The current wave of AI-driven automation may not be so different. For example, robots have made the economy more efficient. A 2015 study of robots in 17 countries found that they added an estimated 0.4 percentage point on average to those countries' annual GDP growth between 1993 and 2007, accounting for just over one-tenth of those countries' overall GDP growth during that time.[6] Some of that growth has been achieved by U.S. manufacturers adopting robots, allowing more goods to be produced while employing fewer workers at some facilities. AI in its many manifestations also holds promise to transform the basis of economic growth for countries across the world; a recent analysis of 12 developed economies (including the United States)

found that AI has the potential to double annual economic growth rates in the countries analyzed by 2035.[7]

Some experts have characterized the rise of AI-driven automation as one of the most important economic and social developments in history. The World Economic Forum has characterized it as the lynchpin of a Fourth Industrial Revolution.[8] Furthermore, the economist Andrew McAfee wrote, "Digital technologies are doing for human brainpower what the steam engine and related technologies did for human muscle power during the Industrial Revolution. They're allowing us to overcome many limitations rapidly and to open up new frontiers with unprecedented speed. It's a very big deal. But how exactly it will play out is uncertain."[9]

At the same time, AI-driven automation has yet to have a quantitatively major impact on productivity growth. In fact, measured productivity growth over the last decade has slowed in almost every advanced economy. It is plausible, however, that the pace of measured productivity growth will pick up in the coming years. To the degree that AI-driven automation realizes its potential to drive tremendous positive advancement in diverse fields, it will make Americans better off on average. But, there is no guarantee that everyone will benefit. AI-driven changes in the job market in the United States will cause some workers to lose their jobs, even while creating new jobs elsewhere. The economic pain this causes will fall more heavily upon some than on others. Policymakers must consider what can be done to help those families and communities get back on their feet and assemble the tools they need to thrive in the transformed economy and share in its benefits.

Economics of AI-Driven Automation

Accelerating AI capabilities will enable automation of some tasks that have long required human labor. Rather than relying on closely-tailored rules explicitly crafted by programmers, modern AI programs can learn from patterns in whatever data they encounter and develop their own rules for how to interpret new information. This means that AI can solve problems and learn with very little human input. In addition, advances in robotics are expanding machines' abilities to interact with and shape the physical world. Combined, AI and robotics will give rise to smarter machines that can perform more sophisticated functions than ever before and erode some of the advantages that humans have exercised. This will permit automation of many tasks now performed by human workers and could change the shape of the labor market and human activity.

These transformations may open up new opportunities for individuals, the economy, and society, but they may also foreclose opportunities that are currently essential to the livelihoods of many Americans. This chapter explores the important role that AI-driven automation is likely to have in growing the economy and potential effects on labor markets and communities. It draws on economic theory and empirical studies of past technological transformations and applies these lessons to the current context. While there are many reasons to think that changes in the labor market prompted by AI-driven automation will be similar to what has been observed in the past, this chapter will also discuss arguments for how the current period could be different from previous technological revolutions.

Critically, technology alone will not determine the economic outcomes in terms of growth, inequality or employment. The advanced economies all have had access to similar levels of technology but have had very different outcomes along all of these dimensions because they have had different institutions and policies. But understanding the technological forces is critical to shaping the continued evolution of these policies.

AI and the Macroeconomy: Technology and Productivity Growth

To the extent that AI-driven automation resembles past forms of technological advancement, it will make important contributions to aggregate productivity growth.

For centuries, the American economy has adjusted to and evolved with technology. Many jobs that existed 150 years ago do not exist today, and jobs no one could have imagined then have taken their place. For example, in 1870, almost 50 percent of American employees worked in agriculture, supplying the Nation's food.[10] Today, thanks in large part to technological change, agriculture employs less than 2 percent of American workers and American food production exceeds domestic demand.[11] In this case, technological innovations, from McCormick harvesters

[10] Patricia A. Daly, "Agricultural Employment: Has the Decline Ended?" *Monthly Labor Review,* November 1981 (http://www.bls.gov/opub/mlr/1981/11/art2full.pdf).

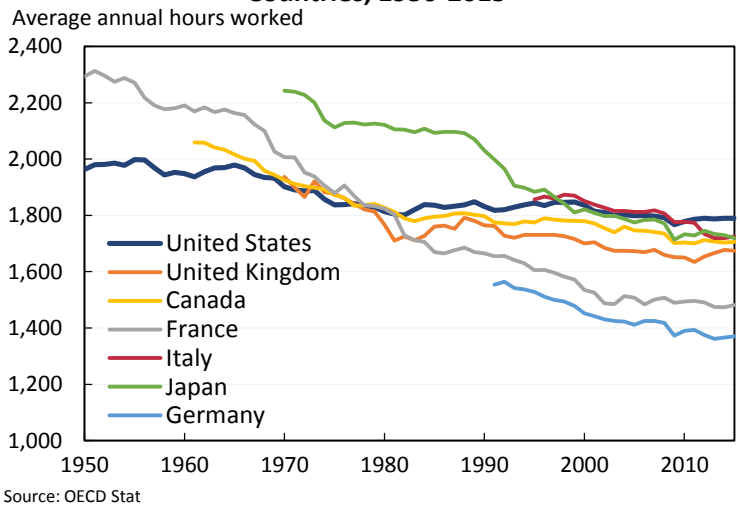
to today's self-driving tractors, increased the productivity of the agricultural sector and contributed to increases in standard of living.[12]

One of the main ways that technology increases productivity is by decreasing the number of labor hours needed to create a unit of output. Labor productivity increases generally translate into increases in average wages, giving workers the opportunity to cut back on work hours and to afford more goods and services. Living standards and leisure hours could both increase, although to the degree that inequality increases—as it has in recent decades—it offsets some of those gains. The expectation that productivity increases would be accompanied by wage growth is what led John Maynard Keynes to predict in his 1930 essay on "Economic Possibilities for our Grandchildren" that, given the rates of technical progress, we might have achieved a 15-hour workweek by now.[13] While that prediction remains far off, over the last 65 years, most developed economies saw annual hours worked decline substantially (Figure 1). In the United States uniquely, however, this decline stopped in the late 1970s, and hours per worker has remained flat since then.

Figure 1: Average Annual Hours Worked per Worker, G-7 Countries, 1950-2015



Technology has been one of the main drivers of this productivity growth. Indeed, changes in technology help explain permanent productivity increases throughout the 1990s.[14] There is also

[12] USDA Economic Research Service, "Table 1. Indices of farm output, input, and total factor productivity for the United States, 1948-2013" (https://www.ers.usda.gov/data-products/agricultural-productivity-in-the-us/).

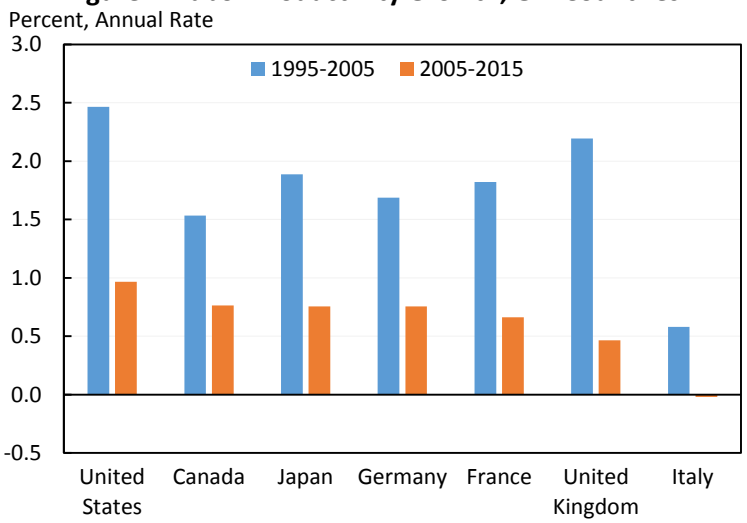
evidence that industrial robotic automation alone increased labor productivity growth by 0.36 percentage points across 17 countries between 1993 and 2007.[15]

The potential positive impact of AI-driven automation on productivity is particularly important given recent trends in productivity. In the last decade, despite technology's positive push, measured productivity growth has slowed in 30 of the 31 advanced economies, slowing in the United States from an average annual growth rate of 2.5 percent in the decade after 1995 to only 1.0 percent growth in the decade after 2005 (Figure 2). While a considerable amount of this slowdown in many countries—including the United States—is due to a slowdown in investment in capital stock, the slowdown in total factor productivity growth (the component influenced by technological change) has also been important.[16] This has contributed to slower growth in real wages and if continued will slow improvements in living standards.

Figure 2: Labor Productivity Growth, G-7 Countries



Source: Conference Board, Total Economy Database; CEA calculations.

AI-driven automation could help boost total factor productivity growth and create new potential to improve the lives of Americans broadly. The benefits of technological change and economic growth, however, are not necessarily shared equally. This can depend on both the nature and speed of the technological change as well as the ability of workers to negotiate for the benefits of their increased productivity, as discussed below.

AI and the Labor Market: Diverse Potential Effects

Few would dispute that the industrial revolution largely made society better off, but the transition led to severe disruptions to the lives and communities of many agricultural workers, with

industrialization inducing many Americans to move to new communities where they could acquire new skills and put their time to new uses. Even during these periods of great technological change, America has maintained high employment. Over long periods, between 90 and 95 percent of the people in the United States who want a job at a given point in time can find one, and the unemployment rate is currently less than 5 percent.[17]

Historical Effects of Technical Change

Technological advances have historically had varied impacts on the labor market. New technologies may substitute for some skills while complementing others, and these trends change over time.[18] At times, new technologies have raised the productivity and increased employment opportunities for workers with little education, and other times for workers with more. To illustrate the diversity of potential impacts and provide a framework for understanding today, this section discusses historical examples of how innovations affected workers in different ways.

The 19th century was characterized by technological change that raised the productivity of lower-skilled workers and reduced the relative productivity of certain higher-skilled workers.[19] This kind of innovation has been called *unskill-biased technical change*. Highly-skilled artisans who controlled and executed full production processes saw their livelihoods threatened by the rise of mass production technologies that used assembly lines with interchangeable parts and lower-skilled workers. In reaction, some English textile weavers participated in the Luddite Riots of the early 1800s by destroying looms and machinery that threatened to undercut their highly-skilled, highly-paid jobs with lower-wage roles. Ultimately, the protesters' fears came true, and many skilled crafts were replaced by the combination of machines and lower-skill labor. There were also new opportunities for less-skilled workers and output per hour rose. As a result, average living standards could rise, but certain high-skill workers were no longer as valuable in the market.

Technological change tended to work in a different direction throughout the late 20th century. The advent of computers and the internet raised the relative productivity of higher-skilled workers, an example of *skill-biased technical change*. Routine-intensive occupations that focused on predictable, easily-programmable tasks—such as switchboard operators, filing clerks, travel agents, and assembly line workers—have been particularly vulnerable to replacement by new technologies.[20] Some entire occupations were virtually eliminated and demand for others reduced. Indeed, Nir Jaimovich and Henry Siu argue that the decline in manufacturing and other

routine jobs is largely responsible for recent low labor demand for less educated workers.[21] Research suggests that technological innovation over this period increased the productivity of those engaged in abstract thinking, creative ability, and problem-solving skills and, therefore, is partially responsible for the substantial growth in jobs employing such traits.[22] Autor, Levy, and Murnane find that about 60 percent of the estimated relative demand shift favoring college-educated labor from 1970 to 1998 can be explained by the reduced labor input needed for routine manual tasks and the increased labor input for non-routine cognitive tasks, which tended to be more concentrated in higher-skilled occupations.[23] Given that college-educated labor was already more highly compensated, shifting demand towards college-educated labor and raising their relative pay contributed to rising income inequality.[24]

Like these past waves of technological advancements, AI-driven automation is setting off labor-market disruption and adjustment. Economic theory suggests that there must be gains from innovations, or they would not be adopted. Market forces alone, however, will not ensure that the financial benefits from innovations are broadly shared.

Market disruptions can be difficult to navigate for many. Recent empirical research highlights the costs of the adjustment process. In recent decades, U.S. workers who were displaced from their jobs—due to, for example, a plant closing or a company moving—experienced substantial earnings declines.[25] Autor, Dorn, and Hanson find that negative shocks to local economies can have substantial negative and long-lasting effects on unemployment, labor force participation, and wages.[26] Perhaps more significantly, over time, displaced workers' earnings recover only slowly and incompletely. Even ten or more years later, the earnings of these workers remain depressed by 10 percent or more relative to their previous wages.[27] These results suggest that for many displaced workers there appears to be a deterioration in their ability either to match their current skills to, or retrain for, new, in-demand jobs. AI-driven automation can act—and in some cases has already acted—as a shock to local labor markets that can initiate long-standing disruptions. Without some form of transfers and safety net, the economic benefits of AI-driven

automation may not be shared by all, and some workers, families, and communities may be persistently negatively affected.

AI and the Labor Market: The Near Term

Today, it may be challenging to predict exactly which jobs will be most immediately affected by AI-driven automation. Because AI is not a single technology, but rather a collection of technologies that are applied to specific tasks, the effects of AI will be felt unevenly through the economy. Some work tasks will be more easily automated than others, and some jobs will be affected more than others.

Some specific predictions are possible based on the current trajectory of AI technology. For example, driving jobs and housecleaning jobs are both jobs that require relatively less education to perform. Advancements in computer vision and related technologies have made the feasibility of fully automated vehicles (AVs), which do not require a human driver, appear more likely, potentially displacing some workers in driving-dominant professions. AVs rely upon, among other things, capabilities of navigating complex environments, analyzing dynamic surroundings, and optimization. Seemingly similar capabilities are required of a household-cleaning robot, for which the operational mandate is less specific (i.e. "clean the house," as opposed to the objective of navigating to a specific destination while following a set of given rules and preserving safety). And yet the technology that would enable a robot to navigate and clean a space as effectively as a human counterpart appears farther off. In the near to medium term, at least, drivers will probably be impacted more by automation than will housecleaners. The following sections lay out a framework for more general predictions of the effect of AI-driven automation on jobs.

Continued skill-biased technical change?

Recent research suggests that the effects of AI on the labor market in the decade ahead will continue the trend toward skill-biased change that computerization and communication innovations have driven in recent decades. Researchers differ on the possible magnitude of this effect. Carl Frey and Michael Osbourne asked a panel of experts on AI to classify occupations by how likely it is that foreseeable AI technologies could feasibly replace them over roughly the next decade or two.[28] Based on this assessment of the technical properties of AI, the relationship between those properties to existing occupations, and employment levels across occupations, they posit that 47 percent of U.S. jobs are at risk of being replaced by AI technologies and computerization in this period. Researchers at the Organisation for Economic Cooperation and Development (OECD), however, highlighted the point that automation targets tasks rather than occupations, which are themselves particular combinations of tasks.[29] Many occupations are likely to change as some of their associated tasks become automatable, so the OECD analysis

[28] Carl Frey and Michael Osborne, "The Future of Employment: How Susceptible are Jobs to Computerization," Oxford University, 2013 (http://www.oxfordmartin.ox.ac.uk/downloads/academic/The_Future_of_Employment.pdf).
[29] Melanie Arntz, Terry Gregory, and Ulrich Zierahn, "The Risk of Automation for Jobs in OECD Countries: A Comparative Analysis," OECD Social, Employment and Migration Working Papers No. 189, 2016 (http://www.oecd-ilibrary.org/docserver/download/5jlz9h56dvq7-en.pdf?expires=1480994298&id=id&accname=guest&checksum=6DC4B241A91EE860DC391585FF43C51C).

concludes that relatively few will be entirely automated away, estimating that only 9 percent of jobs are at risk of being completely displaced. If these estimates of threatened jobs translate into job displacement, millions of Americans will have their livelihoods significantly altered and potentially face considerable economic challenges in the short- and medium-term.

In addition to understanding the magnitude of the overall employment effects, it is also important to understand the distributional implications. CEA ranked occupations by wages and found that, according to the Frey and Osbourne analysis, 83 percent of jobs making less than $20 per hour would come under pressure from automation, as compared to 31 percent of jobs making between $20 and $40 per hour and 4 percent of jobs making above $40 per hour (Figure 3a). Furthermore, the OECD study estimates that less-educated workers are more likely to be replaced by automation than highly-educated ones (Figure 3b). Indeed, the OECD study's authors estimate that 44 percent of American workers with less than a high school degree hold jobs made up of highly-automatable tasks while 1 percent of people with a bachelor's degree or higher hold such a job. To the degree that education and wages are correlated with skills, this implies a large decline in demand for lower-skilled workers and little decline in demand for higher-skilled workers. These estimates suggest a continuation of skill-biased technical change in the near term.

Nevertheless, humans still maintain a comparative advantage over AI and robotics in many areas. While AI detects patterns and creates predictions, it still cannot replicate social or general intelligence, creativity, or human judgment. Of course, many of the occupations that use these types of skills are high-skilled occupations, and likely require higher levels of education. Further, given the current dexterity limits of the robotics that would be needed to implement mass AI-driven automation, occupations that require manual dexterity will also likely remain in demand in the near term.

Figure 3a: Share of Jobs with High Probability of Automation, by Occupation's Median Hourly Wage

Source: Arntz, Gregory, and Zierahn (2016) calculations based on the PIAAC 2012.

Box 1: Automated Vehicle Case Study

A helpful case in understanding the types of effects AI may have on productivity and labor demand is the development of automated vehicles (AVs). Like other forms of technological disruption, AV technology will likely cause disruptions in the labor market as the economy adapts to new paradigms.

CEA estimates that 2.2 to 3.1 million existing part- and full-time U.S. jobs may be threatened or substantially altered by AV technology. Importantly, this is not a net calculation—it does not include the types of new jobs that may be developed—but rather a tally of currently held jobs that are likely to be affected by AI-enabled AV technology. A second caveat is that these changes may take years or decades to occur because there will be a further lag between technological possibility and widespread adoption.

This estimate of the number of current jobs likely displaced or substantially altered by AVs starts by identifying occupations that involve substantial driving and relatively few other responsibilities to lead and coordinate others, drawing occupation descriptions from the Bureau of Labor Statistics (BLS) and the Occupational Information Network (O*NET). For each of these occupations, an analysis of what non-driving tasks the occupation also requires yields an estimate of the share of jobs that will be displaced: driving jobs that also involve less-automatable tasks have a lower chance of disappearing. For example, the job of school-bus driver mixes both the tasks of driving and of attending to children. This job will not disappear, though it may evolve to focus heavily on the task of attending to children. As a result, AV technology may replace only a modest share of school-bus driver jobs, but child care workers will still be required. On the other hand, non-driving tasks are less important in inter-city bus driver jobs, and AV technology will likely replace a large share of these jobs.

Many jobs involve limited amounts of driving. These jobs are not included in the analysis below as individuals in these occupations would likely see a productivity boost, not a threat of displacement, as their time allocated to driving is freed up to focus on other critical tasks.

In addition to occupations identified from BLS and O*NET, CEA's estimate of jobs threatened or likely to be substantially altered by AVs also includes approximately 364,000 self-employed individuals driving either part- or full-time with ride-sharing services as of May 2015 that may find AV technology substituting for their services.

Table 1, below, presents the identified occupation categories.

Table 1

Occupation	BLS Code	# Total Jobs (BLS, May 2015)	Mean Hourly Wage	O*NET Occupation Description
Bus Drivers, Transit and Intercity	53-3021	168,620	$19.31	Drive bus or motor coach, including regular route operations, charters, and private carriage. May assist passengers with baggage. May collect fares or tickets.
Light Truck or Delivery Services Drivers	53-3033	826,510	$16.38	Drive a light vehicle, such as a truck or van, with a capacity of less than 26,000 pounds Gross Vehicle Weight (GVW), primarily to deliver or pick up merchandise or to deliver packages. May load and unload vehicle.
Heavy and Tractor-Trailer Truck Drivers	53-3032	1,678,280	$20.43	Drive a tractor-trailer combination or a truck with a capacity of at least 26,000 pounds Gross Vehicle Weight (GVW). May be required to unload truck. Requires commercial drivers' license.
Bus Drivers, School or Special Client	53-3022	505,560	$14.70	Transport students or special clients, such as the elderly or persons with disabilities. Ensure adherence to safety rules. May assist passengers in boarding or exiting.
Taxi Drivers and Chauffeurs	53-3041	180,960	$12.53	Drive automobiles, vans, or limousines to transport passengers. May occasionally carry cargo. Includes hearse drivers.
Self-employed Drivers	N/A	364,000[30]	$19.35[31]	N/A

As the above occupations involve other, critical non-driving tasks to varying degrees, Table 2, below, presents a weighted estimate of jobs threatened or substantially altered by AV technology in each occupation. For example, a weight of 0.60 indicates that approximately 60 percent of jobs in an occupation are threatened. These weights are generated by CEA using

[30] Calculations based on Hall and Krueger, 2016, (http://www.nber.org/papers/w22843.pdf), who note the number of active driver-partners for Uber more than doubled every six months in the period 2012-2014, and expect this growth rate to continue into 2015. CEA uses data from Harris and Krueger (2015) (http://www.hamiltonproject.org/assets/files/modernizing_labor_laws_for_twenty_first_century_work_krueger_harris.pdf) for only Uber and Lyft. Extrapolating to May 2015 with Hall and Krueger's method, CEA calculates approximately 324,000 individuals were active driver-partners with Uber in May 2015.

[31] Mean hourly earnings reported in Hall and Krueger (2016).

detailed job descriptions, case studies, and surveys of existing and planned technologies for each occupation.

Table 2

Occupation	# Total Jobs (BLS, May 2015)	Range of Replacement Weights	Range of # Jobs Threatened
Bus Drivers, Transit and Intercity	168,620	0.60 – 1.0	101,170 – 168,620
Light Truck or Delivery Services Drivers	826,510	0.20 – 0.60	165,300 – 495,910
Heavy and Tractor-Trailer Truck Drivers	1,678,280	0.80 – 1.0	1,342,620 – 1,678,280
Bus Drivers, School or Special Client	505,560	0.30– 0.40	151,670 – 202,220
Taxi Drivers and Chauffeurs	180,960	0.60 – 1.0	108,580 – 180,960
Self-employed drivers	364,000	0.90 – 1.0	328,000 – 364,000
TOTAL JOBS	3,723,930		2,196,940 – 3,089,990

AV technology could enable some workers to focus time on other job responsibilities, boosting their productivity, and actually fostering wage growth among those still holding the reshaped jobs. For example, salespeople who currently spend a considerable amount of time driving could find themselves able to do other work while a car drives them from place to place, or inspectors and appraisers could fill out paperwork while their car drives itself. This should make these workers more productive, with AV technology serving as a complement, not a substitute. New jobs will also likely be created, both in existing occupations—cheaper transportation costs will lower prices and increase demand for goods and all the related occupations such as service and fulfillment—and in new occupations not currently foreseeable. Conversely, even occupations that have little connection to driving and divorced from the threat of automation could face pressure on wages due to an increased supply of similar, displaced workers.

In cases where downward pressure on wages or consolidation result in displacement of workers, private-sector solutions and public policy should aim to ensure smooth and quick transitions to new opportunities for these workers. CEA analysis finds that a share of workers in a few isolated occupations—truck drivers and delivery service drivers, in particular—currently enjoy a wage premium over others in the labor market with the same level of educational attainment. They may not be able to regain this wage premium if displaced

without intervention to help them re-skill. Job search assistance, education, training and apprenticeships to build and certify new skills, and wage insurance could provide valuable support to them as they transition to finding new jobs.

Policy responses to these challenges are discussed later in this report.

What kind of jobs will AI create?

Predicting future job growth is extremely difficult, as it depends on technologies that do not exist today and the multiple ways they may complement or substitute for existing human skills and jobs. To form an intelligent guess about what these jobs might be like, CEA has synthesized and extended existing research on jobs that would be directly created by AI. It is important to understand, however, that AI will also lead to substantial indirect job creation—to the degree it raises productivity and wages it may also lead to higher consumption that would support additional jobs across the economy in everything from high-end craft production to restaurants and retail.

CEA has identified four categories of jobs that might experience direct AI-driven growth in the future. Employment in areas where humans engage with existing AI technologies, develop new AI technologies, supervise AI technologies in practice, and facilitate societal shifts that accompany new AI technologies will likely grow. Current limits on manual dexterity of robots and constraints on generative intelligence and creativity of AI technologies likely mean that employment requiring manual dexterity, creativity, social interactions and intelligence, and general knowledge will thrive. Below are descriptions and potential examples of future employment for each category.

Engagement. Humans will likely be needed to actively engage with AI technologies throughout the process of completing a task. Many industry professionals refer to a large swath of AI technologies as "Augmented Intelligence," stressing the technology's role as assisting and expanding the productivity of individuals rather than replacing human work. Thus, based on the biased-technical change framework, demand for labor will likely increase the most in the areas where humans complement AI-automation technologies. For example, AI technology such as IBM's Watson may improve early detection of some cancers or other illnesses, but a human healthcare professional is needed to work with patients to understand and translate patients' symptoms, inform patients of treatment options, and guide patients through treatment plans. Shipping companies may also partner workers who pickup and deliver goods over the last 100 feet with AI-enabled autonomous vehicles that move workers efficiently from site to site. In such cases, AI augments what a human is able to do and allows individuals to either be more effective in their specialty task or to operate on a larger scale.

Development. In the initial stages of AI, development jobs are crucial and span multiple industries and skill levels. Most intuitively, there may be a great need for highly-skilled software developers and engineers to put these capacities into practical use in the world. To a certain extent, however, AI is only as good as the data behind it, so there will likely be increased demand for jobs in generating, collecting, and managing relevant data to feed into AI training

processes. Applications of AI can range from high-skill tasks such as recognizing cancer in x-ray images to lower-skill tasks such as recognizing text in images. Finally, to an increasing degree, development may include those specializing in the liberal arts and social sciences, such as philosophers with frameworks for ethical evaluations and sociologists investigating the impact of technology on specific populations, who can give input as the new technologies grapple with more social complexities and moral dilemmas.

Supervision. This category encompasses all roles related to the monitoring, licensing, and repair of AI. For example, after the automated vehicle development phase, the need for human registration and testing of such technology to ensure safety and quality control on the roads will still likely exist. As a widespread new technology, AV will require regular repair and maintenance, which may expand mechanic and technician jobs in this space as well. Real-time supervision will also be required in exceptional, marginal, or high-stakes cases, especially those involving morality, ethics, and social intelligence that AI may lack. This might take the form of quality control of recommendations made by AI or online moderation when sensitive subjects are discussed. The capacity for AI-enabled machines to learn is one of the most exciting aspects of the technology, but it may also require supervision to ensure that AI does not diverge from originally intended uses. As machines get smarter and have improved ability to make practical predictions about the environment, the value of human judgement will increase because it will be the preferred way to resolve competing priorities.[32]

Response to Paradigm Shifts. The technological innovation surrounding AI will likely reshape features of built environment. In the case of AVs, dramatic shifts in the design of infrastructure and traffic laws—which are currently built with the safety and convenience of human drivers in mind—may be needed. The advent of self-driving cars may result in higher demand for urban planners and designers to create a new blueprint for the way the everyday travel landscape is built and used. Paradigm shifts in adjacent fields such as cybersecurity—demanding, for instance, new methods of detecting fraudulent transactions and messages—may also necessitate new occupations and more employment.

[32]Ajay Agrawal, Joshua Gans, and Avi Goldfarb, "The Simple Economics of Machine Intelligence," *Harvard Business Review,* November 17, 2016 (https://hbr.org/2016/11/the-simple-economics-of-machine-intelligence).

Box 2: The End of Work?

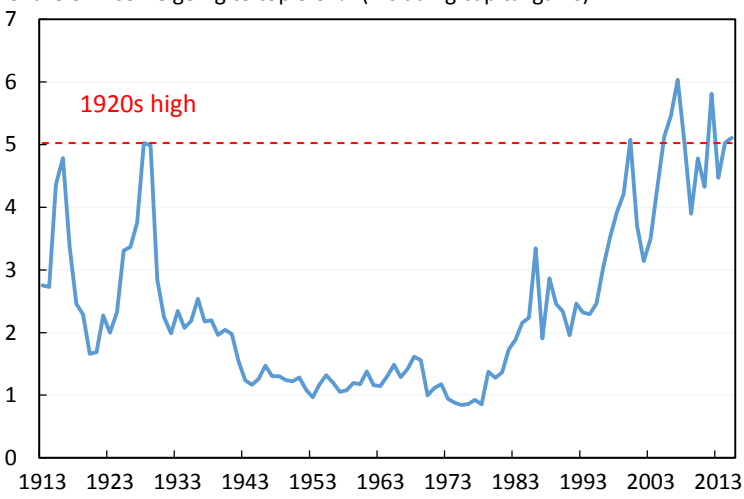
In addition to the arguments that AI and future technologies will broadly follow the same path as past technological revolutions, others make a more radical argument about the possible longer-run effects. They posit that AI could prove different from previous technological change because it has the ability to replicate something previously exclusive to humans: intelligence. There have long been fears that technology—the machines, the assembly lines, or the robots—would replace all human labor, but AI-driven automation has unique features that may allow it to replace substantial amounts of routine cognitive tasks in which humans previously maintained a stark comparative advantage. Initial waves of technology, such as the wheel and lever, allowed humans to do more by replacing or augmenting physical strength. Other processes allowed work to take place faster or more efficiently in a factory. Computers allowed calculations or pattern recognition to take place faster and augment humans' capacity to think or reason.

AI, though, may allow machines to operate without humans to such a degree that they fundamentally change the nature of production and work.[33] It may be that the question is no longer which segment of the population will technology complement, but whether the new technology will complement many humans at all, or if AI will substitute completely for much of human work. The skills in which humans have maintained a comparative advantage are likely to erode over time as AI and new technologies become more sophisticated. Some of this is evident today as AI becomes more capable at tasks such as language processing, translation, basic writing, or even music composition.

AI-driven technological change could lead to even larger disparities in income between capital owners and labor. For example, Brynjolfsson and McAfee argue that current trends in the labor market, such as declining wages in the face of rising productivity, are indicative of a more drastic change in the distribution of economic benefits to come. Rather than everyone receiving at least some of the benefit, the vast majority of that value will go to a very small portion of the population: "superstar-biased technological change." Superstar-biased technological change is somewhat similar to skill-biased technological change, but the benefits of technology accrue to an even smaller portion of society than just the highly-skilled workers. The winner-take-most and winner-take-all nature of the information technology market means that the fortunate few are likely to emerge as victors of the market. This would exacerbate the current trend in the rising fraction of total income going to the top 0.01 percent (Figure 4).

[33] Erik Brynjolfsson and Andrew McAfee, *The Second Machine Age: Work, Progress, and Prosperity in a Time of Brilliant Technologies,* WW Norton & Company, 2014.

Figure 4: Top 0.01% Income Share, 1913-2015



Source: Piketty and Saez (2003), data update as of June 2016.

In theory, AI-driven automation might involve more than temporary disruptions in labor markets and drastically reduce the need for workers. If there is no need for extensive human labor in the production process, society as a whole may need to find an alternative approach to resource allocation other than compensation for labor, requiring a fundamental shift in the way economies are organized.

Although this scenario is speculative, it is included in this report to foster discussion and shed light on the role and value of work in the economy and society. Ultimately, AI may develop in the same way as the technologies before it, creating new products and new jobs such that the bulk of individuals will be employed as they are today.[34]

Technology is Not Destiny—Institutions and Policies Are Critical

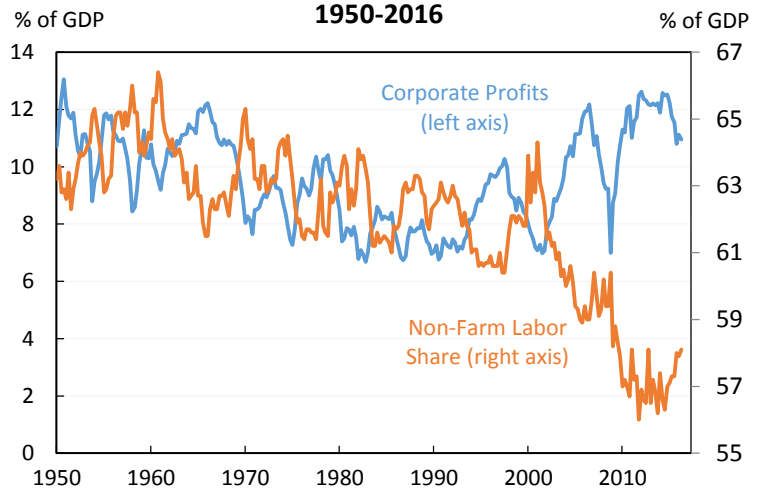
A key determinant of how AI-induced technological change will affect people in the future is the ability of workers to extract the benefits of their increased productivity. For decades after World War II, the share of income going to the bottom 90 percent of workers was roughly unchanged. But since the late 1970s, the bottom 90 percent of households have seen their income fall from two-thirds of the total to about one half of the total share of U.S. income. For much of this period, moreover, productivity growth did not translate to higher real wages for low-income and even middle-income American workers.

This reduced share of income is partly the result of the fact that labor compensation is being increasingly unevenly distributed. But since 2000, it is also because the distribution of benefits going to capital and labor have also been diverging. Starting in about 2000, corporate profits as a share of GDP (a measure of the capital share of GDP) started to increase and labor share of GDP

[34] For more discussion, see John W. Budd, *The Thought of Work*, Cornell University Press, 2011.

began decreasing (Figure 6). The labor share of GDP reached a historical low, though it has trended up somewhat over the last 2 years.

Figure 5: Non-Farm Labor and Corporate Profits Share of GDP, 1950-2016



Source: Bureau of Economic Analysis, Bureau of Labor Statistics; CEA calculations

How AI and AI-driven automation will shape the distribution of gains in coming years depends on non-technical factors including aspects of both the broader economy and policy institutions. First, the direction of innovation is not a random shock to the economy but the product of decisions made by firms, governments, and individuals. Economic factors can drive the direction of technological change. Second, there is a role for policy to help amplify the best effects of automation and temper the worst.

Technological advancement is generated and adopted into the economy as the product of choices of entrepreneurs, workers, and firms looking to better serve a market or streamline a production process, in the context created by public investments in basic and applied research, infrastructure, and other public goods. In a process of directed technical change, incentives draw investment towards more potentially profitable innovations and so the types of technological change that are likely to occur, among those which are technologically feasible, are those which are most profitable.[35] Research examining firms' decisions to innovate argues that the tendency towards unskill-biased technical change in the 1800s came about because it was profitable to create technologies that replaced expensive and scarce resources (skilled artisans) with relatively cheap and abundant resources (machines and low-skilled workers).

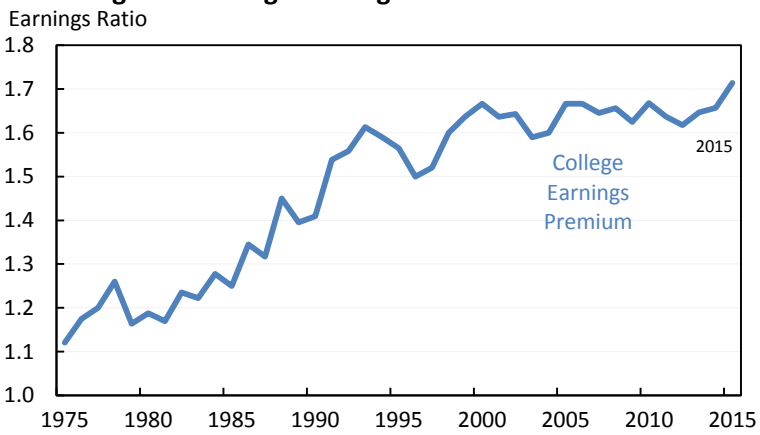
In contrast, research suggests that skill-biased technical change of the 1990s was a function of increases in the supply of educated workers, which made innovations that raised their productivity more profitable because they could be used widely.[36] The Frey and Osborne study

[35] Daron Acemoglu, "Directed Technological Change, *Review of Economic Studies* 69(4): 781-809, 2003 (http://restud.oxfordjournals.org/content/69/4/781.short).
[36] Acemoglu, 2003.

and the OECD study suggest that this trend of skill-biased technical change may continue with AI, as the most automatable occupations tend to be low-wage and low-skill.

On the other hand, the wage premium for higher-skilled labor has increased over time (Figure 6), which creates a countervailing incentive to invest in innovations that might raise the productivity of lower-skill, lower-price workers. For example, automation technology that embodies expertise in medical imaging hardware and software allows middle-skill personnel to make medical diagnosis, reducing demand for more-expensive specialists. Similarly, the introduction of proprietary tax preparation software has allowed less-skilled tax preparers to replace certified accountants in some situations. In both cases, the demand for high-skill computer programmers also increases slightly but their work diffuses widely and scales cheaply. Thus technological change does not happen in a vacuum. The trajectory of AI may shift and change depending on non-technical, competitive incentives.

Figure 6: College Earnings Premium Over Time



Note: The earnings ratio compares the median full-time, full-year worker over age 25 with a bachelor's degree only to the same type of worker with just a high school degree. Prior to 1992, bachelor's degree is defined as four years of college.
Source: CPS ASEC.

Policy plays a large role in shaping the effects of technological change. Therefore, even if Frey and Osborne's predictions that almost 50 percent of occupations are threatened by new automation technologies are accurate, the labor market impacts also depend on a country's institutions and policies. While relative wages depend on the demand for different levels of skill, which is partially a function of technology, wages also depend on the supply of labor at various skill levels, which is influenced by the distribution of educational opportunity and attainment.[37] Relative wages also depend on collective bargaining,[38] minimum wage laws, and other institutions and policies that affect wage setting.

Over the last 4 decades, other major advanced countries have experienced technological changes similar to the United States, yet the United States has seen both a greater increase in income inequality and higher overall levels of inequality, as shown in Figure 7. While most other

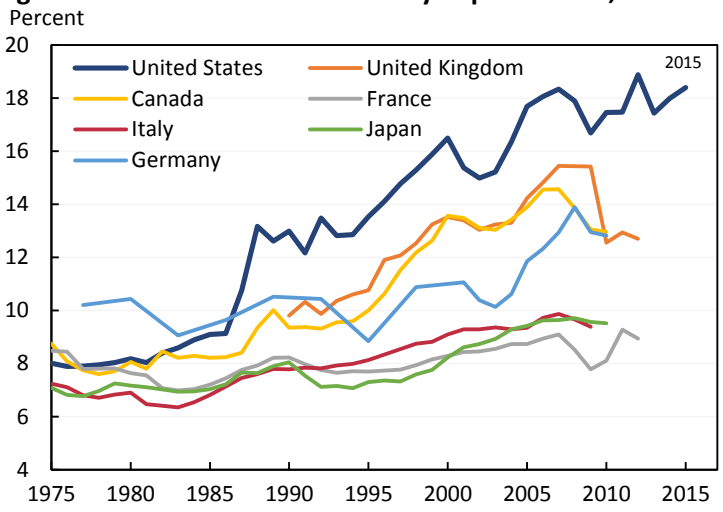
[38] Bruce Western and Jake Rosenfeld, "Unions, norms, and the rise in US wage inequality," *American Sociological Review* 76(4): 513-37, 2011.

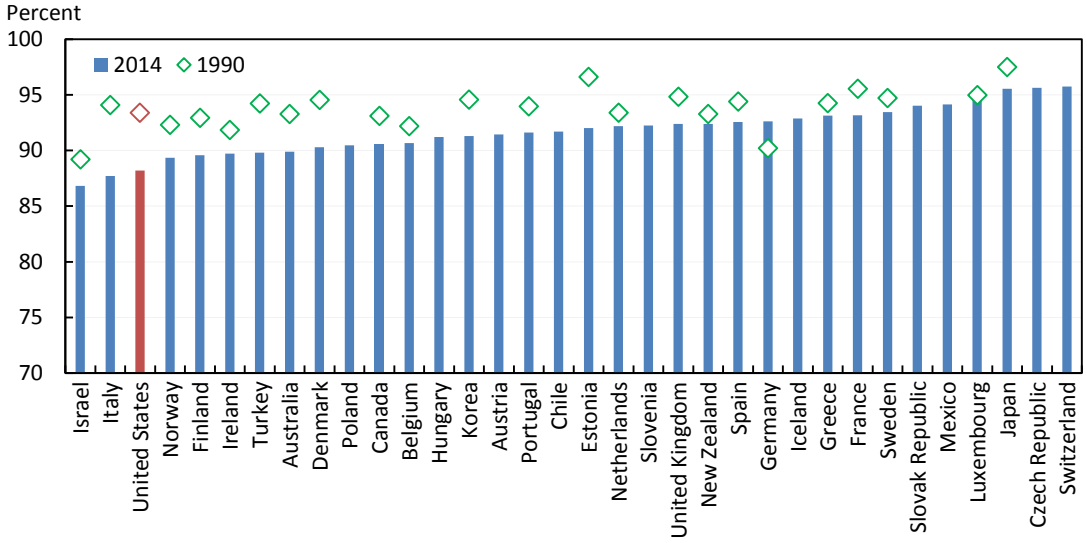
advanced economies have seen declines in prime-age male labor force participation, moreover, the decline in the United States has been steeper than in almost every other advanced economy, as shown in Figure 8.

Figure 7: Share of Income Earned by Top 1 Percent, 1975-2015



Source: World Wealth and Income Database.

Figure 8: Prime-Age Male Labor Force Participation Rates Across the OECD



If the difference between the United States and the other countries in inequality and labor force participation pictured above cannot be explained by the rate of technological change and which tasks are automatable, then it suggests that differences in a country's policies and institutions may mediate these changes. For example, other countries tend to invest far more resources on active labor market programs that help workers navigate job transitions, such as training programs and job-search assistance. While OECD member countries outside of the United States spent, on average, 0.6 percent of GDP on active labor market policies in 2014, spending by the

United States was just 0.1 percent of GDP (Figure 9). The United States, moreover, now spends less than half of what it did on such programs 30 years ago as a share of GDP (Figure 10).[39]

Figure 9: Public Expenditure on Active Labor Market Programs (% of GDP)

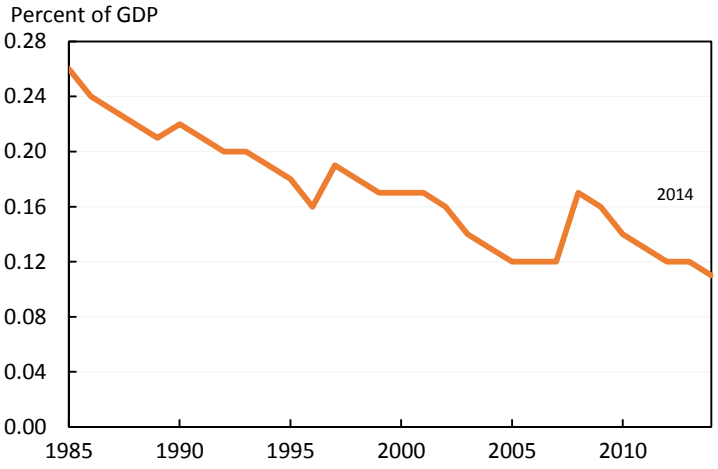
Source: OECD Statistics (2014)

Figure 10: U.S. Public Expenditure on Active Labor Market Programs Over Time as Percent of GDP



Source: OECD Statistics (2014)

It is possible for the economy to generate high levels of employment with more advanced automation and higher levels of productivity than there are today. But Federal policies will need to play a role in helping Americans to navigate transitions in labor market demand caused by changes in technology over time.

Policy Responses

AI-driven automation stands to transform the economy over the coming years and decades. The challenge for policymakers will be to update, strengthen, and adapt policies to respond to the economic effects of AI.

Although it is difficult to predict these economic effects precisely with a high degree of confidence, the economic analysis in the previous chapter suggests that policymakers should prepare for five primary economic effects:

- Positive contributions to aggregate productivity growth;
- Changes in the skills demanded by the job market, including greater demand for higher-level technical skills;
- Uneven distribution of impact, across sectors, wage levels, education levels, job types, and locations;
- Churning of the job market as some jobs disappear while others are created; and
- The loss of jobs for some workers in the short-run, and possibly longer depending on policy responses.

There is substantial uncertainty about how strongly these effects will be felt, and how rapidly they will arrive. It is possible that AI will not have large, new effects on the economy, such that the coming years are subject to the same basic workforce trends seen in recent decades—some which are positive, and others which are worrisome and may require policy changes. At the other end of the range of possibilities, the economy might potentially experience a larger shock, with accelerating changes in the job market, and significantly more workers in need of assistance and retraining as their skills are no longer valued in the job market. Given presently available evidence, it is not possible to make specific predictions, so policymakers must be prepared for a range of potential outcomes. At a minimum, some occupations such as drivers and cashiers are likely to face displacement from or restructuring of their current jobs, leading millions of Americans to experience economic hardship in the short-run absent new policies.

Because the effects of AI-driven automation will likely be felt across the whole economy, and the areas of greatest impact may be difficult to predict, policy responses must be targeted to the whole economy. In addition, the economic effects of AI-driven automation may be difficult to separate from those of other factors such as other technological changes, globalization, reduction in market competition and worker bargaining power, and the effects of past public policy choices. Even if it is not possible to determine how much of the current transformation of the economy is caused by each of these factors, the policy challenges raised by the disruptions remain, and require a broad policy response.

In the cases where it is possible to direct mitigations to particular affected places and sectors, those approaches should be pursued. But more generally, this report suggests and discusses below three broad strategies for addressing the impacts of AI-driven automation across the whole U.S. economy:

1. Invest in and develop AI for its many benefits;
2. Educate and train Americans for jobs of the future; and
3. Aid workers in the transition and empower workers to ensure broadly shared growth.

Strategy #1: Invest In and Develop AI for its Many Benefits

If care is taken to responsibly maximize its development, AI will make important, positive contributions to aggregate productivity growth, and advances in AI technology hold incredible potential to help America stay on the cutting edge of innovation. Indeed, CEA Chair Jason Furman has written that his biggest worry about AI is "that we do not have enough [of it]."[40] AI technology itself has opened up new markets and new opportunities for progress in critical areas such as health, education, energy, economic inclusion, social welfare, transportation, and the environment. Substantial innovation in AI, robotics, and related technology areas has taken place over the last decade, but the United States will need a much faster pace of innovation in these areas to significantly advance productivity growth going forward.[41] With the right investment in AI and policies to support a larger and more diverse AI workforce, the United States has the potential to accelerate productivity and maintain the strategic advantages that result from American leadership in AI.[42]

Invest in AI research and development

Government has an important role to play in advancing the AI field by investing in research and development. Throughout the public outreach on AI conducted by OSTP, government officials heard calls from business leaders, technologists, and economists for greater government investment in AI research and development. Leading researchers in AI were optimistic about sustaining the recent rapid progress in AI and its use in an ever wider range of applications. A strong case can be made in favor of increased Federal funding for research in AI.

The Administration published its *Artificial Intelligence Research and Development Strategic Plan* in October 2016, laying out a detailed strategy and roadmap for government-funded AI research and development.

Develop AI for cyberdefense and fraud detection

Currently, designing and operating secure systems requires a large investment of time and attention from experts. Automating this expert work, partially or entirely, may enable strong security across a much broader range of systems and applications at dramatically lower cost, and

[40] Jason Furman, "Is This Time Different? The Opportunities and Challenges of Artificial Intelligence." Remarks at AI Now: The Social and Economic Implications of Artificial Intelligence Technologies in the Near Term. New York University, New York, July 7, 2016. [41] *Ibid.*
[42] More detailed policy recommendations for investments in AI research and development, and development of the AI workforce, see the previous Administration report, *Preparing for the Future of Artificial Intelligence* (https://www.whitehouse.gov/sites/default/files/whitehouse_files/microsites/ostp/NSTC/preparing_for_the_future_of_ai.pdf), and the accompanying *Artificial Intelligence Research and Development Strategic Plan* (https://www.nitrd.gov/PUBS/national_ai_rd_strategic_plan.pdf).

may increase the agility of cyber defenses. Using AI may help maintain the rapid response required to detect and react to the landscape of ever evolving cyber threats. There are many opportunities for AI and specifically machine-learning systems to help cope with the sheer complexity of cyberspace and support effective human decision making in response to cyberattacks.

Future AI systems could perform predictive analytics to anticipate cyberattacks by generating dynamic threat models from available data sources that are voluminous, ever-changing, and often incomplete. These data include the topology and state of network nodes, links, equipment, architecture, protocols, and networks. AI may be the most effective approach to interpreting these data, proactively identifying vulnerabilities, and taking action to prevent or mitigate future attacks. Results to-date in DARPA's Cyber Grand Challenge competition demonstrate the potential of this approach.[43] The Cyber Grand Challenge was designed to accelerate the development of advanced, autonomous systems that can detect, evaluate, and patch software vulnerabilities before adversaries have a chance to exploit them. The Cyber Grand Challenge Final Event was held on August 4, 2016. To fuel follow-on research and parallel competition, all of the code produced by the automated systems during the Cyber Grand Challenge Final Event has been released as open source to allow others to reverse engineer it and learn from it.

AI also has important applications in detecting fraudulent transactions and messages. AI is widely used in the industry to detect fraudulent financial transactions and unauthorized attempts to log in to systems by impersonating a user. AI is used to filter email messages to flag spam, attempted cyberattacks, or otherwise unwanted messages. Search engines have worked for years to maintain the quality of search results by finding relevant features of documents and actions, and developing advanced algorithms to detect and demote content that appears to be unwanted or dangerous. In all of these areas, companies regularly update their methods to counter new tactics used by attackers and coordination among attackers.

Companies could develop AI-based methods to detect fraudulent transactions and messages in other settings, enabling their users to experience a higher-quality information environment. Further research is needed to understand the most effective means of doing this.

Develop a larger, more diverse AI workforce

The rapid growth of AI has dramatically increased the need for people with relevant skills to support and advance the field. The AI workforce includes AI *researchers* who drive fundamental advances in AI and related fields, a larger number of *specialists* who refine AI methods for specific applications, and a great number of *users* who operate those applications in specific settings. For researchers, AI training is inherently interdisciplinary, often requiring a strong background in computer science, statistics, mathematical logic, and information theory.[44] For

[43] Cyber Grand Challenge (https://www.cybergrandchallenge.com).
[44] There is also a need for the development of a strong research community in fields outside of technical disciplines related to AI, to examine the impacts and implications of AI on economics, social science, health, and other areas of research.

specialists, training typically requires a background in software engineering as well as in the application area. For users, familiarity with AI technologies is needed to apply them reliably.

All sectors face the challenge of how to diversify the AI workforce. The lack of gender and racial diversity in the AI-specific workforce mirrors the significant and problematic lack of diversity in the technology industry and the field of computer science more generally. Unlocking the full potential of the American people, especially in entrepreneurship, as well as science, technology, engineering, and mathematics (STEM) fields, has been a priority of the Administration. The importance of including individuals from diverse backgrounds, experiences, and identities, especially women and members of racial and ethnic groups traditionally underrepresented in STEM, is one of the most critical and high-priority challenges for computer science and AI.

Research has shown that diverse groups are more effective at problem solving than homogeneous groups, and policies that promote diversity and inclusion will enhance our ability to draw from the broadest possible pool of talent, solve our toughest challenges, maximize employee engagement and innovation, and lead by example by setting a high standard for providing access to opportunity to all segments of our society.[45]

Policymakers also will need to address new potential barriers stemming from any algorithmic bias. Firms are beginning to use consumer data, including data sets collected by "third-party" data services companies, to determine individuals' fitness for credit, insurance and even employment. Other firms are pioneering the use of games, simulations, and electronic tests to determine the "fit" of job applicants to a team. To do this, automated algorithms may be trained with data about successful team members in order to look for applicants that resemble them. One important benefit of these innovations is enabling companies to recruit and hire candidates based on demonstrated skills and abilities rather than pedigree, which will become even more critical as people gain skills on the job. But if such training sets are based on a less diverse current workforce, the biases of the existing group may be built into the resulting decisions and may unfairly exclude new potential talent. While employment laws and the Fair Credit Reporting Act currently impose certain restrictions on the use of credit history in making employment decisions, additional statutory or regulatory protections may be need to be explored in this space.

The previous report, *Preparing for the Future of Artificial Intelligence*, discusses workforce needs, including the strong case for increasing diversity, and lays out a detailed plan for AI workforce development.[46]

Support market competition

Competition from new and existing firms has always played an important role in the creation and adoption of new technologies and innovations, and this is no different in the case of AI. Startups

[45] Aparna Joshi and Hyntak Roh, "The Role of Context in Work Team Diversity Research: A Meta-Analytic Review," *Academy of Management Journal* 52: 599-627, 2009; Vivian Hunt, Dennis Layton, and Sara Prince, "Why Diversity Matters," McKinsey & Company, 2015 (http://www.mckinsey.com/business-functions/organization/our-insights/why-diversity-matters).

[46] The White House, *Preparing for the Future of Artificial Intelligence,* (https://www.whitehouse.gov/sites/default/files/whitehouse_files/microsites/ostp/NSTC/preparing_for_the_future_of_ai.pdf).

are a critical pathway for the commercialization of innovative new ideas and products. Startups, or the possibility of entry by a startup, also incentivize established firms to innovate and reduce costs. Competition pushes firms to invest in new technologies that help to lower costs, and also to invest in innovations that can lead to improvements in the quality of existing products.

The rapid evolution of technology can pose challenges for developing sound pro-competition policies, both in terms of defining the scope of the market as well as assessing the degree of contestability or the possibilities for disruption. For example, while it is probably too early to assess the role of AI in competition policy, one might imagine that when a large incumbent has access to most of the customer data in the market, it is able to use AI to refine its products better than any potential entrant could hope, and can thereby effectively foreclose entry.

Strategy #2: Educate and Train Americans for Jobs of the Future

As AI changes the nature of work and the skills demanded by the labor market, American workers will need to be prepared with the education and training that can help them continue to succeed. If the United States fails to improve at educating children and retraining adults with the skills needed in an increasingly AI-driven economy, the country risks leaving millions of Americans behind and losing its position as the global economic leader.

The United States led the world in economic gains from the industrial revolution in part due to major investments in its workforce. In the 20th century, America shifted from a mostly agrarian economy to an industrial economy. During this period, as today, the type of work and skills required to do work underwent a major transformation. To meet the needs of the new economy, the United States rapidly expanded access to education through high school, and by 1930 America was far ahead of European countries in terms of widely available, free, and publically-provided secondary education.[47] The average American born in 1951 had 6.2 more years of schooling than an American born in 1876. These increases in schooling led to tangible economic gains: economists estimate that educational attainment explains 14 percent of annual increases in labor productivity during that period.[48] Americans used education to adapt to new jobs which could not even have been imagined in prior decades. Today's AI-driven transformation will likely require similar realignments. College- and career-ready skills in math, reading, computer science, and critical thinking are likely to be among the factors in helping workers successfully navigate through unpredictable changes in the future labor market. Providing the opportunity to obtain those skills will be a critical component of preparing children for success in the future.[49]

Educate youth for success in the future job market

A key step towards preparing individuals for the economy of the future is providing quality education opportunities for all.

[47] Ajay Chaudry, "The Case for Early Education in the Emerging Economy," *Roosevelt Institute-The New American Economy's Learning* Series, August 2016, p. 3 (http://rooseveltinstitute.org/wp-content/uploads/2016/08/The-Case-for-Early-Education-in-the-Emerging-Economy.pdf).
[48] Claudia Dale Goldin and Lawrence Katz, *The Race between Education and Technology*, 2008.
[49] The White House, Economic Report of the President 2016, Chapter 4.

While, in the past, many jobs paying decent wages could be done with low levels of skill, continuing changes in technology, including AI, will make such jobs less common in the future. While it is unclear exactly how progress in AI and other technologies will affect the jobs of the future, policymakers must address the low levels of proficiency in basic math and reading for millions of Americans. Despite strong progress over the past 8 years, the United States is still falling behind rather than leading the world in key dimensions for successfully navigating this transition. Children from low-income families start kindergarten over 1 year behind peers in language skills.[50] Student performance in mathematics in China is on average 2 years above U.S. students.[51] American students from lower socioeconomic backgrounds score 15 percent lower on international assessments than higher income peers.[52] And year after year, a stubborn gap persists between how well white students are doing compared to their African American and Latino classmates.[53]

For all students, coursework in STEM, and specifically in areas such as computer science, will likely be especially relevant to work and citizenship in an increasingly AI-driven world. To respond to these shifts, the United States must make real investments in high-quality education, at all levels of education.

All Children Get Off to the Right Start with Access to High-Quality Early Education

In a world of AI-driven skill-biased technological change, people with low levels of even basic skills such as reading and math are at higher risk of displacement. On average, children from poor families score far below their peers from higher-income families in early vocabulary and literacy development, in early math, and in the social skills they need to get along well in their classrooms.[54] Studies indicate that kids who start off with deficits in basic skills fail to catch up to peers by later grades.[55] Therefore, it is all the more important that the United States make key investments in getting kids from all income backgrounds off to the right start. To achieve these goals, the United States must catch up to the rest of the world in pre-school enrollment—the United States is ranked 28th out of 38 OECD countries in the share of 4-year-olds enrolled in early education programs.[56]

All Students Graduate from High School College- and Career-Ready

Students are much better positioned for jobs that benefit from AI instead of being replaced by it if they graduate from high school with the necessary skills. In the Obama Administration, the U.S. high school graduation rate has reached a record high of 83 percent for the 2014-2015 school year.[57] Too many students, however, are not college- and career-ready when they finish high school. According to the National Assessment of Education Progress, the largest nationally representative and continuing assessment of what America's students know and can do, fewer than 40 percent of graduating students scored at college- and career-ready levels in 2013.[58] A strategy to dramatically speed up school improvement to keep pace with the accelerating rate of change in the global economy should include attracting and retaining the best teachers, making sure all schools have the resources required for success, and holding all students to high standards with rigorous coursework.

Additionally, it will require building on the President's *Computer Science for All* initiative, which seeks to give all students at the K-12 level access to coursework in computing and computational thinking. A bipartisan coalition of governors, mayors, and other public- and private-sector leaders has supported the creation of new standards, courses, and investments in teacher professional development, as well as supplementary extracurricular programs and resources to make this a reality. Further effort is needed to make computer science education available to all children.

The United States has made unprecedented progress ensuring more schools and libraries can access the digital tools to dramatically improve educational outcomes, particularly in delivering technology skills. From 2013 to 2015, 20 million more students gained access to high-speed broadband and wireless in schools, halving the connectivity divide, and the United States is on track to connect 99 percent of students in the near future. But while significant progress has been made, there is still more work to be done to ensure that all schools, libraries, and homes have access to broadband-enabled devices. And educators will need more support and professional development to deliver high-quality learning tailored to their students' needs.

All Americans Have Access to an Affordable Post-Secondary Education that Prepares Them for Good Jobs

Projections show that in the coming years nearly three-quarters of the fastest growing occupations will require at least some postsecondary education beyond high school.[59] Despite these growing needs, state funding for higher education is down by 18 percent on average since the start of the recession, and tuition at four-year public colleges is up by 33 percent since the

[59] Bureau of Labor Statistics, "Employment Projections—2014-24," December 2015 (http://www.bls.gov/news.release/pdf/ecopro.pdf).

2007-2008 school year.[60] To further improve college access, affordability, and completion, the President has proposed making 2 years of community college free for hard-working students through America's College Promise. If all states participated in America's College Promise, an additional 9 million students could benefit.[61] This could be critical for workers seeking to gain new skills as a response to, or in order to avoid, dislocation from AI-driven automation.

Expand access to training and re-training

A commitment to preparing Americans to adapt to continuous and rapid technological change in the future, whether in AI or other fields, requires pursuing policy changes that would significantly expand the availability of high-quality job training to meet the scale of need; help people more successfully navigate job transitions; and target resources to programs that are producing strong results. But despite the clear challenges facing U.S. workers, the current level of investment in active labor market policies, such as training programs, by the United States is low by both international and historical standards. Through the Workforce Innovation and Opportunity Act—the Federal Government's largest job training investment program—only about 175,000 people are trained per year.[62] As shown above in Figures 9 and 10, while the member countries of the OECD spent, on average, 0.6 percent of GDP on active labor market policies in 2014, spending by the United States was just 0.1 percent of GDP. Relative to the overall economy, the United States now spends less than half of what it did on such programs 30 years ago.

The steps described below should be taken to put the United States ahead of, rather than behind, the curve in these critical areas.

Significantly Expand Availability of Job-Driven Training and Lifelong Learning to Meet the Scale of the Need

Increasing funding for job training by six-fold—which would match spending as a percentage of GDP to Germany, but still leave the United States far behind other European countries—would enable retraining of an additional 2.5 million people per year.[63] Over the last 8 years, the Administration has taken important steps to move in this direction. The Administration has made investments in half of community colleges in the country to create job-driven training programs in fields such as healthcare, information technology, energy and other in-demand fields that have trained nearly 300,000 people so far. The Administration also launched the POWER Initiative, a

[60] Center on Budget and Policy Priorities, "Funding Down, Tuition Up: State Cuts to Higher Education Threaten Quality and Affordability at Public Colleges," August 2016 (http://www.cbpp.org/research/state-budget-and-tax/funding-down-tuition-up).

[62] Department of Labor, Employment and Training Administration, 2015.
[63] This assumes $6,000 per person training/reemployment cost, and an increase in Workforce Innovation and Opportunity Act funding from today's $3B to $18B, to match Germany's spending as a fraction of GDP, with all new funding spent on training.

new interagency effort to assist communities negatively impacted by changes in the coal industry and power sector with coordinated Federal economic and workforce-development resources.

Target Resources to Effective Education and Training Programs

Directing funding to training that produces results starts with information about whether programs are placing people into in-demand jobs that pay good salaries. Historically, very little data on the employment outcomes of education and training institutions has existed. Federal and State policymakers should build on Administration initiatives, such as the College Scorecard and the Workforce Innovation and Opportunity Act, by continuing to make investments in collecting and analyzing data on employment and earnings outcomes to hold programs accountable and direct funding to strategies producing results.

Expand Access to Apprenticeships

Job-driven apprenticeships grow the economy and can provide American workers from all backgrounds with the skills and knowledge they need to adapt to a changing economy. Research suggests that apprentices earn a significant premium for their skills—as much as $300,000 more than their peers over a lifetime.[64] The Obama Administration has prioritized expanding apprenticeship programs, and in 2014, called for doubling the number of U.S. registered apprenticeships over the next 5 years. The Administration awarded $175 million to expand apprenticeship in 2015 and announced $50.5 million in grants to support the expansion of new apprenticeship opportunities across the country in all major industry sectors in October 2016.[65]

Strategy #3: Aid Workers in the Transition and Empower Workers to Ensure Broadly Shared Growth

As AI-driven automation changes the economy, empowered workers can be one of the Nation's greatest assets. They can drive and spread innovation, lift consumer demand, and invest in the next generation.[66] This strategy explores how to ensure that workers and job seekers are able to pursue the job opportunities for which they are best qualified, able to bounce back successfully

February 2016 (http://go.wh.gov/dM4yPt).

from job loss, and be well-positioned to ensure they receive an appropriate return for their work in the form of rising wages.

Modernize and strengthen the social safety net

Changes to how people work and the dislocation of some workers due to automation heightens the need for a robust safety net to ensure that people can still make ends meet, retrain, and potentially transition careers. That means strengthening critical supports such as unemployment insurance, Medicaid, Supplemental Nutrition Assistance Program (SNAP), and Temporary Assistance for Needy Families (TANF), and putting in place new programs such as wage insurance and emergency aid for families in crisis. It also means exploring whether programs such as Trade Adjustment Assistance should be expanded to help those displaced by automation.

In addition, with the rise of part-time and contingent work, and a more mobile workforce in which individuals do not spend their entire career at a single company, policymakers will need to ensure that workers can access retirement, health care, and other benefits whether or not they get them on the job. For example, the Affordable Care Act expanded eligibility for Medicaid and reformed individual health insurance market to ensure that Americans who do not get coverage on the job can still find affordable, high-quality coverage, while simultaneously introducing reforms to improve coverage for people who are offered coverage at work.

Strengthen Unemployment Insurance

Job displacement is likely to be one of the most serious negative consequences of AI-driven automation, impacting entire industries and communities. Since its inception, unemployment insurance has been a powerful tool to prevent a job loss from hurtling a family into poverty. Last year alone, more than 7 million working Americans relied on the program to get by in tough times. Yet its protections have weakened over time, and today coverage by the program is at its lowest level in at least 50 years.[67] Fewer than one in three unemployed Americans now receive unemployment insurance benefits, and benefits replace a smaller percentage of wages than before for those who do qualify. In 2009, the American Recovery and Reinvestment Act built a foundation for modernizing the program by making $7 billion available to states to expand coverage. Since then, more than 30 states have implemented and sustained important reforms.

The program will need to be further strengthened, as laid out in a proposal to Congress from the President, to ensure that the program can offer a more secure safety net for workers displaced by AI-driven automation and to provide a countervailing force against regional spikes in unemployment. Because workers may be unemployed for longer periods of time as they retrain or shift occupations, benefits should be restored to 26 weeks across the country. The program should also provide up to 52 weeks of additional benefits in states experiencing high levels of unemployment or rapid job loss to dampen the effects of mass layoffs on local economies. This would minimize the chance that these layoffs would lead to broader regional or national recessions. Finally, with fewer than 20 states having sufficient reserves to weather even a single

[67] Internal OMB calculations, with unemployment insurance coverage measured as UI claims divided by the number of unemployed individuals.

year of recession, the system's long-term solvency must be ensured so that states are fully prepared for the potential increased cost of benefits stemming from job losses.

Some new tools could also help. Work-sharing programs can help employers hold on to their workers by reducing hours instead of laying them off, with workers whose hours are cut receiving partial unemployment benefits. States could also adopt temporary work-based training programs and allow workers to continue receiving unemployment benefits while participating in on-the-job training.

Experienced workers who lose their jobs and have to start over find themselves, on average, earning wages at least 10 percent less than what they earned in the jobs they lost, and workers with more than 20 years of experience in their prior job face wages that are nearly a quarter less than they had previously been making.[68] For this reason, the President has proposed providing wage insurance to workers who were displaced from jobs if they take a job earning less, replacing up to half of their lost wages. Such a program would help soften the blow of the lower wages some displaced workers would have to accept, and would encourage workers to put their skills back to work quickly so they do not join the ranks of the long-term unemployed or leave the workforce.

These proposals represent steps that can be taken to prepare for a continuation of the job impacts that are already occurring in the economy. If, however, the economic impact of AI is relatively intense or comes on relatively quickly, and if the number of jobs affected approaches the estimates of Frey and Osbourne, then the unemployment insurance system may need to be significantly upgraded to match the magnitude of economic disruption and ensure that displaced workers do not leave the labor force.

Give Workers Improved Guidance to Navigate Job Transitions

With the AI revolution, guidance about how to effectively navigate this transition will be all the more critical. Simple and relatively inexpensive services such as job-search assistance, advice about education and training, and access to labor-market information have been found to be quite effective at helping individuals looking for work find employment more quickly. Evaluations typically find that employment services speed up employment by one to two weeks.[69] Additionally, more intensive counseling services have been shown to increase recipients' earnings and decrease the time they spend unemployed.[70] AI can also be applied, to help workers find information that is best suited to their particular skills and circumstances.

Strengthen Other Safety Net Programs

Other programs, such as SNAP and TANF, can provide critical safeguards for individuals who have lost their jobs or seen a substantial drop in income, by supplementing low-income households with food and monetary assistance. SNAP has played an important role in lifting millions of Americans out of poverty over the past five decades by providing key nutrition in times of need, with research showing that its benefits go beyond alleviating hunger to improving short-run and long-run health, educational attainment, and economic self-sufficiency.[71]

The TANF program, in conjunction with SNAP, was originally intended to help needy families achieve self-sufficiency. If automation leads to a rise in the number of families needing basic assistance due to growing inequality and poverty, it will be important to have a strong TANF program in place to help especially hard-hit families get back on their feet and work toward self-sufficiency. The President put forward a package of proposals to strengthen TANF, shoring up a system that has eroded over time, which would better support families affected by AI-driven automation.

In addition, the President's budget includes a new $2 billion in funds to test and scale innovative state and local approaches to aid families facing financial crisis. For families on the brink—including those affected by the entry of automation into a sector or occupation—a temporary illness or broken-down car could put them over the edge into a cycle of poverty. The funding would provide families with the emergency help they need to avert or reverse a downward spiral, and then connect those who need it with longer-term assistance so that families are stabilized.

Box 3: Replacing the Current Safety Net with a Universal Basic Income Could Be Counterproductive

(Excerpt from a speech by CEA Chair Jason Furman, in New York, July 7, 2016)

Fears of mass job displacement as a result of automation and AI, among other motivations, have led some to propose deep changes to the structure of government assistance. One of the more common proposals has been to replace some or all of the current social safety net with a universal basic income (UBI): providing a regular, unconditional cash grant to every man, woman, and child in the United States, instead of, say, Temporary Assistance to Needy Families (TANF), the Supplemental Nutrition Assistance Program (SNAP), or Medicaid.

While the exact contours of various UBI proposals differ, the idea has been put forward from the right by Charles Murray (2006), the left by Andy Stern and Lee Kravitz (2016), and has been a staple of some technologists' policy vision for the future (Rhodes, Krisiloff, and Altman 2016). The different proposals have different motivations, including real and perceived deficiencies in the current social safety net, the belief in a simpler and more efficient system, and also the premise that we need to change our policies to deal with the changes that will be unleashed by AI and automation more broadly.

The issue is not that automation will render the vast majority of the population unemployable. Instead, it is that workers will either lack the skills or the ability to successfully match with the good, high paying jobs created by automation. While a market economy will do much of the work to match workers with new job opportunities, it does not always do so successfully, as we have seen in the past half-century. We should not advance a policy that is premised on giving up on the possibility of workers' remaining employed. Instead, our goal should be first and foremost to foster the skills, training, job search assistance, and other labor market institutions to make sure people can get into jobs, which would much more directly address the employment issues raised by AI than would UBI.

Increase wages, competition, and worker bargaining power

As the Council of Economic Advisers recently discussed in its report on labor market monopsony,[72] there is growing concern about a general reduction in competition among firms for workers and a commensurate shift in the balance of bargaining power toward employers. Market concentration resulting from the development of AI has the potential to worsen these trends. A displacement of workers from industries being disrupted by AI-driven automation would also create slack in the labor market in the short to medium-run, which is likely to depress wages.

[72] Council of Economic Advisers, "Issue Brief: Labor Market Monopsony: Trends, Consequences, and Policy Responses," October 2016 (https://www.whitehouse.gov/sites/default/files/page/files/20161025_monopsony_labor_mrkt_cea.pdf).

Fortunately, there are several approaches described below that can counterbalance these trends and boost Americans' wages and working conditions.

Raise the Minimum Wage

The minimum wage plays a critical role in reducing inequality, increasing consumption, and strengthening the workforce. Raising it could lift at least 4.6 million people out of poverty.[73] Adjusted for inflation, the value of the minimum wage has fallen by nearly a quarter from its peak value in 1968 and is about one-fifth less than it was when President Reagan took office. While Congress has not acted, 22 states and the District of Columbia enacted legislation raising their minimum wage since that time—including the direct passage of new increases by residents of four states (Arizona, Colorado, Maine, and Washington) in the November 2016 elections.

Modernize Overtime and Spread Work

Offering overtime is one of the single most important steps to help grow middle-class wages and spread jobs to more workers. In May 2016, the Department of Labor finalized revisions to its regulations that would extend overtime protections to 4.2 million more Americans and boost wages for workers by $12 billion over the next decade.[74]

Strengthen Unions, Worker Voice, and Bargaining Power

Growing and sustaining the middle class requires strong labor unions. Labor unions help to build the middle class and have been critical in restoring the link between hard work and opportunity so the benefits of economic growth can be more broadly shared.[75] Unions have been at the forefront of establishing the 40-hour work week and the weekend, eliminating child labor laws, and establishing fair benefits and decent wages. Policymakers should explore ways to empower worker voice in the workplace through strengthening protections for organizing and creating new and innovative ways for workers to make their voices heard.

Protect Wages

Given the unique transformation that may be brought by AI, policymakers may also want to consider whether additional wage protections are needed for low- and middle-skilled workers if automation further "hollows out" middle-skill jobs. One of the most powerful upward pressures on wages is a tight labor market, as demand for labor can drive up wages.

[75] Council of Economic Advisers, "Issue Brief: Worker Voice in a Time of Rising Inequality," October 2015 (https://www.whitehouse.gov/sites/default/files/page/files/cea_worker_voice_issue_brief.pdf).

Identify strategies to address differential geographic impact

Automation will happen more quickly in some places than in others, because of local policies, access to capital, innovative thinkers, the skill set of the workforce, proximity to urban centers, the culture of a place, and myriad other reasons. This has the potential to further exacerbate geographic disparities in income and wealth. Many of the places that are already grappling with structural changes in the economy, overall economic shifts, and poverty—and that therefore seem left behind from today's economy—may fall even further behind, cementing an already-present divide.

Below are two ways to address the uneven geographic impact: reduce the geographic barriers to work and pursue "place-based" solutions.

Reduce Geographic Barriers to Work

Geographic inequality can be reduced if workers can move to areas with more opportunity. If the new jobs spawned by AI-driven automation continue the trend of urbanization, though, a lack of affordable housing could make it difficult for lower-income families to access them. Over the past 3 decades, a growing number of barriers—including zoning, land-use regulations, and lengthy development approval processes—have made it increasingly difficult for housing markets to respond to growing demand by increasing the supply of housing. Reducing these barriers to affordable housing, expanding broadband access in poor and rural areas, and improving public transit would all serve to reduce geographic barriers to work.

Another barrier is occupational licensing. Nearly one-quarter of all U.S. workers need a government license to do their jobs.[76] While licensing can offer important health and safety protections to consumers, as well as benefits to workers, the current system often requires unnecessary training, lengthy delays, or high fees. Research shows that licensing can not only reduce total employment in licensed professions, but also that unlicensed workers earn roughly 7 percent lower wages than licensed workers with similar levels of education and experience.[77] In addition, the patchwork of state-by-state licensing rules leads to dramatically different requirements for the same occupations depending on the state in which one lives, potentially burdening workers who aim to move across state lines frequently. Best practices in licensing could allow states, working together or individually, to safeguard the well-being of consumers while maintaining a modernized regulatory system that meets the needs of workers and businesses. For example, groups of states could harmonize regulatory requirements as much as possible, and where appropriate enter into inter-state compacts that recognize licenses from other states to increase the mobility of skilled workers.[78]

[76] The White House, "Occupational Licensing: A Framework for Policymakers," July 2015 (https://www.whitehouse.gov/sites/default/files/docs/licensing_report_final_nonembargo.pdf).
[77] Bureau of Labor Statistics. CEA calculations (https://www.whitehouse.gov/blog/2016/06/17/new-data-show-roughly-one-quarter-us-workers-hold-occupational-license).
[78] The White House, "Occupational Licensing: A Framework for Policymakers," July 2015 (https://www.whitehouse.gov/sites/default/files/docs/licensing_report_final_nonembargo.pdf).

Pursue Place-Based Solutions

To the extent that AI will differentially affect certain cities, policies should be appropriately targeted and can build on and learn from existing Administration policies. The Administration has launched a series of "place-based" initiatives, often focused on economically challenged areas, that empower local leaders in participating communities by helping to connect them with the resources they need to enact their own homegrown solutions for the challenges facing their communities.

Initiatives such as Choice Neighborhoods and Promise Zones take a big-picture approach to development. Their work helps improve communities' access to and delivery of a wide range of services and activities, from building housing and creating jobs, to supporting after-school programs and improving the health of local residents. Agencies across the Federal Government have worked together to cut through red tape and expand opportunity for the people they serve.

Another example, TechHire, is a national initiative to create pathways for more Americans to access well-paying technology jobs and expand local technology sectors in communities across the country. Originally announced by President Obama in 2015, TechHire enables employers to fill entry-level, career-path, skilled technology jobs, by hiring trained job seekers with the ability to do the job—but who are overlooked by typical hiring practices or underrepresented in the IT field.

Modernize tax policy

Tax policy plays a critical role in combating inequality, including income inequality that may be exacerbated by changes in employment from AI-based automation. A progressive tax system helps ensure that the benefits of economic growth are broadly shared, pushing back against increased inequality in pre-tax income. Progressive taxation is critical for raising adequate revenue to fund national security and domestic priorities, including supporting and retraining workers who may be harmed by increased automation, and will only grow more important if outsized gains continue to accrue at the top while other workers are left struggling. It is also critical to maintain and strengthen tax credits that encourage and reward work while helping families make ends meet, such as the Earned Income Tax Credit and Child Tax Credit.

Advanced AI systems could reinforce trends of national income shifting from labor to capital, as discussed above. With investment income heavily concentrated among high-income individuals, this shift could significantly exacerbate the rise in income inequality seen over the past few decades, absent an appropriate policy response. Taxing capital can be a highly progressive form of taxation, yet under the current tax system, individuals' capital income currently enjoys lower tax rates than labor income, and often goes untaxed. President Obama has proposed reforming capital taxation and raising revenue by ensuring that inherited assets are subject to capital gains tax (ending so-called "stepped up basis"); increasing the top rate on capital gains and dividends for high-income households to 28 percent, the rate under President Reagan; and increasing the estate tax by restoring its 2009 parameters and closing loopholes. Some experts have proposed other reforms, including taxing capital gains on a mark-to-market basis and further reforming taxes on wealth transfers.

Preparing for all contingencies

If job displacements from AI are considerably beyond the patterns of technological change previously observed in economic history, a more aggressive policy response would likely be needed, with policymakers potentially exploring countervailing job creation strategies, new training supports, a more robust safety net, or additional strategies to combat inequality.

Conclusion

Responding to the economic effects of AI-driven automation will be a significant policy challenge for the next Administration and its successors. AI has already begun to transform the American workplace, changing the types of jobs available and the skills that workers need to thrive. All Americans should have the opportunity to participate in addressing these challenges, whether as students, workers, managers, or technical leaders, or simply as citizens with a voice in the policy debate.

AI raises many new policy questions, which should be continued topics for discussion and consideration by future Administrations, Congress, the private sector, and the public. Continued engagement among government, industry, technical and policy experts, and the public should play an important role in moving the Nation toward policies that create broadly shared prosperity, unlock the creative potential of American companies and workers, and ensure the Nation's continued leadership in the creation and use of AI.

North America Data Center Trends H2 2023

Technological innovation is driving record demand despite power constraints.

March 6, 2024 10 Minute Read

State of the Market

State of the Market

- In 2023, primary market supply grew 26% year-over-year to 5,174.1 MW.
- An all-time high of 3,077.8 MW was under construction in primary markets, a 46% year-over-year increase. Construction increased most in Atlanta, growing by 211% to 732.6 MW under construction.
- The average monthly asking rate for a 250- to 500-kW requirement across primary markets increased by 18.6% year-over-year, to $163.44 per kW/month. Northern Virginia had a 42% year-over-year price increase, the largest among primary markets.
- Preleasing activity in primary markets is strengthening, with 2,553.1 MW (83%) of the 3,077.8 MW under construction preleased. Cloud providers continue to lease most available power capacity, but artificial intelligence (AI) is also driving significant demand.
- The overall vacancy rate for primary markets remains near a record low, at 3.7%. With few relocation options, most tenants are renewing existing leases rather than seeking new facilities.

- Limited supply and strong demand drove up asking rates in H2 2023. The average asking rate across primary wholesale colocation markets for a 250- to 500-kW requirement increased by 18.6% year-over-year to a record $163.44 per kW/month.
- Occupiers in California and Virginia faced higher operating costs due to rising fuel costs and taxes as well as electricity rate increases in certain local jurisdictions.
- Data center operators are increasingly investing in renewable energy sources and electricity efficiency practices with cooling technologies. While potentially offering long-term savings, this may require significant upfront investment that can cause pricing to increase.
- Generally, there is a material pricing difference between a new-build facility and a legacy data center.
- Construction costs remain elevated due to ongoing shortages in critical materials like generators, chillers and transformers, despite improved supply chain resilience.

Figure 3: Average Asking Rental Rate with Y-o-Y % Change for Primary Markets

Capital Markets Insights

- New capital sources are attracted by record tenant demand, historic low supply, strong rental growth and data center investment performance. There are ample debt financing options across real estate lenders, infrastructure funds, project finance, TMT lenders, life insurance companies and others.
- Total transaction volume of all data center asset sales increased year-over-year, despite a decline in the number of sales transactions.
- Many would-be sellers remained on the sidelines in 2023 in response to global macroeconomic headwinds, lending volatility and cap rate expansion due to interest rates. Overall activity was largely driven by a handful of transactions from REITs seeking to fund their development pipelines.
- Growing investor interest across the risk spectrum, robust development pipelines and a more stable lending environment should drive more capital markets activity in 2024.
- In this higher-interest rate environment, debt yield and debt-service coverage ratio have become the preferred metrics, as opposed to loan-to-value. As a result, overall leverage levels have decreased to meet cash flow metric stipulations.

Notable H2 2023 Investment Activity

This website uses cookies and session recording technology to enhance user experience and to analyze performance and traffic on our website. We also share information about your use of our site with our social media, advertising and analytics partners. You may opt out of some of these technologies using the Cookie Settings link.

- $1.3 billion sale of its 80% interest in three Northern Virginia data centers to TPG Real Estate
- $743 million sale of its 65% interest in two stabilized data centers in Chicago to GI Partners
- $275 million sale of its remaining interest in four Cyxtera data centers to Brookfield
- $200 million sale of its 80% interest in a build-to-suit data center in Northern Virginia to Realty Income

- KDDI closed its $1 billion acquisition of Allied Properties' data center portfolio.
- Manulife Investment Management completed its acquisition of Serverfarm.

Figure 4: Inventory Growth of Primary Data Center Markets since 2020

Source: CBRE Research, CBRE Data Center Solutions, H2 2023.

Valuation Insights

Transactional data remained limited in H2 2023. However, activity increased in Q4, which included asset sales from Cyxtera's bankruptcy and new investments from Brookfield. Although capital costs remain high, market-level supply-and-demand dynamics continue to support strong rent growth. Landlords are eager to end leases in power-constrained markets to re-lease at higher prices. Increased market rent dynamics have the potential to push down cap rates and create opportunity for non-stabilized assets with contracts below the current market rate. Some operators are also exploring underserved markets.

Lending activity persists for projects under construction, especially preleased and stabilized assets where developers and operators have committed to completion schedules to meet promised lease commencement dates. Data center providers and customers continue acquiring land in both primary and secondary markets, with lack of suitable sites causing bidding wars for offerings that meet desired power and fiber requirements.

The largest hyperscalers' new developments will complete construction and become operational in established, secondary and tertiary markets over the next few years—with AI requirements driving further demand. This demand increased through H2, leading to significant debt financing by firms such as Blackstone/QTS, Compass and PGIM to fund new development. Additionally, Vantage Data Centers announced a significant equity infusion to support its growth. Digital Bridge's Marc Ganzi recently projected AI could eventually more than double the cloud services market's power requirements.

Power remains undersupplied and is being exacerbated by a scarcity of as-of-right zoned developable land, which offers a faster and more efficient entitlement process. An outcome of Loudoun County, Virginia's December 2023 zoning ordinance is that sites for data center development on office and research and development park-zoned land must undergo a special exemption review. This could increase the value of greenfield sites for projects breaking ground sooner and/or grandfathered under prior development guidelines, further supporting rising lease rates and/or pushing development into less established markets.

Network Insights

— Notable Network Activity

- More middle-mile fiber infrastructure is being built across the U.S., including Lake Michigan's first carrier-neutral underwater cable project, announced in H2 2023. A component of the $87.5 million project is two new cables under Lake Michigan connecting Grand Rapids, MI to Lakeside Technology Center at 350 E Cermak Rd. in Chicago. This will strengthen Michigan's data center market, offering a new long-haul path and lower latency.
- Last year, major content providers constructed and/or financed more custom fiber networks to interconnect hyperscale facilities. These private networks provide alternative, low-latency, high-capacity pathways between their facilities. Development is continuing in primary markets such as Atlanta, Dallas-Ft. Worth and Northern Virginia, as well as in tertiary markets such as New Albany, OH, Huntsville, AL, Nashville, TN and Altoona, PA.
- Electric companies such as Dominion, Georgia Power and ComEd have begun deploying and maintaining fiber networks in primary and secondary markets—bolstering network resiliency by establishing unique and secure data pathways. Hundreds of local electric utilities providers have also initiated this in tertiary markets.

capacity. Large companies such as AT&T, Verizon, Comcast, Astound Broadband, Crown Castle, Zayo and Lumen also have Chicago-based projects at varying development stages.

View Market Profiles

Data Center Outlook

- Data center infrastructure demand keeps increasing with the economy's continued digitization. Revenue from generative AI software advancements is expected to increase at a 58% compound annual growth rate from 2023 to 2028, according to S&P Market Intelligence. This growth is being fueled by AI's further development across technology, healthcare, finance and other sectors.
- Digital transformation will accelerate the need for processing power, storage and cloud services in colocation and hyperscale data centers to provide organizations with more flexibility. However, certain workloads will remain on-premises.
- Cloud service provider and AI company partnerships with other large U.S. companies may emerge to help bring new AI solutions to end users. This will lead to new edge data centers deployed on- or near-premises across various real estate asset classes, including retail, industrial, office, telecommunications towers and more.
- More operators and developers of industrial, retail, shopping center and office real estate will install low-latency fiber, DAS systems and private networks to attract both data-intensive and connectivity-focused occupiers.
- Colocation pricing is expected to increase by double-digits in 2024, as limited power availability and other constraints prevent available supply from expanding quickly.
- Despite power availability delays and rising construction costs, under-construction activity in primary markets is expected to reach a new all-time high of more than 2,500 MW in 2024.
- New markets across North America, like Wisconsin and Indiana, will host large data center campuses in 2024. This will be influenced by tax incentives, renewable power advancements, transmission and distribution electricity infrastructure and affordable power supply.

Trends to Watch

- International Data Corporation (IDC) forecasts that the global AI software market will grow from $64 billion in 2022 to nearly $251 billion in 2027, a 31.4% compound annual growth rate.
- Data centers will require more storage and compute capacity as business, commerce and personal smart device usage continues rising. There will be over 50 billion Internet of Things-connected (IoT) devices by 2025, according to McKinsey.
- More North American utility companies and municipalities will consider transmission and distribution infrastructure development to expand load growth capacity, reducing electricity grid constraints.
- Adoption of newer, lower-carbon energy solutions such as nuclear, geothermal and hydropower will continue, instead of natural gas and coal.
- Natural gas prices remained stable in 2023, after a volatile 2022. In markets highly dependent on natural gas, such as Atlanta and Dallas-Ft Worth, will we continue to see appetite for additional renewable energy projects such as wind and solar?
- Vacancy rates are projected to be near record-lows in 2024, which will prompt users to shift from lengthy request-for-proposal (RFP) processes to simplified letters-of-intent (LOI) for quicker space procurement.

Market Buzz

Individual market pages now feature 10+ MW pricing tier.

This website uses cookies and session recording technology to enhance user experience and to analyze performance and traffic on our website. We also share information about your use of our site with our social media, advertising and analytics partners. You may opt out of some of these technologies using the Cookie Settings link.

Data center development in the Rocky Mountains has enabled markets like Salt Lake City, UT and Reno, NV to attract major hyperscalers and developers. Tax incentives and ample land availability further this region's appeal. Last year, a Colorado state bill enabling an operator to claim a refund of all state sales and use tax on data center equipment costs failed to pass. But potential new state tax legislation this year could help draw further development.

Columbus/New Albany, OH

Columbus has benefitted tremendously from affordable and reliable regional power availability. Low natural disaster risk, an unregulated electricity market and competitive power costs are major attractions for further regional development. Developers are seeking new frontiers for growth outside of New Albany and into adjacent counties with power capacity. Land prices are more competitive than major markets like Chicago and Northern Virginia, furthering developer interest.

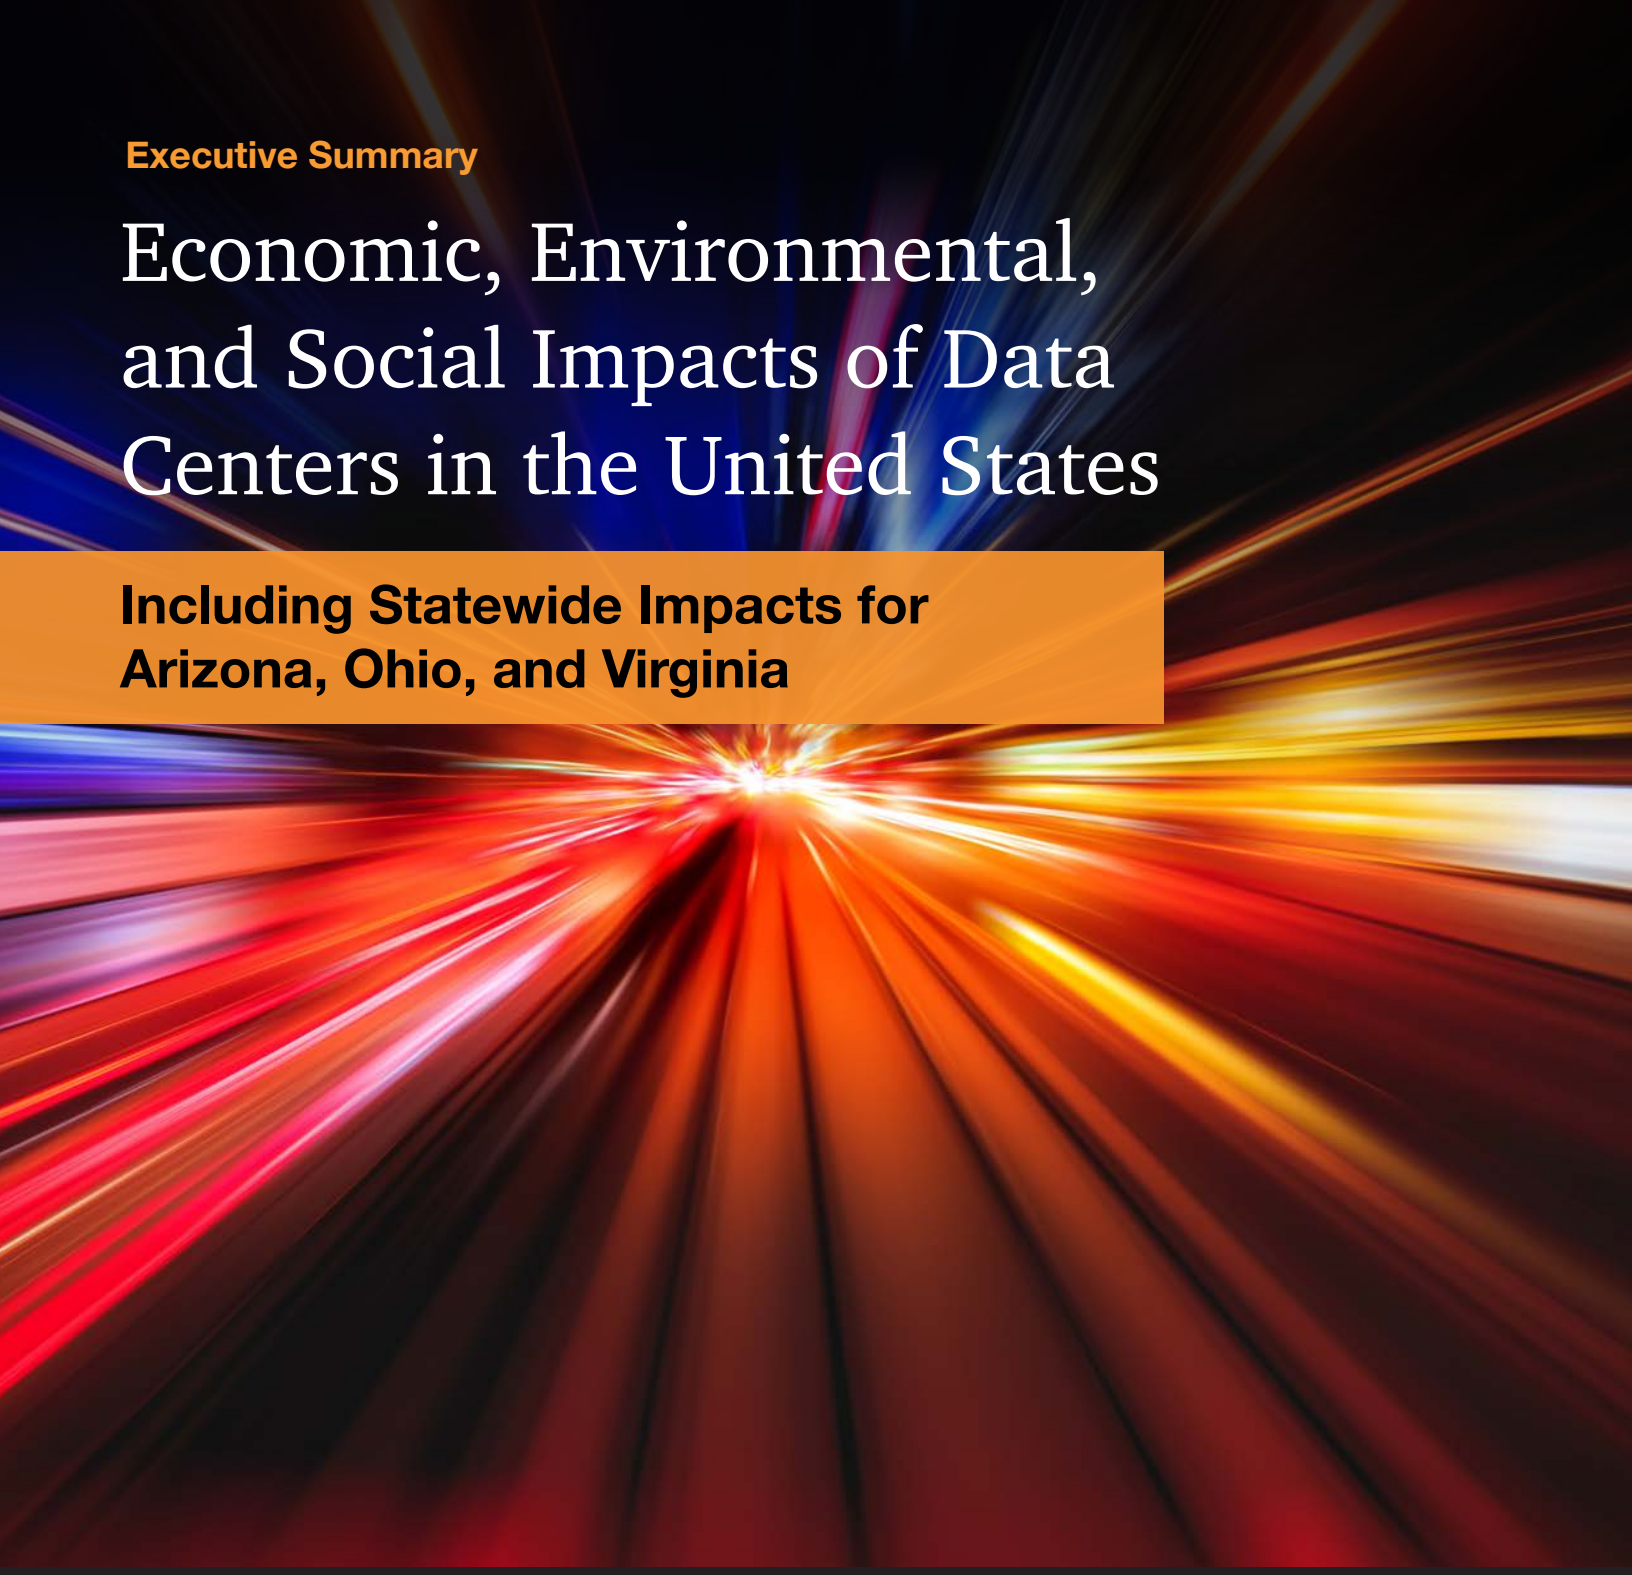
Executive Summary

Economic, Environmental, and Social Impacts of Data Centers in the United States

Including Statewide Impacts for Arizona, Ohio, and Virginia



Prepared for The Data Center Coalition

September 2023

pwc

About

The Data Center Coalition (DCC) engaged PwC to quantify the economic, environmental, and social impacts of the US data center industry. This report presents PwC's impact assessments for the 2017-2021 period at the national level and for three states: Arizona, Ohio, and Virginia. Data for select environmental and social impact metrics were available for 2022 and are included in this report.

DCC is the membership association for the data center industry and represents the industry's interests through a range of activities, including public policy advocacy, thought leadership, stakeholder outreach, and community engagement.

For more information, see www.datacentercoalition.org

At PwC, our purpose is to build trust in society and solve important problems. We're a network of firms in 152 countries with over 327,000 people who are committed to delivering quality in assurance, advisory, and tax services. Find out more and tell us what matters to you by visiting us at: www.pwc.com/US

Executive Summary

Data centers are a crucial component of the modern economy, supporting digitalization, enabling data-driven decision-making, and powering a wide range of industries and services. Their role in storing, processing, and managing data is essential for organizations to thrive in the digital age.

Economic and Tax Impacts

Displayed in **Table E-1** below, the data center industry has had a significant impact on the US economy over the 2017-2021 period. The industry's growth has significantly outpaced that of the overall US economy over this period. From 2017-2021, the US data center industry's direct employment grew by over 17 percent, compared to 2 percent employment growth for the United States overall during the same period.

Between 2017 and 2021, the data center industry's total annual impact (combining its direct, indirect, and induced impacts arising from data center construction and operations) on national employment has grown from 2.9 million jobs in 2017 to 3.5 million jobs in 2021, a 20 percent increase over the period.

Based on preliminary government data for 2022, the industry is estimated to have added more jobs in 2022 than it added over the entire 2017-2021 period, resulting in 560,000 direct jobs and supporting 4.2 million total jobs across the country. This report finds that at the national level, each direct job in the data center industry supports more than six jobs elsewhere in the US economy (including both operational and capital spending impacts).

The US data center industry total* annual economic impacts between 2017-2021 included

2.9 to 3.5 million annual jobs

Each direct job in the data center industry supports more than 6 jobs elsewhere in the US economy.

$209 to $294 billion in annual labor income

Total impact on national labor income grew 40% and labor income earned directly from the data center industry grew by 74% between 2017 and 2021.

$355 to $486 billion in annual GDP contribution

Total contribution to GDP grew 37% from 2017 to 2021. The growth rate in GDP for the US economy as a whole was about half as much over the same time period.

*Total impact includes direct, indirect, and induced impacts. Direct impacts are those occurring directly within the data center industry. Indirect impacts are those occurring within other businesses as part of the supply chain to the data center industry. Induced impacts are those arising from household spending of income earned from the data center industry or its supply chain.

The industry's total annual impact on national labor income grew from $209 billion in 2017 to $294 billion in 2021, a 40 percent increase. The industry's total annual impact on US value added (i.e., contribution to Gross Domestic Product, GDP) grew from $355 billion in 2017 to $486 billion in 2021, a 37 percent increase. Over this same period, the growth rate in GDP for the entire US economy was only about half as much.

Table E-1.– The Economic Impacts of the US Data Center Industry, 2017-2021

Item	2017	2018	2019	2020	2021
Employment (jobs)[1]					
Direct Impact	400,100	420,400	421,600	443,600	468,800
Indirect and Induced Impact	2,525,290	2,628,140	2,683,520	2,883,680	3,039,490
Operational Impact	2,202,100	2,311,400	2,315,700	2,438,200	2,572,900

Source: PwC calculations using the IMPLAN modeling system and public data sources. Details may not add up to totals due to rounding.

1. Employment is defined as the number of payroll and self-employed jobs, including part-time jobs.
2. Labor income is defined as wages, salaries, and benefits as well as proprietors' income.
3. Value added refers to the additional value created at a particular stage of production. It is measured as the difference between the total revenue of the industry and the total cost of its materials, supplies, and services purchased from other businesses, other than capital goods.
4. Total impact includes direct, indirect, and induced impacts. Direct impacts are those occurring directly within the data center industry. Indirect impacts are those occurring within other businesses as part of the supply chain to the data center industry. Induced impacts are those arising from household spending of income earned from the data center industry or its supply chain.

[1]Value added is a term commonly used by economists to describe how much an industry contributes to a nation's or state's GDP. It represents the additional value created at a particular stage of production. Value added is measured as the difference between the total revenue of the industry and the total cost of its materials, supplies, and services purchased from other businesses, other than capital goods. Value added can also be derived as the sum of employee compensation, proprietors' income, pretax income to capital owners from property (including depreciation), and taxes on production and imports (including excise taxes, property taxes, fees, licenses, sales taxes, and custom duties paid by businesses).

Displayed in **Table E-2** below, the data center industry's total contribution to government revenues at the federal, state, and local level, including direct, indirect, and induced impacts, increased from $66.2 billion in 2017 to $99.6 billion in 2021, a 50 percent increase.

Table E-2.– Federal, State, and Local Tax Impact of the US Data Center Industry, 2017-2021[1]

Item	2017	2018	2019	2020	2021
Total Impact ($billions)	**$66.2**	**$74.0**	**$79.0**	**$84.7**	**$99.6**
Social Insurance Contributions	$20.3	$22.7	$24.2	$26.9	$31.5
Corporate Income Taxes	$5.6	$6.3	$6.8	$7.1	$8.2
Personal Income Taxes	$20.2	$22.6	$24.2	$26.7	$31.2
Property Taxes	$8.1	$9.0	$9.6	$9.6	$11.5
Sales/Use Taxes	$9.1	$10.1	$10.8	$10.8	$12.9
Other payments	$2.9	$3.2	$3.4	$3.6	$4.3

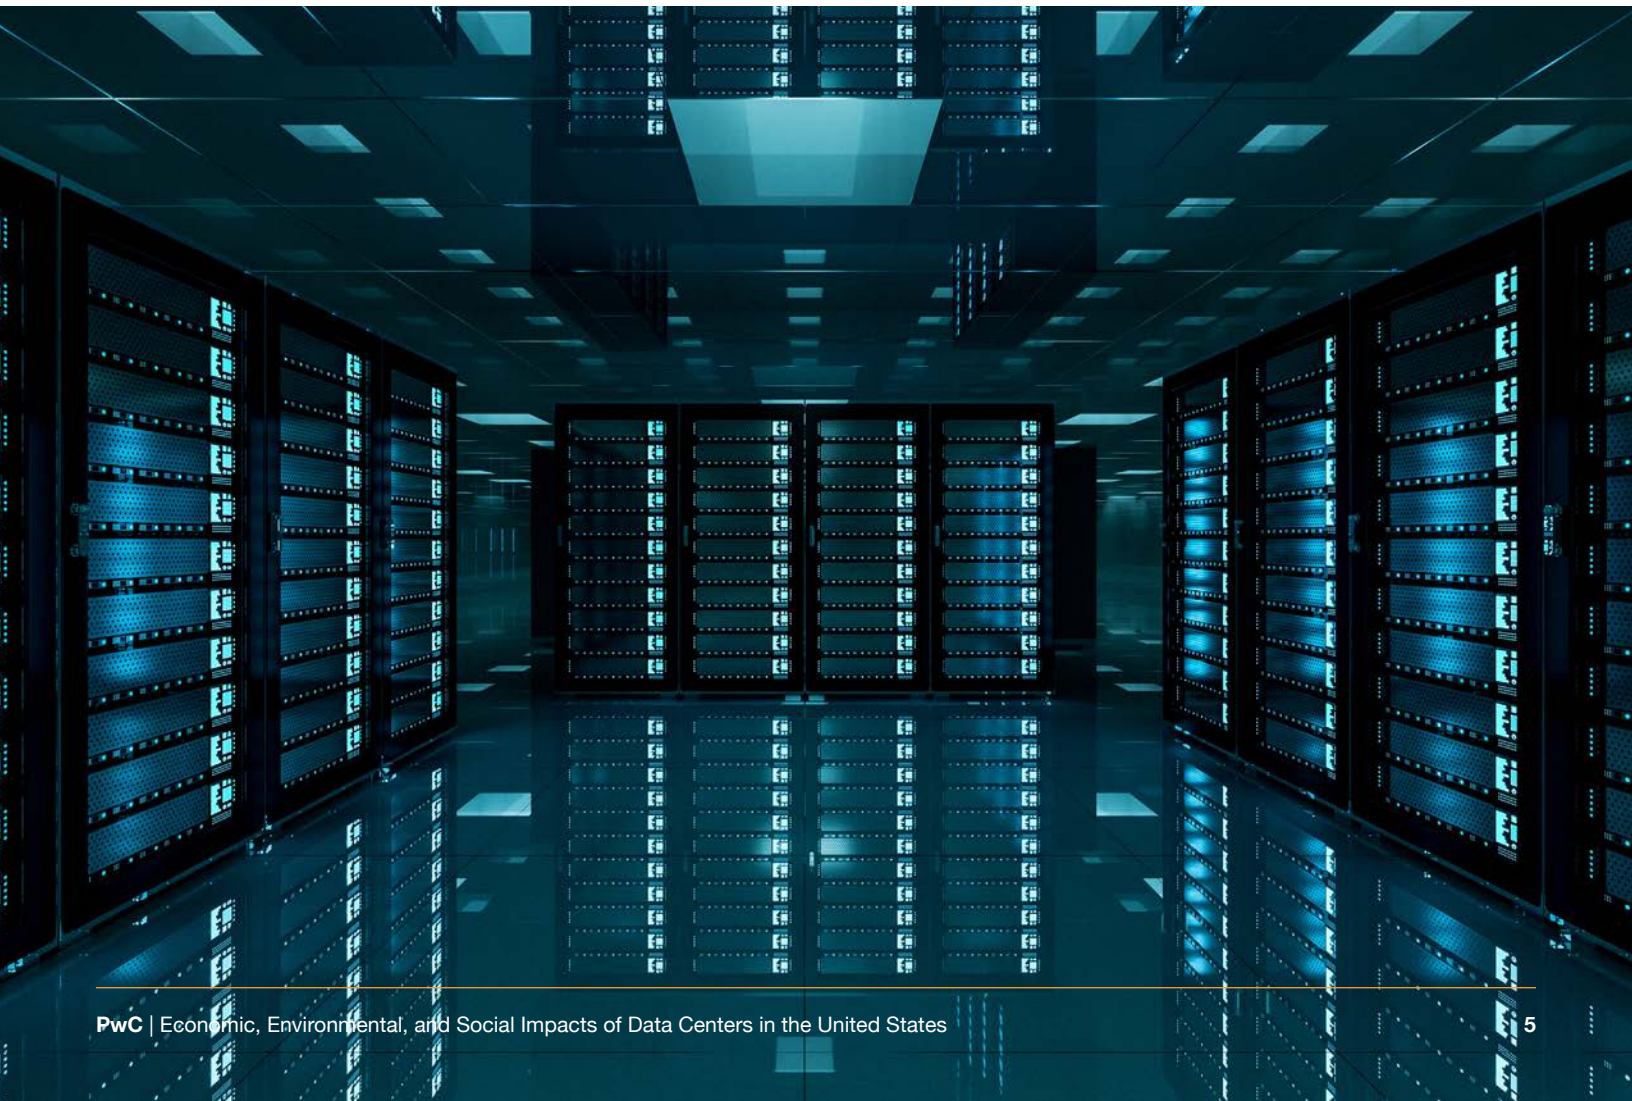
1. Tax impact includes all federal, state, and local taxes directly or indirectly resulting from the US data center industry's construction and operations (including direct, indirect, and induced economic effects).



The data center industry operates in all 50 states and the District of Columbia (see Table A-1 in the appendix). In 40 states and the District of Columbia, data centers directly provided at least 1,000 jobs in each jurisdiction in 2021. We examine the total employment impact of the data center industry in three selected states: Arizona, Ohio, and Virginia. Including direct, indirect, and induced impacts, the industry's total annual employment impact in Arizona increased from 60,810 jobs in 2017 to 72,210 jobs in 2021, an 19 percent increase. The industry's total annual employment impact in Ohio increased from 50,330 jobs in 2017 to 61,740 jobs in 2021, a 23 percent increase. The industry's total annual employment impact in Virginia increased from 65,500 jobs in 2017 to 86,290 jobs in 2021, a 32 percent increase (see **Table E-3**).

Table E-3.– Total Economic Impacts of the Data Center Industry on Selected States, 2017-2021

Item	2017	2018	2019	2020	2021
Employment (jobs)[1]					
Arizona	60,810	62,410	64,920	65,660	72,210
Ohio	50,330	53,050	55,140	59,760	61,740
Virginia	65,500	64,460	74,930	81,770	86,290
Labor Income ($millions)					
Arizona	$3,891	$4,147	$4,382	$4,578	$5,330
Ohio	$2,994	$3,358	$3,614	$3,960	$4,388
Virginia	$5,051	$5,041	$6,214	$6,814	$7,921
GDP ($millions)					
Arizona	$6,965	$6,850	$7,211	$7,460	$8,573
Ohio	$5,027	$5,650	$6,099	$6,462	$7,070
Virginia	$8,913	$8,979	$11,079	$11,732	$13,525

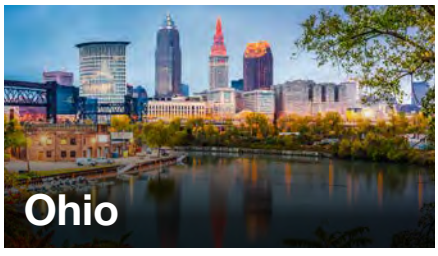
72,210 jobs

The data center industry's total employment impact supported 72,210 jobs in Arizona in 2021, an increase of 19% from 2017.



61,740 jobs

The data center industry's total employment impact supported 61,740 jobs in Ohio in 2021, an increase of 23% from 2017.

86,290 jobs

The data center industry's total employment impact supported 86,290 jobs in Virginia in 2021, an increase of 32% from 2017.

Environmental and Social Impacts

DCC member companies participated in an environmental impact survey and social impact survey in conjunction with this report. Among the small number of survey participants, procurement of clean energy grew substantially over the 2017-2021 period, and participants also reduced their Scope 2[2] greenhouse gas emissions over the period. Data center owners and operators also contributed billions of dollars towards science, technology, engineering, arts, and mathematics (STEAM) education and other workforce development programs, and millions of dollars in charitable contributions.[3] Respondents to the social impact survey also increased workforce representation of women and racial and ethnic minority groups between 2019-2021.

[2] Greenhouse gases are categorized in three scopes. Scope 1 emissions are produced directly from the combustion of fuel. Scope 2 are indirect emissions from the use of purchased electricity. Scope 3 emissions are indirect emissions from a company's value chain, discussed further in Section IV.

Energy demand from data centers growing faster than West can supply, experts say

By Alex Baumhardt (Oregon Capital Chronicle)
Aug. 26, 2024 10 a.m.

In a webinar hosted by regional transmission authorities, data centers were called a “major challenge” for the energy industry, as well as extreme weather

Data centers being rapidly built in the West are becoming an “emerging risk” to electrical grid reliability in the region, according to regional transmission experts.

New data centers, which can be built in as little as 18 months, are far outpacing the growth in new electrical energy supply and transmission, according to members of the Western Electricity Coordinating Council, a nonprofit organization based in Salt Lake City that ensures grid connection and reliability between utilities in 14 western states and parts of Canada and Mexico. Members of the council discussed challenges to grid reliability at a recent webinar first reported by the trade publication RTO Insider.

Data centers like this Google data center, pictured in The Dalles, Ore., in this Oct. 5, 2021 file photo, are far outpacing the growth in new electrical energy supply and transmission, according to a recent study by a nonprofit organization based in Salt Lake City, Utah.

Andrew Selsky / AP

In it, council members said new energy demand from data centers has emerged as a more prescient challenge than meeting energy demand for transportation, also becoming rapidly electrified. The energy and transmission buildout needed to meet these demands is lagging, they said. By the end of 2023, just about half of the new energy buildout anticipated for the West had been completed. This is due in large part to supply chain issues, prices and skilled labor shortages, according to Branden Sudduth, the commission's vice president of reliability planning.

There are more than 700 data centers within those 14 states, including 109 in Oregon, according to the company Data Center Map, and there are more than 5,000 data centers

STREAMING NOW
All Things Considered

Oregon's data center market is the fifth largest in the nation, according to Chicago-based commercial real estate group Cushman & Wakefield. Amazon, Apple, Facebook, Google and X, formerly named Twitter, have massive data centers in eastern Oregon as well as in The Dalles, Hillsboro and Prineville that require enormous amounts of energy to operate. Amazon is planning to build at least 10 more data centers in eastern Oregon, according to reporting by The Oregonian/OregonLive.

THANKS TO OUR SPONSOR: Become a Sponsor

"We're going to see an industry that wants to come online quickly with very large loads, and how are we going to address that?" Sudduth said.

The council in 2023 projected that demand for electricity in the West would increase about 17% by 2033 – that's about twice what it had predicted just the year before. That leap in projected energy use is due largely to the number of large data centers being built, they said. Data centers run on large amounts of energy needed for processing and for cooling servers.

The Portland-based industry trade group Pacific Northwest Utilities Conference Committee has projected electricity demand to grow 30% in the region in the next decade, also due in large part to data centers.

Another major challenge to grid reliability discussed was extreme weather. Sudduth said more energy sources and transmission would need to be developed both at the local level and across the region to ensure a reliable electricity supply.

The power grid in the West faces another big challenge besides data centers: Extreme weather, which can down power lines like those shown in this July 12, 2021 file photo taken near Klamath Falls, Ore.

Nathan Howard / AP

"Pretty much since the August 2020 heat wave event, the weather patterns that we're experiencing are different from what we've typically planned for in the past. A lot of the weather events are more widespread and they last a lot longer than they have in the past," Sudduth said.

STREAMING NOW
All Things Considered

A growing number of utilities in Oregon and Washington are joining a new western regional market for buying and selling energy from one another at set prices for the day ahead, so that they can better handle demand spikes during extreme weather events, such as heat waves or ice storms. The Bonneville Power Administration – responsible for about 28% of all power consumed in the Northwest – is expected to announce soon whether it will join most other Western utilities in this Western day ahead market, or go to a competing day ahead market run by the Southwest Power Pool, based in Arkansas.

THE 2023 ANNUAL REPORT OF THE BOARD OF TRUSTEES OF THE FEDERAL OLD-AGE AND SURVIVORS INSURANCE AND FEDERAL DISABILITY INSURANCE TRUST FUNDS

LETTER OF TRANSMITTAL

BOARD OF TRUSTEES OF THE
FEDERAL OLD-AGE AND SURVIVORS INSURANCE AND
FEDERAL DISABILITY INSURANCE TRUST FUNDS,
Washington, D.C., March 31, 2023

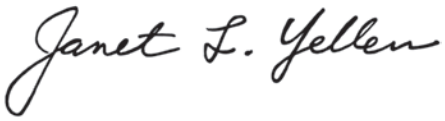
HON. KEVIN MCCARTHY,
Speaker of the House of Representatives.

HON. KAMALA D. HARRIS,
President of the Senate.

DEAR MR. SPEAKER AND MADAM PRESIDENT:

We have the honor of transmitting to you the 2023 Annual Report of the Board of Trustees of the Federal Old-Age and Survivors Insurance and Federal Disability Insurance Trust Funds, the 83rd such report.

Respectfully,



JANET YELLEN,
Secretary of the Treasury,
and Managing Trustee of the Trust Funds.

JULIE A. SU,
Acting Secretary of Labor,
and Trustee.

XAVIER BECERRA,
Secretary of Health and Human Services,
and Trustee.

KILOLO KIJAKAZI,
Acting Commissioner of
Social Security, and Trustee.

VACANT,
Public Trustee.

VACANT,
Public Trustee.

SCOTT L. FREY,
Chief of Staff, Social Security Administration,
and Acting Secretary, Board of Trustees.

THE 2023 ANNUAL REPORT OF THE BOARD OF TRUSTEES OF THE FEDERAL OLD-AGE AND SURVIVORS INSURANCE AND FEDERAL DISABILITY INSURANCE TRUST FUNDS

I. INTRODUCTION

The Old-Age, Survivors, and Disability Insurance (OASDI) program makes monthly income available to insured workers and their families at retirement, death, or disability. The OASDI program consists of two parts. Retired workers, their families, and survivors of deceased workers receive monthly benefits under the Old-Age and Survivors Insurance (OASI) program. Disabled workers and their families receive monthly benefits under the Disability Insurance (DI) program.

The Social Security Act established the Board of Trustees to oversee the financial operations of the OASI and DI Trust Funds. The Board is composed of six members. Four members serve by virtue of their positions in the Federal Government: the Secretary of the Treasury, who is the Managing Trustee; the Secretary of Labor; the Secretary of Health and Human Services; and the Commissioner of Social Security. The President appoints and the Senate confirms the other two members to serve as public representatives. These two positions are currently vacant. The Deputy Commissioner of the Social Security Administration serves as Secretary of the Board.

The Social Security Act requires that the Board, among other duties, report annually to the Congress on the actuarial status and financial operations of the OASI and DI Trust Funds. The 2023 report is the 83rd such report. The intermediate (best estimate) assumptions for this report were set in December 2022. The Trustees will continue to monitor future developments and modify the projections in later reports as appropriate.

II. OVERVIEW

A. HIGHLIGHTS

This section summarizes the report's major findings.

Now, more than 3 years after the start of the COVID-19 pandemic, the acute stage of the pandemic appears to be over, but the Trustees expect there will be residual effects on the population and the economy for years to come. Since the assumptions for last year's report were set, the Trustees have reassessed their expectations for the economy in light of recent developments, including updated data on inflation and output, and have revised down the levels of gross domestic product (GDP) and labor productivity by about 3 percent over the projection period. Assumptions for growth are largely unchanged after the first 10 years of the projection period. The intermediate (best estimate) assumptions for this report were set in December 2022. The Trustees will continue to monitor developments and modify the projections in later reports.

In 2022

At the end of 2022, the OASDI program was providing benefit payments[1] to about 66 million people: 51 million retired workers and dependents of retired workers, 6 million survivors of deceased workers, and 9 million disabled workers and dependents of disabled workers. During the year, an estimated 181 million people had earnings covered by Social Security and paid payroll taxes on those earnings. The total cost of the program in 2022 was $1,244 billion. Total income was $1,222 billion, which consisted of $1,155 billion in non-interest income and $66 billion in interest earnings. Asset reserves held in special issue U.S. Treasury securities declined from $2,852 billion at the beginning of the year to $2,830 billion at the end of the year.

Short-Range Results (2023-32)

Under the Trustees' intermediate assumptions, Social Security's total cost is projected to be higher than its total income in 2023 and all later years. Total cost began to be higher than total income in 2021. Social Security's cost has exceeded its non-interest income since 2010.

[1] The definitions of "benefit payments" and other terms appear in the Glossary.

To illustrate the actuarial status of the Social Security program as a whole, the operations of the OASI and DI Trust Funds are often shown on a combined basis as OASDI. However, by law, the two funds are separate entities and therefore the combined fund operations and reserves are hypothetical. The combined reserves are projected to decrease from $2,830 billion at the beginning of 2023 to $590 billion at the end of 2032, the last year of the short-range period.

The reserves of the combined OASI and DI Trust Funds along with projected program income are sufficient to cover projected program cost over the next 10 years under the intermediate assumptions. However, the ratio of reserves to annual cost is projected to decline from 204 percent at the beginning of 2023 to 96 percent at the beginning of 2029 and remain below 100 percent for the remainder of the 10-year short-range period. Because this ratio falls below 100 percent by the end of the 10th projection year, the combined OASI and DI Trust Funds fail the Trustees' test of short-range financial adequacy. Considered separately, the OASI Trust Fund fails this test, but the DI Trust Fund satisfies the test. For last year's report, the combined reserves were projected to be 211 percent of annual cost at the beginning of 2023 and 57 percent at the beginning of 2032.

Long-Range Results (2023-97)

Under the Trustees' intermediate assumptions, OASDI cost is projected to exceed total income in 2023, and the dollar level of the hypothetical combined trust fund reserves declines until reserves become depleted in 2034, one year earlier than projected in last year's report. Figure II.D2 shows the implications of reserve depletion for the combined OASI and DI Trust Funds. Considered separately, the OASI Trust Fund reserves become depleted in 2033, one year earlier than projected in last year's report, and, as in last year's report, the DI Trust Fund reserves do not become depleted within the 75-year long-range projection period.[1]

The DI program continued to have low levels of disability applications and benefit awards through 2022. Disability applications have declined substantially since 2010, and the total number of disabled-worker beneficiaries in current payment status has been falling since 2014. For this report, disability applications are assumed to rise gradually from current low levels, resulting

[1] If the OASI Trust Fund reserves were to become depleted in 2033 as is currently projected, the operations of the hypothetical combined OASI and DI Trust Funds would not reflect the aggregated operation of the OASI Trust Fund and the DI Trust Fund because part of the OASI benefits could not be paid without a change in the law. The values shown for the hypothetical combined trust funds assume the law will have been changed to permit the transfer of resources between funds as needed.

in a rise in the age-sex-adjusted disability incidence rate to an ultimate rate of 4.8 per thousand exposed by the end of the short-range projection period.

OASDI cost has been generally increasing much more rapidly than non-interest income since 2008 and is projected to continue to do so through about 2040. In this period, the retirement of the baby-boom generation is increasing the number of beneficiaries much faster than the increase in the number of covered workers, as subsequent lower-birth-rate generations replace the baby-boom generation at working ages. Between about 2040 and 2055, OASDI cost and non-interest income are projected to generally increase at more similar rates as the cost rate (the ratio of program cost to taxable payroll) roughly stabilizes, reflecting the return to birth rates above 2 children per woman between 1990 and 2008. Between 2055 and 2078, OASDI cost is projected to grow significantly faster than income because of the period of historically low birth rates starting with the recession of 2007-09. From 2078 to 2097, cost is projected to grow somewhat slower than income, as birth rates are assumed to return to a level of 2 children per woman for 2056 and thereafter.

Over the 75-year long-range period 2023-97, the projected OASDI annual cost rate increases from 14.53 percent of taxable payroll for 2023 to 18.50 percent for 2078, and then decreases generally to 17.75 percent for 2097. The projected cost rate for 2097 is 4.35 percent of taxable payroll more than the projected income rate (the ratio of non-interest income to taxable payroll) for 2097. For last year's report, projected OASDI cost for 2097 was 17.65 percent, or 4.26 percent of payroll more than the annual income rate for that year. Expressed in relation to the projected gross domestic product (GDP), OASDI cost generally rises from 5.2 percent of GDP for 2023 to a peak of about 6.3 percent for 2076, and then declines to 6.0 percent by 2097.

The actuarial deficit is 3.61 percent of taxable payroll for the 75-year projection period through 2097, increased from 3.42 percent of taxable payroll for the 75-year projection period through 2096 in last year's report. The closely-related open-group unfunded obligation for OASDI is 3.42 percent of taxable payroll over the 75-year projection period through 2097, increased from 3.24 percent of payroll over the 75-year projection period through 2096 in last year's report. The open-group unfunded obligation for OASDI is $22.4 trillion in present value over the 75-year projection period through 2097 and is $2.0 trillion more than the measured level of $20.4 trillion over the 75-year projection period through 2096 in last year's report. The actuarial deficit rounds to 1.3 percent and the unfunded obligation rounds to 1.2 percent of GDP over the 75-year projection period through 2097, compared to 1.2 percent for the actuarial deficit and 1.1 percent for the unfunded

obligation over the 75-year projection period through 2096 in last year's report.

If the assumptions, methods, starting values, and the law had all remained unchanged, the actuarial deficit would have increased to 3.48 percent of taxable payroll, and the unfunded obligation would have risen to 3.29 percent of taxable payroll and $21.2 trillion in present value due to the change in the valuation date and the extension of the valuation period through an additional year, 2097. The actuarial deficit increased significantly in this year's report primarily due to recent economic experience and changes in near-term economic assumptions, as described in detail in section IV.B.6 of this report. In particular, the level of potential GDP is assumed to be about 0.9 percent lower than the level estimated in last year's report for 2020, widening to about 3.0 percent lower by 2026 and for all years thereafter. This shift was made as the Trustees lowered the levels of GDP and total economy labor productivity in response to recent economic developments, including higher-than-expected inflation rates and lower-than-expected output growth.

To illustrate the magnitude of the 75-year actuarial deficit, consider that for the combined OASI and DI Trust Funds to remain fully solvent throughout the 75-year projection period ending in 2097: (1) revenue would have to increase by an amount equivalent to an immediate and permanent payroll tax rate increase of 3.44 percentage points[1] to 15.84 percent beginning in January 2023; (2) scheduled benefits would have to be reduced by an amount equivalent to an immediate and permanent reduction of 21.3 percent applied to all current and future beneficiaries effective in January 2023, or 25.4 percent if the reductions were applied only to those who become initially eligible for benefits in 2023 or later; or (3) some combination of these approaches would have to be adopted.

If substantial actions are deferred for several years, the changes necessary to maintain Social Security solvency would be concentrated on fewer years and fewer generations. Significantly larger changes would be necessary if action is deferred until the combined trust fund reserves become depleted in 2034. For example, maintaining 75-year solvency through 2097 with changes that begin in 2034 would require: (1) an increase in revenue by an amount equivalent to a permanent 4.15 percentage point payroll tax rate increase to 16.55 percent starting in 2034, (2) a reduction in scheduled benefits by an

[1] The 3.44 percentage point increase in the payroll tax rate required to achieve 75-year solvency through 2097 differs somewhat from the 3.61 percent actuarial deficit. This is primarily because the rate increase required to achieve 75-year solvency reflects a zero trust fund reserve at the end of the period in 2097, whereas the 3.61 percent actuarial deficit incorporates an ending trust fund reserve equal to one year's cost. While such an increase in the payroll tax rate would cause some behavioral changes in earnings and ensuing changes in benefit levels, such changes are not included in these calculations because they are assumed to have roughly offsetting effects on OASDI actuarial status over the 75-year long-range period as a whole.

amount equivalent to a permanent 25.2 percent reduction in all benefits starting in 2034, or (3) some combination of these approaches.

Conclusion

Under the intermediate assumptions, the projected hypothetical combined OASI and DI Trust Fund asset reserves become depleted and unable to pay scheduled benefits in full on a timely basis in 2034. At the time of depletion of these combined reserves, continuing income to the combined trust funds would be sufficient to pay 80 percent of scheduled benefits. The OASI Trust Fund reserves are projected to become depleted in 2033, at which time OASI income would be sufficient to pay 77 percent of OASI scheduled benefits. DI Trust Fund asset reserves are not projected to become depleted during the 75-year period ending in 2097.

Lawmakers have a broad continuum of policy options that would close or reduce Social Security's long-term financing shortfall. Estimates for many such policy options are available at ssa.gov/OACT/solvency/provisions/.

The Trustees recommend that lawmakers address the projected trust fund shortfalls in a timely way in order to phase in necessary changes gradually and give workers and beneficiaries time to adjust to them. Implementing changes sooner rather than later would allow more generations to share in the needed revenue increases or reductions in scheduled benefits. Social Security will play a critical role in the lives of 67 million beneficiaries and 180 million covered workers and their families during 2023. With informed discussion, creative thinking, and timely legislative action, Social Security can continue to protect future generations.

B. TRUST FUND FINANCIAL OPERATIONS IN 2022

Table II.B1 shows the income, cost, and asset reserves for the OASI, the DI, and the combined OASI and DI Trust Funds in calendar year 2022.

Table II.B1.—Summary of 2022 Trust Fund Financial Operations
[In billions]

	OASI	DI	OASDI
Asset reserves at the end of 2021	$2,752.6	$99.4	$2,852.0
Total income in 2022[a]	1,056.7	165.1	1,221.8
Net payroll tax contributions[b]	945.9	160.7	1,106.6
Interest	63.5	2.8	66.4
Taxation of benefits	47.1	1.6	48.6
Total cost in 2022	1,097.5	146.5	1,243.9
Benefit payments	1,088.1	143.6	1,231.7
Administrative expenses	4.0	2.7	6.7
Railroad Retirement financial interchange	5.3	.2	5.5
Net increase in asset reserves in 2022	-40.7	18.6	-22.1
Asset reserves at the end of 2022	2,711.9	118.0	2,829.9

[a] Includes $0.2 billion in reimbursements from the General Fund of the Treasury and less than $50 million in gifts. See section III.A for details.
[b] Includes adjustments for prior calendar years.

Note: Components may not sum to totals because of rounding.

In 2022, net payroll tax contributions accounted for 90.6 percent of total trust fund income. Net payroll tax contributions consist of taxes paid by employees, employers, and the self-employed on earnings covered by Social Security. These taxes are paid on covered earnings up to a specified maximum annual amount, which was $147,000 in 2022. Table II.B2 shows the payroll tax rates for 2022.

Table II.B2.—Payroll Tax Contribution Rates for 2022
[In percent]

	OASI	DI	OASDI
Payroll tax contribution rate for employees	5.3	0.9	6.2
Payroll tax contribution rate for employers	5.3	.9	6.2
Payroll tax contribution rate for self-employed persons	10.6	1.8	12.4

Interest earned on invested trust fund asset reserves accounted for 5.4 percent of OASI and DI combined trust fund income in 2022. Revenue from subjecting up to 50 percent of Social Security benefits to Federal personal income taxation for beneficiaries with income (including half of bene-

fits and all non-taxable interest received) exceeding specified levels accounted for 4.0 percent of OASDI income.

The Department of the Treasury invests all trust fund income in interest-bearing securities issued by the U.S. Government. In 2022, the combined trust fund reserves (the excess of all past income over all past cost) earned interest at an effective annual rate of 2.4 percent.

Retirement, survivor, and disability benefits accounted for 99.0 percent of OASI and DI combined trust fund cost in 2022. The expenses for administering the Social Security program were 0.5 percent of total cost. The net payment to the Railroad Retirement Social Security Equivalent Benefit Account from the combined OASI and DI Trust Funds accounted for 0.4 percent of total OASDI cost.

Trust fund reserves provide the basis for paying benefits. Combined trust fund reserves decreased by $22.1 billion during 2022 because income to the combined funds, including interest earned on trust fund reserves, was less than total cost. In last year's report, combined reserves were projected to decrease by $46.8 billion in 2022. At the end of 2022, the combined reserves of the OASI and the DI Trust Funds were $2,829.9 billion, or 204 percent of estimated cost [1] for 2023. In comparison, the combined reserves at the end of 2021 were 229 percent of actual cost for 2022.

[1] Estimated cost is based on the intermediate set of assumptions.

C. ASSUMPTIONS ABOUT THE FUTURE

The future income and cost of the OASI and DI Trust Funds will depend on many factors, including the size and characteristics of the population receiving benefits, the level of monthly benefit amounts, the size of the workforce, and the level of covered workers' earnings. These factors will depend in turn on future birth rates, death rates, immigration, marriage and divorce rates, retirement-age patterns, disability incidence and termination rates, employment rates, productivity gains, wage increases, inflation, interest rates, and many other demographic, economic, and program-specific factors.

The Trustees set key demographic, economic, and programmatic assumptions for three alternative scenarios. The intermediate assumptions reflect the Trustees' best estimates of future experience. Therefore, most of the results presented in this overview indicate outcomes under the intermediate assumptions only. Any projection of the future is, of course, uncertain. For this reason, results are also presented under low-cost and high-cost alternatives to provide a range of possible future experience. The actual future costs are unlikely to be as extreme as those portrayed by the low-cost or high-cost projections. A separate section on the uncertainty of the projections, beginning on page 19, highlights the implications of these alternative scenarios.

The Trustees reexamine the assumptions each year in light of recent experience and new information. This annual review helps to ensure that the Trustees' assumptions provide the best estimate of future possibilities.

There are several important assumptions about near-term growth rates and parameter levels that have significant effects over both the short-range (10-year) and long-range (75-year) projection periods. The most significant change in the results presented in this year's report derives from a change in the assumed levels of productivity and GDP in the first several years of the projection. Section IV.B.6 provides additional details about this change.

For each of the three alternative scenarios, Table II.C1 presents key demographic, economic, and programmatic assumptions used for projections beyond the tenth projection year.

Table II.C1.—Key Assumptions[a] and Summary Measures for the Last 65 Years of the Long-Range (75-Year) Projection Period

Assumption	Intermediate	Low-cost	High-cost
Demographic:			
Average annual total fertility rate (children per woman)[b]	1.99	2.19	1.69
Average annual percentage reduction in total age-sex-adjusted death rates	.74	.28	1.24
Average annual net lawful permanent resident (LPR) immigration (in thousands)	788	1,000	595
Average annual net other-than-LPR immigration (in thousands)	457	683	234
Economic:			
Average annual percentage change in:			
Productivity (total U.S. economy)	1.63	1.93	1.33
Average wage in covered employment (nominal)	3.56	4.79	2.35
Average wage in covered employment (real)	1.14	1.74	.54
Consumer Price Index (CPI-W)	2.40	3.00	1.80
Unemployment rate (percent, age-sex-adjusted)	4.5	3.5	5.5
Annual trust fund real interest rate (percent)	2.3	2.8	1.8
Programmatic:			
Average annual disability incidence rate (per 1,000 exposed, age-sex-adjusted)	4.8	3.8	5.8
Average annual disability recovery rate (per 1,000 beneficiaries, age-sex-adjusted)	10.4	12.5	8.3

[a] See chapter V for details, including historical and projected values.
[b] The ultimate total fertility rate is 2.00 for the intermediate assumptions, 2.20 for the low-cost assumptions, and 1.70 for the high-cost assumptions. The ultimate rate is reached on a cohort basis over the lifetime of girls attaining age 14 in 2021 and later, so that the ultimate rate on an annual (or period) basis is reached in 2056. See section V.A.1 for additional details.

D. PROJECTIONS OF FUTURE FINANCIAL STATUS

Short-Range Actuarial Estimates

For the short-range period (2023 through 2032), the Trustees measure financial adequacy using trust fund ratios, which compare projected asset reserves at the beginning of a year to projected program cost for the year. Maintaining a trust fund ratio of 100 percent or more—that is, reserves at the beginning of a year at least equal to projected cost for the year—is a good indication that the trust fund can cover most short-term contingencies. The Trustees' test of short-range financial adequacy is met if under the intermediate assumptions (1) the estimated trust fund ratio is at least 100 percent at the beginning of the period and remains at or above 100 percent throughout the 10-year short-range period (from the beginning of 2023 through the end of 2032, which is indicated by the trust fund ratio at the beginning of 2033) or (2) the ratio is initially less than 100 percent, but reaches at least 100 percent within five years and remains at or above 100 percent throughout the remainder of the 10-year short-range period.

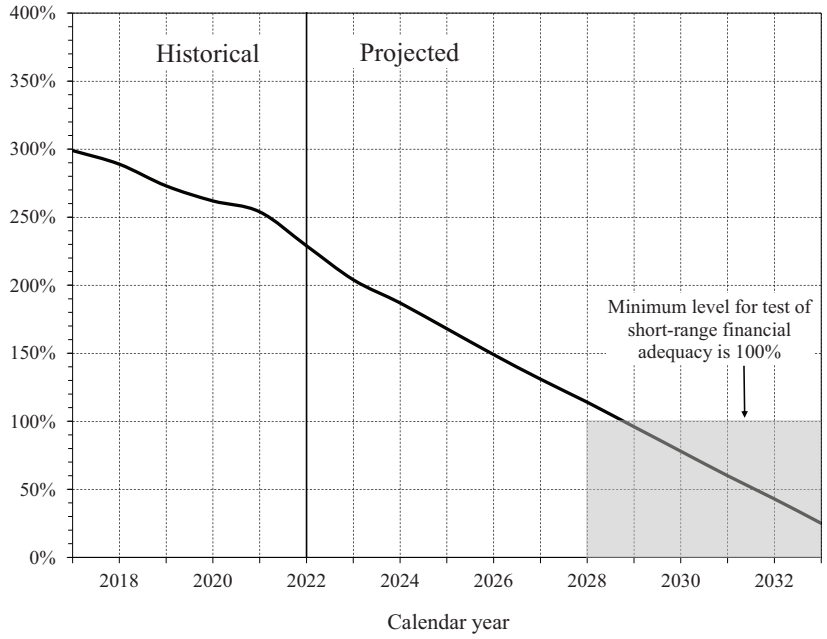
The projected trust fund ratio under the intermediate assumptions for the OASI Trust Fund declines to 91 percent by the beginning of 2029 and remains below 100 percent for the remainder of the short-range period. Therefore, OASI fails the test of short-range financial adequacy.

The DI Trust Fund satisfies the test of short-range financial adequacy because the trust fund ratio, while below 100 percent at the beginning of the projection period, reaches 100 percent within five years and stays above 100 percent throughout the remainder of the 10-year period. The DI trust fund ratio is estimated to be 77 percent at the beginning of 2023. The projected DI trust fund ratio then increases to 107 percent by the beginning of 2026 and continues to increase for the remainder of the short-range period.

On a combined basis, OASDI fails the test of short-range financial adequacy because the OASDI trust fund ratio declines to 96 percent by the beginning of 2029 and remains below 100 percent for the remainder of the short-range period. Figure II.D1 shows that the trust fund ratio for the combined OASI and DI Trust Funds declines steadily after 2010.

For this report, combined reserves are projected to decline in 2023, as they did beginning in 2021, and to continue to decline throughout the remainder of the short-range period.

Figure II.D1.—Short-Range OASI and DI Combined Trust Fund Ratio
[Asset reserves at beginning of year as a percentage of annual cost for the year, under intermediate assumptions]



Long-Range Actuarial Estimates

The Trustees use three types of measures to assess the actuarial status of the program over the long-range period (2023 through 2097): (1) annual cash-flow measures, including income rates, cost rates, and balances; (2) trust fund ratios; and (3) summary measures such as actuarial balances and open-group unfunded obligations. These measures are expressed as percentages of taxable payroll, as percentages of gross domestic product (GDP), or in dollars. Appendix F also presents summary measures over the infinite horizon. The infinite horizon values provide an additional indication of Social Security's very-long-run financial condition.

The Trustees also apply a test of long-range close actuarial balance each year. To satisfy the test, a trust fund must meet two conditions: (1) the trust fund satisfies the test of short-range financial adequacy, and (2) the trust fund ratio stays above zero throughout the 75-year projection period, such that benefits would be payable in a timely manner throughout the period. Under the intermediate assumptions, the OASI Trust Fund and the combined OASI

and DI Trust Funds fail the test of long-range close actuarial balance, while the DI Trust Fund satisfies the test.

Annual Income Rates, Cost Rates, and Balances

Figure II.D2 illustrates the year-by-year relationship among OASDI income (excluding interest), cost (including scheduled benefits), and expenditures (including payable benefits) starting in 2000 and for the full 75-year projection period (2023 through 2097). The figure shows all values as percentages of taxable payroll. Under the intermediate assumptions, demographic factors by themselves cause the projected cost rate to rise rapidly for the next two decades, level off somewhat in about 2040 through 2055, rise temporarily between 2055 and 2078, and then decline somewhat through 2097. The projected income rate is relatively stable at about 13 percent throughout the 75-year period ending in 2097.

Annual OASDI cost has exceeded non-interest income every year beginning with 2010. Cost is projected to continue to exceed non-interest income throughout the 75-year valuation period. Cost is projected to exceed total income in 2023, as it has each year beginning in 2021, and combined OASI and DI Trust Fund reserves decline until they become depleted in 2034. After trust fund reserve depletion, continuing income is sufficient to support expenditures at a level of 80 percent of program cost for the rest of 2034, declining to 74 percent for 2097. Figure II.D2 depicts OASDI operations as a combined whole. However, under current law, the differences between scheduled and payable benefits for OASI would begin in 2033, when the OASI Trust Fund is projected to become depleted. Scheduled benefits equal payable benefits for DI throughout the entire 75-year projection period, because the DI Trust Fund is not projected to become depleted during the period.

Figure II.D2.—OASDI Income, Cost, and Expenditures as Percentages of Taxable Payroll
[Under intermediate assumptions]

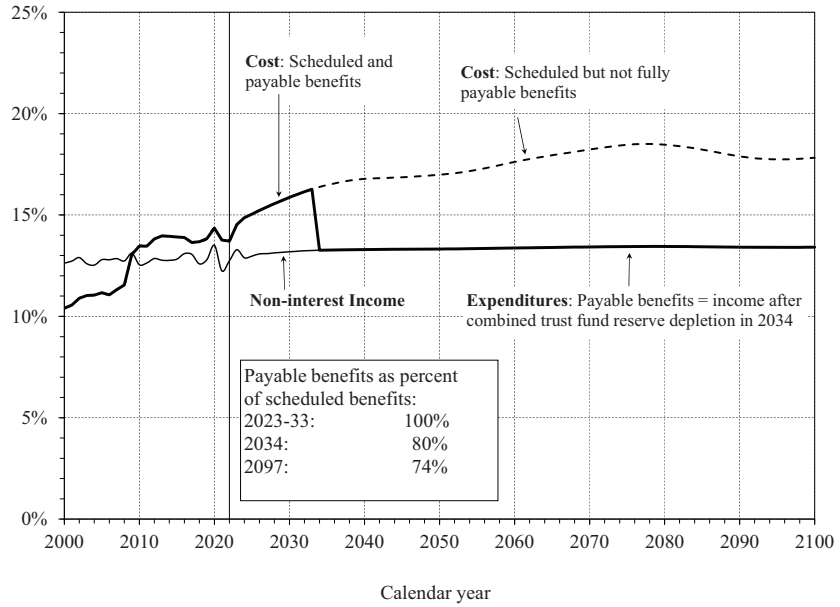


Figure II.D3 shows the estimated number of covered workers per OASDI beneficiary. Figures II.D2 and II.D3 illustrate the inverse relationship between cost rates and the number of workers per beneficiary. In particular, the projected future increase in the cost rate reflects a projected decline in the number of covered workers per beneficiary. There were about 2.8 workers for every OASDI beneficiary in 2022. This ratio had been stable, remaining between 3.2 and 3.4 from 1974 through 2008, and has generally declined since then, initially due to the economic recession of 2007-09 and the beginning of a notable demographic shift. This shift causes the ratio of workers to beneficiaries to decline, as workers of lower-birth-rate generations replace workers of the baby-boom generation. The decline in the ratio slowed substantially between 2013 and 2019 as the recovery of the economy largely offset the demographic shift during that period. The ratio declined slightly in 2020 and then increased slightly by 2022, due to effects of the pandemic-induced recession and recovery on the number of workers. The underlying demographic shift will continue to drive this ratio down over the next 10 to 15 years. The ratio of workers to beneficiaries reaches 2.3 by 2035 when the baby-boom generation will have largely retired, and will generally decline very gradually thereafter due to increasing longevity.

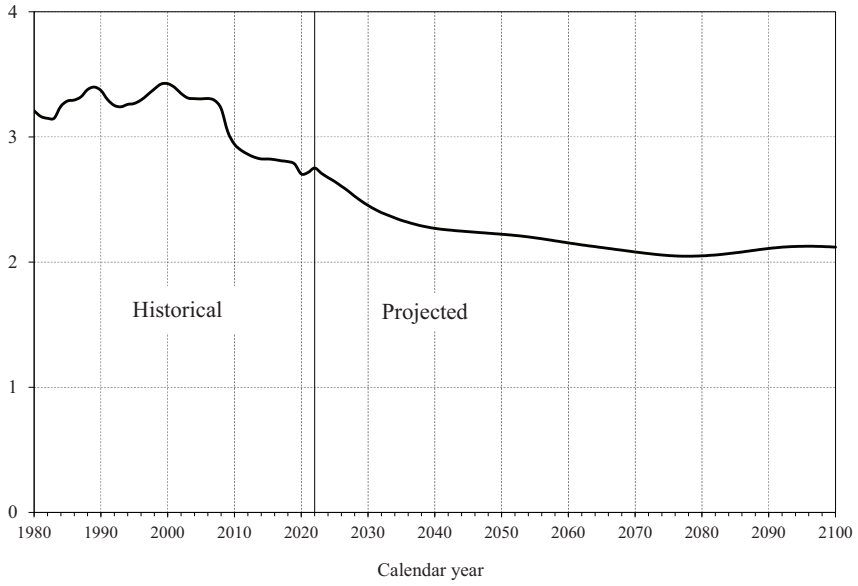
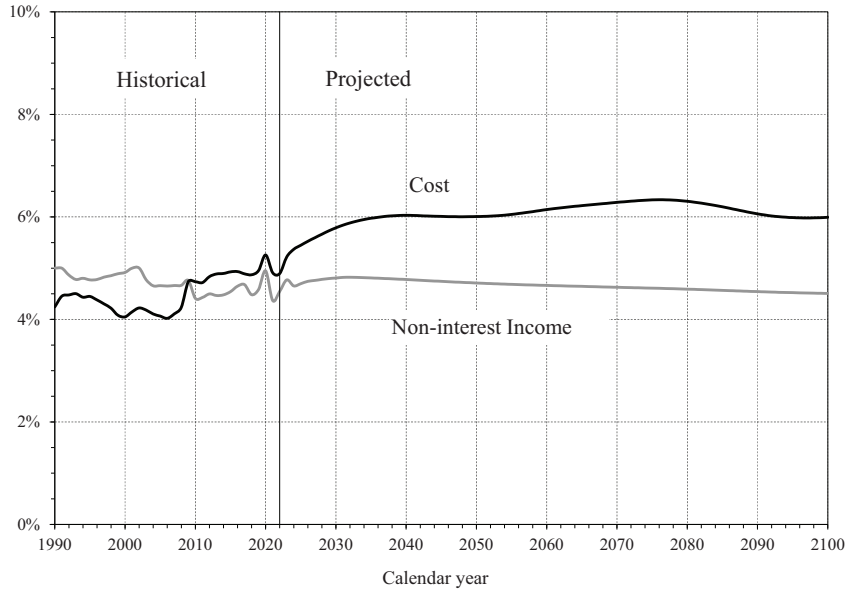
Figure II.D3.—Number of Covered Workers Per OASDI Beneficiary
[Under intermediate assumptions]



Another important way to look at Social Security's future actuarial status is to view its annual cost and non-interest income as a share of U.S. economic output (GDP). As shown in figure II.D4, Social Security's cost as a percent of GDP is generally projected to grow from 5.2 percent in 2023 to a peak of about 6.3 percent for 2076, and then decline to 6.0 percent by 2097. Social Security's non-interest income is projected to decrease from 4.8 percent of GDP in 2023 to 4.7 percent in 2024, and then rise gradually to a peak of about 4.8 percent by 2032. Thereafter, non-interest income as a percent of GDP declines gradually, to about 4.5 percent for 2097.

Figure II.D4.—OASDI Cost and Non-Interest Income as a Percentage of GDP
[Under intermediate assumptions]



Trust Fund Ratios

The trust fund ratio is defined as the asset reserves at the beginning of a year expressed as a percentage of the cost during the year. The trust fund ratio thus represents the proportion of a year's cost which could be paid solely with the accumulated reserves at the beginning of the year. Table II.D1 displays the projected maximum trust fund ratios during the long-range period for the OASI, DI, and combined OASI and DI funds. The table also shows the year of maximum projected trust fund ratio during the long-range projection period (2023 through 2097) and the year of trust fund asset reserve depletion. Trust fund ratios for OASI and combined OASI and DI are projected to decline from their current levels until reserve depletion. For DI, the trust fund ratio is projected to rise to 267 percent of cost in 2043, and then generally decline to 159 percent of cost by 2097.

Table II.D1.—Projected Maximum Trust Fund Ratios During the Long-Range Period and Trust Fund Reserve Depletion Dates
[Under Intermediate Assumptions]

	OASI	DI	OASDI
Maximum projected trust fund ratio (percent)	220	267	204
Year attained	2023	2043	2023
Projected year of trust fund reserve depletion	2033	[a]	2034

[a] The trust fund is not projected to become depleted during the 75-year period ending in 2097.

Summary Measures

The actuarial balance is a summary measure of the program's financial status through the end of the 75-year valuation period. The actuarial balance measure includes the trust fund asset reserves at the beginning of the period, all cost and income during the valuation period, and the cost of reaching a target trust fund reserve of one year's cost by the end of the period. Therefore, the actuarial balance is essentially the difference between the present values of income and cost from 1937 through the end of the valuation period, expressed as a percentage of the taxable payroll for the 75-year valuation period. A negative actuarial balance is called an actuarial deficit. The actuarial deficit represents the average amount of change in income or cost that is needed throughout the valuation period in order to achieve actuarial balance.

In this report, the actuarial deficit for the combined OASI and DI Trust Funds under the intermediate assumptions is 3.61 percent of taxable payroll. The actuarial deficit was 3.42 percent of payroll in the 2022 report. If the assumptions, methods, starting values, and the law had all remained unchanged from last year, the actuarial deficit would have increased to 3.48 percent of payroll solely due to advancing the valuation period by 1 year, from 2022 through 2096 for last year's report to 2023 through 2097 for this year's report. The actuarial deficit is 1.3 percent of GDP in this year's report, increased from 1.2 percent in last year's report.

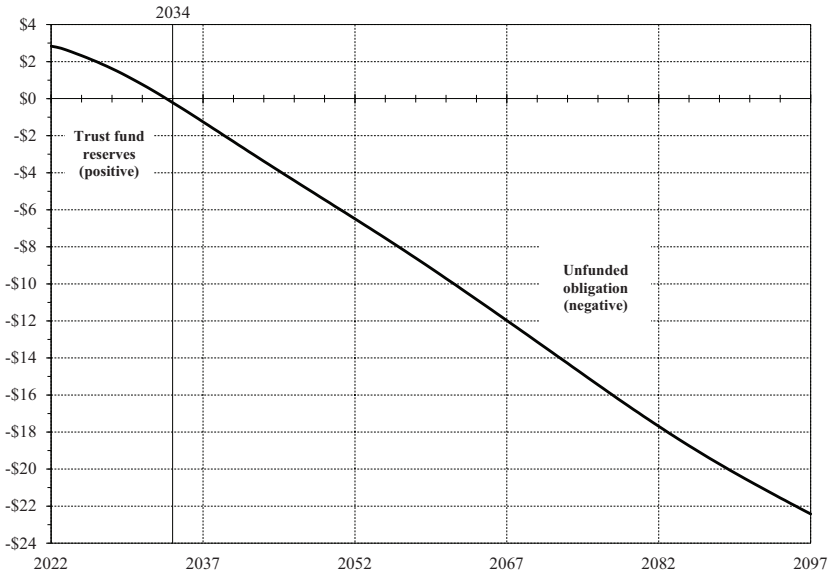
Another way to illustrate the projected financial shortfall of the OASDI program is to examine the cumulative present value of scheduled income less cost. Figure II.D5 shows the present value of cumulative OASDI income less cost from the inception of the program through each of the years from 2022 to 2097. A positive value represents the present value of trust fund reserves at the end of the selected year. A negative value is the unfunded obligation through the selected year. The asset reserves of the combined trust funds were about $2.83 trillion at the end of 2022. The combined trust fund reserves decline on a present value basis after 2022, but remain positive through 2033. However, after 2033 this cumulative amount becomes negative in 2034, which means that the combined OASI and DI Trust Funds have a net unfunded obligation through the end of each year after 2033. Through the end of 2097, the combined funds have a present-value unfunded obligation of $22.4 trillion. If the assumptions, methods, starting values, and the law had all remained unchanged from last year, the unfunded obligation in this year's report would have risen to about $21.2 trillion due to the change in the valuation date and the extension of the valuation period through an additional year, 2097.

This unfunded obligation through 2097 represents 3.42 percent of taxable payroll for 2023 through 2097 (increased from an unfunded obligation through 2096 of 3.24 percent of taxable payroll for 2022 through 2096 in last year's report) and 1.2 percent of GDP over the 75-year valuation period ending in 2097 (increased from 1.1 percent of GDP over the 75-year period ending in 2096 in last year's report). The unfunded obligation as a share of taxable payroll over the period (3.42 percent) and the actuarial deficit (3.61 percent) are similar measures, but differ because the actuarial deficit includes the cost of having an ending trust fund reserve equal to one year's cost.

Figures II.D2, II.D4, and II.D5 show that the program's actuarial status will deteriorate throughout the projection period if current law is not altered. Negative annual balances and increasing cumulative shortfalls toward the end of the 75-year period provide an indication of the additional change that will be needed by that time in order to maintain solvency beyond 75 years. Consideration of summary measures alone for a 75-year period can lead to incorrect perceptions and to policy prescriptions that do not achieve sustainable solvency.[1]

[1] Sustainable solvency for the financing of the program under a specified set of assumptions has been achieved when the projected trust fund ratio is positive throughout the 75-year projection period and is either stable or rising at the end of the period.

Figure II.D5.—Cumulative Scheduled OASDI Income Less Cost, From Program Inception Through Years 2022-2097
[Present value as of January 1, 2023, in trillions, under intermediate assumptions]



Appendix F presents summary measures over the infinite horizon. The infinite horizon values provide an additional indication of Social Security's actuarial status extending indefinitely into the future, but results are subject to much greater uncertainty. Extending the horizon beyond 75 years increases the measured unfunded obligation. Through the infinite horizon, the unfunded obligation, or shortfall, is equivalent to 4.6 percent of future taxable payroll or 1.4 percent of future GDP.

Uncertainty of the Projections

Significant uncertainty surrounds the intermediate assumptions. The Trustees use several methods to help illustrate that uncertainty.

A first approach uses alternative scenarios reflecting intermediate (alternative II), low-cost (alternative I) and high-cost (alternative III) sets of assumptions. The intermediate alternative represents the Trustees' best estimates of future experience. The low-cost alternative includes a higher ultimate total fertility rate, slower improvement in mortality, higher real wage growth, a higher ultimate real interest rate, a higher ultimate annual change in the CPI,

and a lower unemployment rate. The high-cost alternative, in contrast, includes a lower ultimate total fertility rate, more rapid improvement in mortality, lower real wage growth, a lower ultimate real interest rate, a lower ultimate annual change in the CPI, and a higher unemployment rate. These alternatives are not intended to suggest that all parameters would be likely to differ from the intermediate values in the specified directions, but are intended to illustrate the effect of clearly defined scenarios that are, on balance, very favorable or very unfavorable for the program's actuarial status. Actual future costs are unlikely to be as extreme as those portrayed by the low-cost or high-cost projections. The method for constructing the low-cost and high-cost projections does not lend itself to estimating the probability that actual experience will lie within or outside the range they define.

Figure II.D6. shows the projected trust fund ratios for the combined OASI and DI Trust Funds under the intermediate, low-cost, and high-cost assumptions. The figure indicates that the combined trust funds are projected to become depleted in 2034 under the intermediate alternative and in 2031 under the high-cost alternative. Under the low-cost alternative, trust fund reserves are projected to become depleted in 2067, but the trust funds would have sufficient income by the end of 2092 to permit full payment of scheduled benefits thereafter and also to pay in arrears the temporary shortfalls between 2067 and 2092.

Figure II.D6.—Long-Range OASI and DI Combined Trust Fund Ratios Under Alternative Scenarios
[Asset reserves as a percentage of annual cost]

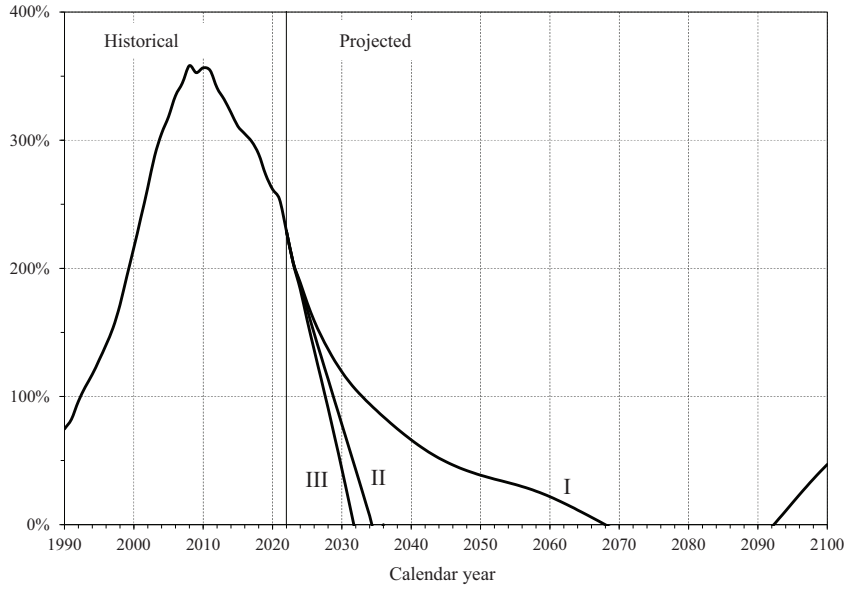


Figure II.D7 shows the projected trust fund ratios separately for OASI and DI Trust Funds under the intermediate, low-cost, and high-cost assumptions. The figure indicates that the OASI reserves are projected to become depleted in 2033 under the intermediate alternative, in 2039 under the low-cost alternative, and in 2031 under the high-cost alternative. The DI reserves are projected to become depleted in 2036 under the high-cost alternative, and are not projected to become depleted under the low-cost and intermediate alternatives. This figure illustrates that OASI reserves are expected to become depleted much sooner than DI reserves, and potentially within the next 10 years.

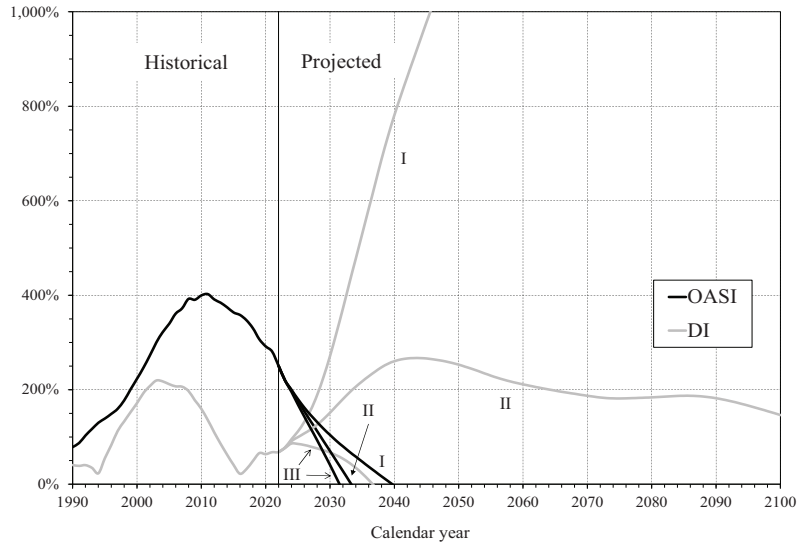
Figure II.D7.—Long-Range OASI and DI Trust Fund Ratios
[Asset reserves as a percentage of annual cost]



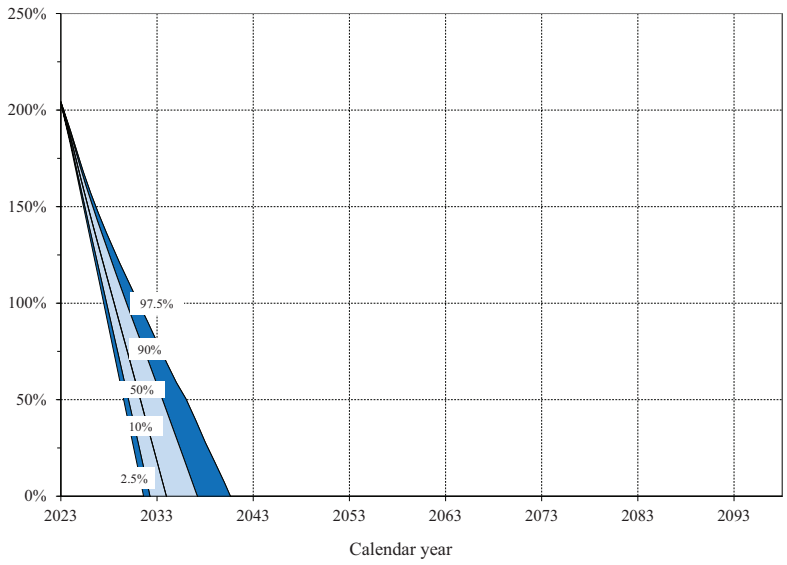
Appendix D of this report presents a second approach using long-range sensitivity analysis for the OASDI program. By varying one parameter at a time, sensitivity analysis provides a second approach for illustrating the uncertainty surrounding projections into the future.

A third approach uses 5,000 independently generated stochastic simulations that reflect randomly assigned annual values and central tendencies for most of the key parameters. These simulations produce a distribution of projected outcomes and corresponding probabilities that future experience will fall

within or outside a given range. The results of the stochastic simulations, discussed in more detail in appendix E, suggest that trust fund reserve depletion (the point at which reserves are insufficient to pay scheduled benefits in full and on time) is very likely before mid-century. In particular, figure II.D8 suggests that based on these stochastic simulations, trust fund reserves will become depleted with 95-percent confidence between 2031 and 2040. In last year's report, this range was between 2031 and 2043. After depletion relatively early in the 75-year projection period, the trust funds are projected not to have sufficient income through 2097 to permit full and timely payment of scheduled benefits.

The stochastic results suggest that trust fund ratios as high as the low-cost alternative or as low as the high-cost alternative are very unlikely.

Figure II.D8.—Long-Range OASI and DI Combined Trust Fund Ratios From Stochastic Modeling



Changes From Last Year's Report

The projected long-range OASDI actuarial deficit increased from 3.42 percent of taxable payroll for last year's report to 3.61 percent of taxable payroll for this year's report. The change in the valuation date and the extension of the 75-year projection period for an additional year, 2097,

would have by itself increased the actuarial deficit to 3.48 percent. Changes in law, methods, starting values, and assumptions combined to increase the actuarial deficit by an additional 0.13 percent of taxable payroll. This increase is mainly attributable to a change in the assumptions for the levels of productivity and GDP in the first several years of the projection. For this year's report, the Trustees assume that the level of potential GDP was about 0.9 percent lower than the level estimated in last year's report for 2020, widening to about 3.0 percent lower by 2026 and for all years thereafter. This shift was made as the Trustees lowered the levels of GDP and total economy labor productivity in response to recent economic developments, including higher-than-expected inflation rates and lower-than-expected output growth. For a detailed description of the specific changes identified in table II.D2, see section IV.B.6.

Table II.D2.—Reasons for Change in the 75-Year Actuarial Balance, Based on Intermediate Assumptions
[As a percentage of taxable payroll]

Item	OASI	DI	OASDI

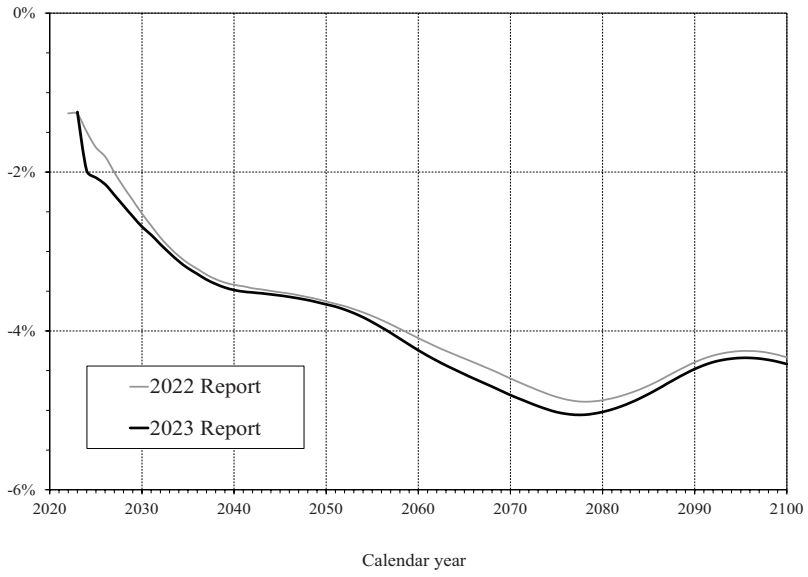
Methods and programmatic data	-.08	.02	-.06
Total change in actuarial balance	-.21	.02	-.19
Shown in this report:			
Actuarial balance	**-3.62**	**.01**	**-3.61**
Income rate	11.93	1.85	13.78
Cost rate	15.54	1.84	17.38

[a] Between -0.005 and 0.005 percent of taxable payroll.
[b] The change in the 75-year valuation period from last year's report to this report means that the 75-year actuarial balance now includes the relatively large negative annual balance for 2097. This change in the valuation period results in a larger long-range actuarial deficit. The actuarial deficit includes the trust fund reserve at the beginning of the projection period.

Note: Components may not sum to totals because of rounding.

Figure II.D9 compares this year's projections of annual balances (non-interest income minus cost) to those in last year's report. The annual balance for 2023 is higher (less negative) in this year's report than it was in last year's report. The annual balances are lower (more negative) in this year's report for all years from 2024 through 2097. For the full 75-year projection period, the annual balances are lower, on average, by 0.13 percentage point.

Figure II.D9.—OASDI Annual Balances: 2022 and 2023 Trustees Reports
[As a percentage of taxable payroll, under the intermediate assumptions]



E. CONCLUSION

The data and projections presented in this report continue to include the Trustees' best estimates of the future course of the population, the economy, and all aspects of the OASDI program under current law. Now, more than 3 years after the start of the COVID-19 pandemic, the acute stage of the pandemic appears to be over, but the Trustees expect there will be residual effects on the population and the economy for years to come. Since the assumptions for last year's report were set, the Trustees have reassessed their expectations for the economy in light of recent developments, including updated data on inflation and output, and have revised down the levels of gross domestic product (GDP) and labor productivity by about 3 percent over the projection period. Assumptions for growth are largely unchanged after the first 10 years of the projection period. The intermediate (best estimate) assumptions for this report were set in December 2022. The Trustees will continue to monitor developments and modify the projections in later reports.

Under current law, the projected cost of Social Security generally increases faster than projected income through about 2040 primarily because the ratio of workers paying taxes to beneficiaries receiving benefits will decline as the baby-boom generation continues to retire and is replaced at working ages with subsequent lower birth-rate generations. The effects of the aging baby boom and subsequent lower birth rates will have largely stabilized between about 2040 and 2055, but annual cost is projected to grow significantly faster than income between 2055 and 2078 due to the period of historically low birth rates starting with the recession of 2007-09. Between 2078 and 2097, cost is projected to grow somewhat slower than income, reflecting an assumed return to a stable ultimate birth rate of 2 children per woman for 2056 and thereafter. Based on the Trustees' intermediate assumptions, Social Security's cost exceeds total income in 2023, as it has beginning in 2021, and remains higher throughout the remainder of the 75-year projection period.

The OASI Trust Fund is projected to have sufficient reserves to pay full benefits on time until 2033. The DI Trust Fund is projected to have sufficient reserves to pay full benefits throughout the 75-year projection period ending in 2097. Legislative action will be needed to prevent OASI reserve depletion. In the absence of such legislation, continuing income to the trust funds at the time of reserve depletion would be sufficient to pay 77 percent of OASI benefits.

Social Security's combined trust funds are projected to cover full payment of scheduled benefits on a timely basis until the trust fund reserves become

depleted in 2034. Full payment of benefits until depletion of the hypothetical combined reserves in 2034 implicitly assumes that the law will have been changed to permit the transfer of funds between OASI and DI as needed. At the time of reserve depletion, projected continuing income to the combined trust funds equals about 80 percent of the program cost. By 2097, continuing income equals about 74 percent of the program cost.

The actuarial deficit for the combined trust funds under the intermediate assumptions is 3.61 percent of taxable payroll for the 75-year period through 2097, increased (worsened) from the 3.42 percent deficit for the 75-year period through 2096 in last year's report. To illustrate the magnitude of the deficit, consider that for the combined OASI and DI Trust Funds to remain fully solvent throughout the 75-year projection period ending with 2097: (1) revenue would have to be increased by an amount equivalent to an immediate and permanent payroll tax rate increase of 3.44 percentage points to 15.84 percent; (2) scheduled benefits would have to be reduced by an amount equivalent to an immediate and permanent reduction of 21.3 percent applied to all current and future beneficiaries through 2097, or 25.4 percent if the reductions were applied only to those who become initially eligible for benefits in 2023 or later; or (3) some combination of these approaches would have to be adopted. If actions are deferred for several years, the changes necessary to maintain Social Security solvency through 2097 become concentrated on fewer years and fewer generations.

If lawmakers design legislative solutions only to eliminate the overall actuarial deficit without consideration of year-by-year financing, then a substantial financial imbalance could remain for 2097, the end of the 75-year valuation period. In that case, the long-range sustainability of program financing could still be in doubt. Sustainable solvency for the financing of the program under a specified set of assumptions is achieved when the projected trust fund ratio is positive throughout the 75-year long-range period and is either stable or rising at the end of the period. Making changes now that achieve sustainable solvency could avoid the need for later legislative changes.

Lawmakers have a broad continuum of policy options that would close or reduce Social Security's long-term financing shortfall. Estimates for many such policy options are available at www.ssa.gov/OACT/solvency/provisions/. Broadly speaking, the approaches that lawmakers can take include increasing revenue from workers and employers by raising the tax rate or the maximum level of taxable earnings, or by dedicating revenue from other sources; lowering benefits for some or all beneficiaries by changing certain program parameters; or a combination of these approaches. There

are many variations on these options, including those that vary the timing, magnitude, and other specifics of the changes under consideration.

The Trustees recommend that lawmakers address the projected trust fund shortfalls in a timely way in order to phase in necessary changes gradually and give workers and beneficiaries time to adjust to them. Implementing changes sooner rather than later would allow more generations to share in the needed revenue increases or reductions in scheduled benefits. Social Security will play a critical role in the lives of 67 million beneficiaries and 180 million covered workers and their families during 2023. With informed discussion, creative thinking, and timely legislative action, Social Security can continue to protect future generations.

III. FINANCIAL OPERATIONS OF THE TRUST FUNDS AND LEGISLATIVE CHANGES IN THE LAST YEAR

A. OPERATIONS OF THE OLD-AGE AND SURVIVORS INSURANCE (OASI) AND DISABILITY INSURANCE (DI) TRUST FUNDS, IN CALENDAR YEAR 2022

This section presents detailed information on the operations of the OASI and DI Trust Funds[1] during calendar year 2022. Chapter IV provides projections for calendar years 2023 through 2100.

1. OASI Trust Fund

Table III.A1 presents a statement of the income and cost of the Federal Old-Age and Survivors Insurance Trust Fund in calendar year 2022, and of the asset reserves in the fund at the beginning and end of the calendar year. As shown in this table, total trust fund income in 2022 amounted to $1,056.7 billion, while cost totaled $1,097.5 billion, resulting in a decrease in trust fund reserves during 2022 of $40.7 billion.

Total income during calendar year 2022 included $950.3 billion in payroll tax contributions. These contributions include initial appropriations of payroll taxes, made on an estimated basis, and adjustments to appropriations for prior years to reflect actual tax income. The OASI fund paid the General Fund $4.4 billion for the estimated amount of employee payroll-tax refunds, partially offsetting these gross contributions. Employees who work for more than one employer during a year and pay contributions on total earnings in excess of the contribution and benefit base are eligible for such refunds. Net payroll tax contributions were therefore $945.9 billion in 2022.

Net reimbursements from the General Fund of the Treasury amounted to $183 million in 2022. As shown in the table, almost all of that amount came from transfers based on Public Law 116-136, the Coronavirus Aid, Relief, and Economic Security Act of 2020 (CARES Act). Section 4003(e) of this act provided for loans to businesses and State and local governments to assist in alleviating losses incurred as a result of the COVID-19 pandemic. This section further specified that a portion of proceeds from repayments of these loans be transferred to the OASI Trust Fund.

Income to the OASI Trust Fund based on the taxation of OASI benefits amounted to $47.1 billion in 2022. As first required by the 1983 Social Security Amendments, this income comes from two separate sources: (1) Federal

[1] See www.ssa.gov/oact/ProgData/fundsQuery.html.

income taxation on up to 50 percent of an individual's or couple's OASI benefits under certain circumstances, and (2) a tax withheld from the benefits paid to certain nonresident alien beneficiaries. For the direct Federal income tax portion, Treasury transfers estimated amounts to the OASI Trust Fund in advance at the beginning of each calendar quarter. Treasury makes subsequent adjustments based on the actual amounts shown on annual income tax records. There were no such adjustments made in 2022. The amount of income from direct Federal income taxation on OASI benefits constituted approximately 99 percent of income from benefit taxation. The remaining one percent of the income from benefit taxation is the amounts withheld from the benefits paid to nonresident aliens.

In 2022, the OASI Trust Fund earned $63.5 billion in net interest, which consisted of: (1) interest earned on the investments held by the trust fund, (2) interest on adjustments in the allocation of administrative expenses between the trust fund and the General Fund account for the Supplemental Security Income program, (3) interest arising from the revised allocation of administrative expenses among the trust funds, and (4) interest on certain reimbursements to the trust fund.

The remaining income, about $18 thousand, consisted of gifts received under the provisions authorizing the deposit of monetary gifts or bequests in the trust funds.

Table III.A1.—Operations of the OASI Trust Fund, Calendar Year 2022
[In millions]

Total asset reserves, December 31, 2021		$2,752,636
Income:		
Net payroll tax contributions:		
Payroll tax contributions[a]	$950,327	
Payments from the General Fund of the Treasury for payroll tax contributions subject to refund[a]	-4,403	
Net payroll tax contributions[a]		945,924
Reimbursements from the General Fund:		
Transfer directed by P.L. 116-136	183	
Reduction in payroll tax contributions due to P.L. 111-312, P.L. 112-78, and P.L. 112-96[a]	[b]	
Payroll tax credits due to P.L. 98-21[a]	[b]	
Net General Fund reimbursements[a]		183
Income based on taxation of benefit payments:		
Withheld from benefit payments to nonresident aliens	262	
All other, not subject to withholding	46,809	
Total income from taxation of benefits		47,071
Investment income and interest adjustments:		
Interest on investments	63,539	
Interest adjustments[c]	[b]	
Total investment income and interest adjustments		63,539
Gifts		[b]
Total income		1,056,718
Cost:		
Benefit payments:		
Monthly benefits and lump-sum death payments[d]	1,088,170	
Reimbursement from the General Fund for unnegotiated checks	-53	
Payment for costs of vocational rehabilitation services for disabled beneficiaries	23	
Net benefit payments[d]		1,088,140
Financial interchange with the Railroad Retirement "Social Security Equivalent Benefit Account"		5,316
Administrative expenses:		
Costs incurred by:		
Social Security Administration	3,376	
Department of the Treasury	628	
Offsetting miscellaneous receipts	-1	
Demonstration projects	—	
Miscellaneous reimbursements from the General Fund [e]	-5	
Net administrative expenses		3,999
Total cost		1,097,455
Net increase in asset reserves		-40,737
Total invested assets	2,711,919	
Undisbursed balances [f]	-20	
Total asset reserves, December 31, 2022		2,711,899

[a] Includes adjustments for prior calendar years.

[b] Between -$0.5 and $0.5 million.

[c] Includes: (1) interest on adjustments in the allocation of administrative expenses between the trust fund and the General Fund account for the Supplemental Security Income program, (2) interest arising from the revised allocation of administrative expenses among the trust funds, and (3) interest on certain reimbursements to the trust fund.

[d] Includes net reductions for the recovery of overpayments.

[e] Reimbursements for costs incurred in performing certain legislatively mandated activities not directly related to administering the OASI program.

[f] A negative balance represents a situation where the actual cash payments exceeded the amount of invested securities of the OASI Trust Fund that were redeemed to make such payments. In this situation, future redemption of additional invested securities will be required to pay for this shortfall.

Note: Components may not sum to totals because of rounding.

Of the $1,097.5 billion in total OASI cost in 2022, $1,088.1 billion was for net benefit payments, including recovered overpayments, reimbursements from the General Fund for unnegotiated checks, and the reimbursable costs of vocational rehabilitation services.[1] Net benefit payments increased by 9.6 percent from calendar year 2021 to calendar year 2022. This increase is due primarily to: (1) an increase in the average number of beneficiaries during the year and (2) an increase in the average monthly benefit amount. The increase in the average benefit amount in 2022 was due in part to the automatic cost-of-living benefit increase of 5.9 percent which became effective for December 2021 under the automatic-adjustment provisions in section 215(i) of the Social Security Act. In addition, new beneficiaries tend to have higher monthly benefit amounts than previous beneficiary cohorts, because their initial benefits are based on average wages, which tend to rise faster than the cost of living.

The Railroad Retirement Act requires an annual financial interchange between the Railroad Retirement program and the OASDI program. The purpose of the interchange is to put the OASI and DI Trust Funds in the same financial position in which they would have been had railroad employment always been covered directly by Social Security. The Railroad Retirement Board and the Social Security Administration calculated an interchange of $5.3 billion from the OASI Trust Fund to the Social Security Equivalent Benefit Account for June 2022.

The remaining $4.0 billion of cost for the OASI Trust Fund was for net administrative expenses. The Social Security Administration charges administrative expenses incurred to administer the OASI program directly to the trust fund on an estimated basis. Periodically, as actual expenses are recorded, adjustments are made to the allocations of administrative expenses for prior periods. These adjustments affect the OASI Trust Fund, the DI Trust Fund, the Hospital Insurance (HI) Trust Fund, the Supplementary Medical Insurance (SMI) Trust Fund, and the General Fund account for the Supplemental Security Income program, and include appropriate interest adjustments. As described earlier, the trust fund accounting records such interest adjustments under investment income.

For 2022, the cost incurred by the Social Security Administration to administer the OASI program was 84 percent of OASI net administrative expenses. The Social Security Administration charged such costs to the trust fund in

[1] Vocational rehabilitation services under the OASI program are furnished to disabled widow(er) beneficiaries and to those children of retired or deceased workers who receive benefits based on disabilities that began before age 22. The trust funds reimburse the providers of such services only in those cases where the services contributed to the successful rehabilitation of the beneficiary.

the amount of $3.4 billion in 2022. In addition, the Department of the Treasury charged the trust fund $0.6 billion in 2022 for services provided in administering the OASI program. A relatively small offset to administrative expenses of $1 million in 2022 represents income from miscellaneous receipts due to the trust fund, which may include refunds, penalties, fees, and other receipts.

Finally, the General Fund of the Treasury makes net reimbursements for administrative costs incurred by the Social Security Administration in performing certain legislatively mandated activities that are not directly related to paying OASI benefits. These reimbursements include $3 million in costs associated with union activities related to administering the OASI program and $2 million in costs of providing information to participants in certain pension plans in 2022. These miscellaneous reimbursements totaled $5 million in 2022.

The asset reserves shown for the OASI Trust Fund at the end of calendar year 2022 totaled $2,711.9 billion, consisting of $2,711.9 billion in U.S. Government obligations and, as an offset, an extension of credit totaling $20 million against securities to be redeemed in the first few days of the following year. The effective annual rate of interest earned by the reserves in the OASI Trust Fund during calendar year 2022 was 2.3 percent, slightly lower than the 2.4 percent earned during calendar year 2021. Table VI.A4, presented in appendix A, shows a detailed listing of OASI Trust Fund holdings by type of security, interest rate, and year of maturity at the end of calendar years 2021 and 2022.

By law, the Department of the Treasury must invest trust fund reserves in interest-bearing securities backed by the full faith and credit of the United States Government. The securities currently held by the OASI Trust Fund are entirely special issue securities sold by the Treasury only to the trust funds. These special issues are of two types: short-term certificates of indebtedness and longer-term bonds. Daily trust fund tax income is invested in the short-term certificates of indebtedness which mature on the next June 30 following the date of issue. The trust fund normally acquires long-term special-issue bonds when special issue securities of either type mature on June 30 and must be reinvested. The amount of long-term bonds acquired on June 30 is equal to the amount of special issue securities maturing (including accrued interest earnings), plus tax income for that day, less amounts required to meet cost on that day.

Section 201(d) of the Social Security Act provides that the obligations issued for purchase by the OASI and DI Trust Funds shall have maturities fixed

with due regard for the needs of the funds. Each year, bond purchases for each trust fund are made on June 30, taking into account the projected reserve depletion date in the most recently issued Trustees Report. The usual practice has been to reinvest the maturing special issue securities, as of each June 30, so that the values of the total portfolio of special issue securities maturing in each of the next 15 years are approximately equal. However, as of June 2022, the most recent projections in the 2022 Trustees Report indicated that the reserves in the OASI Trust Fund would become depleted within 15 years. Therefore, the Department of the Treasury, in consultation with the Chief Actuary of the Social Security Administration, selected the amounts and maturity dates of the OASI special-issue bonds purchased on June 30, 2022, so that the maturity dates of the total portfolio of special issue securities would be spread evenly to the extent possible over the 12-year period 2023 through 2034. The bonds purchased on that date have an interest rate of 3.000 percent, reflecting the average market yield, as of the last business day of the prior month, on all of the outstanding marketable U.S. obligations that are due or callable more than 4 years in the future. Table III.A7 shows additional details on the investment transactions during 2022, including the amounts of bonds purchased on June 30, 2022.

2. DI Trust Fund

Table III.A2 presents a statement of the income and cost of the Federal Disability Insurance Trust Fund in calendar year 2022, and of the asset reserves in the fund at the beginning and end of the calendar year.

Line entries in the DI statement are similar to those in the OASI statement. The explanations of the OASI entries generally apply to DI as well.

Of the $165.1 billion in total income, $160.7 billion was net payroll tax contributions.

Of the $146.5 billion of total cost, $143.6 billion was net benefit payments. The total level of net benefit payments increased by 2.5 percent from calendar year 2021 to calendar year 2022, largely due to increases in average monthly benefit amounts and the total amount of retroactive benefits, partially offset by a decrease in the average number of beneficiaries during the year. DI non-interest income, and total income, exceeded total cost in 2022.

Table III.A2.—Operations of the DI Trust Fund, Calendar Year 2022
[In millions]

Total asset reserves, December 31, 2021		$99,394
Income:

Interest adjustments[c]	2	
Total investment income and interest adjustments		2,833
Gifts		b
Total income		165,063
Cost:		
Benefit payments:		
Monthly benefits[d]	143,475	
Reimbursement from the General Fund for unnegotiated checks	-28	
Payment for costs of vocational rehabilitation services for disabled beneficiaries	120	
Net benefit payments[d]		143,567
Financial interchange with the Railroad Retirement "Social Security Equivalent Benefit Account"		156
Administrative expenses:		
Costs incurred by:		
Social Security Administration	2,634	
Department of the Treasury	110	
Offsetting miscellaneous receipts	—	
Demonstration projects	7	
Miscellaneous reimbursements from the General Fund[e]	-3	
Net administrative expenses		2,747
Total cost		146,470
Net increase in asset reserves		18,594
Total invested assets	118,032	
Undisbursed balances[f]	-44	
Total asset reserves, December 31, 2022		117,988

[a] Includes adjustments for prior calendar years.

[b] Between -$0.5 and $0.5 million.

[c] Includes: (1) interest on adjustments in the allocation of administrative expenses between the trust fund and the General Fund account for the Supplemental Security Income program, (2) interest arising from the revised allocation of administrative expenses among the trust funds, and (3) interest on certain reimbursements to the trust fund.

[d] Includes net reductions for the recovery of overpayments.

[e] Reimbursements for costs incurred in performing legislatively mandated activities not directly related to administering the DI program.

[f] A negative balance represents a situation where the actual cash payments exceeded the amount of invested securities of the DI Trust Fund that were redeemed to make such payments. In this situation, future redemption of additional invested securities will be required to pay for this shortfall.

Note: Components may not sum to totals because of rounding.

During 2022, the reserves in the DI Trust Fund increased by $18.6 billion, from $99.4 billion at the end of 2021 to $118.0 billion at the end of 2022. This $118.0 billion consisted of $118.0 billion in U.S. Government obligations and, as an offset, an extension of credit totaling $44 million against securities to be redeemed in the first few days of the following year. The effective annual rate of interest earned by the asset reserves in the DI Trust Fund during calendar year 2022 was 2.7 percent, slightly lower than the 2.8 percent earned during calendar year 2021. Table VI.A5 shows a detailed listing of DI Trust Fund holdings by type of security, interest rate, and year of maturity at the end of calendar years 2021 and 2022.

Section 201(d) of the Social Security Act provides that the Treasury securities issued for purchase by the OASI and DI Trust Funds shall have maturities fixed with due regard for the needs of the funds. Each year, bond purchases for each trust fund are made on June 30, taking into account the projected reserve depletion date in the most recently issued Trustees Report. The usual practice has been to reinvest the maturing special issue securities, as of each June 30, so that the values of the securities maturing in each of the next 15 years are approximately equal. Accordingly, the Department of the Treasury, in consultation with the Chief Actuary of the Social Security Administration, selected the amounts and maturity dates of the DI special-issue bonds purchased on June 30, 2022, so that the maturity dates of the total portfolio of special issue securities would be evenly spread to the extent possible over the 15-year period 2023-37. The bonds purchased have an interest rate of 3.000 percent, reflecting the average market yield, as of the last business day of the prior month, on the outstanding marketable U.S. obligations that are due or callable more than 4 years in the future. Table III.A7 shows details on investment transactions during 2022.

3. OASI and DI Trust Funds, Combined

Table III.A3 presents a statement of the operations of the OASI and DI Trust Funds on a hypothetical combined basis.[1] The entries in this table represent the sums of the corresponding values from tables III.A1 and III.A2. The two preceding subsections that cover OASI and DI provide a description of the nature of these income and cost transactions.

[1] The OASI and DI Trust Funds are distinct legal entities which operate independently. To illustrate the actuarial status of the program as a whole, the fund operations are often combined on a hypothetical basis.

Table III.A3.—Operations of the Combined OASI and DI Trust Funds, Calendar Year 2022
[In millions]

Total asset reserves, December 31, 2021		$2,852,030
Income:		
Net payroll tax contributions:		
Payroll tax contributions[a]	$1,111,751	
Payments from the General Fund of the Treasury for payroll tax contributions subject to refund[a]	-5,149	
Net payroll tax contributions[a]		1,106,602
Reimbursements from the General Fund:		
Transfer directed by P.L. 116-136	183	
Reduction in payroll tax contributions due to P.L. 111-312, P.L. 112-78, and P.L. 112-96[a]	[b]	
Payroll tax credits due to P.L. 98-21[a]	[b]	
Net General Fund reimbursements[a]		183
Income based on taxation of benefit payments:		
Withheld from benefit payments to nonresident aliens	266	
All other, not subject to withholding	48,358

[a] Percentage differences are calculated prior to rounding.
[b] "Actual" income for 2022 reflects adjustments to payroll tax contributions for prior calendar years (see appendix A for description of these adjustments). "Estimated" income also includes such adjustments, but on an estimated basis.
[c] Between -0.05 percent and 0.05 percent.

Note: Components may not sum to totals because of rounding.

A number of factors contribute to differences between estimates and subsequent actual amounts, including: (1) actual values for key demographic, economic, and other variables that differ from earlier assumed levels; and (2) legislation that was enacted or other administrative initiatives that were finalized after the Trustees completed their estimates. In addition, estimates for the 2018 through 2020 Trustees Reports did not anticipate the pandemic and recession, while the actual income and cost for 2022 do reflect the pandemic, contributing to these differences as well.

At the end of calendar year 2022, the OASDI program was providing monthly benefits to about 66.0 million people. The OASI Trust Fund was

providing benefits to about 57.2 million people and the DI Trust Fund was providing benefits to about 8.8 million people. The number of people receiving benefits from the OASI Trust Fund grew by 2.0 percent while the number of people receiving DI benefits fell by 4.1 percent during calendar year 2022. These changes are in large part due to the shifting age distribution of the adult population, with the baby-boom generation (born in 1946-1965) moving increasingly above age 62 for retired worker benefits, and above normal retirement age, where DI benefits are no longer applicable. Table III.A5 shows the estimated distributions of benefit payments in calendar years 2021 and 2022, by type of beneficiary, for each trust fund separately.

Table III.A5.—Distribution of Benefit Payments by Type of Beneficiary or Payment, Calendar Years 2021 and 2022
[Amounts in millions]

	Calendar year 2021		Calendar year 2022	
	Amount	Percentage of total	Amount	Percentage of total
Total OASDI benefit payments	$1,133,164	100.0	$1,231,646	100.0
OASI benefit payments	993,167	87.6	1,088,170	88.4
DI benefit payments	139,996	12.4	143,475	11.6
OASI benefit payments, total	993,167	100.0	1,088,170	100.0
Monthly benefits:				
Retired workers and auxiliaries	861,873	86.8	947,071	87.0
Retired workers	822,440	82.8	906,826	83.3
Spouses	33,050	3.3	33,491	3.1
Children	6,384	.6	6,754	.6
Survivors of deceased workers	131,057	13.2	140,870	12.9
Aged widows and widowers	104,868	10.6	112,339	10.3
Disabled widows and widowers	2,233	.2	2,245	.2
Parents	19	[a]	19	[a]
Children	22,445	2.3	24,674	2.3
Widowed mothers and fathers caring for child beneficiaries	1,492	.2	1,593	.1
Lump-sum death payments	237	[a]	229	[a]
DI benefit payments, total	139,996	100.0	143,475	100.0
Disabled workers	132,401	94.6	135,978	94.8
Spouses	465	.3	458	.3
Children	7,131	5.1	7,039	4.9

[a] Less than 0.05 percent.

Note: Benefits are monthly benefits and lump-sum death payments. Components may not sum to totals because of rounding.

Net administrative expenses of the OASI and DI Trust Funds in calendar year 2022 totaled $6.7 billion, equal to 0.5 percent of total cost and 0.6 percent of total income. Table III.A6 shows corresponding percentages for each trust fund separately and for OASDI as a whole for the last 5 years.

Table III.A6.—Administrative Expenses as a Percentage of Total Income and of Total Cost, Calendar Years 2018-2022

	OASI Trust Fund		DI Trust Fund		OASI and DI Trust Funds, combined	
Calendar year	Total income	Total cost	Total income	Total cost	Total income	Total cost
2018	0.5	0.4	1.7	1.9	0.7	0.7
2019	.4	.4	1.9	1.8	.6	.6
2020	.4	.4	1.7	1.7	.6	.6
2021	.4	.4	1.7	1.7	.6	.6
2022	.4	.4	1.7	1.9	.6	.5

The acquisition and redemption of securities during calendar year 2022 changed the invested reserves of the OASI and DI Trust Funds. Table III.A7 presents investment transactions for each fund separately and combined.

Table III.A7.—Trust Fund Investment Transactions, Calendar Year 2022
[In millions]

	OASI Trust Fund	DI Trust Fund	OASI and DI Trust Funds, combined
Invested asset reserves, December 31, 2021[a]	$2,752,688	$99,438	$2,852,126
Acquisitions:			
Special issue securities:			
Certificates of indebtedness	1,018,446	162,972	1,181,418
Bonds[b]	189,931	26,381	216,311
Total acquisitions	1,208,377	189,352	1,397,729
Redemptions:			
Special issue securities:			
Certificates of indebtedness	884,392	150,684	1,035,076
Bonds	364,755	20,074	384,829
Total redemptions	1,249,147	170,758	1,419,905
Net increase in invested asset reserves	-40,770	18,594	-22,176
Invested asset reserves, December 31, 2022[a]	2,711,919	118,032	2,829,950

[a] Invested asset reserves differ from total asset reserves by the amount of undisbursed balances. See tables VI.A4 and VI.A5 for details.

[b] Purchased on June 30, 2022. The interest rate on these purchases was 3.000 percent.

Note: Investments are shown at par value. Components may not sum to totals because of rounding.

B. CHANGES IN LAW AND POLICY AFFECTING SOCIAL SECURITY SINCE THE 2022 REPORT

Since the Trustees submitted the 2022 report to Congress, there have been no changes in law, policy, or regulation that are expected to have significant financial effects on the OASDI program. However, there have been a number of notable regulatory and judicial developments related to immigration policy.

At the time of the 2022 report, the US Citizenship and Immigration Services had paused processing of first-time applications under the Deferred Action for Childhood Arrivals (DACA) policy but continued to process renewal applications. Since then, there have been several regulatory and judicial developments:

- On August 30, 2022, the Department of Homeland Security (DHS) published a final rule in the Federal Register, establishing regulations to "preserve and fortify" the DACA program in full.
- On October 5, 2022, the US Court of Appeals for the Fifth Circuit affirmed an earlier district court decision that had declared the DACA policy unlawful. The appeals court returned the case to the district court for further review of the DHS regulation.
- On October 14, 2022, the district court issued an order extending the pause in implementing the DACA final rule. As a result, DHS is currently prohibited from processing new DACA applications and related employment authorizations.

Changes in DACA policy affect OASDI program operations because those who apply for and receive deferred action status are eligible for work authorization, which leads to additional workers covered by the OASDI program, increased payroll tax revenue, and subsequently increased benefit cost. The estimates presented in last year's report reflected the assumption that the DACA program would be fully in effect by the middle of 2022, consistent with the Administration's intent. Because of the court challenges, the estimates in this year's report incorporate an additional one-year delay in the resumption of processing new applications, to the middle of 2023. This change is estimated to have negligible financial effects on the OASDI program over both the short-range and long-range projection periods.

Sections IV.A.4 and IV.B.6 of this report provide further description of the magnitude of effects on the financial status of the OASDI program.

IV. ACTUARIAL ESTIMATES

This chapter presents actuarial estimates of the future financial condition of the Social Security program. These estimates show the income, cost, and asset reserves or unfunded obligation of the OASI and DI Trust Funds: (1) in dollars over the 10-year short-range period; and (2) as a percentage of taxable payroll, as a percentage of gross domestic product, and in present-value dollars over the 75-year long-range period. In addition, the chapter discusses a variety of measures of the adequacy of current program financing. This report distinguishes between: (1) the cost (obligations) of the program, which includes all past and future benefits scheduled under current law; and (2) expenditures, which include actual payments for the past plus only the portion of projected program cost that would be payable with the financing provisions in current law.

This chapter presents the estimates and measures of trust fund financial adequacy for the short-range period (2023 through 2032) first, followed by estimates and measures of actuarial status for the long-range period (2023 through 2097). Summary measures are also provided for trust fund status over the infinite horizon. As described in chapter II of this report, these estimates depend upon a broad set of demographic, economic, and programmatic factors. This chapter presents estimates under three sets of assumptions to show a wide range of possible outcomes, because assumptions related to these factors are subject to uncertainty. The intermediate set of assumptions, designated as alternative II, reflects the Trustees' best estimate of future experience; the low-cost alternative I is significantly more optimistic and the high-cost alternative III is significantly more pessimistic for the trust funds' future financial outlook. The tables of this report show the intermediate estimates first, followed by the low-cost and high-cost estimates. Chapter V describes these three sets of assumptions, along with the actuarial methods used to produce the estimates. Appendix D and appendix E present two additional methods to illustrate the uncertainty of the projections. Appendix D presents sensitivity analyses of the effects of variation in individual factors and appendix E presents probability distributions generated by a stochastic model.

A. SHORT-RANGE ESTIMATES

The Trustees consider the trust funds to be solvent at any point in time if the funds can pay scheduled benefits in full on a timely basis. A standard measure for assessing solvency is the "trust fund ratio," which is the reserves in a fund at the beginning of a year (not including advance tax transfers) expressed as a percentage of the cost during the year. A positive trust fund ratio indicates that the trust fund was solvent at the end of the prior year. The

trust fund ratio represents the proportion of a year's cost which the reserves available at the beginning of that year can cover. The Trustees assume that a trust fund ratio of 100 percent of annual program cost provides a reasonable "contingency reserve." Maintaining a reasonable contingency reserve is important because the trust funds do not have borrowing authority. After reserves are depleted, the trust funds would be unable to pay scheduled benefits in full on a timely basis if annual revenue were less than annual cost. Unexpected events, such as severe economic recessions, can quickly diminish reserves. In such cases, a reasonable contingency reserve can maintain the ability to pay scheduled benefits while giving lawmakers time to address possible changes to the program.

The test of short-range financial adequacy applies to the OASI and DI Trust Funds individually and combined on a hypothetical basis.[1] If the estimated trust fund ratio is at least 100 percent at the beginning of the projection period, the test requires that it remain at or above 100 percent throughout the 10-year period. If the ratio is initially less than 100 percent, then it must reach at least 100 percent within 5 years (without reserve depletion at any time during this period) and then remain at or above 100 percent throughout the remainder of the 10-year period. This test is applied using the estimates based on the intermediate assumptions. If either trust fund fails this test, then program solvency in the next 10 years is in question, and lawmakers should take prompt action to improve short-range financial adequacy.

1. Operations of the OASI Trust Fund

This subsection presents projections, based on the assumptions described in chapter V, of the operations and financial status of the OASI Trust Fund for the period 2023 through 2032. These estimates assume that there are no further changes in the statutory provisions and regulations under which the OASDI program currently operates beyond the changes since last year's report indicated in section III.B.[2]

Estimates of the OASI Trust Fund operations presented in table IV.A1 indicate that the asset reserves of the OASI Trust Fund are projected to decrease in years 2023 through 2032 under all three sets of assumptions. Under the intermediate and low-cost assumptions, asset reserves remain positive through the end of the short-range period, but under the high-cost assumptions, asset reserves become depleted in the third quarter of 2031. Trust fund ratios are similarly projected to decline throughout the 10-year projection

[1] The OASI and DI Trust Funds are distinct legal entities which operate independently. To illustrate the actuarial status of the program as a whole, the fund operations are often combined on a hypothetical basis.

[2] The estimates shown in this subsection reflect 12 months of scheduled benefits in each year of the short-range projection period. In practice, the actual payment dates have at times shifted over calendar year boundaries as a result of the statutory requirement for early delivery of benefit payments when the normal check delivery date is a Saturday, Sunday, or legal public holiday.

period under all three sets of assumptions. Based on the intermediate assumptions, the reserves of the OASI Trust Fund drop below 100 percent of annual cost during 2028, to a trust fund ratio of 91 percent at the beginning of 2029, and remain below 100 percent for the remainder of the short-range period. Consequently, the OASI Trust Fund fails the test of short-range financial adequacy. See figure IV.A1 for an illustration of these results.

2032	[h]	1,289.7	[g]	116.3	[h]	2,004.1	1,992.2	5.0	6.9	[h]	[h]	[h]

[a] The OASI Trust Fund reserves become depleted in the third quarter of 2031 under the high-cost assumptions. For any period during which reserves would be depleted, scheduled benefits could not be paid in full on a timely basis, income from taxing benefits would be less than would apply to scheduled benefits, and interest on trust fund reserves would be negligible. Appendix A presents a detailed description of the components of income and cost, along with complete historical values.

[b] Amounts for 2020 and 2021 are adjusted to include in 2021 operations those benefit payments regularly scheduled in the law to be paid on January 3, 2021, which were actually paid on December 31, 2020 as required by the statutory provision for early benefit payments when the normal delivery date is on a weekend or holiday. Such shifts in payments across calendar years occur periodically whenever January 3rd falls on a Sunday. In order to provide a consistent perspective on trust fund operations over time, all trust fund operations in each year reflect the 12 months of benefits that are regularly scheduled for payment in that year.

[c] Represents reserves at the beginning of a year (which are identical to reserves at the end of the prior year shown in the "Amount at end of year" column) as a percentage of cost for the year. The trust fund ratio at the beginning of 2033 is projected to be 7 percent for the intermediate, and 69 percent for the low-cost assumptions.

[d] Includes adjustments for prior calendar years. For example, in June 2021, an unusually large negative adjustment to payroll tax contributions in the amount of $30.4 billion was made because payroll tax revenue credited to the trust fund in 2020 was based on estimates that did not anticipate effects of the pandemic and recession.

[e] Includes reimbursements from the General Fund of the Treasury to the OASI Trust Fund for: (1) the cost of payroll tax credits provided to employees in 1984 and self-employed persons in 1984-89 by Public Law 98-21; and (2) payroll tax revenue forgone under the provisions of Public Laws 111-147, 111-312, 112-78, and 112-96. Also includes transfers of a portion of proceeds from repayments of loans authorized under Public Law 116-136.

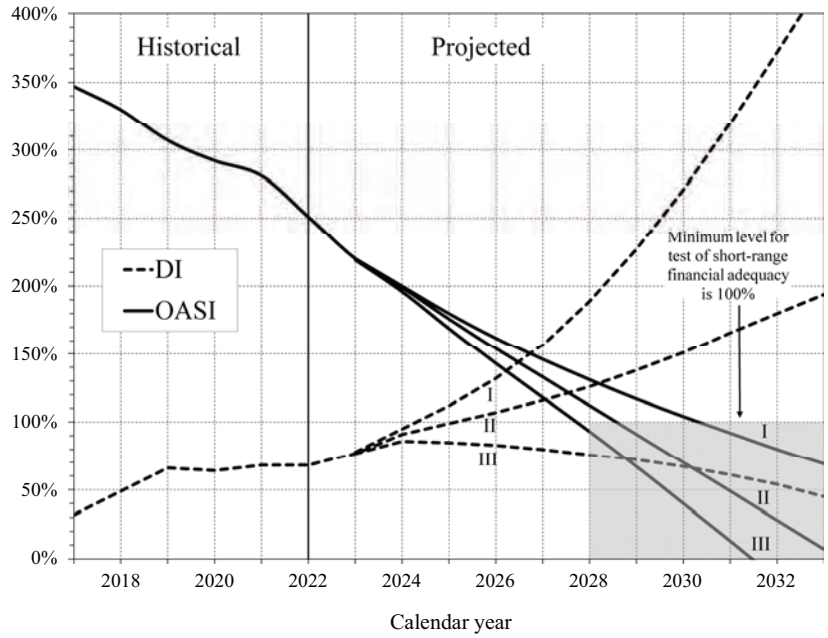
[f] Revenue from taxation of benefits is the amount that would be assessed on benefit amounts scheduled in the law.

[g] Between -$50 million and $50 million.

[h] When the fund reserves are depleted, values under current law would reflect permissible expenditures only, which would be less than the full cost of paying scheduled benefits shown in this table.

Note: Components may not sum to totals because of rounding.

Figure IV.A1.—Short-Range OASI and DI Trust Fund Ratios
[Asset reserves as a percentage of annual cost]



The estimated income shown in table IV.A1 increases annually under each set of assumptions throughout the short-range projection period, with the exception of a small decrease in 2024 for the high-cost alternative. The estimated increases in income result primarily from the projected increases in OASDI taxable payroll. Employment increases in years 2023 through 2032 for all three alternatives, with the exception of small decreases in covered employment in 2023 and 2024 for the high-cost alternative: the number of covered workers increases under alternatives I, II, and III from 181 million during calendar year 2022 to about 192 million, 188 million, and 184 million, respectively, in 2032.[1] The total annual amount of taxable payroll increases in years 2023 through 2032 for each alternative. Total taxable payroll increases from $9,069 billion in 2022 to $16,650 billion, $14,023 billion, and $12,189 billion in 2032, on the basis of alternatives I, II, and III, respectively.[2] These increases in taxable payroll are due primarily to: (1) projected increases in employment levels as the working-age population increases; (2) trend increases in average earnings in covered employment (reflecting both real growth and price inflation); (3) increases in the contribu-

[1] See table IV.B3.
[2] See table VI.G6.

tion and benefit base under the automatic-adjustment provisions; and (4) growth in employment and average earnings.

Interest earnings contribute to the overall projected level of trust fund income during this period. Interest income declines generally at a slow rate under the intermediate assumptions and much faster under the high-cost assumptions, and increases generally under the low-cost assumptions, due to the net effects of changes in reserve levels and the patterns of projected interest rates. Under the intermediate assumptions, interest also declines as a share of total OASI Trust Fund income reaching 1 percent of total trust fund income for 2032, as compared to 6 percent for 2022.

Rising OASI cost from 2022 through 2032 reflects automatic benefit increases each year after initial benefit eligibility and increases each year for those becoming newly eligible based on rising average earnings levels, as well as the upward trend in the number of beneficiaries. The steady growth in the number of OASI beneficiaries in the past and the expected future growth result both from the increase in the aged population and from the increase in the proportion of the population that is insured for benefits.

The Treasury invests OASI income in financial securities, generally special public-debt obligations of the U.S. Government. The revenue used to make these purchases flows to the General Fund of the Treasury. The trust fund earns interest on these securities, and the Treasury invests the proceeds from maturing securities in new securities if not immediately needed to pay program costs. Program expenditures require the redemption of trust fund securities, generally prior to maturity, to cover the payments made by the General Fund of the Treasury on behalf of the trust fund.

2. Operations of the DI Trust Fund

Table IV.A2 shows the projected operations and financial status of the DI Trust Fund during calendar years 2023 through 2032 under the three sets of assumptions, together with values for actual experience during 2018 through 2022. Non-interest income for DI dropped in 2019 from its level in 2018, due to the temporary payroll tax rate reallocation from OASI to DI in 2016 through 2018. For 2022, non-interest income was higher than DI cost. Non-interest income increases generally throughout the short-range projection period under each alternative, due to most of the same factors described previously for the OASI Trust Fund beginning on page 45. DI cost grows steadily throughout the period under each alternative. Under the intermediate and low-cost assumptions, DI reserves increase through 2032. Under the high-cost assumptions, DI reserves increase through 2026 and then decline through 2032.

[a] Appendix A presents a detailed description of the components of income and cost, along with complete historical values.

[b] Amounts for 2020 and 2021 are adjusted to include in 2021 operations those benefit payments regularly scheduled in the law to be paid on January 3, 2021, which were actually paid on December 31, 2020 as required by the statutory provision for early benefit payments when the normal delivery date is on a weekend or holiday. Such shifts in payments across calendar years occur periodically whenever January 3rd falls on a Sunday. In order to provide a consistent perspective on trust fund operations over time, all trust fund operations in each year reflect the 12 months of benefits that are regularly scheduled for payment in that year.

[c] Represents reserves at the beginning of a year (which are identical to reserves at the end of the prior year shown in the "Amount at end of year" column) as a percentage of cost for the year. The trust fund ratio at the beginning of 2033 is projected to be 194 percent for the intermediate, 425 percent for the low-cost, and 45 percent for the high-cost assumptions.

[d] Includes adjustments for prior calendar years. For example, in June 2021, an unusually large negative adjustment to payroll tax contributions in the amount of $5.2 billion was made because payroll tax revenue credited to the trust fund in 2020 was based on estimates that did not anticipate effects of the pandemic and recession.

[e] Includes reimbursements from the General Fund of the Treasury to the DI Trust Fund for: (1) the cost of payroll tax credits provided to employees in 1984 and self-employed persons in 1984-89 by Public Law 98-21; and (2) payroll tax revenue forgone under the provisions of Public Laws 111-147, 111-312, 112-78, and 112-96.

[f] Revenue from taxation of benefits is the amount that would be assessed on benefit amounts scheduled in the law.

[g] Between -$50 million and $50 million.

Note: Components may not sum to totals because of rounding.

For the future, DI cost is projected to increase in part due to increases in average benefit levels resulting from: (1) automatic benefit increases and (2) projected increases in the amounts of average monthly earnings on which benefits are based. Future changes in DI cost also reflect changes in the number of DI beneficiaries in current-payment status. In 2022, the number of DI beneficiaries in current-payment status continued the declining trend of the prior eight years. Under the intermediate assumptions, that number of DI beneficiaries is projected to drop further through the end of 2024, then increase through the end of 2032 to a level of about 9 million. The rate of increase after 2024 is much slower than was experienced on average from 1990 to 2010, when the population with the highest disability prevalence rates was growing rapidly due to the aging of the baby-boom generation. See section V.C.5 for further details.

At the beginning of calendar year 2023, the reserves of the DI Trust Fund represented 77 percent of estimated annual cost. Under the intermediate

assumptions, DI trust fund reserves and the trust fund ratio increase throughout the short-range projection period. The trust fund ratio rises to 107 percent at the beginning of the fourth projected year, 2026, and continues to increase for the remainder of the short-range period.

Because the reserves of the DI Trust Fund at the beginning of 2023 were less than the estimated annual cost for 2023, but are projected to increase to above annual cost within five years, and then remain above annual cost throughout the rest of the short-range period under the intermediate assumptions, the DI Trust Fund satisfies the Trustees' test of short-range financial adequacy.

3. Operations of the Combined OASI and DI Trust Funds

Table IV.A3 shows the projected operations and status of the combined OASI and DI Trust Funds for calendar years 2023 through 2032 under the three alternatives, together with actual experience in 2018 through 2022. Income and cost for the OASI Trust Fund represent over 80 percent of the corresponding amounts for the combined OASI and DI Trust Funds. Under the intermediate and low-cost assumptions, the combined OASI and DI Trust Funds would have sufficient financial resources to pay all scheduled benefits through the end of the short-range period, although it is important to note that under current law, one trust fund cannot share financial resources with another trust fund. Under the high-cost assumptions, combined OASI and DI trust fund reserves deplete in the fourth quarter of 2031. The combined OASI and DI Trust Funds do not satisfy the test of short-range financial adequacy because under the intermediate assumptions, trust fund reserves drop below 100 percent of annual cost during 2028, to a trust fund ratio of 96 percent at the beginning of 2029, and remain below 100 percent for the remainder of the short-range period.

[a] The OASDI Trust Fund reserves become depleted in the fourth quarter of 2031 under the high-cost assumptions. For any period during which reserves would be depleted, scheduled benefits could not be paid in full on a timely basis, income from taxing benefits would be less than would apply to scheduled benefits, and interest on trust fund reserves would be negligible. Appendix A presents a detailed description of the components of income and cost, along with complete historical values.

[b] Amounts for 2020 and 2021 are adjusted to include in 2021 operations those benefit payments regularly scheduled in the law to be paid on January 3, 2021, which were actually paid on December 31, 2020 as required by the statutory provision for early benefit payments when the normal delivery date is on a weekend or holiday. Such shifts in payments across calendar years occur periodically whenever January 3rd falls on a Sunday. In order to provide a consistent perspective on trust fund operations over time, all trust fund operations in each year reflect the 12 months of benefits that are regularly scheduled for payment in that year.

[c] Represents reserves at the beginning of a year (which are identical to reserves at the end of the prior year shown in the "Amount at end of year" column) as a percentage of cost for the year. The trust fund ratio at the beginning of 2033 is projected to be 25 percent for the intermediate, and 100 percent for the low-cost assumptions.

[d] Includes adjustments for prior calendar years. For example, in June 2021, an unusually large negative adjustment to payroll tax contributions in the amount of $35.5 billion was made because payroll tax revenue credited to the trust funds in 2020 was based on estimates that did not anticipate effects of the pandemic and recession.

[e] Includes reimbursements from the General Fund of the Treasury to the OASI and DI Trust Funds for: (1) the cost of payroll tax credits provided to employees in 1984 and self-employed persons in 1984-89 by Public Law 98-21; and (2) payroll tax revenue forgone under the provisions of Public Laws 111-147, 111-312, 112-78, and 112-96. Also includes transfers of a portion of proceeds from repayments of loans authorized under Public Law 116-136.

[f] Revenue from taxation of benefits is the amount that would be assessed on benefit amounts scheduled in the law.

[g] Between -$50 million and $50 million.

[h] When the fund reserves are depleted, values under current law would reflect permissible expenditures only, which would be less than the full cost of paying scheduled benefits shown in this table.

Note: Components may not sum to totals because of rounding.

4. Factors Underlying Changes in 10-Year Trust Fund Ratio Estimates From Last Year's Report

Table IV.A4 presents an analysis of the factors underlying the changes in the intermediate estimates over the short-range projection period for the OASI, DI, and the combined funds from last year's report to this report.

In the 2022 report under the intermediate assumptions, the trust fund ratio for OASI reached 66 percent at the beginning of 2031—the tenth projection year for that report. The change in the short-range valuation period alone, from 2022 through 2031 to 2023 through 2032, lowered the estimated trust fund ratio for the tenth year by 20 percentage points, to 46 percent. All other changes to reflect modifications in law and regulations since last year's report, the most recent data, adjustments to the assumptions for future years, and changes in projection methods combined for a net decrease in the ratio for the tenth projection year of 18 percentage points. Therefore, the total change in the tenth year projected trust fund ratio from last year's report to this year's report is a reduction of 38 percentage points to 28 percent.

Legislative and regulatory changes since the 2022 report was published did not have a significant effect on the projected tenth year OASI trust fund ratio. Changes in demographic assumptions over the short-range period increased the projected tenth year trust fund ratio for OASI by 4 percentage points. Several changes in economic data and assumptions combined to cause a net reduction in the OASI trust fund ratio of 21 percentage points by the beginning of 2032. The large decrease due to economic factors is primarily due to the Trustees revising down the levels of GDP and labor productivity over the projection period. The reduced level of productivity reduces the projected growth in average earnings relative to the CPI. As a result, higher assumed growth in CPI and average benefits in the short-range period is not matched with comparable increases in average earnings underlying payroll tax collections. Incorporating recent programmatic data and assumptions, including actual average benefits and beneficiary counts for 2022, resulted in a decrease of 1 percentage point in the tenth year OASI trust fund ratio. Finally, the tenth year trust fund ratio was not affected significantly by changes in the short-range methodology for this report.

Table IV.A4 also shows corresponding estimates of the factors underlying the changes in the financial projections for the DI Trust Fund and for the combined OASI and DI Trust Funds. The 35-percentage-point increase in the DI trust fund ratio from the beginning of 2031 in last year's report to the beginning of 2032 in this year's report is the net effect of increases and decreases from the factors described above for the OASI Trust Fund, combined with other changes that are significant for DI but not OASI. The large increase of 33 points due to programmatic data and assumptions reflects

lower recent disabled-worker application and incidence rates, and a more gradual return of initial disability application rates to their ultimate levels from recent lows.

B. LONG-RANGE ESTIMATES

The Trustees use three types of financial measures to assess the actuarial status of the Social Security trust funds under the financing approach specified in current law: (1) annual cash-flow measures, including income rates, cost rates, and balances; (2) trust fund ratios; and (3) summary measures such as actuarial balances and unfunded obligations.

The difference between the annual income rate and annual cost rate, both expressed as percentages of taxable payroll, is the annual balance. The level and trend of the annual balances at the end of the 75-year projection period are factors used to assess the actuarial status of the program.

The trust fund ratio for a year is the proportion of the year's projected cost that could be paid with fund reserves available at the beginning of the year. Critical factors considered in assessing actuarial status include: (1) the year of depletion of the fund reserves and the percent of scheduled benefits that is still payable after reserves are depleted, (2) the stability of the trust fund ratio at the end of the long-range period, and (3) the level and year of maximum trust fund ratio.

Solvency at any point in time requires that sufficient financial resources are available to pay all scheduled benefits at that time. Solvency is generally indicated by a positive trust fund ratio. "Sustainable solvency" for the financing of the program under a specified set of assumptions is achieved when the projected trust fund ratio is positive throughout the 75-year projection period and is either stable or rising at the end of the period.

Total income and cost are summarized over valuation periods that extend through 75 years and over the infinite horizon.[1] This section presents several summarized measures, including the actuarial balance and the open- group unfunded obligation. The actuarial balance indicates the size of any surplus or shortfall as a percentage of taxable payroll over the period. The open-group unfunded obligation indicates the size of any shortfall in present-value dollars.

This section also includes additional information that is used to assess the actuarial status of the Social Security program, including: (1) a comparison of the number of beneficiaries to the number of covered workers, (2) the test of long-range close actuarial balance, and (3) the reasons for the change in the actuarial balance from the last report.

---

[1] See appendix F.

1. Annual Income Rates, Cost Rates, and Balances

The concepts of income rate and cost rate, expressed as percentages of taxable payroll, are important in the consideration of the long-range actuarial status of the trust funds. The annual income rate is the ratio of all non-interest income to the OASDI taxable payroll for the year. Non-interest income includes payroll taxes, taxes on scheduled benefits, and any General Fund transfers or reimbursements. The OASDI taxable payroll consists of the total earnings subject to OASDI taxes with some relatively small adjustments.[1] The annual cost rate is the ratio of the cost of the program to the taxable payroll for the year. The cost includes scheduled benefits, administrative expenses, net interchange with the Railroad Retirement program, and payments for vocational rehabilitation services for disabled beneficiaries. For any year, the annual income rate minus the annual cost rate is the annual "balance" for the year.

Table IV.B1 presents a comparison of the estimated annual income rates and cost rates by trust fund and alternative. Table IV.B2 shows the separate components of the annual income rates.

Under the intermediate assumptions, the OASI income rate will increase from 10.95 percent of payroll for 2022 to 11.42 percent of payroll for 2023 and then decrease to 11.08 percent of payroll for 2024. The income rate for 2023 is relatively high because of an estimated large positive adjustment to payroll tax contributions to be made in June 2023. This adjustment is unusually large because payroll tax revenue credited to the trust fund in 2022 was based on estimates that did not anticipate the stronger-than-expected recovery from the pandemic-induced recession. The OASI income rate then generally gradually rises thereafter, reaching 11.57 percent of taxable payroll for 2097. Income from taxation of benefits causes this gradual increase in the OASI income rate for two main reasons: (1) total scheduled benefits are rising faster than payroll; and (2) the ratio of total income tax on benefits to total benefits increases over time for reasons discussed in detail on page 153.

The OASI cost rate rises rapidly from 2022 to about 2040. During this period, the retirement of the baby-boom generation will increase the number of beneficiaries much faster than the number of workers increases, as subsequent lower-birth-rate generations continue to replace the baby-boom generation at working ages. From 2040 to 2046, the cost rate declines because the aging baby-boom generation is gradually replaced at retirement ages by the

[1] Adjustments include adding deemed wage credits based on military service for 1983-2001 and reflecting the lower effective tax rates (as compared to the combined employee-employer rate) that apply to multiple-employer "excess wages." Lower rates also applied to net earnings from self-employment before 1984 and to income from tips before 1988.

lower-birth-rate generations that followed. The OASI cost rate then rises from 15.01 percent for 2046 to 16.65 percent for 2078, largely because of the period of reduced birth rates starting with the recession of 2007-09, and then generally declines to 15.82 percent for 2097.

Projections of income rates under the low-cost and high-cost sets of assumptions are similar to those projected for the intermediate assumptions, because income rates are largely a reflection of the payroll tax rates specified in the law, with the changes from taxation of benefits noted above. In contrast, OASI cost rates for the low-cost and high-cost assumptions are significantly different from those projected for the intermediate assumptions. For the low-cost assumptions, the OASI cost rate generally declines from 12.77 percent for 2023 to 12.03 percent for 2053, rises to 12.33 percent for 2070, and then generally declines to 11.06 percent for 2097, at which point the income rate reaches 11.27 percent. For the high-cost assumptions, the OASI cost rate rises from 13.26 percent for 2023 to 24.89 percent for 2088 and then declines gradually to 24.73 percent for 2097, at which point the income rate reaches 12.13 percent.

The pattern of the projected OASI annual balance is important in the analysis of the actuarial status of the program. Under the intermediate assumptions, the annual balance is negative throughout the projection period. The annual deficit increases from 1.15 percent of taxable payroll for 2022 to 1.50 percent for 2023 and to 2.17 percent for 2024. After 2024, the annual deficit continues to rise to 3.59 percent for 2040. It then declines to 3.53 percent of payroll for 2046, rises to 5.03 percent for 2078, and generally declines thereafter, reaching 4.25 percent of taxable payroll for 2097.

Under the low-cost assumptions, the OASI annual deficit increases from 1.41 percent of payroll for 2023 to 1.66 percent for 2024, and then generally declines to 0.72 percent of payroll for 2053. After 2053, the annual deficit rises to 0.99 percent for 2070. After 2070, the OASI annual balance generally improves, turning positive in 2089, and reaching 0.21 percent of payroll for 2097. Under the high-cost assumptions, the OASI annual deficit rises from 1.72 percent for 2023 to 12.76 percent for 2088, and then declines relatively modestly to 12.60 percent for 2097.

First year balance becomes negative and remains negative throughout the 75-year projection period			2010			2026			2010

[a] Income rates include certain reimbursements from the General Fund of the Treasury.

[b] Benefit payments scheduled to be paid on January 3 are actually paid on December 31 as required by the statutory provision for early delivery of benefit payments when the normal payment delivery date is a Saturday, Sunday, or legal public holiday. For comparability with the values for historical years and the projections in this report, all trust fund operations and asset reserves reflect the 12 months of benefits scheduled for payment each year.

[c] Between 0 and 0.005 percent of taxable payroll.

[d] The annual balance is projected to be negative for a temporary period and then become positive before the end of the projection period.

[e] The annual balance is projected to be positive throughout the entire 75-year projection period.

Notes:
1. The income rate excludes interest income.
2. Revisions of taxable payroll may change some historical values.
3. Components may not sum to totals because of rounding.

Under the intermediate assumptions, the projected DI cost rate is 1.60 percent for 2023. After 2023, the cost rate fluctuates, reaching 1.59 percent for 2031. Then the DI cost rate increases gradually to 1.96 percent for 2055. Thereafter, the cost rate remains relatively stable, decreasing slowly to 1.84 percent for 2083, and then increasing to 1.93 percent for 2097. The DI income rate increases from 1.79 percent for 2022 to 1.86 percent for 2023, decreases to 1.80 percent for 2024, and is relatively stable thereafter, reaching 1.83 percent for 2097. The annual balance increases from 0.17 percent of payroll for 2022 to 0.26 percent for 2023, decreases to 0.16 percent for 2026 and then increases to 0.23 percent for 2031. After 2031, the annual balance declines and becomes negative for 2044. After 2044, the annual deficit increases to 0.13 percent for 2055, decreases to 0.01 percent for 2083, and then increases to 0.10 percent of payroll for 2097.

Under the low-cost assumptions, the projected DI cost rate declines from 1.57 percent of payroll for 2023 to 1.20 percent for 2035 and then increases to 1.32 percent for 2054. The cost rate then declines through 2082 and increases slowly thereafter, reaching 1.29 percent for 2097. The annual balance is positive throughout the long-range period, reaching 0.53 percent of payroll for 2097. Under the high-cost assumptions, the DI cost rate rises from 1.65 percent of payroll for 2023 to 2.80 percent for 2057 and fluctuates thereafter, reaching 2.75 percent for 2097. The DI annual balance declines from 0.22 percent of payroll for 2023 and becomes negative for 2026, with a 0.03 percent annual deficit for 2026. After 2026, annual deficits increase to 0.96 percent of payroll for 2057 and fluctuate thereafter, reaching 0.90 percent for 2097.

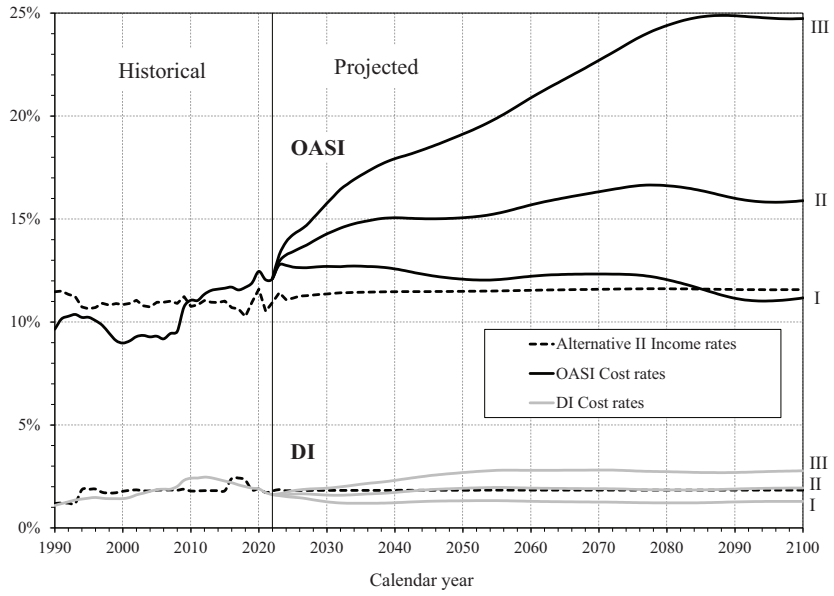
Figure IV.B1 shows the patterns of the historical and projected OASI and DI annual cost rates. The patterns in projected OASI and DI cost rates are described earlier in this chapter. Historical annual OASI cost rates shifted upward starting in 2008 and have remained at relatively high levels since then, primarily due to the changing age distribution of the adult population with the retirement of the baby-boom generation and entry of lower birth-rate generations into working ages. Historical annual DI cost rates rose substantially between 1990 and 2010 in large part due to: (1) aging of the working population as the baby-boom generation moved from ages 25-44 in 1990, where disability prevalence is low, to ages 45-64 in 2010, where disability prevalence is much higher; (2) a substantial increase in the percentage of women insured for DI benefits as a result of increased and more consistent rates of employment; and (3) increased disability incidence rates for women to a level similar to those for men by 2010. As of 2010, these three factors have largely stabilized. Other factors that are not yet fully understood, including the changing nature of work, have caused age-sex-adjusted incidence rates and cost rates to decline from 2010 to 2022. Figure IV.B1 shows only the income rates for alternative II because the variation in income rates by alternative is very small. Income rates generally increase slowly for each of the alternatives over the long-range period. Taxation of benefits, which is a small portion of income, is the main source of the increases in the income rate and the variation among the alternatives.

Table IV.B1 shows the annual balances for OASI, DI, and OASDI. The pattern of the annual balances is important to the analysis of the actuarial status of the Social Security program as a whole. As seen in figure IV.B1, the magnitude of each of the positive annual balances is the distance between the appropriate cost-rate curve and the income-rate curve above it. The magnitude of each of the annual deficits is the distance between the appropriate cost-rate curve and the income-rate curve below it. Annual balances follow closely the pattern of annual cost rates after 1990 because the payroll tax rate

for the OASDI program has not changed and will not under current law, with only small variations in the allocation between DI and OASI except for changes due to the 1994 and the 2016-18 payroll tax rate reallocations.

In the future, the costs of OASI, DI, and the combined OASDI programs as a percentage of taxable payroll are unlikely to fall outside the range encompassed by alternatives I and III because alternatives I and III define a wide range of demographic, economic, and program-specific conditions.

Figure IV.B1.—Long-Range OASI and DI Annual Income Rates and Cost Rates
[As a percentage of taxable payroll]



Long-range OASDI cost and income are most often expressed as percentages of taxable payroll. However, cost and income are also presented as shares of gross domestic product (GDP), the value of goods and services produced during the year in the United States. Under alternative II, the OASDI cost increases from about 5.2 percent of GDP for 2023 to about 6.0 percent for 2040. After 2040, OASDI cost as a percentage of GDP declines slightly through 2048, increases to a peak of 6.3 percent for 2076, and thereafter decreases slowly, reaching about 6.0 percent by 2097. Appendix G presents full estimates of income and cost relative to GDP.

Table IV.B2 contains historical and projected annual income rates and their components by trust fund and alternative. The annual income rates consist of

the scheduled payroll tax rates, the rates of income from taxation of scheduled benefits, and the rates of income from General Fund reimbursements. Projected income from taxation of benefits increases over time for reasons discussed on page 153.

[a] Revenue from taxation of benefits is the amount that would be assessed on benefit amounts scheduled in the law.

[b] Includes payroll tax revenue forgone under the provisions of Public Laws 111-147, 111-312, 112-78, and 112-96, and other miscellaneous reimbursements. Also includes transfers of a portion of the proceeds from repayments of loans authorized under Public Law 116-136.

[c] Values exclude interest income.

[d] Between 0 and 0.005 percent of taxable payroll.

Note: Components may not sum to totals because of rounding.

2. Comparison of Workers to Beneficiaries

Under the intermediate assumptions, the OASDI cost rate will rise rapidly between 2023 and about 2040, primarily because the number of beneficiaries rises much more rapidly than the number of covered workers as the baby-boom generation continues to retire and is replaced at working ages by lower birth-rate generations. The ratio of OASDI beneficiaries to workers is dominated by the OASI program because all workers eventually die or retire, but only a relatively small minority become eligible for benefits under the DI program. The trends described below are primarily due to demographic changes and thus affect the DI program roughly 20 years earlier than the OASI and OASDI programs. The baby-boom generation had lower fertility rates than their parents, and lower fertility rates are expected to persist for all future generations; therefore, the ratio of OASDI beneficiaries to workers will rise rapidly and reach a permanently higher level after all of the baby-boom generation has retired. Due to increasing longevity, the ratio of beneficiaries to workers will generally rise slowly thereafter. Table IV.B3 provides a comparison of the numbers of covered workers and beneficiaries.

[a] Workers who are paid at some time during the year for employment on which OASDI taxes are due.
[b] Beneficiaries with monthly benefits in current-payment status as of June 30.
[c] This column is the sum of OASI and DI beneficiaries. A small number of beneficiaries receive benefits from both funds.

Notes:

1. The number of beneficiaries does not include uninsured individuals who received benefits under section 228 of the Social Security Act. The General Fund of the Treasury reimbursed the trust funds for the costs of most of these individuals.

2. Historical covered worker and beneficiary data are subject to revision.

3. Components may not sum to totals because of rounding.

The effect of the demographic shift under the three alternatives on the OASDI cost rates is clear when one considers the projected number of OASDI beneficiaries per 100 covered workers. Compared to the 2022 level of 36 beneficiaries per 100 covered workers, this ratio is projected to rise to 44 by 2038 under the intermediate assumptions because the growth in beneficiaries greatly exceeds the growth in workers. This projected ratio continues to rise through 2078 and then generally declines, reaching 47 under the intermediate assumptions by 2100. Under the high-cost assumptions, this ratio generally rises to 66 by 2100. Under the low-cost assumptions, this ratio rises to 41 by 2038 and then generally declines, reaching 36 by 2100. Figure IV.B2 shows beneficiaries per 100 covered workers.

For each alternative, the curve in figure IV.B2 is strikingly similar to the corresponding cost-rate curve in figure IV.B1. This similarity emphasizes the extent to which the cost rate is determined by the age distribution of the population. The cost rate is essentially the product of the number of beneficiaries and their average benefit, divided by the product of the number of covered workers and their average taxable earnings. For this reason, the pattern of the annual cost rates is similar to that of the annual ratios of beneficiaries to workers.

Figure IV.B2.—Number of OASDI Beneficiaries Per 100 Covered Workers

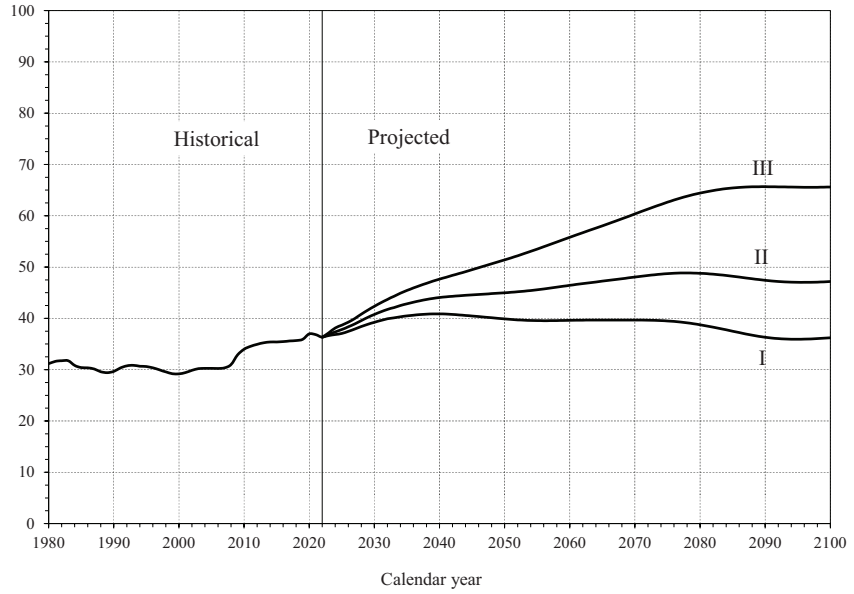

Table IV.B3 also shows the number of covered workers per OASDI beneficiary, which was about 2.8 for 2022. Under the intermediate assumptions,

this ratio declines generally throughout the long-range period, reaching 2.3 for 2038 and 2.1 by 2100. Under the low-cost assumptions, this ratio declines to 2.4 for 2038, then generally rises to 2.8 by 2100. Under the high-cost assumptions, this ratio generally decreases to 1.5 by 2100.

3. Trust Fund Ratios and Test of Long-Range Close Actuarial Balance

Trust fund ratios are critical indicators of the adequacy of the financial resources of the Social Security program. The trust fund ratio for a year is the amount of asset reserves in a fund at the beginning of a year expressed as a percentage of the cost for the year. Under current law, the OASI and DI Trust Funds do not have the authority to borrow other than in the form of advance tax transfers. If reserves held in either trust fund become depleted during a year, and continuing revenue falls short of the cost of scheduled benefits, then full scheduled benefits would not be payable on a timely basis. For this reason, the trust fund ratio is a critical financial measure.

The trust fund ratio serves an additional important purpose in assessing the actuarial status of the program. If the projected trust fund ratio is positive throughout the period and is either level or increasing at the end of the period, then projected adequacy for the long-range period is likely to continue for subsequent reports. Under these conditions, the program has achieved sustainable solvency.

Table IV.B4 shows the projections of trust fund ratios by alternative, without regard to advance tax transfers that would be effected, for the separate and combined OASI and DI Trust Funds. The table also shows the years of trust fund reserve depletion and the percentage of scheduled benefits that would be payable thereafter, by alternative.

Under the intermediate assumptions, the OASI trust fund ratio is projected to decline from 220 percent at the beginning of 2023 until the trust fund reserves become depleted in 2033 (one year earlier than projected in last year's report), at which time 77 percent of scheduled benefits would be payable. The change in reserve depletion year to 2033, compared to 2034 in last year's report, is due primarily to changes in recent economic data and near-term assumptions.

The DI Trust Fund remains solvent throughout the long-range period under the intermediate assumptions, as in last year's report. The DI trust fund ratio increases from 77 percent at the beginning of 2023 to a peak of 267 percent for 2043. After 2043, the DI trust fund ratio generally declines throughout the remainder of the long-range period, reaching 155 percent for 2098.

Under the intermediate assumptions, the trust fund ratio for the combined OASI and DI Trust Funds declines from 204 percent at the beginning of

2023 until the combined fund reserves become depleted in 2034 (one year earlier than projected in last year's report), at which time 80 percent of scheduled benefits would be payable.

Under the low-cost assumptions, the trust fund ratio for the DI program increases from 2023 throughout the projection period, from 78 percent at the beginning of 2023 to the extremely high level of 3,574 percent for 2098. For the OASI program, the trust fund ratio declines steadily, from 220 percent for 2023 until the reserves become depleted in 2039, at which time 89 percent of scheduled benefits would be payable. For the combined OASDI program, the trust fund ratio declines from 204 percent for 2023 until the combined fund reserves become depleted in 2067. However, the trust funds would have sufficient income by the end of 2092 to permit full payment of scheduled benefits thereafter and also to pay in arrears the temporary shortfalls between 2067 and 2092. By 2093, trust fund reserves become positive and the trust fund ratio increases thereafter, to a ratio of 36 percent for 2098. Because the DI trust fund ratio is positive throughout the projection period and increasing at the end of the period, under the low-cost assumptions, only the DI program achieves sustainable solvency.

Under the high-cost assumptions, the OASI trust fund ratio declines from 219 percent for 2023 until reserves become depleted in 2031, at which time 70 percent of scheduled benefits would still be payable. The DI trust fund ratio increases from 77 percent for 2023 to 86 percent for 2024, and then declines until the reserves become depleted in 2036. At that time, 85 percent of scheduled benefits would still be payable. The combined OASI and DI trust fund ratio declines from 204 percent for 2023 until reserves become depleted in 2031, at which time 72 percent of scheduled benefits would still be payable.

Trust fund reserve depletion occurs within the 75-year projection period for the OASI Trust Fund under the low-cost, intermediate, and high-cost assumptions, and for the DI Trust Fund under the high-cost assumptions. It is therefore very likely that lawmakers will need to increase income, reduce program costs, or both, in order to maintain solvency for the OASI Trust Fund. The stochastic projections discussed in appendix E suggest that OASI and combined OASI and DI Trust Fund reserve depletion is highly probable before mid-century.

In the 2022 report, the combined trust fund reserves were projected to become depleted in 2031 and 2035 under the high-cost and intermediate assumptions, respectively, and become temporarily depleted between 2069 and 2088 under the low-cost assumptions.

For 2097	71	[c]	74	100	[c]	[d]	46	67	48

[a] Benefit payments scheduled to be paid on January 3 are actually paid on December 31 as required by the statutory provision for early delivery of benefit payments when the normal payment delivery date is a Saturday, Sunday, or legal public holiday. For comparability with the values for historical years and the projections in this report, all trust fund ratios reflect the 12 months of benefits scheduled for payment each year.

[b] Trust fund reserves would be depleted at the beginning of this year.

[c] Trust fund reserves would not be depleted within the projection period.

[d] Trust fund reserves would be depleted for a temporary period, and return to positive levels before the end of the period.

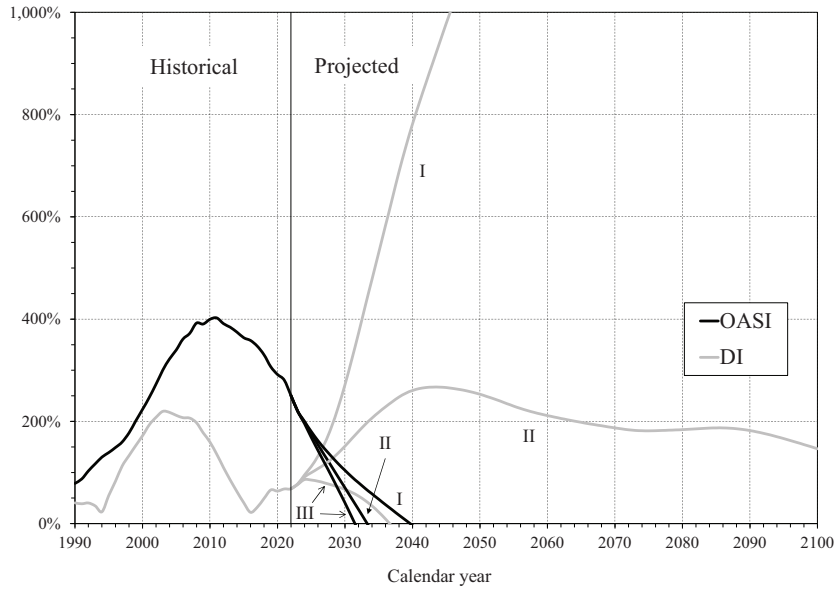
Note: The definition of trust fund ratio appears in the Glossary. The ratios shown for the combined trust funds for years after reserve depletion of either the DI or OASI Trust Fund are hypothetical.

Since 2013, when the Trustees last modified the test of long-range close actuarial balance, the standard for each trust fund requires meeting two conditions: (1) the test of short-range financial adequacy is satisfied; and (2) the trust fund ratios stay above zero throughout the 75-year projection period, allowing scheduled benefits to be paid in a timely manner throughout the period. Both the long-range test and the short-range test are applied based on

the intermediate set of assumptions. As discussed in section IV.A, the DI Trust Fund passes the test of short-range financial adequacy because the trust fund ratio, while below 100 percent at the beginning of the projection period, reaches 100 percent within 5 years and stays above 100 percent throughout the remainder of the 10-year period. The OASI and combined OASI and DI Trust Funds fail the test of short-range financial adequacy because the trust fund ratios drop below 100 percent by the end of the 10-year period. Under the intermediate assumptions, the OASI Trust Fund reserves become depleted in 2033, DI Trust Fund reserves stay positive throughout the 75-year period, and the combined OASI and DI Trust Fund reserves become depleted in 2034. Therefore, the OASI and combined OASI and DI Trust Funds fail the test of long-range close actuarial balance, and the DI program passes the test of long-range close actuarial balance.

Figure IV.B3 illustrates the trust fund ratios for the separate OASI and DI Trust Funds for each of the alternative sets of assumptions. DI Trust Fund status is more uncertain than OASI Trust Fund status because there is a high degree of uncertainty associated with future disability prevalence. A graph of the trust fund ratios for the combined trust funds appears in figure II.D6.

Figure IV.B3.—Long-Range OASI and DI Trust Fund Ratios
[Asset reserves as a percentage of annual cost]



4. Summarized Income Rates, Summarized Cost Rates, and Actuarial Balances

Summarized values for the full 75-year period are useful in analyzing the program's long-range actuarial status over the period as a whole, both under current law and under proposed modifications to the law. All annual amounts included in a summarized value are present-value discounted to the valuation date. It is important to note that the actuarial balance indicates the solvency status of the fund only for the very end of the period.

Table IV.B5 presents summarized income rates, summarized cost rates, and actuarial balances for 25-year, 50-year, and 75-year valuation periods. Summarized income rates are the sum of the present value of non-interest income for a period (which includes scheduled payroll taxes, the projected income from the taxation of scheduled benefits, and reimbursements from the General Fund of the Treasury) and the starting trust fund asset reserves, expressed as a percentage of the present value of taxable payroll over the period. Under current law, the total OASDI payroll tax rate will remain at 12.4 percent in the future. In contrast, income from taxation of benefits, expressed as a percentage of taxable payroll, is expected to increase in most years of the long-range period for the reasons discussed on page 153. Summarized cost rates are the sum of the present value of cost for a period (which includes scheduled benefits, administrative expenses, net interchange with the Railroad Retirement program, and payments for vocational rehabilitation services for disabled beneficiaries) and the present value of the cost of reaching a target trust fund of 100 percent of annual cost at the end of the period, expressed as a percentage of the present value of taxable payroll over the period.

The actuarial balance for a valuation period is equal to the difference between the summarized income rate and the summarized cost rate for the period. An actuarial balance of zero for any period indicates that cost for the period could be met for the period as a whole (but not necessarily at all points within the period), with a remaining trust fund reserve at the end of the period equal to 100 percent of the following year's cost. A negative actuarial balance for a period indicates that the present value of income to the program plus the existing trust fund is less than the present value of the cost of the program plus the cost of reaching a target trust fund reserve of one year's cost by the end of the period. Generally, a trust fund is deemed to be adequately financed for a period as a whole if the actuarial balance is zero or positive, meaning that the reserves at the end of the period are at least

equal to annual cost. Note that solvency is possible at the end of the period with a small negative actuarial balance where reserves are still positive.[1]

Table IV.B5 contains summarized rates for the intermediate, low-cost, and high-cost assumptions. The low-cost and high-cost assumptions define a wide range of possibilities. Financial outcomes as good as the low-cost scenario or as bad as the high-cost scenario are unlikely to occur.

For the 25-year valuation period, the OASDI program has an actuarial balance of -0.31 percent of taxable payroll under the low-cost assumptions, -2.50 percent under the intermediate assumptions, and -4.89 percent under the high-cost assumptions. These balances indicate that the program is not adequately financed for the 25-year valuation period under any of these three sets of assumptions.

For the 50-year valuation period, the OASDI program has actuarial balances of -0.29 percent under the low-cost assumptions, -3.24 percent under the intermediate assumptions, and -6.97 percent under the high-cost assumptions. These actuarial balances mean that the OASDI program is not adequately financed for the 50-year valuation period under any of these three sets of assumptions.

For the entire 75-year valuation period, the combined OASDI program has actuarial balances of -0.10 percent of taxable payroll under the low-cost assumptions, -3.61 percent under the intermediate assumptions, and -8.37 percent under the high-cost assumptions. These balances indicate that the combined OASDI program is not adequately financed for the 75-year valuation period under any of these three sets of assumptions.

Assuming the intermediate assumptions accurately capture future demographic, economic, and program-specific trends, solvency for the program over the next 75 years could be restored using a variety of approaches. For example, revenue could be increased in a manner equivalent to an immediate and permanent increase in the combined Social Security payroll tax rate from 12.40 percent to 15.84 percent (a relative increase of 27.7 percent),[2] cost could be reduced in a manner equivalent to an immediate and permanent

---

[1] A program is solvent over any period for which the trust fund maintains a positive level of asset reserves. In contrast, the actuarial balance for a period includes the cost of having a target fund equal to 100 percent of the following year's cost at the end of the period. Therefore, if a program ends the period with reserves that are positive but not sufficient to cover the following year's costs, it will be solvent at the end of the period and yet still have a small negative actuarial balance for that period.

[2] The 3.44 percentage point increase in the payroll tax rate required to achieve 75-year solvency differs somewhat from the 3.61 percent actuarial deficit. This is primarily because the rate increase required to achieve 75-year solvency reflects a zero trust fund reserve at the end of the period, whereas the 3.61 percent actuarial deficit incorporates an ending trust fund reserve equal to one year's cost. While such an increase in the payroll tax rate would cause some behavioral changes in earnings and ensuing changes in benefit levels, such changes are not included in these calculations because they are assumed to have roughly offsetting effects on OASDI actuarial status over the 75-year long-range period as a whole.

reduction in scheduled benefits of 21.3 percent, or some combination of approaches could be used.

However, eliminating the actuarial deficit for the next 75-year valuation period requires raising payroll taxes or lowering benefits by more than is required just to achieve solvency, because the actuarial deficit includes the cost of attaining a target trust fund equal to 100 percent of annual program cost by the end of the period. The actuarial deficit could be eliminated for the 75-year period by increasing revenue in a manner equivalent to an immediate and permanent increase in the combined payroll tax from 12.40 percent to 16.01 percent (a relative increase of 29.1 percent),[1] reducing cost in a manner equivalent to an immediate reduction in scheduled benefits of 22.1 percent, or some combination of approaches could be used.

Under the intermediate assumptions, the OASDI program has large annual deficits toward the end of the long-range period that reach 4.35 percent of payroll for 2097 (see table IV.B1). These large deficits indicate that annual cost continues to exceed non-interest income after 2097, so continued adequate financing would require larger changes than those needed to maintain solvency for the 75-year period. Over the period extending through the infinite horizon, the actuarial deficit is 4.6 percent of payroll under the intermediate assumptions.

Table IV.B5.—Components of Summarized Income Rates and Cost Rates, Calendar Years 2023-2097
[As a percentage of taxable payroll]

	Summarized income rate			Summarized cost rate			
Valuation period	Non-interest income	Beginning asset reserves[a]	Total	Cost[a]	Ending target fund[a]	Total	Actuarial balance
OASI:							
Intermediate:							
2023-47.	11.41	1.06	12.47	14.51	0.57	15.09	-2.62
2023-72.	11.48	.57	12.05	15.03	.28	15.31	-3.26
2023-97.	11.51	.41	11.93	15.38	.16	15.54	-3.62
Low-cost:							
2023-47.	11.30	.94	12.24	12.58	.49	13.07	-.83
2023-72.	11.32	.49	11.81	12.39	.23	12.63	-.82
2023-97.	11.32	.34	11.66	12.16	.14	12.30	-.64
High-cost:							
2023-47.	11.53	1.18	12.72	16.60	.67	17.28	-4.56
2023-72.	11.67	.67	12.35	18.40	.34	18.74	-6.39
2023-97.	11.78	.51	12.29	19.82	.20	20.02	-7.73

[1] The calculation of the payroll tax rate increase required to eliminate the actuarial deficit also does not include the effects of behavioral changes, because they are assumed to have roughly offsetting effects.

[a] Benefit payments scheduled to be paid on January 3 are actually paid on December 31 as required by the statutory provision for early delivery of benefit payments when the normal payment delivery date is a Saturday, Sunday, or legal public holiday. For comparability with the values for historical years and the projections in this report, all trust fund operations and asset reserves reflect the 12 months of benefits scheduled for payment each year.

Note: Components may not sum to totals because of rounding.

5. Open-Group Unfunded Obligation

Consistent with practice since 1965, this report focuses on a 75-year open-group valuation to evaluate the long-range actuarial status of the OASDI program. The open-group valuation includes non-interest income and cost for past, current, and future participants through the year 2097. The open-group unfunded obligation measures the adequacy of financing over the period as a whole for a program financed on a pay-as-you-go basis. On this basis, payroll taxes and scheduled benefits for all participants are included through 2097.

The open-group unfunded obligation increased from $20.4 trillion shown in last year's report to $22.4 trillion in this report. If there had been no changes in starting values, assumptions, laws, or methods for this report, then the open-group unfunded obligation would have increased to $21.2 trillion

solely due to the change in the valuation period. This expected increase in the unfunded obligation occurs because: (1) the unfunded obligation is now discounted to January 1, 2023, rather than to January 1, 2022, which tends to increase the unfunded obligation by the annual nominal interest rate; and (2) the unfunded obligation now includes an additional year (2097). However, changes in the law, assumptions, methods, and starting values resulted in a net $1.2 trillion increase in the unfunded obligation.

The 75-year unfunded obligation is equivalent to 3.42 percent of OASDI taxable payroll and 1.2 percent of GDP for 2023-97.[1] These percentages were 3.24 and 1.1, respectively, for last year's report. The 75-year unfunded obligation as a percentage of taxable payroll is less than the actuarial deficit, because the unfunded obligation excludes the cost of having an ending target trust fund value.

The actuarial deficit was 3.42 percent of payroll in last year's report, and was expected to increase to a deficit of 3.48 percent of payroll solely due to the change in the valuation period. Changes in the law, assumptions, methods, and starting values combined to account for a 0.13 percentage point increase (worsening) in the actuarial deficit to 3.61 percent of payroll. The actuarial deficit is 1.3 percent of GDP in this year's report, 0.1 percent higher than in last year's report.

As mentioned above, the open-group unfunded obligation expressed in dollars is higher than it would have been if only the valuation period had been changed. This net increase occurred for a variety of reasons described in the next section, in particular changes in recent economic data and near-term assumptions, and changes in programmatic data and methods.

Table IV.B6 presents the components and the calculation of the long-range (75-year) actuarial balance under the intermediate assumptions. The present value of future cost less future non-interest income over the long-range period, minus the amount of trust fund asset reserves at the beginning of the projection period, is $22.4 trillion for the OASDI program. This amount is the 75-year "open-group unfunded obligation" (see row H). The actuarial deficit (which is the negative of the actuarial balance) combines this unfunded obligation with the present value of the ending target trust fund and expresses the total as a percentage of the present value of the taxable payroll for the period. The present value of future non-interest income minus cost, plus starting trust fund reserves, minus the present value of the ending target trust fund, is -$23.6 trillion for the OASDI program.

[1] The present value of taxable payroll for 2023-97 is $655.0 trillion. The present value of GDP for 2023-97 is $1,865.3 trillion. In last year's report, the present value of taxable payroll for 2022-96 was $631.6 trillion and the present value of GDP was $1,817.7 trillion.

Table IV.B6.—Components of 75-Year Actuarial Balance and Unfunded Obligation Under Intermediate Assumptions

Item	OASI	DI	OASDI
Present value as of January 1, 2023 (in billions):			
A. Payroll tax revenue	$69,343	$11,775	$81,118
B. Reimbursements from general revenue	[a]	[a]	[a]
C. Taxation of benefits revenue	6,076	214	6,290
D. Non-interest income (A + B + C)	75,419	11,989	87,408
E. Cost	100,744	11,916	112,660
F. Cost minus non-interest income (E - D)	25,325	-73	25,252
G. Trust fund asset reserves at start of period	2,712	118	2,830
H. Open-group unfunded obligation (F - G)	22,613	-191	22,422
I. Ending target trust fund[b]	1,070	131	1,201
J. Income minus cost, plus reserves at start of period, minus ending target trust fund (D - E + G - I = - H - I)	-23,683	61	-23,623
K. Taxable payroll	655,013	655,013	655,013
Percent of taxable payroll:			
Actuarial balance (100 × J ÷ K)	-3.62	.01	-3.61

[a] Less than $0.5 billion.

[b] The calculation of the actuarial balance includes the cost of accumulating a target trust fund reserve equal to 100 percent of annual cost at the end of the period.

Note: Components may not sum to totals because of rounding.

Consideration of summary measures alone (such as the actuarial balance and open-group unfunded obligation) for a 75-year period can lead to incorrect perceptions and to policy prescriptions that do not achieve sustainable solvency. These concerns can be addressed by considering the trend in trust fund ratios toward the end of the period. (See the discussion of "sustainable solvency" beginning on page 53.)

Another measure of trust fund finances, discussed in appendix F, is the infinite horizon unfunded obligation, which takes account of all annual balances, even those after 75 years. The extension of the time period past 75 years assumes that the current-law OASDI program and the demographic, economic, and program-specific trends used for the 75-year projection continue indefinitely. This infinite horizon unfunded obligation is estimated to be 4.6 percent of taxable payroll or 1.4 percent of GDP. These percentages were 4.5 and 1.4, respectively, for last year's report. Of course, the degree of uncertainty associated with estimates increases substantially for years further in the future.

6. Reasons for Change in Actuarial Balance From Last Report

Table IV.B7 shows the effects of changes on the long-range actuarial balance under the intermediate assumptions, by category, between last year's report and this report.

Table IV.B7.—Reasons for Change in the 75-Year Actuarial Balance, Based on Intermediate Assumptions
[As a percentage of taxable payroll]

Item	OASI	DI	OASDI
Shown in last year's report:			
Income rate	11.93	1.85	13.78
Cost rate	15.34	1.86	17.20
Actuarial balance	**-3.41**	**-.01**	**-3.42**
Changes in actuarial balance due to changes in:			
Legislation / Regulation	[a]	[a]	[a]
Valuation period[b]	-.05	-.01	-.05
Demographic data and assumptions	-.03	[a]	-.03
Economic data and assumptions	-.04	[a]	-.04
Disability data and assumptions	[a]	.01	.01
Methods and programmatic data	-.08	.02	-.06
Total change in actuarial balance	-.21	.02	-.19
Shown in this report:			
Actuarial balance	**-3.62**	**.01**	**-3.61**
Income rate	11.93	1.85	13.78
Cost rate	15.54	1.84	17.38

[a] Between -0.005 and 0.005 percent of taxable payroll.
[b] The change in the 75-year valuation period from last year's report to this report means that the 75-year actuarial balance now includes the relatively large negative annual balance for 2097. This change in the valuation period results in a larger long-range actuarial deficit. The actuarial deficit includes the trust fund reserve at the beginning of the projection period.

Note: Components may not sum to totals because of rounding.

If the law, data, assumptions, and methods had all remained unchanged from last year's Trustees Report, the long-range OASDI actuarial balance would have decreased (worsened) by 0.05 percent of taxable payroll solely due to the change in the valuation period. However, as described below, projections in this report also reflect new data and changes in law, assumptions, and methods. These changes, including the change in the valuation period, combine to decrease (worsen) the long-range OASDI actuarial balance by 0.19 percentage point, from -3.42 percent of taxable payroll in last year's report to -3.61 percent in this report.

Legislation/Regulation

Changes in law, regulations, and policy have a negligible effect on the long-range OASDI actuarial balance.

Since the last report, there have been a number of notable regulatory and judicial developments related to immigration policy. On August 30, 2022, the Department of Homeland Security (DHS) published a final rule in the Federal Register, establishing regulations to "preserve and fortify" the Deferred Action for Childhood Arrivals (DACA) program in full. On October 5, 2022, the US Court of Appeals for the Fifth Circuit affirmed an earlier district court decision that had declared the DACA policy unlawful. The appeals court returned the case to the district court for further review of the

DHS regulation. On October 14, 2022, the district court issued an order extending the pause in implementing the DACA final rule. As a result, DHS is currently prohibited from processing new DACA applications and related employment authorizations.

Changes in DACA policy affect OASDI program operations because those who apply for and receive deferred action status are eligible for work authorization, which leads to additional workers covered by the OASDI program, increased payroll tax revenue, and subsequently increased benefit cost. The estimates presented in last year's report reflected the assumption that the DACA program would be fully in effect by the middle of 2022, consistent with the Administration's intent. Because of the court challenges, the estimates presented in this year's report incorporate an additional one-year delay in the resumption of processing new applications, to the middle of 2023. This one-year delay has a negligible effect on the actuarial balance.

Valuation Period

As mentioned above, changing the 75-year valuation period from 2022 through 2096 for last year's report to 2023 through 2097 for this report decreases the projected long-range OASDI actuarial balance by 0.05 percent of taxable payroll. This decrease occurs because (1) the annual balances after 2022 are now discounted to January 1, 2023, rather than to January 1, 2022, and (2) the relatively large negative annual balance for 2097 is now included in this year's 75-year projection period. Note that the actuarial balance calculation includes trust fund reserves at the beginning of the projection period. These reserves reflect the program's net financial flows for all past years, including 2022, up to the start of the valuation period.

Demographic Data and Assumptions

New demographic data and changes in demographic assumptions combine to decrease (worsen) the long-range OASDI actuarial balance by 0.03 percent of taxable payroll.

The ultimate demographic assumptions are unchanged for this year's report. However, updates to recent demographic data and near-term assumptions result in significant changes in the long-range actuarial balance.

First, final birth data for calendar year 2021, the base year for the fertility rate projections, indicate a total fertility rate very slightly higher than the rate assumed in last year's report for 2021. However, incorporating the updated base year data into the regression used to project birth rates during the transition to the ultimate level led to generally slightly lower birth rates during the

transition period. This change in assumed birth rates during the transition period decreases the actuarial balance by 0.01 percent of taxable payroll.

Second, updates to near-term mortality assumptions to reflect the effects of the COVID-19 pandemic increase the long-range actuarial balance by 0.02 percent of taxable payroll. Final mortality data are now available for all age groups for calendar year 2020 and for ages 65 and older for 2021. Based on preliminary data available to date, assumed death rates were increased for ages 0 to 64 for 2021 and for ages 0 to 84 for 2022, compared to the rates used for last year's report. Death rates are assumed to continue to be elevated in 2023 and 2024, above the levels that were assumed in last year's report. Projected death rates for years after 2024 are assumed to be unchanged from the levels that would have been projected in the absence of the pandemic.

Third, updates to data for the historical population, other-than-lawful permanent resident immigration, and marriage and divorce—including updates related to incorporating 2020 and 2021 data from the American Community Survey—combine to decrease the actuarial balance by 0.04 percent of taxable payroll.

Economic Data and Assumptions

New economic data and changes in economic assumptions, in combination, decrease the long-range OASDI actuarial balance by 0.04 percent of taxable payroll.

One ultimate economic assumption was updated for this year's report. The annual percentage change in the average OASDI covered wage, adjusted for inflation, is assumed to average 1.14 percentage points over the last 65 years of the 75-year projection period. This is 0.02 percentage point higher than the value assumed for last year's report. This change in the real wage growth assumption was made because the difference between the growth in earnings and employee compensation has been extraordinarily low across the last three economic cycles and is expected to remain slightly lower in the future than was assumed for last year's report. This assumption change increases the long-range actuarial balance by 0.03 percent of taxable payroll.

In addition, updates to recent economic data and near-term assumptions result in significant changes in the long-range actuarial balance.

First, in response to recent economic developments, including higher-than-expected inflation rates and lower-than-expected output growth, the Trustees revised the levels of GDP and labor productivity down by about 3.0 percent by 2026 and for all years thereafter. This change decreases the actuarial balance by roughly 0.13 percent of taxable payroll.

Second, while the ultimate real interest rate assumption remains at 2.3 percent for this year's report, the assumed real interest rates over the first 10 years of the projection period are generally higher than those assumed for last year's report, consistent with recent experience and expectations. These higher near-term real interest rates increase the actuarial balance by 0.02 percent of payroll.

Other changes to historical data and near-term economic assumptions combine for a net increase in the actuarial balance of about 0.03 percent of taxable payroll.

Disability Data and Assumptions

New disability data and changes in disability assumptions combine to increase the long-range OASDI actuarial balance by 0.01 percent of taxable payroll. This increase is due to the combined effects of actual disability data for 2022 and generally slightly lower assumed incidence rates in the first 10 years of the projection period. The ultimate disability incidence rate assumption remains at 4.8 per thousand exposed for this report.

Methods and Programmatic Data

The projections in this report also reflect several methodological improvements and updates based on new program-specific data. These methodological changes, programmatic data updates, and interactions combine to decrease the long-range OASDI actuarial balance by 0.06 percent of taxable payroll. Descriptions of four significant methodological changes and programmatic data updates follow.

First, the method for projecting the age distributions of lawful permanent resident (LPR) new arrival and adjustment-of-status immigrants was updated, reflecting recent data showing a slightly older population at the time of attaining LPR status than had previously been estimated. These updated age distributions decrease the actuarial balance by 0.02 percent of taxable payroll.

Second, the method for estimating the level of OASDI taxable wages for historical years 2000-21 was improved by adopting a more consistent approach for estimating completed values across various types of wages, including regular wages, farm wages, employer-reported tips, and self-reported wages and tips. Taxable wages are based on tabulations of wages reported to date on IRS Forms 941 (Employer's Quarterly Federal Tax Return), but because of reporting lags and corrections, the reported amounts are initially incomplete for a given tax year and additional amounts continue to arrive for sev-

eral subsequent years. This method improvement increases the actuarial balance by 0.01 percent of payroll.

Third, the sample of retired-worker and disabled-worker beneficiaries who have become newly entitled for benefits used in the long-range model for projecting average benefit levels was updated. This model uses a large sample of 10 percent of all newly entitled retired-worker beneficiaries in a recent year. The sample used in last year's report was for worker beneficiaries newly entitled in 2018, while this year's report uses the results from worker beneficiaries newly entitled in 2019. This update results in a decrease in the actuarial balance of 0.03 percent of payroll.

The fourth significant change is updating the post-entitlement benefit adjustment factors based on new programmatic data. Post-entitlement factors are used to account for changes in benefit levels, primarily due to differential mortality by benefit level and earnings after initial benefit entitlement. This data update decreases the actuarial balance by 0.03 percent of payroll.

In addition to these four methodological changes and programmatic data updates, changes in starting levels and projected levels of OASI and DI beneficiaries and benefit amounts over the first 10 years of the projection period, updating other programmatic data, other small methodological improvements, and interactions among the various method changes and updates to programmatic experience combine to increase the long-range actuarial balance by 0.01 percent of payroll.

Figure IV.B4.—OASDI Annual Balances: 2022 and 2023 Trustees Reports
[As a percentage of taxable payroll, under intermediate assumptions]

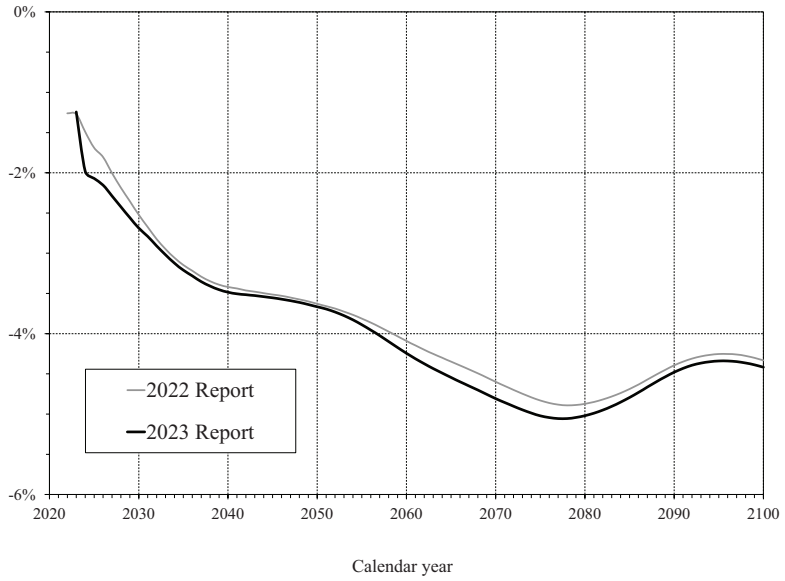

Figure IV.B4 compares the annual balances for this report and the prior year's report for the combined OASDI program over the long-range (75-year) projection period. The figure illustrates the annual effects of the changes described earlier in this section.

The annual balances in this year's report are lower (more negative) in all years after 2023, primarily due to the changes in economic factors and methodological improvements described above. For the full 75-year projection period (2023-97), the annual balances average 0.13 percentage point lower in this year's report. For 2097, the projected annual deficit is 4.35 percent of taxable payroll in this report, compared to 4.26 percent in last year's report.

V. ASSUMPTIONS AND METHODS UNDERLYING ACTUARIAL ESTIMATES

The future income and cost of the OASDI program will depend on many demographic, economic, and program-specific factors. Trust fund income will depend on how these factors affect the size and composition of the working population as well as the level and distribution of earnings. Similarly, program cost will depend on how these factors affect the size and composition of the beneficiary population as well as the general level of benefits.

The Trustees make basic assumptions for several of these factors based on analysis of historical trends, historical conditions, and expected future conditions. These factors include fertility, mortality, immigration, marriage, divorce, productivity, inflation, average earnings, unemployment, real interest rates, and disability incidence and termination. Other factors depend on these basic assumptions. These other, often interdependent, factors include total population, life expectancy, labor force participation, gross domestic product, and program-specific factors. Each year, the Trustees reexamine these assumptions and methods in light of new information and make appropriate revisions.

Future levels of these factors and their interrelationships are inherently uncertain. To address these uncertainties, this report uses three sets of assumptions, designated as intermediate (alternative II), low-cost (alternative I), and high-cost (alternative III). The intermediate set represents the Trustees' best estimate of the future course of the population and the economy as of the time assumptions were set in December 2022. With regard to the net effect on the actuarial status of the OASDI program, the low-cost set is more optimistic and the high-cost set is more pessimistic. The low-cost and high-cost sets of assumptions reflect significant potential changes in the interrelationships among factors, as well as changes in the values for individual factors.

While it is unlikely that all of the factors and interactions will differ in the specified directions from the intermediate values, many combinations of individual differences in the factors could have a similar overall effect. Outcomes with overall long-range cost as low as the low-cost scenario or as high as the high-cost scenario are very unlikely. This report also includes a section on sensitivity analysis, where factors are changed one at a time (see appendix D), and a section on stochastic projections, which provides a probability distribution of possible future outcomes, with most of the key factors being varied around the intermediate alternative (see appendix E).

Readers should interpret the estimates based on the three sets of alternative assumptions with care. These estimates are not specific predictions of the future financial status of the OASDI program. Rather, they are intended to provide a reasonable range of future income and cost.

All of the key demographic, economic, and program-specific assumptions reach their long-range ultimate values within the next 25 years. For extrapolations beyond the 75-year long-range period, the ultimate levels or trends reached by the end of the 75-year period remain unchanged. The assumed ultimate values represent average annual experience or growth rates. Actual future values will exhibit fluctuations or cyclical patterns, as in the past.

At this time, there is no consensus on what the lasting effects of the COVID-19 pandemic on long-term demographic, economic, and program-specific trends will be. The Trustees continue to assume that the pandemic will have no net effect on the individual long-range ultimate assumptions. However, the Trustees assume that the pandemic and other evolving international events, like the war in Ukraine, will have consequential effects on the future structure of the economy and the level of productivity.

The following sections briefly discuss the various assumptions and methods used in making the estimates of trust fund actuarial status, which are the focus of this report.[1] There are, of course, many interrelationships among these factors that are important but are beyond the scope of this discussion.

A. DEMOGRAPHIC ASSUMPTIONS AND METHODS

This section of the report provides a brief overview of the demographic historical data and the assumptions used for the projections.

1. Fertility Assumptions

Birth rates by single year of age, for girls and women aged 14 to 49,[2] are the basis for the fertility assumptions. These rates apply to the total number of women, across all marital statuses, in the midyear population at each age. Table V.A1 displays the historical and projected total fertility rates.[3]

---

[1] Actuarial Studies published by the Office of the Chief Actuary, Social Security Administration, contain further details about the assumptions, methods, and actuarial estimates. A complete list of available studies may be found at www.ssa.gov/OACT/NOTES/actstud.html. This entire report, along with supplemental year-by-year tables and additional documentation on assumptions and methods, may be found at www.ssa.gov/OACT/TR/2023/.

[2] Birth rates at age 14 include births to girls aged 14 and under, and birth rates at age 49 include births to women aged 49 and over.

[3] The total fertility rate may be interpreted as the average number of children that would be born to a woman if she were to experience, at each age of her life, the birth rate observed in, or assumed for, a specified year, and if she were to survive the entire childbearing period. A rate of about 2.1 would ultimately result in a nearly constant population if immigration and emigration were both zero, and if death rates were to remain at current levels.

Historically, birth rates in the United States have fluctuated widely. The total fertility rate decreased from 3.31 children per woman at the end of World War I (1918) to 2.15 during the Great Depression (1936). After 1936, the total fertility rate rose to 3.68 in 1957 and then fell to 1.74 by 1976. After 1976, the total fertility rate rose above 2.00 by 1990, where it generally remained through 2009, but it dropped below 1.90 for 2011 and has been at relatively low levels since then. It reached an all-time low of 1.64 for 2020 but went up slightly to 1.66 for 2021.

As in last year's report, the Trustees assume that the COVID-19 pandemic will not have any significant net effect on fertility rates in either the near term or the long term.

The variations in the historical total fertility rate resulted from changes in many factors, including social attitudes, economic conditions, birth-control practices, and the racial/ethnic composition of the population. Since the baby-boom era (1946-65), women have had higher educational attainment, higher labor force participation, an older average age at first marriage, and a higher propensity to be unmarried. All of these factors are consistent with continued lower total fertility rates than those experienced during the baby-boom era. It is still too early to tell whether the 2022 Supreme Court decision (Dobbs v. Jackson Women's Health Organization) and changes being made and considered in states regarding abortion policy will have a significant effect on future fertility rates. Based on consideration of these factors, the Trustees expect the ultimate total fertility rate to be relatively close to the average level since the end of the baby-boom era. The assumed ultimate total fertility rates are 2.20, 2.00, and 1.70 children per woman for the low-cost, intermediate, and high-cost assumptions, respectively. These are the same ultimate rates as those assumed for last year's report.

The 2023 Trustees Report uses a cohort-based projection approach that incorporates a gradual shift to older ages of childbearing for birth cohorts who have not yet reached age 49. The ultimate total fertility rate is reached on a cohort basis over the lifetime of girls attaining age 14 in 2021 and later. For the intermediate assumptions, the projected total fertility rate gradually increases on a period (annual) basis through the year the ultimate period value is reached (2056). The assumed low-cost and high-cost total fertility rates trend away from the intermediate path, also reaching their ultimate period values in 2056.

2. Mortality Assumptions

Mortality projections are developed by assuming ultimate average annual percentage reductions in future mortality rates by age group and cause of death. The assumptions are used to estimate future central death rates by age group, sex, and cause of death.

Adjustments were made to the assumed death rates for 2021, 2022, 2023, and 2024 to account for the effects of the pandemic period. The table below shows the multiplicative factors that were applied to the probabilities of death that would have been projected in the absence of the pandemic. Factors for 2020 are not necessary, as actual final data are available. Similarly, factors were not applied for ages 65 and over in 2021 because actual data are available for those ages.

Year	Age 0	Ages 1-14	Ages 15-64	Ages 65-84	Ages 85 and older
2021	1.00	1.08	1.33	[a] 1.18	[a] 1.08
2022	1.00	1.05	1.11	1.12	1.05
2023	1.00	1.01	1.03	1.03	1.01
2024	1.00	1.00	1.01	1.01	1.00

[a] Based on actual data.

Provisional death rates were particularly high in 2021 for those aged 15-64, relative to the rates that would have been expected in the absence of the pandemic. The factors for this age group in 2022-24 are more in line with the other age groups based on provisional death data in 2022. Compared to the death rates used for last year's report, the factors in the table above result in higher total death rates in 2021 through 2024.

From the estimated central death rates, probabilities of death by single year of age and sex were calculated. Projected death rates for years after 2024 are unchanged from the levels that would have been projected in the absence of the pandemic, under the assumption that increased deaths from the residual effects of living through the pandemic (both physiological and psychological) will be roughly offset by decreased deaths that instead happened sooner (during the pandemic).

Historical death rates were calculated for years 1900 through 2020 for ages below 65 (and for all ages for years prior to 1968) using data from the National Center for Health Statistics (NCHS).[1] For ages 65 and over, final Medicare data on deaths for years 1968 through 2019 and preliminary data

[1] These rates reflect NCHS data on deaths and Census estimates of population.

for 2020 and 2021 were used.[1] Death rates by cause of death were produced for all ages for years 1979-2020 using data from the NCHS. Note, however, that regressions used for the model projections do not include data for 2020 and 2021 due to the elevated death rates caused by COVID-19.

The total age-sex-adjusted death rate[2] declined at an average annual rate of 1.02 percent between 1900 and 2019. Between 1979 and 2019, the period for which death rates were analyzed by cause, the total age-sex-adjusted death rate, for all causes combined, declined at an average rate of 0.85 percent per year.

Death rates have declined substantially in the U.S. since 1900, with rapid declines over some periods and slow or no improvement over the other periods. Many factors are responsible for historical reductions in death rates, including medical advances, increased availability of health-care services, and improvements in sanitation and nutrition. Historical death rates generally declined more slowly for older ages and more rapidly for children and infants than for the rest of the population. Between 1900 and 2019, the age-sex-adjusted death rate declined at an average rate of 0.78 percent per year for ages 65 and over, and 2.97 percent per year for ages under 15.

Mortality assumptions differ for the low-cost, intermediate, and high-cost scenarios. Throughout the projection period, the low-cost scenario contains annual percentage reductions that are smaller than those in the intermediate scenario, while those in the high-cost scenario are larger. The ultimate annual percentage reductions for each of the three alternatives are unchanged from last year's report.

The trends in the annual reductions in central death rates were calculated for the period from 2008 to 2019 for both the NCHS and Medicare data, by age group, sex, and cause of death.[3] These trends are the starting reductions for alternative II. For alternatives I and III, 50 and 150 percent of the starting reductions are used, respectively. These annual reductions, by alternative, are assumed to transition rapidly from the starting reductions until they reach the ultimate annual percentage reductions assumed for 2047 and later.

Table V.A1 contains historical and projected age-sex-adjusted death rates for the total population (all ages), for ages under 65, and for ages 65 and over. Age-sex adjustment eliminates the effect of a changing distribution of population by age and sex, allowing the pure effects of changes in death rates to

[1] These rates reflect Medicare data on deaths and enrollments.

[2] Based on the enumerated total population as of April 1, 2010, if that population were to experience the death rates by age and sex for the selected year.

[3] Cause of death is only available for the NCHS data.

be observed. Under the intermediate assumptions, projected age-sex-adjusted death rates are very slightly higher than the rates in last year's report after 2024. These changes result from incorporating final 2019 Medicare data and a method improvement to use single-year-of-age data instead of five-year age group data.

The projected average annual rate of decline for the total age-sex-adjusted death rate is about 0.39 percent, 0.86 percent, and 1.40 percent between 2022 and 2097 for alternatives I, II, and III, respectively. In keeping with the patterns observed in the historical data, the assumed future rates of decline are greater for younger ages than for older ages, but to a substantially lesser degree than in the past. Accordingly, the projected age-sex-adjusted death rates for ages 65 and over decline at average annual rates of about 0.37 percent, 0.79 percent, and 1.24 percent between 2022 and 2097 for alternatives I, II, and III, respectively. The projected age-sex-adjusted death rates for ages under 15 decline at average annual rates of about 0.54 percent, 1.54 percent, and 2.96 percent between 2022 and 2097 for alternatives I, II, and III, respectively. It should be noted that these average annual rates of decline between 2022 and 2097 are not directly comparable with the rates of decline between 2021 and 2096 in last year's report, because the 75-year period used for last year's report included the pandemic year of 2021, and the death rate assumptions for 2022-24 were revised for this year's report to better reflect the current expected course of the pandemic.

Demographers express a wide range of views on the likely rate of future decline in death rates. For example, some believe that the long-standing historical tendency for mortality to decline more slowly at the oldest ages will cease in the future. Others believe that biological factors, social factors, and limitations on health care spending may slow future rates of decline in mortality.

Table V.A1.—Fertility and Mortality Assumptions,[a] Calendar Years 1940-2100

Calendar year	Total fertility rate[b]	Age-sex-adjusted death rate[c] per 100,000		
		Total	Under 65	65 and over
Historical data:				
1940	2.23	1,919.8	750.1	9,718.8
1945	2.42	1,716.6	674.8	8,662.9
1950	3.03	1,561.9	570.2	8,173.7
1955	3.50	1,453.8	508.2	7,758.4

2100	1.70	285.3	64.4	1,757.9

[a] This table contains basic assumptions along with key summary values that are derived from basic assumptions.

[b] The total fertility rate for any year is the average number of children that would be born to a woman if she were to experience, at each age of her life, the birth rate observed in, or assumed for, the selected year, and if she were to survive the entire childbearing period.

[c] Based on the enumerated total population as of April 1, 2010, if that population were to experience the death rates by age and sex observed in, or assumed for, the selected year.

[d] Estimated using final data for ages below 65 and preliminary data for ages 65 and older.

[e] Estimated using the intermediate assumptions for ages below 65 and preliminary data for ages 65 and older.

[f] Estimated, intermediate alternative.

3. Immigration Assumptions

Projections of the total Social Security area population reflect assumptions for the following four annual immigration flows:

- Lawful permanent resident (LPR) immigration: Persons who enter the Social Security area and are granted LPR status, or who are already in the Social Security area and adjust their status to become LPRs.[1]
- Legal emigration: LPRs and citizens who leave the Social Security area population.
- Other-than-LPR immigration: Persons who enter the Social Security area and stay to the end of the year without being granted LPR status, such as undocumented immigrants, and foreign workers and students entering with temporary visas.
- Other-than-LPR emigration: Other-than-LPR immigrants who leave the Social Security area population or who adjust their status to become LPRs.

Net LPR immigration is the difference between LPR immigration and legal emigration. Net other-than-LPR immigration is the difference between other-than-LPR immigration and other-than-LPR emigration. Total net immigration refers to the sum of net LPR immigration and net other-than-LPR immigration.

Immigration assumptions differ for the low-cost, intermediate, and high-cost scenarios. The low-cost scenario includes higher annual net immigration and the high-cost scenario includes lower annual net immigration. Table V.A2 contains historical and projected levels of various immigration flows.

LPR immigration has increased significantly since World War II, due to various factors and legislative changes, including the Immigration Act of 1965 and the Immigration Act of 1990.

LPR new arrival immigration dropped significantly in 2020 and 2021. LPR new arrival immigration levels in 2020 and 2021 are estimated to be about 280,000 persons lower and 235,000 persons lower, respectively, than would have been expected in the absence of the pandemic. For all three alternatives, the LPR new arrival immigration levels for 2022 are assumed to be the same as would have been assumed in the absence of the pandemic. LPR new arrival immigration levels for 2023 and 2024 are assumed to be higher than would have been assumed in the absence of the pandemic, fully making up for the lower levels in 2020 and 2021. These pandemic effects on LPR new arrival immigration levels are slightly larger than the assumed pandemic effects in last year's report.

[1] Persons who enter the country with legal visas but without LPR status, such as temporary foreign workers and students, are not included in the "LPR immigration" category.

For the intermediate alternative, the ultimate level of annual LPR immigration, which includes residents who adjust their status to become LPRs, is assumed to be 1,050,000 persons for 2025 and later. For alternative I, ultimate annual LPR immigration is assumed to be 1,250,000 persons for 2025 and later, and for alternative III, ultimate annual LPR immigration is assumed to be 850,000 persons for 2025 and later. The ultimate levels of LPR immigration are unchanged from last year's report.

The assumed ratios of annual legal emigration to LPR immigration are 20, 25, and 30 percent for alternatives I, II, and III, respectively. This range is consistent with the limited historical data for legal emigration from the Social Security area. These ratios are unchanged from last year's report. Under the intermediate alternative, by combining the ultimate annual LPR immigration and legal emigration assumptions, ultimate annual net LPR immigration is about 788,000 persons. For the low-cost and high-cost scenarios, ultimate annual net LPR immigration is 1,000,000 persons and 595,000 persons, respectively.

The estimated number of other-than-LPR immigrants residing in the Social Security area and the annual level of other-than-LPR immigration were affected significantly by the economic recession of 2007-09. Although other-than-LPR immigration was greatly reduced during the economic downturn and immediate years thereafter, it returned to higher levels for most years from 2014 through 2019, reflecting a recovery from levels experienced during the recession. The COVID-19 pandemic began to affect other-than-LPR immigration in 2020; the estimated level of other-than-LPR immigration in 2020 is about 747,000, which is 453,000 lower than would have been estimated in the absence of the pandemic.

The Trustees assume that the pandemic will continue to affect other-than-LPR immigration in years 2021 through 2024. For each of the three alternatives, the assumed other-than-LPR immigration level for 2021 is 350,000 lower than would have been assumed in the absence of the pandemic. The other-than-LPR immigration levels for 2022 are assumed to be the same as would have been assumed in the absence of the pandemic. Other-than-LPR immigration levels for 2023 and 2024 are assumed to be higher than would have been assumed in the absence of the pandemic, fully making up for the lower levels in 2020 and 2021. These pandemic effects on other-than-LPR immigration levels are all smaller than the assumed pandemic effects in last year's report.

The ultimate annual levels of other-than-LPR immigration are 1,350,000 persons for alternative II, 1,850,000 persons for alternative I, and 850,000 persons for alternative III. These ultimate levels are unchanged from those used

in last year's report. The ultimate levels are attained in 2025 for all three alternatives.

Emigration from the other-than-LPR immigrant population includes those who leave the Social Security area and those who adjust their status to become LPRs. This other-than-LPR immigrant population is highly mobile and far more likely to leave the Social Security area than is the citizen or LPR population. However, as other-than-LPR immigrants stay in the country for longer periods of time, they generally become less likely to leave the country.

Under the intermediate assumptions, the total annual number of other-than-LPR immigrants who leave the Social Security area averages about 426,000 through the 75-year projection period. The ultimate annual number of other-than-LPR immigrants who adjust status to become LPRs is assumed to be 450,000 for the intermediate assumptions, and is unchanged from last year's report. For the low-cost and high-cost scenarios, the total annual number of other-than-LPR emigrants averages about 585,000 and 265,000, respectively, through the 75-year projection period. The ultimate annual number of people adjusting status to LPR status is assumed to be 550,000 persons and 350,000 persons, for the low-cost and high-cost scenarios, respectively, and is unchanged from last year's report.

Under the assumptions described above, the projected size of the other-than-LPR immigrant population grows substantially, from about 15.6 million by the end of 2023 to about 35.6 million by the end of 2097. This growth reflects the excess of annual immigration over the combined annual numbers of emigrants (including adjustments of status) and deaths that occur within the other-than-LPR immigrant population.

Under the intermediate assumptions, projected net other-than-LPR immigration gradually decreases over time. Because the projected number of other-than-LPR immigrants leaving the Social Security area is based on rates of departure, an increase in the number of other-than-LPR immigrants residing in the Social Security area results in an increase in the number who emigrate out of the area. All other components of net other-than-LPR immigration are assumed to be stable after 2024, and thus do not contribute toward any change in annual net other-than-LPR immigration. Under the intermediate assumptions, the projected average annual level of net other-than-LPR immigration over the 75-year projection period is about 485,000 persons. For the low-cost and high-cost assumptions, projected average annual net other-than-LPR immigration is about 726,000 persons and 245,000 persons, respectively.

The projected average annual level of total net immigration (LPR and other-than-LPR, combined) is about 1,277,000 persons per year during the 75-year projection period under the intermediate assumptions. For the low-cost and high-cost assumptions, projected average annual total net immigration is about 1,732,000 persons and 845,000 persons, respectively.

Demographers express a wide range of views about the future course of immigration for the United States. Some believe that net immigration will increase substantially in the future. Others believe that potential immigrants may be increasingly attracted to other countries, that the number of potential immigrants may be lower due to lower birth rates in many countries, or that changes in the law or enforcement of the law will reduce immigration.

[a] This table contains basic assumptions along with key summary values that are derived from basic assumptions.

[b] Historical other-than-LPR immigration and emigration estimates depend on a residual method. The Office of the Chief Actuary developed these estimates, as well as the resulting other-than-LPR January 1 stock estimates, for years through 2000. For years 2001 and later, the residual method uses stock estimates. For 2001 through 2004, the stock is set to values that linearly grade from the 2000 stock estimate to the 2005 stock estimate. Stock estimates are developed by the Office of the Chief Actuary, based on the latest methods used by DHS.

[c] Estimates include persons who attained LPR status under the special one-time provisions of the Immigration Reform and Control Act of 1986.

[d] Adjustments of status are a positive for net LPR immigration and a negative for net other-than-LPR immigration.

[e] Estimated.

[f] Estimated, intermediate alternative.

Note: Components may not sum to totals because of rounding.

4. Total Population Estimates

The starting Social Security area population for December 31, 2020, is derived from the Census Bureau's estimate of the residents of the 50 States and D.C. and U.S. Armed Forces overseas. Adjustments are made to reflect mortality assumptions for the aged population since 2010 that are consistent with Medicare and Social Security data, net immigration assumptions for the aged population since 2010, estimates of the net undercount in the 2010 census, inclusion of U.S. citizens living abroad (including residents of U.S. territories), and inclusion of non-citizens living abroad who are insured for Social Security benefits. The Office of the Chief Actuary projects the population in the Social Security area by age, sex, and marital status for December 31 of each year from 2021 through 2097 by combining the assumptions for future fertility, mortality, and immigration with assumptions for marriage and divorce. Previous sections of this chapter present the assumptions for future fertility, mortality, and immigration. Assumptions for future rates of marriage and divorce reflect historical data from the National Center for Health Statistics, the Census Bureau, and selected individual States.

This report presents a July 1 (i.e., midyear) population for each year, which is derived from surrounding December populations. Table V.A3 shows the historical and projected population for July 1 by broad age group, for the three alternatives. It also shows the aged and total dependency ratios (see table footnotes for definitions).

[a] Ratio of the population at ages 65 and over to the population at ages 20-64.
[b] Ratio of the population at ages 65 and over and the population under age 20 to the population at ages 20-64.
[c] Estimated.
[d] Estimated, intermediate alternative.

Notes:
1. Historical data are subject to revision.
2. Components may not sum to totals because of rounding.

5. Life Expectancy Estimates

Life expectancy, or the average remaining number of years expected prior to death, is an additional way to summarize the Trustees' mortality assumptions. This report includes life expectancy at both birth and at age 65, in two different forms (period and cohort), which are useful for separate purposes.

- Period life expectancy at a selected age for a particular year incorporates the actual or expected death rates at the selected age and each older age for that year. It is a useful summary statistic for illustrating the overall level of the death rates at or above the given age experienced in a single year. Period life expectancy for a particular year provides an individual's expected average remaining lifetime at a selected age, assuming no change in death rates after that year. Table V.A4 presents historical and projected life expectancy calculated on a period basis.
- Cohort life expectancy does not incorporate death rates for a single year, but for the series of years in which the individual will actually reach each succeeding age if he or she survives. Cohort life expectancy provides the expected average remaining lifetime for an individual at a selected age in a particular year, using actual or expected future death rates for the selected age and all succeeding ages. Table V.A5 presents historical and projected life expectancy calculated on a cohort basis. Cohort life expectancy is generally greater than period life expectancy for a given year because: (1) death rates at any age generally decline over time; and (2) cohort life expectancy uses death rates for future years, while period life expectancy uses death rates only for the given year.

Life expectancy at a given age reflects death rates at that and all older ages. Period life expectancy is somewhat related to the age-sex-adjusted death rate discussed in section V.A.2. However, life expectancy places far greater weight on death rates at relatively younger ages (those at or just above the given age) than those at relatively older ages. Therefore, changes in death rates at young ages, particularly in infancy, affect life expectancy at birth to a much greater degree than changes in death rates at older ages. It is important to keep this concept in mind when considering trends in life expectancy.

Table V.A4.—Period Life Expectancy[a]

Calendar year	Historical data			
	At birth		At age 65	
	Male	Female	Male	Female
1940	61.4	65.7	11.9	13.4
1945	62.9	68.4	12.6	14.4
1950	65.6	71.1	12.8	15.1
1955	66.7	72.8	13.1	15.6
1960	66.7	73.2	12.9	15.9
1965	66.8	73.8	12.9	16.3
1970	67.1	74.9	13.1	17.1
1975	68.7	76.6	13.7	18.0
1980	69.9	77.5	14.0	18.4
1985	71.1	78.2	14.4	18.6
1990	71.8	78.9	15.0	19.0
1995	72.5	79.1	15.4	19.0
2000	74.0	79.4	15.9	19.0
2005	74.8	80.0	16.7	19.5

[a] The period life expectancy at a given age for a given year is the average remaining number of years expected prior to death for a person at that exact age, born on January 1, using the mortality rates for that year over the course of his or her remaining life.
[b] Estimated using final data for ages below 65 and preliminary data for ages 65 and older.
[c] Estimated using the intermediate assumptions for ages below 65 and preliminary data for ages 65 and older.
[d] Estimated, intermediate alternative.

[a] The cohort life expectancy at a given age for a given year is the average remaining number of years expected prior to death for a person at that exact age, born on January 1, using the mortality rates for the series of years in which the individual will actually reach each succeeding age if he or she survives.

[b] Cohort life expectancy at birth for those born in the calendar year is based on a combination of actual, estimated, and projected death rates for birth years 1940 through 2020. For birth years after 2020, these values depend on estimated and projected death rates.

[c] Age 65 cohort life expectancy for those attaining age 65 in calendar years 1940 through 2019 is based on a combination of actual, estimated, and projected death rates. After 2019, these values depend on estimated and projected death rates.

B. ECONOMIC ASSUMPTIONS AND METHODS

The three alternative sets of economic assumptions are intended to provide a reasonable range for estimating the future financial status of the trust funds. The intermediate assumptions reflect the Trustees' consensus expectation of moderate economic growth after completion of the recovery from the pandemic-induced recession and a period of slow growth in 2023, and their best estimates for other economic parameters. The low-cost assumptions represent a more optimistic outlook with a faster recovery to a higher level of economic output, stronger long-term economic growth, and relatively optimistic levels for other parameters. The high-cost assumptions represent a more pessimistic scenario with a recession in 2023, slower economic growth in the long term, and relatively pessimistic levels for other parameters.

Actual economic data were generally available through the third quarter of 2022 at the time the assumptions for this report were set. Those data indicate that economic activity reached a peak in the fourth quarter of 2019.[1] The recession started in the first quarter of 2020 due to the precipitous decline in economic activity in March of 2020, continuing in April of 2020, leading to the gross domestic product (GDP) in the second quarter of 2020 being almost 10 percent below the peak in the fourth quarter of 2019, expressed in constant 2012 dollars. GDP recovered rapidly, surpassing the fourth quarter 2019 peak in the first quarter of 2021. In the third quarter of 2022, GDP was about 4 percent above the previous peak.

Under the intermediate assumptions, the economy is estimated to be 1 percent above its sustainable trend level of output in the third quarter of 2022 and is then projected to grow slowly, reaching a level of almost 1 percent below the sustainable trend level at the end of 2023. Stronger growth is projected thereafter, with GDP reaching and stabilizing at the sustainable trend level in the first quarter of 2027. The sustainable trend level of GDP is assumed to be 3 percent lower at the end of 2025 and thereafter than was assumed for the intermediate assumptions in the 2022 report. Under the low-cost assumptions, the economy is projected to grow at a faster rate and return to a higher sustainable trend level of output in the first quarter of 2026. Under the high-cost assumptions, the sustainable trend level is assumed to be lower, and GDP was significantly above it in 2022; GDP is projected to fall to 2.5 percent below that lower sustainable trend level in the fourth quarter of 2023 and then to recover fully by the fourth quarter of 2027. Complete eco-

[1] On a monthly basis, economic activity peaked in February 2020, but the decline in March was sharp enough that the output in the first quarter of 2020 was substantially below the output in the fourth quarter of 2019. See www.nber.org/news/business-cycle-dating-committee-announcement-june-8-2020.

nomic cycles have little effect on the long-range estimates of financial status of the trust funds, so the assumptions do not include cycles beyond the short-range period (2023 through 2032).

The key economic assumptions underlying the three sets of projections of the future financial status of the OASI and DI Trust Funds are discussed in the remainder of this section.

1. Productivity Assumptions

Total U.S. economy productivity is defined as the ratio of real GDP to hours worked by all workers.[1] The rate of change in total-economy productivity is a major determinant of the growth of average earnings. Over the last six complete economic cycles (1969-73, 1973-79, 1979-90, 1990-2001, 2001-07, and 2007-19, measured peak to peak), the annual increase in total-economy productivity averaged 2.64, 1.06, 1.39, 1.84, 2.15, and 1.09 percent, respectively. For the period from 1969 to 2019, covering those last six complete economic cycles, the annual increase in total-economy productivity averaged 1.57 percent.

The assumed ultimate annual increase in total-economy productivity is 1.93, 1.63, and 1.33 percent for the low-cost, intermediate, and high-cost assumptions, respectively.[2] These rates of increase are unchanged from the 2022 report.

The average annual rate of change in total-economy productivity from 2019 (the end of the last complete economic cycle) to 2022 is estimated to be 1.52 percent. For the intermediate assumptions, the annual rate of change in productivity is assumed to be 0.18 percent for 2023, 1.11 percent for 2024, averages 1.47 percent for 2025 through 2028, and reaches its ultimate value of 1.63 percent for 2029 and thereafter. For the low-cost assumptions, the annual rate of change in productivity is 0.87 percent for 2023, averages 2.00 percent for 2024 through 2027, and reaches its ultimate value of 1.93 percent for 2028 and thereafter. For the high-cost assumptions, the assumed recession lowers the annual rate of change in productivity to -1.71 percent for 2023. The growth rate rebounds to an average of 1.49 percent for 2024 through 2027, averages 1.28 percent for 2028 through 2030, and stabilizes at its ultimate value of 1.33 percent for 2031 and there-

[1] Historical levels of real GDP are from the National Income and Product Accounts (NIPA) produced by the Bureau of Economic Analysis (BEA). Historical total hours worked are provided by the Bureau of Labor Statistics (BLS) and cover all U.S. Armed Forces and civilian employment.

[2] These assumptions for total-economy productivity are consistent with ultimate annual increases in private nonfarm business productivity of 2.36, 2.00, and 1.63 percent. Private nonfarm business productivity excludes the farm, government, nonprofit institution, and private household sectors.

after. The combined effect of data revisions, new data for 2022, and less optimistic near-term projections lowered the average productivity growth rate from 2019 to 2032 from 1.67 percent in the 2022 report to 1.40 percent for this report under the intermediate assumptions.

2. Price Inflation Assumptions

Changes in the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI) directly affect the OASDI program through the automatic cost-of-living benefit increases. Changes in the GDP price index (GDP deflator) affect the nominal levels of GDP, wages, self-employment income, average earnings, and taxable payroll. For a given real rate of growth in average earnings, a higher price inflation rate immediately results in a higher nominal rate of growth in both earnings and revenues, while the resulting added growth in nominal benefit levels occurs with a delay, causing an overall increase (improvement) in the actuarial balance. Similarly, a lower price inflation rate causes an overall decrease in the actuarial balance.

The annual increase in the CPI averaged 4.91, 8.54, 5.30, 2.73, 2.63, and 1.73 percent over the economic cycles 1969-73, 1973-79, 1979-90, 1990-2001, 2001-07, and 2007-19, respectively.[1] The annual increase in the GDP deflator averaged 5.04, 7.54, 4.61, 2.08, 2.52, and 1.62 percent for the respective economic cycles. For the period from 1969 to 2019, covering the last six complete economic cycles, the annual increase in the CPI and the GDP deflator averaged 3.89 and 3.45 percent, respectively. The annual rate of change for 2020, which was affected by the recession, was 1.21 percent for the CPI and 1.35 percent for the GDP deflator. During the subsequent recovery, aggregate demand increased while supply was constrained, leading to a 2021 growth rate of 5.26 percent for the CPI and 4.49 percent for the GDP deflator and an estimated 2022 growth rate of 8.51 percent for the CPI and 7.03 percent for the GDP deflator.

The assumed ultimate annual increase in the CPI is 3.00, 2.40, and 1.80 percent for the low-cost, intermediate, and high-cost assumptions, respectively. These values are unchanged from the 2022 report.

For the intermediate assumptions, the annual rate of change in the CPI is 4.00 percent for 2023, 2.53 percent for 2024, and reaches the ultimate

[1] BLS produces a series called the Consumer Price Index Research Series Using Current Methods (CPI-U-RS) that approximates the measured rate of inflation since 1978 had the method currently used been in effect since then. BLS does not revise the CPI values published in earlier years, for which different methods were used. These CPI published values are shown in table V.B1. The Trustees use an adjusted CPI series based on the CPI-U-RS when setting the ultimate price inflation assumption because it provides a time series that is consistent with the current method for computing the CPI.

growth rate of 2.40 percent for 2025 and thereafter. For the low-cost assumptions, the annual rate of change in the CPI is 3.90 percent for 2023, 3.02 percent for 2024, and reaches its ultimate growth rate of 3.00 percent for 2025 and thereafter. For the high-cost assumptions, the annual rate of change in the CPI is 4.56 percent for 2023, 2.92 percent for 2024, 1.86 percent for 2025, and reaches its ultimate growth rate of 1.80 percent for 2026 and thereafter.

The annual increase in the GDP deflator differs from the annual increase in the CPI because the two indices are constructed using different computational methods and coverage (the set of goods and services used in the measurement). The difference between the rate of change in the CPI and the rate of change in the GDP deflator is called the price differential in this report. For the period including 1969 through 2019, covering the last six complete economic cycles, the average annual price differential was 0.46 percentage point. For 2020, the annual price differential was -0.13 percentage point, for 2021 it was 0.77 percentage point, and for 2022 it is estimated to be 1.49 percentage points.

The fluctuations in the price differential for 2020-22 primarily reflect a decline and subsequent increase in oil prices, as well as price increases concentrated in consumer goods categories during the economic recovery. Changes in oil prices affect the CPI much more than the GDP deflator because oil comprises a much larger share of U.S. consumption than of U.S. production. Oil prices are assumed to grow at a relatively stable rate in the future. For the intermediate assumptions, the price differential is 0.11 percentage point for 2023, 0.36 percentage point for 2024, and 0.35 percentage point for 2025 and later.

The assumed ultimate price differential is 0.25, 0.35, and 0.45 percentage point for the low-cost, intermediate, and high-cost alternative, respectively. Varying the ultimate projected price differential across alternatives recognizes the historical variation in this measure. Accordingly, the assumed ultimate annual increase in the GDP deflator is 2.75 (3.00 less 0.25), 2.05 (2.40 less 0.35), and 1.35 (1.80 less 0.45) percent for the low-cost, intermediate, and high-cost alternative, respectively. The ultimate price differentials for the three alternatives are unchanged from the 2022 report.

3. Average Earnings Assumptions

The size of the taxable payroll—the main source of the OASDI program's income—for each year depends primarily on the nominal earnings in OASDI

covered employment, which is the product of covered employment[1] for the year and average covered earnings for the year. Average covered earnings also affects the future level of average benefits. In addition, the average reported annual wage in the U.S. economy determines the national average wage index (AWI). Under the automatic adjustment provisions in the law, the growth in the AWI affects the contribution and benefit base, certain parameters used in the OASDI benefit formula, and certain other program parameters.[2]

The projected growth rate in average annual covered earnings and in the AWI are derived from the projected growth rate in average U.S. earnings. Average U.S. earnings is defined as the ratio of the sum of total U.S. wages and net proprietors' income to the sum of average weekly U.S. civilian employment and Armed Forces. The growth rate in average U.S. earnings for any period is equal to the combined growth rates for total U.S. economy productivity, average hours worked per week, the ratio of earnings to total labor compensation (which includes fringe benefits), the ratio of total labor compensation to GDP, and the GDP deflator.

The average annual change in average hours worked per week was -0.20 percent over the last six complete economic cycles covering the period from 1969 to 2019. The annual change in average hours worked averaged -0.87, -0.53, -0.09, 0.11, -0.47, and -0.05 percent over the economic cycles 1969-73, 1973-79, 1979-90, 1990-2001, 2001-07, and 2007-19, respectively. From 2019 to 2022, the first three years after the peak of the last complete cycle, the average annual change in average hours worked per week is estimated to be a decrease of 0.03 percent.

The assumed ultimate annual rate of change for average hours worked per week is 0.05, -0.05, and -0.15 percent for the low-cost, intermediate, and high-cost assumptions, respectively. These values are unchanged from the 2022 report.

The average annual change in the ratio of earnings to total labor compensation was -0.14 percent from 1969 to 2019. Data from BEA indicate that the most significant component of this change was the relative increase in the cost of employer-sponsored group health insurance (ESGHI) for wage workers, followed by the increase in employer contributions to social insurance (as statutory payroll tax rates increased between 1970 and 1990), and, to a lesser extent, an increase in employer contributions to retirement plans.

---

[1] Covered employment for a year is defined as the total number of persons who have any OASDI covered earnings (that is, earnings subject to the OASDI payroll tax) at any time during that year. See section V.C.2 for a more detailed discussion of covered employment.

[2] See section V.C.1 for a discussion of the AWI and the parameters indexed to it.

Assuming that the level of total employee compensation is not affected by the amount of non-wage compensation, such as ESGHI, any increase or decrease in the cost of non-wage compensation leads to a commensurate decrease or increase in wages. Projections of future ratios of earnings to total labor compensation follow this principle.

The average annual rate of change in the ratio of wages to employee compensation was -0.17 percent from 1969 to 2019. The average annual rate of change in this ratio increased sharply to 0.40 percent for the period 2019 to 2022 due to the unusual effects of the pandemic-induced recession. The average annual rate from 2022 to 2032 is assumed to be about 0.02, -0.08, and -0.13 percent for the low-cost, intermediate, and high-cost assumptions, respectively. For the last 65 years of the long-range period, from 2032 to 2097, the average rate is assumed to be about 0.00, -0.10, and -0.20 percent for the low-cost, intermediate, and high-cost assumptions, respectively. These average rates are slightly higher (i.e., less negative) than those assumed for the 2022 report. Under the intermediate assumptions, the ratio of wages to employee compensation declines from 0.824 for 2022 to 0.767 for 2097.

Because earnings and compensation are the same for self-employed workers, the ratio of earnings to total labor compensation includes self-employment income both in the numerator and in the denominator. As a result, the rate of change in the ratio of earnings to total labor compensation (which, under the intermediate assumptions, averages -0.08 percent from 2032 to 2097) is slightly higher (i.e., less negative) than the rate of change in the ratio of wages to employee compensation.

The ratio of total labor compensation (i.e., employee compensation and net proprietors' income) to GDP varies over the economic cycle and with changes in the relative sizes of different sectors of the economy. Over the last six complete economic cycles from 1969 to 2019, this ratio has averaged 0.622. This ratio increased to 0.628 for 2020, declined to 0.613 for 2021, and is estimated to decrease to 0.605 for 2022. It is then projected to gradually rise to reach 0.628 by 2032 under the intermediate assumptions. For years after 2032, the relative sizes of different sectors of the economy are assumed to remain about constant,[1] and therefore the ratio of total labor compensation to GDP remains at about the 2032 level for each set of assumptions.

[1] The sole exception is employment in the U.S. Armed Forces, which has declined in size over the last 40 years and is assumed to remain at its 2020 level throughout the 75-year projection period.

For the intermediate assumptions, the projected average annual growth rate in average nominal U.S. earnings from 2022 to 2032 is 3.95 percent. The projected average annual growth rate from 2032 to 2097 is 3.58 percent, which reflects the assumed ultimate annual growth rates of 1.63 percent for productivity, -0.05 percent for average hours worked, 2.05 percent for the GDP deflator, and -0.08 percent for the ratio of earnings to total labor compensation. Over the same period, the projected average annual growth rate in average nominal U.S. earnings is 4.79 percent for the low-cost assumptions and 2.37 percent for the high-cost assumptions.

The average annual wage in OASDI covered employment (often referred to as the "average covered wage") is defined as the total wages and salaries paid in OASDI covered employment during the year, divided by the number of workers who worked in OASDI covered employment at any time during the year. Over long periods, the average annual growth rate in the average covered wage is expected to be very close to the average annual growth rate in average U.S. earnings. The estimated annual rate of change in the average covered wage is 4.79 percent for 2022 under the intermediate assumptions. From 2022 to 2032, the annual rate of change in the average covered wage averages 5.37, 3.99, and 2.97 percent for the low-cost, intermediate, and high-cost assumptions, respectively. The projected average annual growth rate in the average covered wage from 2032 to 2097 is 4.79, 3.56, and 2.35 percent for the low-cost, intermediate, and high-cost assumptions, respectively.

4. Assumed Real Wage Growth

For the period from 1969 to 2019, covering the last six complete economic cycles, the annual real (i.e., inflation-adjusted) growth rate in the average covered wage averaged 0.77 percent, the result of averages of 0.98, 0.03, 0.45, 1.43, 0.80, and 0.76 percent over the economic cycles 1969-73, 1973-79, 1979-90, 1990-2001, 2001-07, and 2007-19, respectively.[1]

For the period 2032 to 2097, the projected average annual real wage growth rate in OASDI covered employment is 1.74, 1.14, and 0.54 percent for the low-cost, intermediate, and high-cost assumptions, respectively. The average annual real wage growth rates are slightly higher than those in the 2022 report.[2]

The real wage increased 1.52 percent for 2020, a year which included the pandemic-induced recession and the beginning of the recovery. It then

[1] In previous Trustees Reports, the real increase in the average covered wage was expressed in the form of a real wage differential—the annual percentage change in the average wage in OASDI covered employment minus the annual percentage change in the CPI.

increased 3.89 percent for 2021, during the continuing rapid recovery from the recession, and is estimated to decrease 3.43 percent for 2022 under the intermediate assumptions, primarily due to the high inflation rate. For the intermediate assumptions, the annual real wage growth rate is projected to be 0.15 percent in 2023, increase to 1.20 percent in 2024, average 1.64 percent for 2025 through 2027, average 1.57 percent for 2028 through 2031, and average 1.14 percent from 2032 to 2097. For the low-cost assumptions, the annual real wage growth rate is 0.79 percent for 2023, averages 2.77 percent for 2024 through 2026, and gradually declines to its long-term average of 1.74 percent from 2032 to 2097. For the high-cost assumptions, the real wage growth rate is -2.58 percent for 2023 and 0.70 percent for 2024. It then averages 1.67 percent for 2025 through 2027, and gradually reaches its long-term average of 0.54 percent from 2032 to 2097.

[2] In the 2022 report, the projected average real wage differential was 1.77, 1.15, and 0.53 percentage points for the low-cost, intermediate, and high-cost assumptions, respectively. The corresponding average real growth rate was 1.72, 1.12, and 0.52 percent for the low-cost, intermediate, and high-cost assumptions, respectively.

Table V.B1.—Principal Economic Assumptions

Calendar year	Annual percentage change[a] in—						
	Productivity (Total U.S. economy)	GDP price index	Average hours worked per week	Earnings as a percent of total labor compensation	Average annual wage in covered employment		Consumer price index

2032	1.33	1.35	-.15	-.16	2.50	.69	1.80
2032 to 2097	1.33	1.35	-.15	-.17	2.35	.54	1.80

[a] For rows with a single year listed, the value is the annual percentage change from the prior year. For rows with a range of years listed, the value is the compound average annual percentage change.
[b] Economic cycles are shown from peak to peak, except for the last cycle, which is not yet complete.
[c] Estimated values for 2022 vary slightly by alternative and are shown for the intermediate assumptions.
[d] Greater than -0.005 and less than 0.005 percent.

5. Labor Force, Employment, and Unemployment Projections

Employment is a fundamental component of economic output (GDP), taxable payroll, and the determination of OASDI benefit eligibility and benefit levels. U.S. employment is projected in two components: the size of the labor force (those employed or seeking employment) and the unemployment rate (the proportion of those in the labor force who are not employed). Table V.B2 provides the historical and projected rates of change in employment, which follow from the rates of change in the labor force, adjusted for the varying unemployment rates from year to year.

The model used by the Office of the Chief Actuary projects the civilian labor force by age, sex, marital status, and presence of children. Projections of the labor force participation rates reflect changes in disability prevalence, educational attainment, marriage patterns, the average level of Social Security retirement benefits, the state of the economy, and life expectancy.

The annual rate of growth in the size of the labor force decreased from an average of about 2.6 percent during the 1969-73 economic cycle and 2.7 percent during the 1973-79 cycle to 1.7 percent during the 1979-90 cycle, 1.2 percent during the 1990-2001 cycle, 1.1 percent during the 2001-07 cycle, and 0.5 percent during the 2007-19 cycle. From 2019 to 2022, during the current (incomplete) economic cycle, labor force growth averaged 0.2 percent per year, which combines the fall in the labor force during the pandemic-induced recession of 2020 and the growth in the labor force in 2021-22. Going forward, labor force growth is projected to be 0.8 percent in 2023, rising to 1.2 percent in 2024, and then converging to the long-term trend of about 0.4 percent per year by 2032. The long-term growth rate in the labor force is expected to remain subdued due to a slowing of growth in the working-age population—a consequence of the baby-boom generation reaching retirement ages and succeeding lower-birth-rate cohorts reaching working ages. Under the intermediate assumptions, the labor force is projected to increase by an average of 0.7 percent per year from 2022 to 2032 and 0.4 percent per year from 2032 to 2097.

Labor force participation rates are projected with a model that uses demographic and economic assumptions specific to each alternative. More optimistic economic assumptions in the low-cost alternative are consistent with higher labor force participation rates, while demographic assumptions in the low-cost alternative (such as slower improvement in longevity) are consistent with lower labor force participation rates. These economic and demographic influences have largely offsetting effects. Therefore, the projected labor force participation rates do not vary substantially across alternatives.

Historically, labor force participation rates reflect trends in demographics and pensions. Between the mid-1960s and the mid-1980s, labor force participation rates at ages 55 and over declined for men but were fairly stable for women. During this period, the baby-boom generation reached working age and more women entered the labor force. This increasing supply of labor allowed employers to offer attractive early retirement options. Between the mid-1980s and the mid-1990s, participation rates at ages 55 and over roughly stabilized for men and increased for women. Since the mid-1990s, however, participation rates for both sexes at ages 55 and over have generally risen.

Many economic and demographic factors, including longevity, disability prevalence, the business cycle, incentives for retirement in Social Security and private pensions, education, and marriage patterns, will influence future labor force participation rates. The Office of the Chief Actuary models some of these factors explicitly. To model the effects of other factors related to increases in life expectancy, projected participation rates are adjusted upward for mid-career and older ages to reflect projected increases in life expec-

tancy. For the intermediate projections, this adjustment increases the total labor force by 3.0 percent for 2097.

For men and boys age 16 and over, the projected age-adjusted labor force participation rate[1] for 2097 is 72.8, 72.6, and 72.1 percent for the low-cost, intermediate, and high-cost assumptions, respectively. For women and girls age 16 and over, the projected age-adjusted labor force participation rate for 2097 is 62.3, 61.9, and 61.7 percent for the low-cost, intermediate, and high-cost assumptions, respectively. These age-adjusted labor force participation rates for 2097 are higher under all three alternatives than the age-adjusted rates for 2021 of 70.3 percent for men and boys and 58.8 percent for women and girls (based on actual age-specific rates published by the Bureau of Labor Statistics), primarily due to the Trustees' projected increases in life expectancy, as well as the rise in educational attainment for women.

The total civilian unemployment rates are presented in table V.B2. For years through 2032, the table presents total civilian rates without adjustment for the changing age-sex distribution of the population. For years after 2032, the table presents age-sex-adjusted rates, using the age-sex distribution of the 2011 civilian labor force. Age-sex-adjusted rates allow for more meaningful comparisons across longer time periods.

The total civilian unemployment rate reflects the projected levels of unemployment for various age-sex groups of the population. Each group's unemployment rate gradually approaches an assumed stable value within the first ten years of the projection period for all alternatives, and thus the total age-sex-adjusted civilian unemployment rate reaches its ultimate assumed value within the first ten years of the projection period.

The assumed ultimate age-sex-adjusted unemployment rate is 3.5, 4.5, and 5.5 percent for the low-cost, intermediate, and high-cost assumptions, respectively. These values are unchanged from the 2022 report. The Trustees assume that, as economic growth slows temporarily due to anti-inflationary measures, the unemployment rate will increase from 3.7 percent for 2022 to 4.7 percent in 2024, and then gradually decline to reach the assumed 4.5 percent for 2027 under the intermediate assumptions. Under the low-cost assumptions, the unemployment rate is projected to rise to 3.8 percent in 2023 and 2024 before declining to the ultimate unemployment rate of 3.5 percent in 2026. Under the high-cost assumptions, due to the assumed economic recession, the unemployment rate increases further to 6.3 percent

[1] The Office of the Chief Actuary adjusts the labor force participation rates to the 2011 age distribution of the civilian noninstitutional U.S. population.

in 2024, with the age-sex-adjusted rate then gradually decreasing to the ultimate unemployment rate of 5.5 percent in 2027.[1]

6. Gross Domestic Product Projections

The value of real GDP is equal to the product of three components: (1) productivity (i.e., output per hour worked), (2) average weekly total employment,[2] and (3) average hours worked per week, times 52. Consequently, the growth rate in real GDP is equal to the combined growth rates for productivity, total employment, and average hours worked. For the period from 1969 to 2019, which covers the last six complete economic cycles, the average annual growth in real GDP was 2.7 percent, combining average growth rates of 1.6 percent for productivity, 1.3 percent for total employment, and -0.2 percent for average hours worked ($1.027 = 1.016 \times 1.013 \times 0.998$). The real GDP growth rate was -2.8 percent for 2020, 5.9 percent for 2021, and is estimated to be 1.9 percent for 2022 under the intermediate assumptions.

For the intermediate assumptions, the average annual growth in real GDP is 1.9 percent from 2022 to 2032, combining the average growth rates of 1.37 percent for productivity, 0.58 percent for total employment, and -0.01 percent for average hours worked. The projected average annual growth in real GDP of 1.9 percent from 2022 to 2032 is approximately equal to the underlying sustainable trend rate, but it is slightly slower for 2023 through 2024 and slightly faster for 2025 through 2027. After 2032, the annual growth in real GDP follows the sustainable trend rate and averages 2.0 percent, which combines the projected ultimate annual growth rate of 1.63 percent for productivity, average annual growth rate of 0.40 percent for total employment, and the ultimate annual growth rate of -0.05 percent for average hours worked per week. The projected growth rate of real GDP is lower than the past average growth rate mainly because the working-age population is expected to grow more slowly than in the past.

For the low-cost assumptions, the annual growth in real GDP averages 2.9 percent from 2022 to 2032 and 2.7 percent from 2032 to 2097. For the high-cost assumptions, the annual growth in real GDP averages 1.2 percent from 2022 to 2032 and 1.2 percent from 2032 to 2097.

---

[1] The assumed ultimate unemployment rates are age-sex-adjusted rates. For the intermediate assumptions, the age-sex-adjusted unemployment rate in 2027 through 2032 is 4.5, while the unadjusted rate is 4.4 for 2029 through 2032, as shown in table V.B2. For the high-cost assumptions, the age-sex-adjusted unemployment rate in 2027 through 2032 is 5.5 percent, while the unadjusted rate is 5.4 percent for 2028 through 2032.

[2] Average weekly total employment is the sum of average weekly U.S. civilian employment, which can be expressed as a product of the total civilian labor force and the complement of the unemployment rate, and U.S. Armed Forces.

7. Interest Rates

Table V.B2 presents average annual nominal and real interest rates for newly issued trust fund securities. The nominal rate is the average of the nominal interest rates for special U.S. Government obligations issuable to the trust funds in each of the 12 months of the year. Interest for these securities is compounded semiannually, or at redemption if sooner. The real interest rate is defined as the annual yield rate for investments in these securities divided by the annual rate of growth in the CPI for the first year after issuance. The real rate shown for each year reflects the actual realized (historical) or expected (future) real yield on securities issuable in the prior year.

To develop a reasonable range of assumed ultimate future real interest rates for the three alternatives, the Office of the Chief Actuary examined historical experience for the last six complete economic cycles. For the period from 1969 to 2019, the real interest rate averaged 2.4 percent per year. The real interest rate averaged 1.6, -1.0, 5.1, 4.1, 2.0, and 0.8 percent per year over the economic cycles 1969-73, 1973-79, 1979-90, 1990-2001, 2001-07, and 2007-19, respectively. The assumed ultimate real interest rate is 2.8 percent, 2.3 percent, and 1.8 percent for the low-cost, intermediate, and high-cost assumptions, respectively. These rates are unchanged from the 2022 report.

The average annual nominal interest rate was approximately 1.4 percent for securities newly issuable in 2021, implying an effective annual yield of 1.4 percent for securities held one year. The CPI rose from 2021 to 2022 by approximately 8.5 percent. The annual real interest rate for 2022 was therefore -6.6 percent ($1.014 / 1.085 = 0.935 = 1 - 0.0656$). From 2022 to 2032, projected nominal interest rates depend on changes in the economic cycle and in the CPI. When combined with the ultimate CPI assumptions of 3.0, 2.4, and 1.8 percent, the assumed ultimate real interest rates produce an ultimate nominal interest rate of 5.8 percent for the low-cost assumptions, 4.7 percent for the intermediate assumptions, and 3.6 percent for the high-cost assumptions. These nominal rates for newly issued trust fund securities reach their ultimate levels by 2032.

[a] The Office of the Chief Actuary adjusts the civilian unemployment rates for 2033 and later to the age-sex distribution of the civilian labor force in 2011. For years through 2032, the values are the total rates without adjustment for the changing age-sex distribution.

[b] For rows with a single year listed, the value is the annual percentage change from the prior year. For rows with a range of years listed, the value is the compounded average annual percentage change.

[c] The U.S. civilian labor force.

[d] Total U.S. military and civilian employment.

[e] The value of the total output of goods and services in 2012 dollars.

[f] The average of the nominal interest rates, compounded semiannually, for special public-debt obligations issuable to the trust funds in each of the 12 months of the year.

[g] The realized or expected annual real yield for each year on securities issuable in the prior year.

[h] Greater than -0.05 and less than 0.05 percent.

[i] Economic cycles are shown from peak to peak, except for the last cycle, which is not yet complete.

[j] Estimated values for 2022 vary slightly by alternative and are shown for the intermediate assumptions.

C. PROGRAM-SPECIFIC ASSUMPTIONS AND METHODS

The Office of the Chief Actuary at the Social Security Administration uses a set of models to project future income and cost under the OASDI program. These models rely not only on the demographic and economic assumptions described in the previous sections, but also on a number of program-specific assumptions and methods. Values of many program parameters change from year to year as prescribed by formulas set out in the Social Security Act. These program parameters affect the level of payroll taxes collected and the level of benefits paid. The office uses complex models to project the numbers of future workers covered under OASDI and the levels of their covered earnings, as well as the numbers of future beneficiaries and the expected levels of their benefits. The following subsections provide descriptions of these program-specific assumptions and methods.

1. Automatically Adjusted Program Parameters

The Social Security Act requires that certain parameters affecting the determination of OASDI benefits and taxes be adjusted annually to reflect changes in particular economic measures. Formulas prescribed in the law, applied to reported statistics, change these program parameters annually. The law bases these automatic adjustments on measured changes in the national average wage index (AWI) and the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI).[1] This section shows values for program parameters adjusted using these indices from the time that these adjustments became effective through 2032. Projected values for future years depend on the economic assumptions described in the preceding section of this report.

Tables V.C1 and V.C2 present the historical and projected values of the CPI-based benefit increases, the AWI series, and the values of many of the wage-indexed program parameters. Each table shows projections under the three alternative sets of assumptions. Table V.C1 includes:

- *The annual cost-of-living benefit increase percentages.* The automatic cost-of-living adjustment provisions in the Social Security Act specify increases in OASDI monthly benefits based on increases in the CPI. Volatility in oil prices has resulted in substantial volatility in cost-of-living adjustments over the last two decades. A large cost-of-living adjustment for December 2008 was followed by no cost-of-living adjustments for December 2009 and December 2010. More recent volatility in oil

[1] The *Federal Register* publishes details of these indexation procedures annually. Also see www.ssa.gov/OACT/COLA/.

prices again affected the CPI, resulting in no cost-of-living adjustment for December 2015. Cost-of-living adjustments resumed in December 2016. All three sets of assumptions include annual cost-of-living adjustments for all future years.

- *The annual levels of and percentage increases in the AWI.* Under section 215(b)(3) of the Social Security Act, Social Security benefit computations index taxable earnings (for most workers first becoming eligible for benefits in 1979 or later) using the AWI for each year after 1950. This procedure converts a worker's past earnings to approximately average-wage-indexed equivalent values near the time of his or her benefit eligibility. Other program parameters presented in this section that are subject to the automatic-adjustment provisions also rely on the AWI.
- *The wage-indexed contribution and benefit base.* For any year, the contribution and benefit base is the maximum amount of earnings subject to the OASDI payroll tax and creditable toward benefit computation. The Social Security Act defers any increase in the contribution and benefit base if there is no cost-of-living adjustment effective for December of the preceding year. There was no increase in the contribution and benefit base for 2010, 2011, or 2016 because there was no cost-of-living adjustment for the immediate prior December in each case. Under all three sets of assumptions, the contribution and benefit base is projected to increase for all future years.
- *The wage-indexed retirement earnings test exempt amounts.* The exempt amounts are the annual amount of earnings below which beneficiaries do not have benefits withheld. A lower exempt amount applies for years prior to the year of attaining normal retirement age. A higher exempt amount applies beginning with the year in which a beneficiary attains normal retirement age. Starting in 2000, the retirement earnings test no longer applies beginning with the month of attaining normal retirement age. The Social Security Act defers any increase in these exempt amounts if there is no cost-of-living adjustment effective for December of the preceding year. There was no increase in these exempt amounts for 2010, 2011, or 2016 because there was no cost-of-living adjustment for the immediate prior December. Under all three sets of assumptions, the exempt amounts increase for all future years.

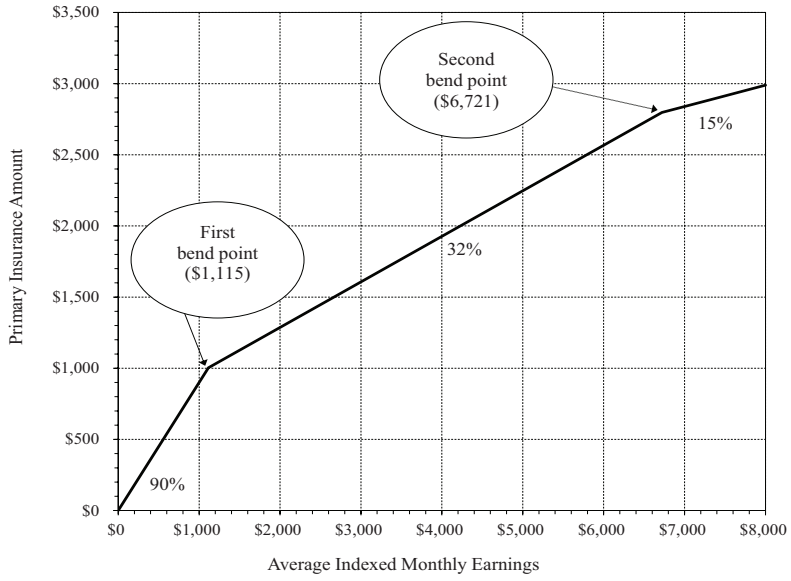
[a] Effective with benefits payable for June in each year 1975-82, and for December in each year after 1982.
[b] See table VI.G6 for projected dollar amounts of the AWI for years beyond the last year of this table.
[c] Public Law 95-216 specified amounts for 1978-81. Public Law 101-239 changed the indexing procedure and caused slightly higher bases after 1989.
[d] Normal retirement age. See table V.C3 for specific values.
[e] In 1955-82, the retirement earnings test did not apply at ages 72 and over. In 1983-99, the test did not apply at ages 70 and over. Beginning in 2000, the test does not apply beginning with the month of normal retirement age attainment. In the year of normal retirement age attainment, the higher exempt amount applies to earnings prior to the month of normal retirement age attainment. Public Law 95-216 specified amounts for 1978-82. Public Law 104-121 specified amounts for 1996-2002.
[f] Originally determined as 2.4 percent. Pursuant to Public Law 106-554, effectively 2.5 percent.
[g] Actual amount, as determined under automatic-adjustment provisions.

Table V.C2 shows values for other wage-indexed parameters. The table provides historical values from 1978, when indexing of the amount of earnings required for a quarter of coverage first began, through 2023, and also shows projected values through 2032. These other wage-indexed program parameters are:

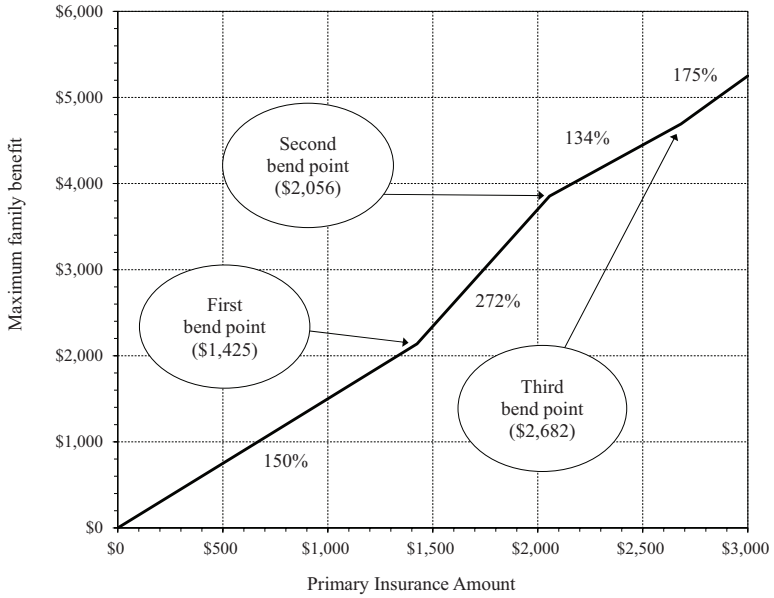
- *The bend points in the formula for computing the primary insurance amount (PIA) for workers who reach age 62, become disabled, or die in a given year.* As figure V.C1 illustrates, these two bend points define three ranges in a worker's average indexed monthly earnings (AIME). The formula for the worker's PIA multiplies a 90, 32, or 15 percent factor by the portion of the worker's AIME that falls within the three respective ranges, and then adds the resulting products together.

Figure V.C1.—Primary-Insurance-Amount Formula for Those Newly Eligible in 2023



- *The bend points in the formula for computing the maximum total amount of monthly benefits payable based on the earnings record of a retired or deceased worker (maximum family benefit).* As figure V.C2 illustrates, these three bend points define four ranges in a worker's PIA. The formula for the maximum family benefit multiplies a 150, 272, 134, or 175 percent factor by the portion of the worker's PIA that falls within the four respective ranges, and then adds the resulting products together.

Figure V.C2.—OASI Maximum-Family-Benefit Formula for Those Newly Eligible in 2023



- *The amount of earnings required in a year to earn a quarter of coverage (QC).* The number and timing of QCs earned determines an individual's insured status—the basic requirement for benefit eligibility under OASDI.
- *The old-law contribution and benefit base—the contribution and benefit base that would have been in effect without enactment of the 1977 amendments.* This old-law base is used in determining special-minimum benefits for certain workers who have many years of low earnings in covered employment. Since 1986, the calculation of OASDI benefits for certain workers who are eligible to receive pensions based on non-covered employment uses the old-law base. In addition, the Railroad Retirement program and the Employee Retirement Income Security Act of 1974 use the old-law base for certain purposes.

2032	1,489	8,975	1,902	2,746	3,582	2,190	158,700

[a] The formula to compute a PIA is: (1) 90% of AIME below the first bend point, plus (2) 32% of AIME in excess of the first bend point but not in excess of the second, plus (3) 15% of AIME in excess of the second bend point. The bend points are determined based on the first year a beneficiary becomes eligible for benefits.

[b] The formula to compute an OASI family maximum is: (1) 150% of PIA below the first bend point, plus (2) 272% of PIA in excess of the first bend point but not in excess of the second, plus (3) 134% of PIA in excess of the second bend point but not in excess of the third, plus (4) 175% of PIA in excess of the third bend point. This formula also determines family maximums for disabled-worker beneficiaries first eligible after 1978 and entitled before July 1980.

[c] Contribution and benefit base that would have been in effect without enactment of the Social Security Amendments of 1977. Public Law 101-239 changed the indexing procedure and caused slightly higher bases after 1989.

[d] No provision in law for this amount in this year.

[e] Amount specified by Social Security Amendments of 1977.

In addition to the economic factors that affect the determination of OASDI benefits, there are certain legislated changes that affect current and future benefit amounts. Two such changes are the scheduled increases in the normal retirement age and in the delayed retirement credits. Table V.C3 shows the scheduled changes in these parameters and the resulting effects on benefit levels expressed as a percentage of PIA.

Table V.C3.—Legislated Changes in Normal Retirement Age and Delayed Retirement Credits for Persons Attaining Age 62 in Each Year 1986 and Later

Year of birth	Year of attainment of age 62	Normal retirement age (NRA)	Credit for each year of delayed retirement after NRA (percent)	Benefit, as a percentage of PIA, beginning at age —				
				62	65	66	67	70

2. Covered Employment

Projections of the total U.S. civilian labor force and unemployment rate (see table V.B2) are based on Bureau of Labor Statistics definitions from the Current Population Survey (CPS). These projections represent the average weekly number of employed and unemployed persons, age 16 and over, in the U.S. in a calendar year. Covered employment for a calendar year is defined as the total number of persons who have any OASDI covered earnings (that is, earnings subject to the OASDI payroll tax) at any time during that year. For those age 16 and over, projected covered employment is the sum of age-sex groups, each reflecting the growth projected for the group's total U.S employment and average weeks worked per year.[1] For the short-range period, the age-sex-adjusted average weeks worked declines slightly as the age-sex-adjusted unemployment rate rises to its ultimate assumed value of 4.5 percent. After 2032, the average weeks worked for each age-sex group

[1] For those under age 16, projected covered employment is the sum of age-sex components, each of which is projected as a ratio to the Social Security area population.

is assumed to remain constant. The projection method also accounts for changes in non-OASDI-covered employment and the increase in coverage of Federal civilian employment as a result of the 1983 Social Security Amendments. It also reflects changes in the number and employment status of other-than-LPR immigrants residing within the Social Security coverage area, such as undocumented immigrants and foreign workers and students with temporary visas.

The covered-worker rate is the ratio of OASDI covered workers to the Social Security area population. For men and boys age 16 and over, the projected age-adjusted covered-worker rates[1] for 2097 are 69.7, 69.8, and 69.6 percent for the low-cost, intermediate, and high-cost assumptions, respectively. For women and girls age 16 and over, the projected age-adjusted covered-worker rates for 2097 are 66.8, 66.1, and 65.7 percent for the low-cost, intermediate, and high-cost assumptions, respectively. An important factor in the variation among the projected rates for the three alternatives is the portion of the men and women in the population that is projected to be other-than-LPR immigrants. For men and boys, the intermediate projected rate for 2097 is lower than the 2021 age-adjusted rate of 71.0 percent primarily due to the projected increase in the portion of the Social Security area population that consists of other-than-LPR immigrants. For women and girls, the intermediate projected rate for 2097 is higher than the 2021 age-adjusted rate of 64.8 percent because the projected increase in the age-adjusted labor force participation rate more than offsets the projected increase in the portion of the population that will be other-than-LPR immigrants.

3. Insured Population

Eligibility for worker benefits under the OASDI program requires some threshold level of work in covered employment. A worker satisfies this requirement by his or her accumulation of quarters of coverage (QCs). Prior to 1978, a worker earned one QC for each calendar quarter in which he or she earned at least $50. In 1978, when annual earnings reporting replaced quarterly reporting, the amount required to earn a QC (up to a maximum of four per year) was set at $250. As specified in the law, the Social Security Administration has adjusted this amount each year since then according to changes in the AWI. Its value in 2023 is $1,640.

There are three types of insured status that a worker can earn under the OASDI program. The number and recency of QCs earned determine each

[1] Age-adjusted covered-worker rates are adjusted to the 2011 age distribution of the Social Security area population.

status. A worker is fully insured when his or her total number of QCs is greater than or equal to the number of years elapsed after the year of attainment of age 21 (but not less than six). After a worker has accumulated 40 QCs, he or she remains permanently fully insured. A worker is disability insured if he or she is: (1) a fully insured worker who has accumulated 20 QCs during the 40-quarter period ending with the current quarter, (2) a fully insured worker aged 24-30 who has accumulated QCs during one-half of the quarters elapsed after the quarter of attainment of age 21 and up to and including the current quarter, or (3) a fully insured worker under age 24 who has accumulated six QCs during the 12-quarter period ending with the current quarter. A worker is currently insured when he or she has accumulated six QCs during the 13-quarter period ending with the current quarter. Periods of disability reduce the number of quarters required for insured status, but not below the minimum of six QCs.

There are many types of benefits payable to workers and their family members under the OASDI program. A worker must be fully insured to be eligible for a primary retirement benefit and for his or her spouse or children to be eligible for auxiliary retirement benefits. A deceased worker must have been either currently insured or fully insured at the time of death for his or her children (and their mother or father) to be eligible for benefits. If there are no eligible surviving children, the deceased worker must have been fully insured at the time of death for his or her surviving spouse to be eligible. A worker must be disability insured to be eligible for a primary disability benefit and for his or her spouse or children to be eligible for auxiliary disability benefits.

The Office of the Chief Actuary estimates the fully insured population, as a percentage of the Social Security area population, by single year of age and sex starting in 1969. The short-range model extrapolates the historical trend in these rates from data in the Continuous Work History Sample (CWHS). The model uses information on quarters of coverage earned due to employment covered by Social Security derived from tabulations of the CWHS. The model also uses historical administrative data on beneficiaries in force and estimated historical mortality rates. The model combines this information to estimate the proportion of individuals who were alive and fully insured as of the end of each historical year. Using projected mortality rates and covered workers, the model extrapolates these rates into the future and applies them to the historical and projected population to arrive at the fully insured population by age and sex through the end of the short-range period.

The long-range fully insured model uses 30,000 simulated work histories for each sex and birth cohort, representing everyone except the other-than-LPR

immigrant population.[1] For the other-than-LPR immigrant population, the model generates substantially lower percentages attaining fully insured status. The model constructs simulated work histories using past coverage rates, earnings distributions, and amounts required for crediting QCs, and develops them in a manner that replicates historical individual variations in work patterns. The probability of covered employment in any year is assumed to be higher for those who have worked more consistently in the recent past. Model parameters are selected so that simulated fully insured percentages are consistent with the fully insured percentages estimated by the short-range model for the recent historical period.

The Office of the Chief Actuary estimates the disability insured population, as a percentage of the fully insured population, by age and sex starting in 1969. The office bases historical values on a tabulation of the disability insured population from the CWHS and estimates of the fully insured population. The short-range model projects these percentages by using the relationship between the historical percentages and covered-worker rates. The long-range model projects these percentages by using the same simulated work histories used to project the fully insured percentages. The long-range model makes additional adjustments to the model simulations in order to bring the disability insured percentages in the historical and short-range periods into close agreement with those estimated from the CWHS and the short-range model.

The office does not project the currently insured population because the number of beneficiaries who are entitled to benefits based solely on currently insured status has been very small recently and is likely to remain small in the future.

Using these insured models, the percentage of the Social Security area population aged 62 and over that is fully insured is projected to change from its estimated level of 88.5 for December 31, 2020, to 86.8, 88.6, and 90.9 for December 31, 2100, under the low-cost, intermediate, and high-cost alternatives, respectively. Over the projection period, the percentages for both men and women change significantly. The percentage for men declines, reflecting, in part, increases in the percent of the population that is classified as other-than-LPR immigrants and is thus less likely to have earnings reported and credited to them. The percentage for women increases, reflecting the past substantial growth in the employment of younger cohorts of women. Under the intermediate assumptions, for example, the percentage for men

[1] Those granted legal work authorization through the 2012 Deferred Action for Childhood Arrivals program are included in the simulations.

decreases from 94.1 to 87.7, and the percentage for women increases from 83.9 to 89.4.

4. Old-Age and Survivors Insurance Beneficiaries

The Office of the Chief Actuary projects the number of OASI beneficiaries for each type of benefit separately by the sex of the worker on whose earnings the benefits are based and by the age of the beneficiary. For the long-range period, the office also projects the number of beneficiaries by marital status for several types of benefits. The office uses two separate models in making these projections. The short-range model makes projections during the first 10 years of the projection period and the long-range model makes projections thereafter.

The short-range model develops the number of retired-worker beneficiaries by applying award rates to the aged fully insured population, excluding those already receiving retired-worker, disabled-worker, aged-widow(er), or aged-spouse benefits, and by applying termination rates to the number of retired-worker beneficiaries.

The long-range model projects the number of retired-worker beneficiaries who were not previously converted from disabled-worker beneficiary status as a percentage of the exposed population.[1] For age 62, the model projects this percentage by using a linear regression based on the historical relationship between this percentage, the employment rate[2] at age 62, and the number of months from age 62 to normal retirement age. The percentage for ages 70 and over is nearly 100 because delayed retirement credits cannot be earned after age 70. The long-range model projects the percentage for each age 63 through 69 based on historical experience with an adjustment for changes in the portion of the primary insurance amount that is payable at each age of entitlement. The model adjusts these percentages for ages 62 through 69 to reflect changes in the normal retirement age.

The long-range model calculates the number of retired-worker beneficiaries previously converted from disabled-worker beneficiary status using an extension of disabled-worker death rates by age, sex, and duration.

The Office of the Chief Actuary estimates the number of aged-spouse beneficiaries, excluding those who are also receiving a retired-worker benefit, from the population projected by age and sex. Benefits of aged-spouse beneficia-

---

[1] The exposed population is the fully insured population age 62 and over, excluding persons entitled to or converted from disabled-worker benefits and fully insured persons entitled only to widow(er) benefits.

[2] The employment rate is the ratio of U.S. civilian employment to the civilian noninstitutional population.

ries depend on the earnings records of their husbands or wives, who are referred to as "earners." The short-range model projects insured aged-spouse beneficiaries in conjunction with the retired-worker beneficiaries. This model projects uninsured aged-spouse beneficiaries by applying award rates to the aged uninsured male or female population and by applying termination rates to the population already receiving such benefits.

The long-range model estimates aged-spouse beneficiaries separately for those married and divorced. The model projects the number of married aged-spouse beneficiaries, by age and sex, by applying a series of factors to the number of spouses, aged 62 and over, in the population. These factors are the probabilities that the spouse and the earner meet all of the conditions of eligibility—that is, the probabilities that: (1) the earner is 62 or over, (2) the earner is insured, (3) the earner is receiving benefits, (4) the spouse is not receiving a benefit for the care of an entitled child, (5) the spouse is either not insured or is insured but not receiving benefits, and (6) the spouse is not eligible to receive a significant government pension based on earnings from noncovered employment. To calculate the estimated number of aged-spouse beneficiaries, the model applies a projected prevalence rate to the resulting number of spouses. Due to the Bipartisan Budget Act of 2015, for those turning age 62 in 2016 and later, deemed filing now applies to all retired workers and spouses even after initial entitlement, regardless of age. Thus, spouses who are insured are no longer eligible to delay their retired-worker benefit while receiving an aged-spouse benefit.

The long-range model estimates the number of divorced aged-spouse beneficiaries, by age and sex, by applying the same factors to the number of divorced persons aged 62 and over in the population, with three differences. First, the model applies a factor to reflect the probability that the earner (former spouse) is still alive. If the former spouse is not alive, the person may be entitled to a divorced widow(er) benefit. Second, the model applies a factor to reflect the probability that the marriage to the former spouse lasted at least 10 years. Third, the model does not apply factor (3) in the previous paragraph because, effective January 1985, a divorced person is generally no longer required to wait for the former spouse to receive benefits.

The Office of the Chief Actuary bases the projected numbers of children under age 18, and students aged 18 and 19, who are eligible for benefits as children of retired-worker beneficiaries, on the projected number of children in the population. The short-range model develops the number of entitled children by applying award rates to the number of children in the population who have two living parents and by applying termination rates to the number of children already receiving benefits.

The long-range model projects separately the number of entitled children by sex of the earner parent. For each age under 18, the model multiplies the projected number of children with a parent aged 62 and over by the ratio of the number of retired workers aged 62 to 71 to the number of members of the population aged 62 to 71. For student beneficiaries, the model multiplies the number of children aged 18 and 19 in the population by the probabilities that: (1) the parent is alive, aged 62 or over, insured, and receiving a retired-worker benefit; and (2) the child is attending high school.

The Office of the Chief Actuary projects the number of disabled children, aged 18 and over, of retired-worker beneficiaries from the adult population. The short-range model applies award rates to the population and applies termination rates to the number of disabled children already receiving benefits. The long-range model projects the number of disabled children in a manner similar to that used for student children except for a factor that reflects the probability of being disabled before age 22.

The short-range model develops the number of spouses of retired workers, who are entitled to spouse benefits because they are caring for a child who is under age 16 or disabled, by applying award rates to the number of awards to children of retired workers and by applying termination rates to the number of young spouses with a child in their care who are already receiving benefits. The long-range model projects the number of young-spouse beneficiaries with a child in their care as a proportion of the number of child beneficiaries of retired workers, including projected changes in average family size.

The Office of the Chief Actuary projects the number of aged-widow(er) beneficiaries, excluding those who are also receiving a retired-worker benefit, from the population by age and sex. The short-range model projects fully insured aged-widow(er) beneficiaries in conjunction with the retired-worker beneficiaries. The model projects the number of uninsured aged-widow(er) beneficiaries by applying award rates to the aged uninsured male or female population and by applying termination rates to the population already receiving such benefits. The long-range model projects uninsured aged-widow(er) beneficiaries by marital status. The model multiplies the number of widow(er)s in the population aged 60 and over by the probabilities that: (1) the deceased earner is fully insured at death, (2) the widow(er) is not receiving a benefit for the care of an entitled child, (3) the widow(er) is not fully insured, and (4) the widow(er) benefits are not withheld because of receipt of a significant government pension based on earnings in noncovered employment. In addition, the model applies the same factors to the number of divorced persons aged 60 and over in the population and includes addi-

tional factors representing the probability that the person's former earner spouse has died and that the marriage lasted at least 10 years. The model projects the number of insured aged-widow(er) beneficiaries who are ages 60 through 71 in a manner similar to that for uninsured aged-widow(er) beneficiaries. In addition, the model assumes that some insured widow(er)s who had not applied for their retired-worker benefits will receive widow(er) benefits. The model projects insured aged-widow(er) beneficiaries over age 71 by applying termination rates to the population that started receiving such benefits prior to age 71.

The short-range model develops the number of disabled-widow(er) beneficiaries by applying award rates to the uninsured male or female population and by applying termination rates to the population already receiving a disabled-widow(er) benefit. The long-range model projects the number for each cohort by age from 50 to normal retirement age as percentages of the widowed and divorced populations, adjusted for the insured status of the deceased spouse, the prevalence of disability, and the probability that the disabled spouse is not receiving another type of benefit.

The Office of the Chief Actuary bases the projected number of children under age 18, and students aged 18 and 19, who are entitled to benefits as survivors of deceased workers, on the number of children in the population whose mothers or fathers are deceased. The short-range model develops the number of entitled children by applying award rates to the number of orphaned children and by applying termination rates to the number of children already receiving benefits.

The long-range model projects the number of surviving-child beneficiaries in a manner similar to that for student beneficiaries of retired workers, except that the model replaces the probability that the parent is aged 62 or over with the probability that the parent is deceased.

The Office of the Chief Actuary projects the number of surviving-disabled-child beneficiaries, aged 18 and over, from the adult population. The short-range model applies award rates to the population and applies termination rates to the number of surviving-disabled-child beneficiaries already receiving benefits. The long-range model projects the number of surviving-disabled-child beneficiaries in a manner similar to that for surviving-student-child beneficiaries, except for including an additional factor to reflect the probability of being disabled before age 22.

The short-range model develops the numbers of entitled surviving-mother and surviving-father beneficiaries by applying award rates to the number of awards to surviving-child beneficiaries, in cases where the children are either

under age 16 or disabled, and by applying termination rates to the number of surviving-mother and surviving-father beneficiaries already receiving benefits. The long-range model estimates the numbers of surviving-mother and surviving-father beneficiaries, assuming they are not remarried, from the number of surviving-child beneficiaries.

The Office of the Chief Actuary projects the number of surviving-parent beneficiaries based on the historical pattern of the number of such beneficiaries.

Table V.C4 shows the projected number of beneficiaries under the OASI program by type of benefit. The retired-worker beneficiary counts include those persons who receive a residual auxiliary benefit in addition to their retired-worker benefit. The office makes estimates of the number and amount of residual payments separately for spouses and widow(er)s.

[a] Retired-worker beneficiaries include persons who also receive a residual benefit consisting of the excess of an auxiliary benefit over their retired-worker benefit.

Notes:
1. The number of beneficiaries does not include uninsured individuals who receive benefits under section 228 of the Social Security Act. Transfers from the General Fund of the Treasury reimburse the OASI Trust Fund for the cost of most of these individuals.

2. Components may not sum to totals because of rounding.

5. Disability Insurance Beneficiaries

The DI Trust Fund pays for benefits to workers who: (1) satisfy the disability insured requirements, (2) have applied for disabled-worker benefits, (3) are determined to be unable to engage in any substantial gainful activity due to a medically determinable physical or mental impairment severe enough to satisfy the requirements of the program, and (4) have not yet attained normal retirement age. Spouses and children of such disabled-worker beneficiaries may also receive DI benefits provided they satisfy certain criteria, primarily age and earnings requirements.

The Office of the Chief Actuary projects the number of disabled-worker beneficiaries in current-payment status (disability prevalence) for each future year. The projections start with the number in current-payment status as of December 2022. Projections of the number of applicants and new beneficiaries awarded benefits each year (disability incidence) and the number of beneficiaries leaving the disability rolls each year then determine the number in current-payment status in later years. Beneficiaries leave the rolls due to death and recovery (disability terminations) and due to conversion from disabled-worker to retired-worker beneficiary status at normal retirement age, after which the OASI Trust Fund pays for benefits. The remainder of this section describes the concepts of disability incidence, termination, and prevalence.

a. Disability Incidence

The disability incidence rate is the ratio of the number of applicants newly awarded disabled-worker benefits during each year to the number of individuals who meet insured requirements but are not yet receiving benefits (the disability-exposed population[1]). The Office of the Chief Actuary projects the number of newly awarded beneficiaries for each future year by multiplying assumed age-sex-specific disability incidence rates and the projected disability-exposed population by age and sex.

Figure V.C3 illustrates the projected incidence rates under the three alternatives along with historical rates. Incidence rates have varied substantially during the historical period since 1970 due to a variety of demographic and economic factors, along with changes in legislation and program administration. The solid lines in figure V.C3 show the age-sex-adjusted incidence rate consistent with the age-sex distribution of the disability-exposed population

[1] The disability-exposed population excludes those receiving benefits, while the disability insured population includes them. Section V.C.3 of this report describes the projection of the disability insured population.

for 2000. This adjustment allows a meaningful comparison of incidence rates over time by focusing on the likelihood of being awarded disabled-worker benefits, excluding the effects of a changing distribution of the population toward ages where disability is more or less likely.

The dashed lines in figure V.C3 represent the gross (unadjusted) incidence rates. The changing age-sex distribution of the exposed population over time influences these unadjusted rates. The gross incidence rate declined relative to the age-sex-adjusted rate between 1970 and 1990 as the baby-boom generation increased the size of the younger working-age population, where disability incidence is lower than in older populations. Between 1990 and 2010, the gross rate increased relative to the age-sex-adjusted rate as the baby-boom generation moved into an age range where disability incidence is higher. The projected gross incidence rate generally declines relative to the age-sex-adjusted rate as the baby-boom generation moves above the normal retirement age and the lower-birth-rate cohorts of the 1970s enter prime disability ages (50 to normal retirement age). As these smaller cohorts age beyond normal retirement age, by about 2050, the gross incidence rate returns to a higher relative level under the intermediate assumptions. Thereafter, the gross rate remains higher than the age-sex-adjusted rate, and reflects the persistently higher average age of the working-age population compared to the population in 2000, which is largely due to lower birth rates since 1965, and to the increase in the normal retirement age.

For the first 10 years of the projection period (through 2032), incidence rates reflect several factors following on the experience since the recession of 2007-09. At the beginning of the period of high unemployment that began in 2007, disability incidence rates started to rise to a level well above the general trend level, with rates reaching a peak in 2010. Between 2010 and 2012, incidence rates subsided as the economy recovered, but the decline continued after 2012, reaching levels well below those expected over the long-term. A portion of the elevation of disability incidence rates experienced during the recession of 2007-09 likely contributed to the lowering of incidence rates experienced during and subsequent to the economic recovery that followed, as many individuals applied for disability benefits earlier than they would have otherwise.

For 2022, the actual age-sex-adjusted incidence rate (2.9 per thousand) was below the level projected in last year's report (3.2 per thousand). In this year's report, incidence rates under the intermediate alternative are projected to rise more slowly early in the projection period than in last year's report, consistent with the low incidence levels experienced recently. Incidence rates are projected to rise to a temporary peak level for 2027 as some of the

reduced levels of new benefit awards in the pandemic period are realized in the next few years. After 2027, incidence rates gradually decline through the rest of the short-range period to the ultimate assumed level of incidence.

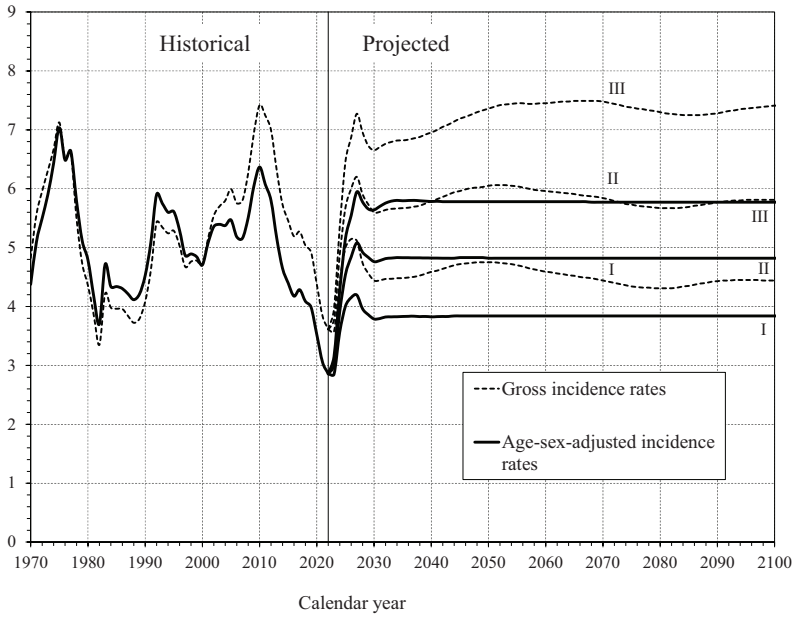
In 2032, at the end of the short-range period, age-sex-specific incidence rates are assumed to reach the ultimate rates assumed for the long-range projections. These ultimate age-sex-specific disability incidence rates were selected based on careful analysis of historical levels and patterns and expected future conditions, including the impact of scheduled increases in the normal retirement age.[1] The ultimate incidence rates represent the expected average rates of incidence for the future.

For the intermediate alternative, the Trustees assume that the ultimate age-sex-adjusted incidence rate (adjusted to the disability-exposed population for the year 2000) will be 4.8 awards per thousand exposed, which is the same as in last year's report. Figure V.C3 illustrates that the age-sex-adjusted incidence rate averaged 5.0 per thousand over the historical period 1970 through 2022, but has dropped substantially below that level since 2013. The rates seen in recent years are not consistent with an assumption of a full rise back to longer-term past historical averages. The Trustees continue to monitor experience and review the disability incidence rate assumption.

The Trustees assume that the ultimate age-sex-adjusted incidence rates for the low-cost and high-cost alternatives will be 3.8 and 5.8 awards per thousand exposed, or about 20 percent lower and higher, respectively, than the ultimate incidence rate for the intermediate alternative. These ultimate low-cost and high-cost incidence rates are similar to those in last year's report.

[1] Projected incidence rates are adjusted upward to account for additional workers who are expected to file for disability benefits (rather than retirement benefits) in response to reductions in retirement benefits as the normal retirement age rises.

Figure V.C3.—DI Disability Incidence Rates, 1970-2100
[Awards per thousand disability-exposed]



b. Disability Termination

Beneficiaries stop receiving disability benefits when they die, experience an improvement in their medically-determinable impairment such that they are deemed able to engage in substantial gainful activity, or return to substantial work. Disabled-worker beneficiaries who return to substantial work for an extended period are deemed to have recovered, and their benefits are then terminated. The termination rate is the ratio of the number of terminations for these reasons to the average number of disabled-worker beneficiaries during the year.

The Office of the Chief Actuary projects termination rates by age, sex, and reason for termination. In addition, the office projects termination rates by duration of entitlement to disabled-worker benefits in the long-range period (post-2032).

In the short-range period (through 2032), the projected age-sex-adjusted death rate (adjusted to the 2000 disabled-worker beneficiary population) under the intermediate assumptions declines from the temporarily elevated rate of 28.6 deaths per thousand beneficiaries for 2022 to about 23.8 per thousand for 2032. These rates are assumed to remain elevated through 2024

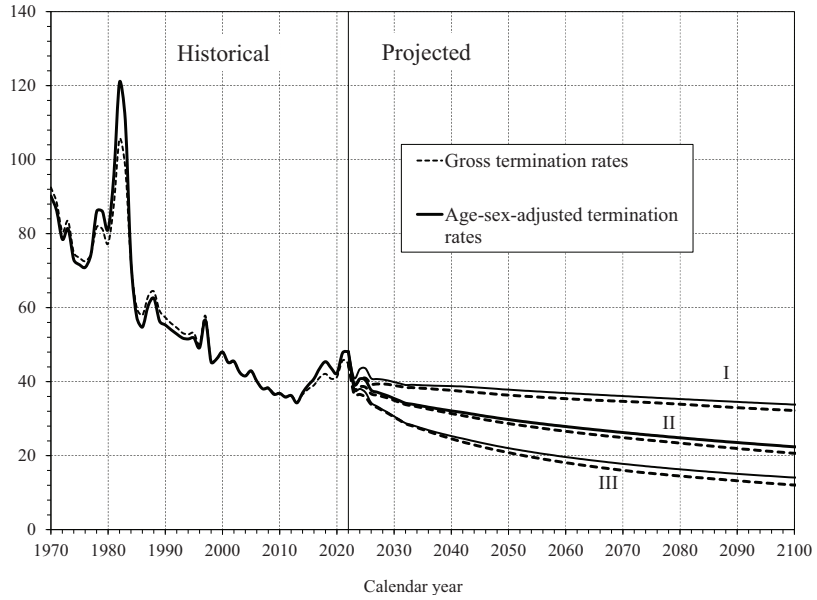
due to the COVID-19 pandemic, and then return to follow the underlying declining trend in general population mortality. The projected age-sex-adjusted recovery rate (medical improvement and return to substantial work) under the intermediate assumptions decreases from the relatively high level of 19.6 per thousand beneficiaries for 2022 to 10.4 per thousand beneficiaries for 2032. The recovery rate has been high in recent years due to an ongoing administrative effort to eliminate a backlog of medical continuing disability reviews. The recovery rate is expected to decrease as the backlog of disabled-worker reviews is assumed to be eliminated by the end of 2025. Thereafter, the rate decreases toward the expected long-term projected rate. Under the low-cost and high-cost assumptions, total age-sex-adjusted termination rates due to death and recovery are roughly 10 to 20 percent higher or lower, respectively, than under the intermediate assumptions.

For the long-range period (post-2032), the Office of the Chief Actuary projects death and recovery rates by age, sex, and duration of entitlement relative to the average level of rates experienced over the base period 2011 through 2015. The assumed ultimate age-sex-adjusted recovery rate for disabled-worker beneficiaries is 10.4 per thousand beneficiaries under the intermediate alternative.[1] The assumed ultimate age-sex-adjusted recovery rates for the low-cost and high-cost alternatives are 12.5 and 8.3 recoveries per thousand beneficiaries, respectively. Death rates by age and sex change throughout the long-range period at the same rate as death rates in the general population. The age-sex-adjusted death rate decreases from 28.6 per thousand beneficiaries in 2022 to 21.5, 12.4, and 6.1 per thousand disabled-worker beneficiaries for 2097 under the low-cost, intermediate, and high-cost assumptions, respectively.

Figure V.C4 illustrates gross and age-sex-adjusted total termination rates (including both recoveries and deaths) for disabled-worker beneficiaries for the historical period since 1970, and for the projection period through 2100. As with incidence rates, the age-sex-adjusted termination rate illustrates the real change in the tendency to terminate benefits. Changes in the age-sex distribution of the beneficiary population influence the gross termination rate. A shift in the disabled-worker beneficiary population to older ages, as occurred over the past 20 years when the baby-boom generation moved into pre-retirement ages, increases gross death termination rates relative to the age-sex-adjusted rates.

[1] The disability recovery rates for each alternative vary slightly over the last 65 years of the 75-year projection period, so the ultimate rates are presented as averages for years 2033 through 2097.

Figure V.C4.—DI Disability Termination Rates, 1970-2100
[Terminations per thousand disabled-worker beneficiaries]



c. Comparison of Incidence, Termination, and Conversion

Incidence and termination rates are the foundation for projecting the number of disabled-worker beneficiaries in current-payment status. At normal retirement age, all disabled-worker beneficiaries convert to retired-worker status and leave the DI rolls.

Figure V.C5 compares the historical and projected (intermediate) levels of incidence, termination, and conversion on an age-sex-adjusted basis. Incidence rates have varied widely, and the Trustees expect the age-sex adjusted rates under the intermediate assumptions to remain near the middle of the high and low extremes experienced since 1970. Termination rates have declined and the Trustees expect them to continue to decline, largely because of declining death rates.

Conversions are a transfer of beneficiaries at normal retirement age from the DI program to the OASI program. Therefore, the disability "conversion" rate is 100 percent for disabled-worker beneficiaries reaching normal retirement age in a given year. After conversion, recovery from the disabling condition is no longer relevant for benefit eligibility. The conversion ratio is the number of conversions in a given year (that is, beneficiaries who reach normal

retirement age) divided by the average number of disabled-worker beneficiaries at all ages in that year. The ratio is constant on an age-sex-adjusted basis, except for the two periods during which normal retirement age increases under current law.

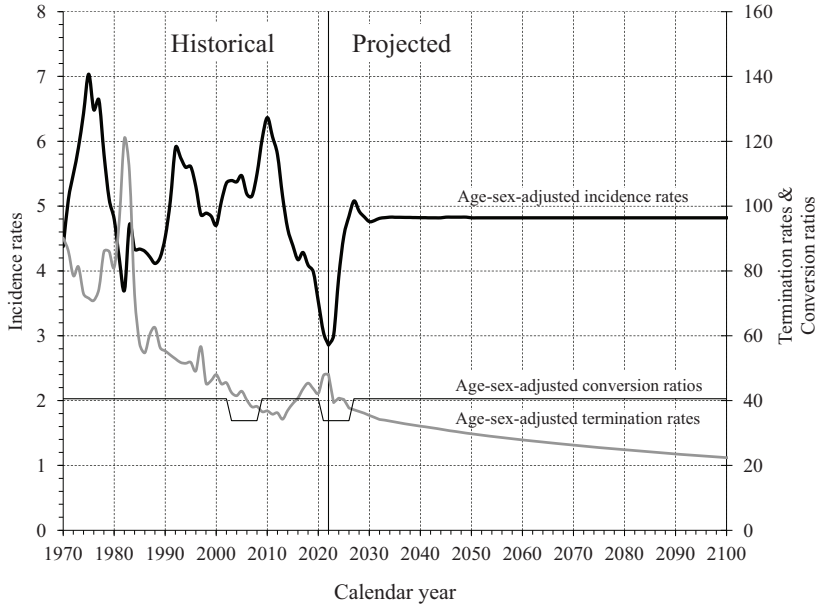
[Awards per thousand disability-exposed;
terminations and conversions per thousand disabled-worker beneficiaries]



d. DI Beneficiaries and Disability Prevalence Rates

The Office of the Chief Actuary makes detailed projections of disabled-worker awards, terminations, and conversions and combines these to project the number of disabled workers receiving benefits over the next 75 years. Table V.C5 presents the projected numbers of disabled-worker beneficiaries in current-payment status. The number of disabled-worker beneficiaries in current-payment status grows from 7.6 million at the end of 2022, to 10.9 million, 12.6 million, and 12.6 million at the end of 2100, under the low-cost, intermediate, and high-cost assumptions, respectively. Of course, much of this growth results from the growth and changing age distribution of the population described earlier in this chapter. Table V.C5 also presents projected numbers of auxiliary beneficiaries and disability prevalence rates on both a gross basis and an age-sex-adjusted basis.

Table V.C5.—DI Beneficiaries With Benefits in Current-Payment Status at the End of Calendar Years 1960-2100

[Beneficiaries in thousands; prevalence rates per thousand persons insured for disability benefits]

Calendar year	Disabled-worker beneficiaries	Auxiliary beneficiaries		Total beneficiaries	Disability prevalence rates

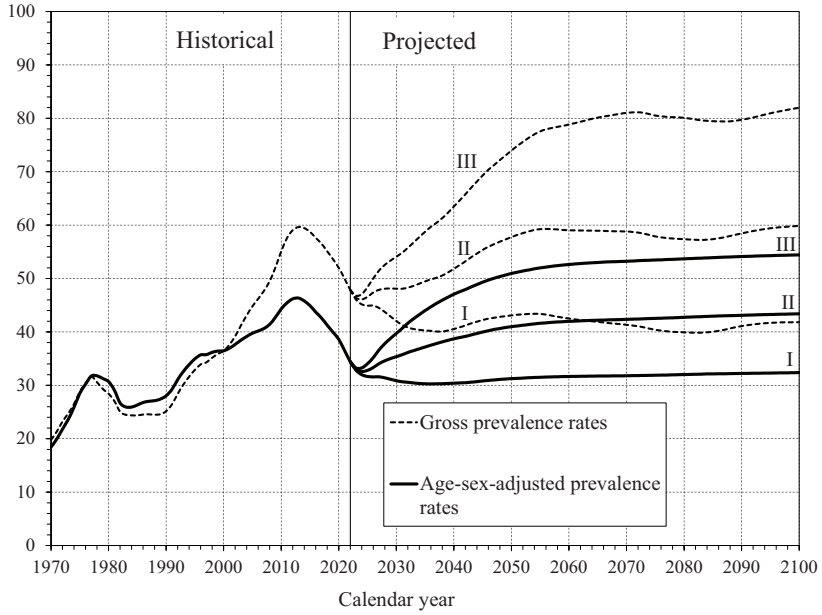
[a] Adjusted to the age-sex distribution of the disability insured population for the year 2000.

Note: Components may not sum to totals because of rounding.

The disability prevalence rate is the ratio of the number of disabled-worker beneficiaries in current-payment status to the number of persons insured for disability benefits. Figure V.C6 illustrates the historical and projected disability prevalence rates on both a gross basis and on an age-sex-adjusted basis (adjusted to the age-sex distribution of the disability insured population for the year 2000).

Changes in prevalence rates are a direct result of changes in incidence rates and termination rates. Figure V.C5 depicts patterns for incidence and termination rates, which are helpful for understanding the trend in prevalence rates. Annual incidence and termination rates are not directly comparable or combinable because their denominators differ.

Figure V.C6.—DI Disability Prevalence Rates, 1970-2100
[Rate per thousand persons insured for disability benefits]



Age-sex-adjusted prevalence rates have increased primarily because: (1) termination rates, in particular death termination rates, have declined; (2) incidence rates at younger ages have increased relative to rates at older ages (new beneficiaries at younger ages have more potential years on the disability rolls); (3) incidence rates have increased substantially for women to parity with men; and (4) the maturation of the DI program (disabled-worker benefits became available to those over age 50 at the start of the program in 1957 and to younger workers in 1960, and disability insured status requirements were eased for those under age 31 in 1968). Gross prevalence rates have increased more than age-sex-adjusted prevalence rates since the baby-boom generation began to reach ages 45 through normal retirement age, a time of life when disability incidence rates are relatively high. The Office of the Chief Actuary projects both gross and age-sex adjusted prevalence rates to grow at a slower pace based on assumed stabilization in these four factors: (1) the age distribution of the general population, (2) the age distribution of the disability insured population, (3) incidence rates by age and sex, and (4) DI program age and insured requirements. As these factors gradually stabilize, the declining death termination rate continues to have a small influence toward higher disability prevalence rates.

As mentioned above in the discussion of incidence and termination rates, the age-sex-adjusted prevalence rate isolates the changing trend in the underlying likelihood of receiving benefits for the insured population, without reflecting changes in the age and sex distribution of the population. As with incidence rates, gross disability prevalence rates declined relative to the age-sex-adjusted rate when the baby-boom generation reached working age between 1970 and 1990; this trend reflects the lower disability prevalence rates associated with younger ages. Conversely, the gross rate of disability prevalence has increased relative to the age-sex-adjusted rate after 1990 due to the aging of the baby-boom generation into ages with higher disability prevalence rates.

Under the intermediate assumptions, the projected age-sex-adjusted disability prevalence rate grows from 34.4 per thousand disability insured workers at the end of 2022 to 43.4 per thousand at the end of 2100. The projected age-sex-adjusted disability prevalence rate at the end of 2100 is 32.4 per thousand under the low-cost assumptions and 54.4 per thousand under the high-cost assumptions.

Table V.C5 presents projections of the numbers of auxiliary beneficiaries paid from the DI Trust Fund. As indicated at the beginning of this subsection, auxiliary beneficiaries are qualifying spouses and children of disabled-worker beneficiaries. A spouse must either be at least age 62 or have an eligible child beneficiary in his or her care who is either under age 16 or disabled prior to age 22. A child must be: (1) under age 18, (2) age 18 or 19 and still a student in high school, or (3) age 18 or older and disabled prior to age 22.

The projection of the number of auxiliary beneficiaries relies on the projected number of disabled-worker beneficiaries. In the short-range period (2023 through 2032), the Office of the Chief Actuary projects incidence and termination rates for each category of auxiliary beneficiary. After 2032, the office projects child beneficiaries at ages 18 and under in relation to the projected number of children in the population using the probability that either of their parents is a disabled-worker beneficiary. The office projects the remaining categories of children and spouses in a similar manner.

6. Covered and Taxable Earnings, Taxable Payroll, and Payroll Tax Contributions

Covered earnings include both covered wages and covered self-employment net earnings. The Office of the Chief Actuary projects covered wages for component sectors of the economy (i.e., private, State and local government, Federal civilian, and military) based on the projected overall growth of sec-

toral and total wages in the U.S. economy. The projections of covered wages also reflect changes in covered employment due to a relative increase in non-covered undocumented immigrants and to the mandatory coverage of new hires in the Federal civilian sector. The office projects covered self-employment net earnings based on the growth in net proprietors' income in the U.S. economy.

Taxable earnings are the portion of covered earnings subject to the Social Security payroll tax. Taxable wages for an employee are total covered wages from all wage employment up to the contribution and benefit base. Taxable wages for an employer are the sum of all covered wages paid to each employee up to the base. Employees with multiple jobs whose total wages exceed the base are eligible for a refund of excess employee taxes withheld; employers are not eligible for a refund on this basis. For self-employed workers with no taxable wages, taxable earnings are the amount of covered self-employment net earnings up to the base. For self-employed workers with taxable wages less than the base, covered self-employment net earnings are taxable up to the difference between the base and their taxable wages. For projection purposes, the Office of the Chief Actuary computes taxable earnings based on a proportion of covered earnings that is at or below the base.

The OASDI taxable payroll (see table VI.G6) for a year is computed as the amount of earnings which, when multiplied by the combined OASDI employee-employer payroll tax rate for that year, yields the total amount of payroll taxes due from wages paid and self-employment net earnings for the year. Taxable payroll is used as the denominator for income rates, cost rates, and actuarial balances. Taxable payroll is derived by adjusting total taxable earnings to account for categories of earnings that are taxed at rates other than the combined employee-employer rate and to take into account amounts credited as wages that were not included in normally reported wages. For 1951 and later, taxable earnings are reduced by one-half of the amount of wages paid to employees with multiple jobs that exceed the contribution and benefit base. For 1983 through 2001, deemed wage credits for military service after 1956 are added to taxable earnings. The self-employment tax rates for 1951 through 1983 were less than the combined employee-employer rates; therefore, the self-employment component of taxable payroll for those years is reduced by multiplying the ratio of the self-employment rate to the combined employee-employer rate times the taxable self-employment net earnings. Finally, for 1966 through 1979, employers were exempt from paying their share of payroll tax on their employees' tips and, for 1980 through 1987, employers paid tax on only part of their employees' tips. For those

years, the taxable payroll is reduced by half of the amount of tips for which the employer owed no payroll tax.

The ratio of taxable payroll to covered earnings (the taxable ratio) declined from 88.6 percent for 1984 to 82.6 percent for 2000, mostly due to much larger increases in wage levels for very high earners than for all other earners. From 2000 to 2010, the taxable ratio varied with the business cycle, rising during economic downturns and declining during recoveries. Specifically, the taxable ratio rose to 85.7 percent for 2002, declined to 82.4 percent for 2007, rose to 85.2 percent for 2009, and averaged 83.0 percent for the period 2010 to 2019.

The ratio declined to 82.2 percent for 2020 from the previous year's 83.1 percent. Unlike previous economic downturns, the pandemic-induced recession led to a much greater decrease in wages for earners at the low end of the earnings distribution than for those at the high end. This resulted in a relatively higher proportion of total wages being above the contribution and benefit base than has typically been the case in other economic downturns. The ratio declined further to 81.0 percent for 2021, mainly due to increases in bonuses paid to high earners and the exercising of stock options.

The taxable ratio for 2022 is estimated to increase to 82.3 percent for all three alternatives. The ratio for the intermediate assumptions increases to 83.1 for 2023 and 83.2 for 2024. For the low-cost and high-cost alternatives, the ratio for 2023 increases to 83.1 and 83.5, respectively. Subsequently, for all three alternatives, the ratio gradually decreases to the levels assumed for the end of the short-range period.

For this report, the Trustees assume a level for the taxable ratio at the end of the short-range period (2032) of 84.0 percent for the low-cost assumptions, 82.5 percent for the intermediate assumptions, and 81.0 percent for the high-cost assumptions.[1] These are the same assumptions that the Trustees used for the end of the short-range period (2031) for the 2022 report.

The Office of the Chief Actuary projects payroll tax contributions using the patterns of tax collection required by Federal laws and regulations. The office determines payroll tax liabilities by multiplying the scheduled tax rates for each year by the amount of taxable wages and self-employment net earnings for that year. The office then splits these liabilities into amounts by collection period. For wages, Federal law requires that employers withhold

[1] The taxable ratio drifts down slightly after 2032, to 84.0, 82.3, and 80.7 percent for 2097 for the low-cost, intermediate, and high-cost assumptions, respectively, as self-employment income (which has a lower percent taxable than wages) becomes an increasing share of total earnings.

OASDI and HI payroll taxes and Federal individual income taxes from employees' pay. As an employer's accumulation of such taxes (including the employer share of payroll taxes) meets certain thresholds, which the Department of the Treasury determines, the employer must deposit these taxes with the U.S. Treasury by a specific day, depending on the amount of money involved.[1] For projection purposes, the office splits the payroll tax contributions related to wages into amounts paid in the same quarter as incurred and in the following quarter. Self-employed workers must make estimated tax payments on their earnings four times during the year and make up any underestimate on their individual income tax returns. The projection splits the self-employed tax liabilities by collection quarter to reflect this pattern.

The projected tax contributions also reflect the method used to ensure that money transferred to the trust funds is adjusted, over time, to equal the actual liability owed. Because payers generally make tax payments without identifying the separate OASDI contribution amounts, Treasury makes daily transfers of money from the General Fund to the trust funds on an initial estimated basis. The Social Security Administration periodically certifies the amounts of wages and self-employment net earnings on which tax contributions are owed for each year, at which time Treasury determines adjustments to appropriations to reconcile tax liabilities with deposits in the trust funds. This process also includes periodic transfers from the trust funds to the General Fund for contributions on wages in excess of the contribution and benefit base.

Table V.C6 shows the payroll tax contribution rates applicable under current law in each calendar year and the allocation of these rates between the OASI and DI Trust Funds.[2] It also shows the contribution and benefit base for each year through 2023.

[1] Generally, the higher the amount of liability, the sooner the taxes must be paid. For smaller employers, payment is due by the middle of the month following when the liability was incurred. Medium-size employers have three banking days in which to make their deposits. Larger employers must make payment on the next business day after paying their employees.

[2] Table VI.G1 shows the payroll tax contribution rates for the Hospital Insurance (HI) program.

[a] Except as noted below, the combined employee/employer rate is divided equally between employees and employers.
[b] Beginning in 1990, self-employed persons receive a deduction, for purposes of computing their net earnings, equal to half of the combined OASDI and HI contributions that would be payable without regard to the contribution and benefit base. The OASDI contribution rate then applies to net earnings after this deduction, but subject to the OASDI base.
[c] In 1984 only, employees received an immediate credit of 0.3 percent of taxable wages against their OASDI payroll tax contributions. The self-employed received similar credits of 2.7 percent, 2.3 percent, and 2.0 percent against their combined OASDI and Hospital Insurance (HI) contributions on net earnings from self-employment in 1984, 1985, and 1986-89, respectively. The General Fund of the Treasury reimbursed the trust funds for these credits.
[d] Public Law 111-147 exempted most employers from paying the employer share of OASDI payroll tax on wages paid during the period March 19, 2010 through December 31, 2010 to certain qualified individuals hired after February 3, 2010. Public Law 111-312 reduced the OASDI payroll tax rate for 2011 by 2 percentage points for employees and for self-employed workers. Public Law 112-96 extended the 2011 rate reduction through 2012. These laws require that the General Fund of the Treasury reimburse the OASI and DI Trust Funds for these temporary reductions in 2010 through 2012 payroll tax revenue, in order to "replicate to the extent possible" revenue that would have been received if the combined employee/employer payroll tax rates had remained at 12.4 percent for OASDI (10.6 percent for OASI and 1.8 percent for DI).
[e] Subject to automatic adjustment based on increases in average wages.

7. Income From Taxation of Benefits

Under current law, the OASI and DI Trust Funds are credited with income tax revenue from the taxation of up to the first 50 percent of taxpayers' OASI and DI benefit payments. (The HI Trust Fund receives the remainder of the income tax revenue from the taxation of up to 85 percent of taxpayers' OASI and DI benefit payments.) Benefits are partially subject to federal income tax for beneficiaries with income (defined for this purpose as adjusted gross income excluding Social Security benefits, plus half of their Social Security benefits and all of their non-taxable interest income) in excess of specified

threshold amounts. The threshold amounts are $25,000 for single filers, $32,000 for joint filers, and $0 for those married individuals filing separately.

For the short-range period, the Office of the Chief Actuary estimates the income to the OASI and DI Trust Funds from taxation of benefits by applying the following two factors (projected by the Office of Tax Analysis, Department of the Treasury) to total OASI and DI scheduled benefits: (1) the percentage of taxpayers' scheduled benefits (limited to 50 percent) that is taxable and (2) the average marginal tax rate applicable to those benefits. Up to 85 percent of benefits may be subject to federal income tax, with any tax on more than 50 percent of a taxpayer's benefits credited to the Medicare Hospital Insurance Trust Fund.

For the long-range period, the office estimates the income to the trust funds from taxation of benefits by applying projected ratios of taxation of OASI and DI benefits to total OASI and DI scheduled benefits. These tax ratios rely on estimates from the Office of Tax Analysis in the Department of the Treasury. The Office of the Chief Actuary's estimates reflect the following assumptions: (1) The income thresholds used for benefit taxation are specified in the Internal Revenue Code to be constant in the future, and have never been changed, while income and benefit levels continue to rise. Accordingly, projected ratios of income from taxation of benefits to the amount of benefits increase gradually. (2) A permanent level shift upward in the ratios is projected for 2026 and beyond due to the expiration of the personal income tax provisions in Public Law 115-97, the Tax Cuts and Jobs Act of 2017. (3) Because indexation of income tax brackets is not specified in the Social Security Act, and because periodic changes have been made in the past to avoid indefinite compression of the income tax brackets relative to income levels (bracket creep), the Trustees assume that such periodic changes will occur in the future. As a result, after the tenth year of the projection period, income tax brackets are assumed to rise with average wages, rather than with the C-CPI-U as specified under current law. Thus, the income tax brackets are projected to roughly maintain their levels relative to the income distribution.

8. Average Benefits

Projections of average benefits for each benefit type reflect recent historical averages, projected average primary insurance amounts (PIAs), and projected ratios of average benefits to average PIAs. Calculations of average PIAs are based on projected distributions of beneficiaries by duration from year of initial entitlement, average PIAs at initial entitlement, and increases in PIAs after initial entitlement. Projected increases in average PIAs after ini-

tial entitlement depend on automatic benefit increases, recomputations to reflect additional covered earnings, and differences in mortality by level of lifetime earnings. Calculations of future average PIAs at initial entitlement are based on projected earnings histories, which in turn reflect a combination of the actual earnings histories associated with a sample of 2019 initial entitlements and more recent actual earnings levels by age and sex for covered workers.

For retired-worker, aged-spouse, and aged-widow(er) benefits, the percentage of the PIA that is payable depends on the age at initial entitlement to benefits. Projected ratios of average benefits to average PIAs for these types of benefits are based on projections of age distributions at initial entitlement.

9. Scheduled Benefits

For each type of benefit, scheduled benefits are the product of the number of beneficiaries and the corresponding average monthly benefit. The short-range model calculates scheduled benefits on a quarterly basis. The long-range model calculates all scheduled benefits on an annual basis, using the number of beneficiaries at the beginning and end of the year. Adjustments to these annual scheduled benefits include retroactive payments to newly awarded beneficiaries and other amounts not reflected in the regular monthly scheduled benefits.

Scheduled lump-sum death benefits are estimated as the product of: (1) the number of lump-sum death payments projected on the basis of the assumed death rates, the projected fully insured population, and the estimated percentage of the fully insured population that will qualify for lump-sum death payments; and (2) the amount of the lump-sum death payment, which is $255 (unindexed since 1973).

10. Illustrative Scheduled Benefit Amounts

Table V.C7 shows, under the intermediate assumptions, future scheduled benefit amounts payable upon retirement at the normal retirement age and at age 65, for various hypothetical workers attaining age 65 in 2023 and subsequent years. The illustrative benefit amounts in table V.C7 are presented in CPI-indexed 2023 dollars—that is, adjusted to 2023 levels by the CPI indexing series shown in table VI.G6. Table V.C7 also shows each benefit amount as a percentage of the average of each hypothetical worker's highest 35 years

of Social Security covered earnings, indexed by national average wage growth to the year prior to initial entitlement to retired worker benefits.[1]

The normal retirement age was 65 for individuals who reached age 62 before 2000. It increased to age 66 during the period 2000 through 2005, at a rate of 2 months per year as workers attained age 62. Under current law, the normal retirement age increases to age 67 during the period 2017 through 2022, also by 2 months per year as workers attain age 62. The illustrative benefit amounts shown in table V.C7 for retirees at age 65 are lower than the amounts shown for retirees at normal retirement age because monthly benefits taken before normal retirement age are reduced to reflect the expected additional years benefits will be collected. For example, those who start collecting benefits at age 65 in 2027 and survive to age 67 will receive benefits for two more years than if they had instead waited to start collecting benefits at normal retirement age in 2029.

Table V.C7 shows five different pre-retirement earnings patterns. Four of these patterns assume the earnings history of workers with scaled-earnings patterns[2] and reflect very low, low, medium, and high career-average levels of pre-retirement earnings starting at age 21. The fifth pattern assumes the earnings history of a steady maximum earner starting at age 22. The four scaled-earnings patterns derive from earnings experienced by insured workers during calendar years 2000 through 2019. These earnings levels differ by age. The career-average level of earnings for each scaled case targets a percent of the AWI.

For the scaled medium earner, the career-average earnings level is about equal to the AWI (estimated to be $66,147 for 2023). For the scaled very low, low, and high earners, the career-average earnings level, wage-indexed to the year before starting benefits, is about 25 percent, 45 percent, and 160 percent of the AWI, respectively (estimated to be $16,537, $29,766, and $105,835, respectively, for 2023). The steady maximum earner has earnings at or above the contribution and benefit base ($160,200 for 2023) for each year starting at age 22 through the year prior to retirement.

---

[a] Annual amounts are the total for the 12-month period starting with the month of retirement.
[b] Attains age 65 on January 1 of the year.
[c] CPI-indexed dollar adjustment uses the adjusted CPI indexing series shown in table VI.G6.
[d] Career average earnings at about 25 percent of the national Average Wage Index (AWI).
[e] Career average earnings at about 45 percent of the AWI.
[f] Career average earnings at about 100 percent of the AWI.
[g] Career average earnings at about 160 percent of the AWI.
[h] Earnings for each year at or above the contribution and benefit base.

11. Administrative Expenses

The projection of administrative expenses through the short-range period is based on historical experience and the projected growth in average wages. The Office of Budget of the Social Security Administration provides estimates for the first several years of the projection. For years after the short-range period, projected administrative expenses reflect increases in the number of beneficiaries in current-payment status, and increases in the average wage. However, the increases in average wage are partially offset by assumed administrative productivity gains.

12. Railroad Retirement Financial Interchange

Railroad workers are covered under a separate multi-tiered benefit plan, with a first tier of coverage similar to OASDI coverage. An annual financial interchange between the Railroad Retirement fund and the OASI and DI Trust Funds is made to resolve the difference between: (1) the amount of OASDI benefits that would be paid to railroad workers and their families if railroad employment had been covered under the OASDI program, plus administrative expenses associated with these benefits; and (2) the amount of OASDI payroll tax and income tax that would be received with allowances for interest from railroad workers.

The Office of the Chief Actuary's projection of future amounts for the financial interchange with the Railroad Retirement fund reflects trends similar to those used in estimating the cost of OASDI benefits. The annual short-range net cost for the OASI and DI Trust Funds is about $6 to $7 billion and the long-range summarized net cost for the OASI and DI Trust Funds is 0.05 percent of taxable payroll.

VI. APPENDICES

A. HISTORY OF OASI AND DI TRUST FUND OPERATIONS

The Federal Old-Age and Survivors Insurance (OASI) Trust Fund was established on January 1, 1940 as a separate account in the United States Treasury. The Federal Disability Insurance (DI) Trust Fund, another separate account in the United States Treasury, was established on August 1, 1956. These funds conduct the financial operations of the OASI and DI programs. The Board of Trustees is responsible for overseeing the financial operations of these funds. The following paragraphs describe the various components of trust fund income and cost. Following this description, tables VI.A1 and VI.A2 present the historical operations of the separate trust funds since their inception, and table VI.A3 presents the operations of the hypothetical combined trust funds[1] during the period when they have co-existed.

The primary income of these two funds comes from appropriations under permanent authority on the basis of payroll tax contributions. Federal law requires that all employees who work in OASDI covered employment, and their employers, make payroll tax contributions on their wages up to a specified annual maximum amount (the contribution and benefit base). Employees and their employers must also make payroll tax contributions on monthly cash tips if such tips are at least $20. Self-employed persons must make payroll tax contributions on their covered net earnings from self-employment subject to the annual contribution and benefit base. The Federal Government pays amounts equivalent to the combined employer and employee contributions that would be paid on deemed wage credits attributable to military service performed between 1957 and 2001, if such wage credits were covered wages. Treasury initially deposits payroll tax contributions to the trust funds each day on an estimated basis. Subsequently, Treasury makes adjustments based on the certified amount of wages and self-employment earnings in the records of the Social Security Administration.

Income also includes various reimbursements from the General Fund of the Treasury, such as: (1) the cost of noncontributory wage credits for military service before 1957, and periodic adjustments to previous determinations of this cost; (2) the cost in 1971 through 1982 of deemed wage credits for military service performed after 1956; (3) the cost of benefits to certain uninsured persons who attained age 72 before 1968; (4) the cost of payroll tax credits provided to employees in 1984 and self-employed persons in 1984 through 1989 by Public Law 98-21; (5) the cost in 2009 through 2017 of excluding certain self-employment earnings from SECA taxes under Public

[1] The OASI and DI Trust Funds are distinct legal entities which operate independently. To illustrate the actuarial status of the program as a whole, the fund operations are often combined on a hypothetical basis.

Law 110-246; and (6) payroll tax revenue forgone under the provisions of Public Laws 111-147, 111-312, 112-78, and 112-96. This also includes a portion of proceeds of repayments of loans authorized by Public Law 116-136.

Beginning in 1984, Federal law subjected up to 50 percent of an individual's or couple's OASDI benefits to Federal income taxation under certain circumstances. Effective for taxable years beginning after 1993, the law increased the maximum percentage from 50 percent to 85 percent. Treasury credits the proceeds from this taxation of up to 50 percent of benefits to the OASI and DI Trust Funds in advance, on an estimated basis, at the beginning of each calendar quarter, with no reimbursement to the General Fund for interest costs attributable to the advance transfers.[1] Treasury makes subsequent adjustments based on the actual amounts shown on annual income tax records. Each of the OASI and DI Trust Funds receives the income taxes paid on the benefits from that trust fund.[2]

Another source of income to the trust funds is interest received on investments held by the trust funds. On a daily basis, Treasury invests trust fund income in interest-bearing obligations of the U.S. Government. These investments include the special public-debt obligations described in the next paragraph. The Social Security Act also authorizes the trust funds to hold obligations guaranteed as to both principal and interest by the United States. The act therefore permits the trust funds to hold certain Federally sponsored agency obligations and marketable obligations.[3] The trust funds may acquire any of these obligations on original issue at the issue price or by purchase of outstanding obligations at their market price.

The Social Security Act authorizes the issuance of special public-debt obligations for purchase exclusively by the trust funds. The act provides that the interest rate for special obligations newly issued in any month is the average market yield, as of the last business day of the prior month, on all of the outstanding marketable U.S. obligations that are due or callable more than 4 years in the future. This rate is rounded to the nearest one-eighth of one percent. Beginning January 1999, in calculating the average market yield rate for this purpose, the Treasury incorporates the yield to the call date when a callable bond's market price is above par.

Although the Social Security Act does not authorize the purchase or sale of special issue securities in the open market, Treasury redeems special issue

---

[1] The HI Trust Fund receives the additional tax revenue resulting from the increase to 85 percent.

[2] A special provision applies to benefits paid to nonresident aliens. Effective for taxable years beginning after 1994, Public Law 103-465 subjects benefits to a flat-rate tax, usually 25.5 percent, before they are paid. Therefore, this tax remains in the trust funds. From 1984 to 1994, the flat-rate tax was usually 15 percent.

[3] The Social Security Act requires the trust funds to acquire special-issue obligations unless the Managing Trustee determines that the purchase of marketable obligations is in the public interest. The purchase of marketable obligations has been quite limited and has not occurred since 1980.

securities prior to maturity at par value when needed to meet current operating expenses. As a result, changes in market yield rates after issuance of special issue securities do not cause fluctuations in the value of these securities. As is true for marketable Treasury securities held by the public, the full faith and credit of the U.S. Government backs all of the investments held by the trust funds.

Annual cost for the OASI and DI Trust Funds primarily consists of: (1) OASDI benefit payments[1], net of any reimbursements from the General Fund of the Treasury for unnegotiated benefit checks; and (2) expenses incurred by the Social Security Administration and the Department of the Treasury in administering the OASDI program and the provisions of the Internal Revenue Code relating to the collection of contributions. Such administrative expenses include, among other items, the cost of (1) payroll; (2) construction, rental, lease, or purchase of office buildings and related facilities for the Social Security Administration; and (3) information technology systems. The Social Security Act prohibits payments from the OASI and DI Trust Funds for any purpose not related to the payment of benefits or administrative costs for the OASDI program.

Annual cost also includes: (1) the costs of vocational rehabilitation services furnished to disabled persons receiving cash benefits because of their disabilities, where such services contributed to their successful rehabilitation; and (2) net costs of the provisions of the Railroad Retirement Act that provide for a system of coordination and financial interchange between the Railroad Retirement program and the Social Security program. Under the financial interchange provisions, the Railroad Retirement program's Social Security Equivalent Benefit Account and the trust funds interchange amounts on an annual basis so that each trust fund is in the same position it would have been had railroad employment always been covered under Social Security.

The statements of the operations of the trust funds in this report do not include the net worth of facilities and other fixed capital assets because the value of fixed capital assets is not available in the form of a financial asset redeemable for the payment of benefits or administrative costs. As a result of this unavailability, the actuarial status of the trust funds does not take these assets into account.

---

[1] Periodically, benefit payments which were scheduled to be paid on January 3 were actually paid on December 31 of the preceding year as required by the statutory provision included in the 1977 Social Security Amendments for early delivery of benefit payments when the normal payment delivery date is a Saturday, Sunday, or legal public holiday. Such advance payments have occurred about every 7 years, first for benefits scheduled for January 3, 1982. The most recent such accelerated payment affected benefits scheduled to be paid on January 3, 2021. For comparability with the values for historical years and the projections in this report, all trust fund operations and asset reserves reflect the 12 months of benefits scheduled for payment each year without regard to the accelerated payments described above.

[a] Beginning in 1979, benefit payments scheduled to be paid on January 3 of a given year were paid on December 31 of the preceding year as required by the statutory provision included in the 1977 Social Security Amendments for early delivery of benefit payments when the normal payment delivery date is a Saturday, Sunday, or legal public holiday. Such advance payments have occurred about every 7 years, first for benefits scheduled for January 3, 1982. For comparability with other historical years and the projections in this report, all trust fund operations and asset reserves reflect the 12 months of benefits scheduled for payment in each year without regard to the accelerated payments described above.

[b] Represents asset reserves at the beginning of a year as a percentage of cost during the year. The table shows no ratio for 1937 because no reserves existed at the beginning of the year.

[c] Includes adjustments for prior calendar years.

[d] Includes net reimbursements from the General Fund of the Treasury to the OASI Trust Fund for: (1) the cost of noncontributory wage credits for military service before 1957; (2) the cost in 1971-82 of deemed wage credits for military service performed after 1956; (3) the cost of benefits to certain uninsured persons who attained age 72 before 1968; (4) the cost of payroll tax credits provided to employees in 1984 and self-employed persons in 1984-89 by Public Law 98-21; (5) the cost in 2009-17 of excluding certain self-employment earnings from SECA taxes under Public Law 110-246; and (6) payroll tax revenue forgone under the provisions of Public Laws 111-147, 111-312, 112-78, and 112-96. Also includes transfers of a portion of proceeds from repayments of loans authorized under Public Law 116-136.

[e] Net interest includes net profits or losses on marketable investments. Beginning in 1967, the trust fund pays administrative expenses on an estimated basis, with a final adjustment including interest made in the following fiscal year. Net interest includes the amounts of these interest adjustments. The 1970 report describes the accounting for administrative expenses for years prior to 1967. Beginning in October 1973, figures include relatively small amounts of gifts to the fund. Net interest for 1983-86 reflects payments for interest on amounts owed under the interfund borrowing provisions. During 1983-90, net interest reflects interest reimbursements paid from the trust fund to the General Fund on advance tax transfers.

[f] Beginning in 1966, includes payments for vocational rehabilitation services furnished to disabled persons receiving benefits because of their disabilities. Beginning in 1983, net benefit amounts include reimbursements paid from the General Fund to the trust fund for unnegotiated benefit checks. Excluding the portion attributable to vocational rehabilitation services and unnegotiated benefit checks, amounts are the same as benefits scheduled under law at that time for all historical years.

[g] Operations prior to 1940 are for the Old-Age Reserve Account established by the original Social Security Act. The 1939 Amendments transferred the asset reserves of the Account to the OASI Trust Fund effective January 1, 1940.

[h] Between -$50 million and $50 million.

[i] Reflects interfund borrowing of $17.5 billion by the OASI Trust Fund from the DI and HI Trust Funds in 1982 and the subsequent repayment of those loans in 1985 ($4.4 billion) and 1986 ($13.2 billion).

[j] Reserves used for the trust fund ratio calculation include January advance tax transfers.

Note: Components may not sum to totals because of rounding.

[a] Beginning in 1979, benefit payments scheduled to be paid on January 3 of a given year were paid on December 31 of the preceding year as required by the statutory provision included in the 1977 Social Security Amendments for early delivery of benefit payments when the normal payment delivery date is a Saturday, Sunday, or legal public holiday. Such advance payments have occurred about every 7 years, first for benefits scheduled for January 3, 1982. For comparability with other historical years and the projections in this report, all trust fund operations and asset reserves reflect the 12 months of benefits scheduled for payment in each year without regard to the accelerated payments described above.
[b] Represents asset reserves at the beginning of a year as a percentage of cost during the year. The table shows no ratio for 1957 because no reserves existed at the beginning of the year.
[c] Includes adjustments for prior calendar years.
[d] Includes net reimbursements from the General Fund of the Treasury to the DI Trust Fund for: (1) the cost of noncontributory wage credits for military service before 1957; (2) the cost in 1971-82 of deemed wage credits for military service performed after 1956; (3) the cost of payroll tax credits provided to employees in 1984 and self-employed persons in 1984-89 by Public Law 98-21; (4) the cost in 2009-17 of excluding certain self-employment earnings from SECA taxes under Public Law 110-246; and (5) payroll tax revenue forgone under the provisions of Public Laws 111-147, 111-312, 112-78, and 112-96.
[e] Net interest includes net profits or losses on marketable investments. Beginning in 1967, the trust fund pays administrative expenses on an estimated basis, with a final adjustment including interest made in the following fiscal year. Net interest includes the amounts of these interest adjustments. The 1970 report describes the accounting for administrative expenses for years prior to 1967. Beginning in July 1974, figures include relatively small amounts of gifts to the fund. Net interest for 1983-86 reflects payments for interest on amounts owed under the interfund borrowing provisions. During 1983-90, net interest reflects interest reimbursements paid from the trust fund to the General Fund on advance tax transfers.
[f] Beginning in 1966, includes payments for vocational rehabilitation services furnished to disabled persons receiving benefits because of their disabilities. Beginning in 1983, net benefit amounts include reimbursements paid from the General Fund to the trust fund for unnegotiated benefit checks. Excluding the portion attributable to vocational rehabilitation services and unnegotiated benefit checks, amounts are the same as benefits scheduled under law at that time for all historical years.
[g] Between -$50 million and $50 million.
[h] Reflects interfund borrowing by the OASI Trust Fund from the DI Trust Fund in 1982 of $5.1 billion and the subsequent repayment of that loan in 1985 ($2.5 billion) and 1986 ($2.5 billion).
[i] Reserves used for the trust fund ratio calculation include January advance tax transfers.

Note: Components may not sum to totals because of rounding.

[a] Beginning in 1979, benefit payments scheduled to be paid on January 3 of a given year were paid on December 31 of the preceding year as required by the statutory provision included in the 1977 Social Security Amendments for early delivery of benefit payments when the normal payment delivery date is a Saturday, Sunday, or legal public holiday. Such advance payments have occurred about every 7 years, first for benefits scheduled for January 3, 1982. For comparability with other historical years and the projections in this report, all trust fund operations and asset reserves reflect the 12 months of benefits scheduled for payment in each year without regard to the accelerated payments described above.

[b] Represents asset reserves at the beginning of a year as a percentage of cost during the year.

[c] Includes adjustments for prior calendar years.

[d] Includes net reimbursements from the General Fund of the Treasury to the OASI and DI Trust Funds for: (1) the cost of noncontributory wage credits for military service before 1957; (2) the cost in 1971-82 of deemed wage credits for military service performed after 1956; (3) the cost of benefits to certain uninsured persons who attained age 72 before 1968; (4) the cost of payroll tax credits provided to employees in 1984 and self-employed persons in 1984-89 by Public Law 98-21; (5) the cost in 2009-17 of excluding certain self-employment earnings from SECA taxes under Public Law 110-246; and (6) payroll tax revenue forgone under the provisions of Public Laws 111-147, 111-312, 112-78, and 112-96. Also includes transfers of a portion of proceeds from repayments of loans authorized under Public Law 116-136.

[e] Net interest includes net profits or losses on marketable investments. Beginning in 1967, the trust funds pay administrative expenses on an estimated basis, with a final adjustment including interest made in the following fiscal year. Net interest includes the amounts of these interest adjustments. The 1970 report describes the accounting for administrative expenses for years prior to 1967. Beginning in October 1973, figures include relatively small amounts of gifts to the funds. Net interest for 1983-86 reflects payments for interest on amounts owed under the interfund borrowing provisions. During 1983-90, net interest reflects interest reimbursements paid from the trust funds to the General Fund on advance tax transfers.

[f] Beginning in 1966, includes payments for vocational rehabilitation services furnished to disabled persons receiving benefits because of their disabilities. Beginning in 1983, net benefit amounts include reimbursements paid from the General Fund to the trust funds for unnegotiated benefit checks. Excluding the portion attributable to vocational rehabilitation services and unnegotiated benefit checks, amounts are the same as benefits scheduled under law at that time for all historical years.

[g] Between -$50 million and $50 million.

[h] Reflects interfund borrowing by the OASI Trust Fund from the HI Trust Fund in 1982 of $12.4 billion and the subsequent repayment of that loan in 1985 ($1.8 billion) and 1986 ($10.6 billion).

[i] Reserves used for the trust fund ratio calculation include January advance tax transfers.

Note: Components may not sum to totals because of rounding.

Tables VI.A4 and VI.A5 show the total asset reserves of the OASI Trust Fund and the DI Trust Fund, respectively, at the end of calendar years 2021 and 2022. The tables show the invested asset reserves by interest rate and year of maturity. Bonds issued to the trust funds in 2022 had an interest rate of 3.000 percent, compared with an interest rate of 1.500 percent for bonds issued in 2021.

[a] A negative amount for a given year represents a situation where actual program cost exceeded the amount of invested securities of the OASI Trust Fund that were redeemed to cover such cost. In this situation, future redemption of additional invested securities will be required to pay for this shortfall.

Note: Amounts of special issue securities are at par value. The trust fund purchases and redeems special issue securities at par value. The table groups equal amounts that mature in two or more years at a given interest rate.

[a] A negative amount for a given year represents a situation where actual program cost exceeded the amount of invested securities of the DI Trust Fund that were redeemed to cover such cost. In this situation, future redemption of additional invested securities will be required to pay for this shortfall.

Note: Amounts of special issue securities are at par value. The trust fund purchases and redeems special issue securities at par value. The table groups equal amounts that mature in two or more years at a given interest rate.

B. HISTORY OF ACTUARIAL STATUS ESTIMATES

This appendix chronicles the history of the long-range OASDI actuarial balance and the year of combined OASI and DI Trust Fund reserve depletion since 1982 under the intermediate assumptions. The actuarial balance is the principal summary measure of actuarial status for the long-range period as a whole. The year of trust fund reserve depletion is also critical, as it indicates the year by which legislative action would be needed in order to maintain timely payment of scheduled benefits.

The 1983 report was the last report for which the actuarial balance was positive for the OASDI program. The two basic components of actuarial balance are the summarized income rate and the summarized cost rate, both of which are expressed as percentages of taxable payroll over the period. Section IV.B.4 defines the summarized income rate, summarized cost rate, and actuarial balance in detail. For any given period, the actuarial balance includes the difference between the present value of non-interest income for the period and the present value of the cost for the period, each divided by the present value of taxable payroll for all years in the period. The computation of the actuarial balance also includes:

- In the reports for 1988 and later, the amount of the trust fund asset reserves on hand at the beginning of the valuation period; and
- In the reports for 1991 and later, the present value of a target trust fund asset reserve equal to 100 percent of the annual cost to be reached and maintained at the end of the valuation period.

Reports of 1973-87 used the average-cost method, a simpler method which approximates the results of the present-value approach for computing the actuarial balance. Under the average-cost method, the sum of the annual cost rates over the 75-year projection period was divided by the total number of years, 75, to obtain the average cost rate per year. A similar computation produced the average income rate. The actuarial balance was the difference between the average income rate and the average cost rate.

When the 1973 report introduced the average-cost method, the financing of the program was more nearly on a pay-as-you-go basis over the long-range. Also, the long-range demographic and economic assumptions in that report produced an annual rate of growth in total taxable payroll which was about the same as the annual rate at which the trust funds earned interest. In either circumstance (i.e., pay-as-you-go financing, where the annual income rate is the same as the annual cost rate, or an annual rate of growth in total taxable payroll equal to the annual interest rate), the average-cost method produces

the same result as the present-value method. However, by 1988, neither of these circumstances still existed.

After the 1977 and 1983 Social Security Amendments, projections indicated substantial increases in the trust fund reserves continuing well into the 21st century. These laws changed the program's financing from essentially pay-as-you-go to partial advance funding through the 75-year period. Also, for the reports from 1973 through 1987, long-range fertility rates and average real wage growth assumptions were gradually reduced, resulting in an annual rate of growth in taxable payroll that was significantly lower than the assumed interest rate by 1987. As a result of the difference between this rate of growth and the assumed interest rate, the results of the average-cost method and the present-value method began to diverge in the reports for 1973 through 1987, and by 1988 they were quite different. While the average-cost method reflected most of the effects of assumed interest rates, it no longer reflected all interest effects. The present-value method, by contrast, accurately reflects the implications of assumed interest rates. As a result, the 1988 report reintroduced the present-value method of calculating the actuarial balance.

A positive actuarial balance indicates that estimated income (plus starting reserves, beginning with the 1988 report) is more than sufficient to meet estimated trust fund obligations (plus the ending target fund, beginning with the 1991 report) for the period as a whole. Even with a positive actuarial balance, it is possible for reserves to become temporarily depleted within the long-range period. An actuarial balance of zero indicates that the estimated income (plus starting reserves, beginning with the 1988 report) exactly matches estimated trust fund obligations (plus the ending target fund, beginning with the 1991 report) for the period as a whole. A negative actuarial balance indicates that estimated income (plus starting reserves, beginning with the 1988 report) is insufficient to meet estimated trust fund obligations (plus the ending target fund, beginning with the 1991 report) for the entire period.

Table VI.B1 contains the long-range OASDI actuarial balances, summarized income rates, and summarized cost rates for the 1982 report through the current report. The reports presented these values on the basis of the intermediate assumptions, which recent reports refer to as alternative II and reports from 1982 to 1990 referred to as alternative II-B.

Table VI.B1.—Long-Range OASDI Actuarial Balances and Trust Fund Reserve Depletion Dates as Shown in the Trustees Reports for 1982-2023 under Intermediate Assumptions[a]

[As a percentage of taxable payroll]

Year of report	Summarized income rate	Summarized cost rate	Actuarial balance[b]	Change from previous year[c]	Year of combined trust fund reserve depletion
1982	12.27	14.09	-1.82	[d]	1983
1983	12.87	12.84	+.02	+1.84	[e]
1984	12.90	12.95	-.06	-.08	[e]
1985	12.94	13.35	-.41	-.35	2049
1986	12.96	13.40	-.44	-.03	2051
1987	12.89	13.51	-.62	-.18	2051
1988	12.94	13.52	-.58	+.04	2048
1989	13.02	13.72	-.70	-.13	2046
1990	13.04	13.95	-.91	-.21	2043
1991	13.11	14.19	-1.08	-.17	2041
1992	13.16	14.63	-1.46	-.38	2036
1993	13.21	14.67	-1.46	[d]	2036
1994	13.24	15.37	-2.13	-.66	2029
1995	13.27	15.44	-2.17	-.04	2030
1996	13.33	15.52	-2.19	-.02	2029
1997	13.37	15.60	-2.23	-.03	2029
1998	13.45	15.64	-2.19	+.04	2032
1999	13.49	15.56	-2.07	+.12	2034
2000	13.51	15.40	-1.89	+.17	2037
2001	13.58	15.44	-1.86	+.03	2038
2002	13.72	15.59	-1.87	-.01	2041
2003	13.78	15.70	-1.92	-.04	2042
2004	13.84	15.73	-1.89	+.03	2042
2005	13.87	15.79	-1.92	-.04	2041
2006	13.88	15.90	-2.02	-.09	2040
2007	13.92	15.87	-1.95	+.06	2041
2008	13.94	15.63	-1.70	+.26	2041
2009	14.02	16.02	-2.00	-.30	2037
2010	14.01	15.93	-1.92	+.08	2037
2011	14.02	16.25	-2.22	-.30	2036
2012	14.02	16.69	-2.67	-.44	2033
2013	13.88	16.60	-2.72	-.05	2033
2014	13.89	16.77	-2.88	-.16	2033
2015	13.86	16.55	-2.68	+.20	2034
2016	13.84	16.50	-2.66	+.02	2034
2017	13.84	16.67	-2.83	-.17	2034
2018	13.84	16.69	-2.84	-.02	2034
2019	13.81	16.60	-2.78	+.06	2035
2020	13.85	17.06	-3.21	-.43	2035
2021	13.78	17.31	-3.54	-.32	2034
2022	13.78	17.20	-3.42	+.12	2035
2023	13.78	17.38	-3.61	-.19	2034

[a] The 1982-90 reports referred to the intermediate assumptions as alternative II-B; the 1991 and later reports refer to the intermediate assumptions as alternative II.

[b] The definition and method of calculating the actuarial balance were changed in 1988 and 1991. See text for details.

[c] A detailed year-by-year breakdown of the reasons for the changes in the actuarial balance since the 1983 Trustees Report may be found in Actuarial Note 2023.8 at www.ssa.gov/OACT/NOTES/ran8/.

[d] Between -0.005 and 0.005 percent of taxable payroll.

[e] Not projected to become depleted during the 75-year projection period.

Note: Components may not sum to totals because of rounding.

For several of the years included in the table, significant legislative changes or definitional changes affected the actuarial balance. The Social Security Amendments of 1983 account for the largest single change shown in the table: the actuarial balance of -1.82 for the 1982 report improved to +0.02 for the 1983 report. In 1985, the actuarial balance changed largely because of an adjustment made to the method for estimating the age distribution of immigrants.

Rebenchmarking of the National Income and Product Accounts and changes in demographic assumptions contributed to the change in the actuarial balance for 1987. Various changes in assumptions and methods for the 1988 report had roughly offsetting effects on the actuarial balance. In 1989 and 1990, changes in economic assumptions accounted for most of the changes in the actuarial balance.

In 1991, the effect of legislation, changes in economic assumptions, and the introduction of the cost of reaching and maintaining an ending target trust fund level combined to produce the change in the actuarial balance. In 1992, changes in disability assumptions and the method for projecting average benefit levels accounted for most of the change in the actuarial balance. In 1993, numerous small changes in assumptions and methods had offsetting effects on the actuarial balance. In 1994, changes in the real wage assumptions, disability rates, and the earnings sample used for projecting average benefit levels accounted for most of the change in the actuarial balance. In 1995, numerous small changes had largely offsetting effects on the actuarial balance, including a substantial reallocation of the payroll tax rate, which reduced the OASI actuarial balance, but increased the DI actuarial balance.

In 1996, a change in the method of projecting dually-entitled beneficiaries produced a large increase in the actuarial balance, which almost totally offset decreases produced by changes in the valuation period and in the demographic and economic assumptions. Various changes in assumptions and methods for the 1997 report had roughly offsetting effects on the actuarial balance. In 1998, increases caused by changes in the economic assumptions, although partially offset by decreases produced by changes in the valuation period and in the demographic assumptions, accounted for most of the changes in the actuarial balance. In 1999, increases caused by changes in the economic assumptions (related to improvements in the CPI by the Bureau of Labor Statistics) accounted for most of the changes in the actuarial balance. For the 2000 report, changes in economic assumptions and methodology caused increases in the actuarial balance, although reductions in the balance caused by the change in valuation period and changes in demographic assumptions partially offset these increases.

For the 2001 report, increases caused by changes in the demographic starting values, although partially offset by a decrease produced by the change in the valuation period, accounted for most of the changes in the actuarial balance. For the 2002 report, changes in the valuation period and the demographic assumptions—both decreases in the actuarial balance—were offset by changes in the economic assumptions, while an increase due to disability assumptions was slightly more than offset by a decrease due to changes in the projection methods and data. For the 2003 report, an increase due to the change in program assumptions was more than offset by decreases due to the change in valuation period and changes in demographic assumptions. In the 2004 report, increases due to changing the method of projecting benefit levels for higher earners more than offset decreases in the actuarial balance arising from the change in the valuation period and the net effect of other changes in programmatic data and methods. For the 2005 report, an increase due to changing the method of projecting future average benefit levels was more than offset by decreases due to changes in the valuation period, updated starting values for the economic assumptions, and other methodological changes.

In 2006, decreases in the actuarial balance due to the change in the valuation period, a reduction in the ultimate annual real interest rate, and improvements in calculating mortality for disabled workers, were greater in aggregate than increases in the actuarial balance due to changes in demographic starting values and the ultimate total fertility rate, as well as other programmatic data and method changes. For the 2007 report, increases in the actuarial balance arising from revised disability incidence rate assumptions, improvements in average benefit level projections, and changes in near-term economic projections, more than offset decreases in the balance due to the valuation period change and updated historical mortality data. For the 2008 report, the large increase in the actuarial balance was primarily due to changes in immigration projection methods and assumptions. These changes more than offset the decreases in the actuarial balance due to the change in the valuation period and the lower starting and ultimate mortality rates. In 2009, changes in starting values and near-term economic assumptions due to the economic recession, faster ultimate rates of decline in death rates for ages 65-84, and the change in the valuation period accounted for most of the large decrease in the actuarial balance. Legislative changes, in particular the estimated effects of the Patient Protection and Affordable Care Act and the Health Care and Education Reconciliation Act of 2010, were the main reason for the increase in the actuarial balance for the 2010 report. The change in the valuation period partially offset this increase; there were also changes in

several assumptions, methods, and recent data which had largely offsetting effects.

For the 2011 report, changes in mortality projections, due to new starting values and revised methods, were the most significant of several factors contributing to the increase in the deficit. In 2012, changes in economic assumptions and starting values accounted for about half of the decrease in actuarial balance. Other factors worsening the actuarial balance were the change in valuation period, changes to starting demographic values, changes to ultimate disability incidence assumptions, and methodology changes and data updates. For the 2013 report, the change in valuation period accounted for the entire net change in the actuarial balance. The effects of substantially lower death rates for 2009 than previously projected and the American Taxpayer Relief Act of 2012 (which lowered the Federal marginal income tax rates) were offset by updates of program-specific data and methodology improvements. In 2014, changes in economic data and assumptions accounted for the majority of the net change in the actuarial balance. Other factors worsening the actuarial balance were the change in the valuation period and various methodology improvements and data updates. For the 2015 report, methodological improvements and updates of programmatic data accounted for the majority of the net increase in the actuarial balance. Also increasing the actuarial balance were a lower assumed ultimate average wage differential and changes in near-term economic assumptions. These increases were offset somewhat by the change in the valuation period and updates to historical and near-term projected birth rates.

For the 2016 report, the actuarial balance increased primarily due to the effects of the Bipartisan Budget Act of 2015 and improvements made to immigration methods. The most notable immigration change was a revision to the method for projecting emigration of the never-authorized population to reflect lower rates of emigration for those who have resided here longer. These increases in the actuarial balance were largely offset by the effects of changes in ultimate economic assumptions, including a lower real interest rate and a lower annual increase in the rate of price inflation. In 2017, the change in the valuation period and various methodology improvements accounted for most of the net reduction in the actuarial balance. Other economic factors also contributed to worsening the actuarial balance, including a lower real wage differential assumption and an assumed weaker recovery from the recent recession. These reductions were offset somewhat by lower estimated disability incidence rates over the short-range period. For the 2018 report, incorporating the effects of lower-than-expected birth rates, lower near-term fertility assumptions, and the change in the valuation period

decreased the actuarial balance. Offsetting these factors to a large degree were the effects of higher-than-expected death rates and several methods improvements, most notably an update to the sample used to project average benefit levels for newly-entitled worker beneficiaries. For the 2019 report, the actuarial balance increased primarily due to higher-than-expected death rates and lower near-term and ultimate disability incidence rate assumptions. Partially offsetting these factors were the effects of a lower ultimate real interest rate assumption and the change in the valuation period. For the 2020 report, the actuarial balance decreased primarily due to the following factors. First, the repeal of the Affordable Care Act's excise tax on employer-sponsored group health insurance premiums reduced projected earnings as a share of employee compensation, having a significant negative financial effect on the trust funds. In addition, lower assumed values for the ultimate total fertility rate, the ultimate rate of price inflation, and the ultimate real interest rate, as compared to the rates assumed for the 2019 report, decreased the actuarial balance.

In 2021, the actuarial balance decreased due to the change in the valuation period and three main additional factors. First, economic assumptions were updated to reflect experience during and following the COVID-19 pandemic. In particular, the levels of productivity and potential GDP were assumed to be roughly 1 percent lower beginning with the second quarter of 2020. Second, the data and methodology used for projecting average benefit levels were updated and improved. Third, data and estimates provided by the Office of Tax Analysis at the Department of the Treasury indicated lower near-term and ultimate levels of taxation of benefits.

For the 2022 report, the actuarial balance increased primarily due to a decrease in the assumed ultimate disability incidence rate, incorporating recent economic data, and changes in near-term economic assumptions. In particular, employment, earnings, and GDP following the 2020 recession recovered much faster than had been assumed in the 2021 report. These disability and economic factors were partially offset by the change in the valuation period and updates for recent demographic data.

Section IV.B.6 describes changes affecting the actuarial balance shown for the 2023 report.

C. FISCAL YEAR HISTORICAL AND PROJECTED TRUST FUND OPERATIONS THROUGH 2032

Tables VI.C1, VI.C2, and VI.C3 contain details of the fiscal year 2022 operations of the OASI, DI, and the combined OASI and DI Trust Funds, respectively. The fiscal year for the U.S. Government is the 12-month period ending September 30. Fiscal year 2022 is the most recent fiscal year for which complete information is available. The descriptions of the values in these tables are similar to the corresponding descriptions and values in the calendar year operations tables in section III.A. Please see that section for a description of the various items of income and cost.

Table VI.C1.—Operations of the OASI Trust Fund, Fiscal Year 2022
[In millions]

Total asset reserves, September 30, 2021		$2,755,799
Income:		
Net payroll tax contributions:		
Payroll tax contributions[a]	$933,445	
Payments from the General Fund of the Treasury for payroll tax contributions subject to refund	-4,403	
Net payroll tax contributions[a]		929,042
Reimbursements from the General Fund:		
Reduction in payroll tax contributions due to P.L.s 111-312, 112-78, and 112-96[a]	[b]	
Payroll tax credits due to P.L. 98-21[a]	[b]	
Net General Fund reimbursements[a]		[b]
Income based on taxation of benefit payments:		
Withheld from benefit payments to nonresident aliens	259	
All other, not subject to withholding	46,711	
Total income from taxation of benefits		46,970
Investment income and interest adjustments:		
Interest on investments	65,081	
Interest adjustments[c]	[b]	
Total investment income and interest adjustments		65,081
Gifts		[b]
Total income		1,041,093
Cost:		
Benefit payments:		
Monthly benefits and lump-sum death payments[d]	1,063,929	
Reimbursement from the General Fund for unnegotiated checks	-52	
Payment for costs of vocational rehabilitation services for disabled beneficiaries	19	
Net benefit payments[d]		1,063,896
Financial interchange with the Railroad Retirement "Social Security Equivalent Benefit Account"		5,316
Administrative expenses:		
Costs incurred by:		
Social Security Administration	3,452	
Department of the Treasury	603	
Offsetting miscellaneous receipts	-1	
Miscellaneous reimbursements from the General Fund [e]	-5	
Net administrative expenses		4,050
Total cost		1,073,262
Net increase in asset reserves		-32,169
Total invested assets	2,723,601	
Undisbursed balances[f]	29	
Total asset reserves, September 30, 2022		2,723,629

[a] Includes adjustments for prior years.
[b] Between -$0.5 and $0.5 million.
[c] Includes: (1) interest on adjustments in the allocation of administrative expenses between the trust fund and the General Fund account for the Supplemental Security Income program, (2) interest arising from the revised allocation of administrative expenses among the trust funds, and (3) interest on certain reimbursements to the trust fund.
[d] Includes net reductions for the recovery of overpayments.
[e] Reimbursements for costs incurred in performing certain legislatively mandated activities not directly related to administering the OASI program.
[f] A positive balance represents a situation where the invested securities of the OASI Trust Fund that were redeemed to make cash payments exceeded actual program cash payments. In this situation, this excess amount will be used to partially offset future redemption of additional invested securities.

Note: Components may not sum to totals because of rounding.

Table VI.C2.—Operations of the DI Trust Fund, Fiscal Year 2022
[In millions]

Total asset reserves, September 30, 2021		$98,063
Income:		
Net payroll tax contributions:		
Payroll tax contributions[a]	$158,563	
Payments from the General Fund of the Treasury for payroll tax contributions subject to refund	-746	
Net payroll tax contributions[a]		157,816
Reimbursements from the General Fund:		
Reduction in payroll tax contributions due to P.L.s 111-312, 112-78, and 112-96[a]	[b]	
Payroll tax credits due to P.L. 98-21[a]	[b]	
Net General Fund reimbursements[a]		[b]
Income based on taxation of benefit payments:		
Withheld from benefit payments to nonresident aliens	4	
All other, not subject to withholding[a]	1,529	
Total income from taxation of benefits[a]		1,533
Investment income and interest adjustments:		
Interest on investments	2,657	
Interest adjustments[c]	2	
Total investment income and interest adjustments		2,658
Gifts		[b]
Total income		162,007
Cost:		
Benefit payments:		
Monthly benefits[d]	142,386	
Reimbursement from the General Fund for unnegotiated checks	-28	
Payment for costs of vocational rehabilitation services for disabled beneficiaries	101	
Net benefit payments[d]		142,459
Financial interchange with the Railroad Retirement "Social Security Equivalent Benefit Account"		156
Administrative expenses:		
Costs incurred by:		
Social Security Administration	2,655	
Department of the Treasury	105	
Demonstration projects	7	
Miscellaneous reimbursements from the General Fund[e]	-2	
Net administrative expenses		2,764
Total cost		145,379
Net increase in asset reserves		16,628
Total invested assets	114,679	
Undisbursed balances[f]	12	
Total asset reserves, September 30, 2022		114,691

[a] Includes adjustments for prior years.
[b] Between -$0.5 and $0.5 million.
[c] Includes: (1) interest on adjustments in the allocation of administrative expenses between the trust fund and the General Fund account for the Supplemental Security Income program, (2) interest arising from the revised allocation of administrative expenses among the trust funds, and (3) interest on certain reimbursements to the trust fund.
[d] Includes net reductions for the recovery of overpayments.
[e] Reimbursements for costs incurred in performing certain legislatively mandated activities not directly related to administering the DI program.
[f] A positive balance represents a situation where the invested securities of the DI Trust Fund that were redeemed to make cash payments exceeded actual program cash payments. In this situation, this excess amount will be used to partially offset future redemption of additional invested securities.

Note: Components may not sum to totals because of rounding.

Table VI.C3.—Operations of the Combined OASI and DI Trust Funds, Fiscal Year 2022
[In millions]

Total asset reserves, September 30, 2021		$2,853,862
Income:		
Net payroll tax contributions:		
Payroll tax contributions[a]	$1,092,007	
Payments from the General Fund of the Treasury for payroll tax contributions subject to refund	-5,149	
Net payroll tax contributions[a]		1,086,858
Reimbursements from the General Fund:		
Reduction in payroll tax contributions due to P.L.s 111-312, 112-78, and 112-96[a]	[b]	
Payroll tax credits due to P.L. 98-21[a]	[b]	
Net General Fund reimbursements[a]		[b]
Income based on taxation of benefit payments:		
Withheld from benefit payments to nonresident aliens	262

Interest on investments	67,738	
Interest adjustments[c]	2	
Total investment income and interest adjustments		67,740
Gifts		[b]
Total income		1,203,100
Cost:		
Benefit payments:		
Monthly benefits and lump-sum death payments[d]	1,206,315	
Reimbursement from the General Fund for unnegotiated checks	-80	
Payment for costs of vocational rehabilitation services for disabled beneficiaries	120	
Net benefit payments[d]		1,206,355
Financial interchange with the Railroad Retirement "Social Security Equivalent Benefit Account"		5,471
Administrative expenses:		
Costs incurred by:		
Social Security Administration	6,108	
Department of the Treasury	708	
Offsetting miscellaneous receipts	-1	
Demonstration projects	7	
Miscellaneous reimbursements from the General Fund[e]	-7	
Net administrative expenses		6,814
Total cost		1,218,641
Net increase in asset reserves		-15,541
Total invested assets	2,838,279	
Undisbursed balances[f]	41	
Total asset reserves, September 30, 2022		2,838,320

[a] Includes adjustments for prior years.
[b] Between -$0.5 and $0.5 million.
[c] Includes: (1) interest on adjustments in the allocation of administrative expenses between the trust funds and the General Fund account for the Supplemental Security Income program, (2) interest arising from the revised allocation of administrative expenses among the trust funds, and (3) interest on certain reimbursements to the trust funds.
[d] Includes net reductions for the recovery of overpayments.
[e] Reimbursements for costs incurred in performing certain legislatively mandated activities not directly related to administering the OASI and DI programs.
[f] A positive balance represents a situation where the invested securities of the combined OASI and DI Trust Funds that were redeemed to make cash payments exceeded actual program cash payments. In this situation, this excess amount will be used to partially offset future redemption of additional invested securities.

Note: Components may not sum to totals because of rounding.

Tables VI.C4, VI.C5, and VI.C6 show estimates of the operations and status of the OASI, DI, and the hypothetical combined OASI and DI Trust Funds, respectively, during fiscal years 2018 through 2032.

[a] The OASI Trust Fund reserves become depleted in fiscal year 2031 under the high-cost assumptions. For any period during which reserves would be depleted, scheduled benefits could not be paid in full on a timely basis, income from taxing benefits would be less than would apply to scheduled benefits, and interest on trust fund reserves would be negligible.
[b] Represents asset reserves at the beginning of a year (which are identical to reserves at the end of the prior year shown in the "Amount at end of year" column) as a percentage of cost for the year.
[c] Includes adjustments for prior years.
[d] Includes reimbursements from the General Fund of the Treasury to the OASI Trust Fund for: (1) the cost of payroll tax credits provided to employees in 1984 and self-employed persons in 1984-89 by Public Law 98-21; (and (2) payroll tax revenue forgone under the provisions of Public Laws 111-147, 111-312, 112-78, and 112-96. Also includes transfers of a portion of proceeds from repayments of loans authorized under Public Law 116-136.
[e] Revenue from taxation of benefits is the amount that would be assessed on benefit amounts scheduled in law.
[f] Between -$50 million and $50 million.
[g] When the fund reserves are depleted, values under current law would reflect permissible expenditures only, which would be less than the full cost of paying scheduled benefits shown in this table.

Note: Components may not sum to totals because of rounding.

[a] The OASDI Trust Fund reserves become depleted in fiscal year 2032 under the high-cost assumptions. For any period during which reserves would be depleted, scheduled benefits could not be paid in full on a timely basis, income from taxing benefits would be less than would apply to scheduled benefits, and interest on trust fund reserves would be negligible.

[b] Represents asset reserves at the beginning of a year (which are identical to reserves at the end of the prior year shown in the "Amount at end of year" column) as a percentage of cost for the year.

[c] Includes adjustments for prior years.

[d] Includes reimbursements from the General Fund of the Treasury to the OASI and DI Trust Funds for: (1) the cost of payroll tax credits provided to employees in 1984 and self-employed persons in 1984-89 by Public Law 98-21; and (2) payroll tax revenue forgone under the provisions of Public Laws 111-147, 111-312, 112-78, and 112-96. Also includes transfers of a portion of proceeds from repayments of loans authorized under Public Law 116-136.

[e] Revenue from taxation of benefits is the amount that would be assessed on benefit amounts scheduled in law.

[f] Between -$50 million and $50 million.

[g] When the fund reserves are depleted, values under current law would reflect permissible expenditures only, which would be less than the full cost of paying scheduled benefits shown in this table.

Note: Components may not sum to totals because of rounding.

D. LONG-RANGE SENSITIVITY ANALYSIS

This appendix presents estimates that illustrate the sensitivity of the long-range actuarial status of the OASDI program to changes in selected individual assumptions. The estimates based on the three alternative sets of assumptions, which were presented earlier in this report, illustrate the effects of varying all of the principal assumptions simultaneously, in order to portray a significantly more optimistic or pessimistic future. For each sensitivity analysis presented in this appendix, the intermediate alternative II projection is the reference point, and one assumption is varied within that alternative. The variation used for each individual assumption is the same as the level used for that assumption in the low-cost alternative I and high-cost alternative III projections.

Each table in this section shows the effects of changing a particular assumption on the OASDI summarized income rates, summarized cost rates, and actuarial balances for 25-year, 50-year, and 75-year valuation periods. Each table also shows the effects on the annual balance for 2097 and on the year of combined trust fund reserve depletion. Following each table is a discussion of the estimated changes in cost rates. The change in each of the actuarial balances is approximately equal to the change in the corresponding cost rate, but in the opposite direction. This appendix does not discuss income rates following each table because income rates vary only slightly with changes in assumptions that affect revenue from taxation of benefits.

1. Total Fertility Rate

Table VI.D1 shows selected measures of OASDI actuarial status on the basis of alternative II with three different assumptions for the future paths of total fertility rates. Under the Trustees' assumptions, the average annual total fertility rate for the period 2033 through 2097 is 1.69, 1.99, and 2.19 children per woman under alternatives III, II, and I, respectively. The ultimate total fertility rate (1.70 under the alternative III assumptions, 2.00 under the alternative II assumptions, and 2.20 under the alternative I assumptions) is reached on a cohort basis over the lifetime of girls attaining age 14 in 2021 and later, so that the ultimate fertility rate on an annual (or period) basis is reached in 2056.

Table VI.D1.—Sensitivity of OASDI Measures to Fertility Assumptions
[As a percentage of taxable payroll]

Valuation period	Average total fertility rate[a] [b] 1.69	1.99	2.19
Summarized income rate:			
25-year: 2023-47	14.34	14.34	14.34
50-year: 2023-72	13.93	13.90	13.88
75-year: 2023-97	13.85	13.78	13.73
Summarized cost rate:			
25-year: 2023-47	16.83	16.85	16.85
50-year: 2023-72	17.47	17.14	16.92
75-year: 2023-97	18.17	17.38	16.87
Actuarial balance:			
25-year: 2023-47	-2.49	-2.50	-2.51
50-year: 2023-72	-3.54	-3.24	-3.04
75-year: 2023-97	-4.32	-3.61	-3.14
Annual balance for 2097	-6.69	-4.35	-3.07
Year of combined trust fund reserve depletion	2034	2034	2034

[a] The total fertility rate for any year is the average number of children that would be born to a woman if she were to experience, at each age of her life, the birth rate observed in, or assumed for, the selected year, and if she were to survive the entire childbearing period. The average total fertility rate shown is for the period 2033 through 2097.
[b] The total fertility rates used for this analysis are consistent with those assumed for the three alternative scenarios. All other assumptions used for this analysis are from alternative II.

For the 25-year period, the cost rate for the three fertility assumptions varies by only about 0.02 percent of taxable payroll. In contrast, the 75-year cost rate varies over a wide range, decreasing from 18.17 percent to 16.87 percent, as the average total fertility rate for the period 2033 through 2097 increases from 1.69 for alternative III to 2.19 for alternative I. Similarly, while the 25-year actuarial balance varies by only 0.02 percent of taxable payroll, the 75-year actuarial balance varies over a much wider range, from -4.32 percent to -3.14 percent.

During the 25-year period, the very slight increases in the working-age population and tax income resulting from higher fertility (than that experienced in an alternative scenario) are more than offset by the effects of decreases in female labor force participation and increases in the number of child beneficiaries. Therefore, program cost as a percent of taxable payroll increases slightly with higher fertility. For the 75-year long-range period, however, changes in fertility have a relatively greater effect on the working-age population than on the beneficiary population. As a result, an increase in fertility significantly reduces the cost rate. Each increase of 0.1 in the average total fertility rate increases (improves) the long-range actuarial balance by about 0.24 percent of taxable payroll.

2. Death Rates

Table VI.D2 shows selected measures of OASDI actuarial status on the basis of alternative II with three different assumptions about future reductions in death rates for the period from 2032 to 2097. These assumptions are described in section V.A.2. Under the Trustees' assumptions, the age-sex-adjusted death rates[1] decline at average annual rates of 0.28 percent, 0.74 percent, and 1.24 percent for alternatives I, II, and III, respectively.

Table VI.D2.—Sensitivity of OASDI Measures to Death-Rate Assumptions
[As a percentage of taxable payroll]

Valuation period	Average annual death-rate reduction[a b]		
	0.28 percent	0.74 percent	1.24 percent
Summarized income rate:			
25-year: 2023-47	14.34	14.34	14.34
50-year: 2023-72	13.88	13.90	13.92
75-year: 2023-97	13.74	13.78	13.82
Summarized cost rate:			
25-year: 2023-47	16.65	16.85	17.10
50-year: 2023-72	16.66	17.14	17.72
75-year: 2023-97	16.65	17.38	18.21
Actuarial balance:			
25-year: 2023-47	-2.31	-2.50	-2.75
50-year: 2023-72	-2.78	-3.24	-3.79
75-year: 2023-97	-2.91	-3.61	-4.39
Annual balance for 2097	-2.88	-4.35	-5.82
Year of combined trust fund reserve depletion	2034	2034	2034

[a] The average annual death-rate reduction is the average annual geometric rate of decline in the age-sex-adjusted death rate for the period from 2032 to 2097.
[b] The death-rate reductions used for this analysis are consistent with those assumed for the three alternative scenarios. All other assumptions used for this analysis are from alternative II.

The variation in cost for the 25-year period is less pronounced than the variation for the 75-year period because decreases in death rates have cumulative effects. The 25-year cost rate increases from 16.65 percent (for an average annual death-rate reduction of 0.28 percent from 2032 to 2097) to 17.10 percent (for an average annual death-rate reduction of 1.24 percent from 2032 to 2097). The 75-year cost rate increases from 16.65 percent to 18.21 percent. The actuarial balance decreases from -2.31 percent to -2.75 percent for the 25-year period, and from -2.91 percent to -4.39 percent for the 75-year period.

Lower death rates raise both the income (through increased taxable payroll) and the cost of the OASDI program. The relative increase in cost, however,

[1] Based on the enumerated total population as of April 1, 2010, if that population were to experience the death rates by age and sex for the selected year.

exceeds the relative increase in taxable payroll. For any given year, reductions in the death rates for people who are age 62 and over (ages at which death rates are the highest) increase the number of retired-worker beneficiaries (and, therefore, the amount of retirement benefits paid) without adding significantly to the number of covered workers (and, therefore, to the taxable payroll). Reductions in death rates for people at age 50 to retirement eligibility age result in significant increases to the taxable payroll. However, those increases are not large enough to offset the sum of the additional retirement benefits mentioned above and the disability benefits paid to additional beneficiaries at these pre-retirement ages, which are ages of high disability incidence. At ages under 50, death rates are so low that even substantial reductions in death rates do not result in significant increases in the numbers of covered workers or beneficiaries. Consequently, if death rates decline by about the same relative amount for all ages, the cost increases faster than the rate of growth in payroll, which results in higher cost rates and lower actuarial balances. Each additional 0.1-percentage-point increase in the average annual rate of decline in the death rate decreases (worsens) the long-range actuarial balance by about 0.15 percent of taxable payroll.

3. Immigration

Table VI.D3 shows selected measures of OASDI actuarial status under alternative II with three different assumptions about the magnitude of total net immigration (sum of net lawful permanent resident (LPR) immigration and net other-than-LPR immigration). See section V.A.3 for more information on immigration assumptions and methods. Under the Trustees' assumptions, total net annual immigration averages 829,000 persons, 1,245,000 persons, and 1,683,000 persons for the period 2033 through 2097 under alternatives III, II, and I, respectively.

Table VI.D3.—Sensitivity of OASDI Measures to Total Net Immigration Assumptions
[As a percentage of taxable payroll]

Valuation period	Average annual total net immigration[a] [b] 829,000	1,245,000	1,683,000
Summarized income rate:			
25-year: 2023-47	14.37	14.34	14.31
50-year: 2023-72	13.94	13.90	13.86
75-year: 2023-97	13.82	13.78	13.73
Summarized cost rate:			
25-year: 2023-47	17.09	16.85	16.61
50-year: 2023-72	17.50	17.14	16.79
75-year: 2023-97	17.85	17.38	16.94
Actuarial balance:			
25-year: 2023-47	-2.71	-2.50	-2.30
50-year: 2023-72	-3.56	-3.24	-2.92
75-year: 2023-97	-4.02	-3.61	-3.21
Annual balance for 2097	-5.17	-4.35	-3.66
Year of combined trust fund reserve depletion	2034	2034	2034

[a] Average annual total net immigration is the annual total net immigration to the Social Security area, including both LPR and other-than-LPR immigration, averaged for 2033 through 2097.
[b] The total net immigration assumptions used for this analysis are consistent with those assumed for the three alternative scenarios. All other assumptions used for this analysis are from alternative II.

For all three periods, when total net immigration increases, the cost rate decreases. For the 25-year period, the cost rate decreases from 17.09 percent of taxable payroll (for average annual total net immigration of 829,000 persons for 2033 through 2097) to 16.61 percent (for an average annual total net immigration of 1,683,000 persons for 2033 through 2097). For the 50-year period, it decreases from 17.50 percent to 16.79 percent, and for the 75-year period, it decreases from 17.85 percent to 16.94 percent. The actuarial balance increases from -2.71 percent to -2.30 percent for the 25-year period, from -3.56 percent to -2.92 percent for the 50-year period, and from -4.02 percent to -3.21 percent for the 75-year period.

The cost rate decreases with an increase in total net immigration because immigration occurs at relatively young ages, thereby increasing the numbers of covered workers earlier than the numbers of beneficiaries. Increasing average annual total net immigration by 100,000 persons increases (improves) the long-range actuarial balance by about 0.09 percent of taxable payroll.

4. Real Wage Growth

Table VI.D4 shows selected measures of OASDI actuarial status on the basis of alternative II with three different assumptions about the real growth rate in the average annual wage in OASDI covered employment. Under the Trust-

ees' assumptions, the average annual real growth rate in the average wage in covered employment from 2032 to 2097 is 0.54 percent, 1.14 percent, and 1.74 percent under alternatives III, II, and I, respectively.

Table VI.D4.—Sensitivity of OASDI Measures to Real Wage Growth Assumptions
[As a percentage of taxable payroll]

	Average annual real wage growth [a b]		
Valuation period	0.54	1.14	1.74
Summarized income rate:			
25-year: 2023-47	14.46	14.34	14.22
50-year: 2023-72	14.05	13.90	13.76
75-year: 2023-97	13.94	13.78	13.62
Summarized cost rate:			
25-year: 2023-47	17.68	16.85	16.03
50-year: 2023-72	18.36	17.14	15.97
75-year: 2023-97	18.75	17.38	16.05
Actuarial balance:			
25-year: 2023-47	-3.22	-2.50	-1.81
50-year: 2023-72	-4.30	-3.24	-2.21
75-year: 2023-97	-4.81	-3.61	-2.44
Annual balance for 2097	-6.36	-4.35	-2.60
Year of combined trust fund reserve depletion	2033	2034	2035

[a] The average annual real wage growth is the average annual real growth rate in the average wage in OASDI covered employment from 2032 to 2097.
[b] The real wage growth assumptions used for this analysis are consistent with those assumed for the three alternative scenarios. All other assumptions used for this analysis are from alternative II.

For the 25-year period, the cost rate decreases from 17.68 percent (for a real growth rate in the average wage in OASDI covered employment of 0.54 percent) to 16.03 percent (for a real growth rate of 1.74 percent). For the 50-year period, it decreases from 18.36 percent to 15.97 percent, and for the 75-year period it decreases from 18.75 percent to 16.05 percent. The actuarial balance increases from -3.22 percent to -1.81 percent for the 25-year period, from -4.30 percent to -2.21 percent for the 50-year period, and from -4.81 percent to -2.44 percent for the 75-year period.

The cost rate decreases with increasing real wage growth. Higher wages increase taxable payroll immediately, but they increase benefit levels only gradually as new beneficiaries become entitled. In addition, cost-of-living adjustments (COLA) to benefits depend not on changes in wages, but on changes in prices. Each 0.1-percentage-point increase in real wage growth increases (improves) the long-range actuarial balance by about 0.20 percent of taxable payroll.

5. Consumer Price Index

Table VI.D5 shows selected measures of OASDI actuarial status on the basis of alternative II with three different assumptions about the rate of increase for the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI). Under the Trustees' assumptions, the annual increase in the CPI is 3.00 percent, 2.40 percent, and 1.80 percent under alternatives I, II, and III, respectively. These ultimate rates of increase are reached by 2026 under all three alternatives.

Table VI.D5.—Sensitivity of OASDI Measures to CPI-Increase Assumptions
[As a percentage of taxable payroll]

	Ultimate annual increase in CPI[a]		
Valuation period	3.00	2.40	1.80
Summarized income rate:			
25-year: 2023-47	14.32	14.34	14.36
50-year: 2023-72	13.89	13.90	13.92
75-year: 2023-97	13.76	13.78	13.79
Summarized cost rate:			
25-year: 2023-47	16.74	16.85	16.94
50-year: 2023-72	17.00	17.14	17.28
75-year: 2023-97	17.23	17.38	17.53
Actuarial balance:			
25-year: 2023-47	-2.42	-2.50	-2.59
50-year: 2023-72	-3.12	-3.24	-3.36
75-year: 2023-97	-3.47	-3.61	-3.74
Annual balance for 2097	-4.17	-4.35	-4.51
Year of combined trust fund reserve depletion	2034	2034	2034

[a] The CPI assumptions used for this analysis are consistent with those assumed for the three alternative scenarios. All other assumptions used for this analysis are from alternative II.

For all three periods, the cost rate increases when the assumed rates of increase in the CPI are smaller. For the 25-year period, the cost rate increases from 16.74 percent (for a CPI increase of 3.00 percent) to 16.94 percent (for a CPI increase of 1.80 percent). For the 50-year period, it increases from 17.00 percent to 17.28 percent, and for the 75-year period, it increases from 17.23 percent to 17.53 percent. The actuarial balance decreases from -2.42 percent to -2.59 percent for the 25-year period, from -3.12 percent to -3.36 percent for the 50-year period, and from -3.47 percent to -3.74 percent for the 75-year period.

The time lag between the effects of the CPI changes on taxable payroll and on scheduled benefits explains these patterns. When the rate of increase in the CPI is greater and real wage growth is constant, then: (1) the effect on taxable payroll due to a greater rate of increase in average wages occurs immediately and (2) the effect on benefits due to a larger COLA occurs with

a lag of about 1 year. As a result of these effects, the higher taxable payrolls have a stronger effect than the higher benefits, which results in lower cost rates. Each 0.1-percentage-point decrease in the rate of the change in the CPI decreases (worsens) the long-range actuarial balance by about 0.02 percent of taxable payroll.

6. Real Interest Rate

Table VI.D6 shows selected measures of OASDI actuarial status under alternative II with three different assumptions about the annual real interest rate (compounded semiannually) for special public-debt obligations issuable to the trust funds. Under the Trustees' assumptions, the ultimate annual real interest rate is 1.8 percent, 2.3 percent, and 2.8 percent under alternatives III, II, and I, respectively. These ultimate rates are reached by 2033 under all three alternatives. In each case, the ultimate annual increase in the CPI is 2.40 percent, which is consistent with alternative II. Therefore, the ultimate annual yields are 4.2, 4.8, and 5.3 percent, respectively.

Table VI.D6.—Sensitivity of OASDI Measures to Real Interest Rate Assumptions
[As a percentage of taxable payroll]

Valuation period	Ultimate annual real interest rate[a] [b]		
	1.8 percent	2.3 percent	2.8 percent
Summarized income rate:			
25-year: 2023-47	14.30	14.34	14.38
50-year: 2023-72	13.85	13.90	13.95
75-year: 2023-97	13.72	13.78	13.83
Summarized cost rate:			
25-year: 2023-47	16.90	16.85	16.79
50-year: 2023-72	17.24	17.14	17.05
75-year: 2023-97	17.51	17.38	17.26
Actuarial balance:			
25-year: 2023-47	-2.60	-2.50	-2.41
50-year: 2023-72	-3.39	-3.24	-3.09
75-year: 2023-97	-3.79	-3.61	-3.43
Annual balance for 2097	-4.35	-4.35	-4.35
Year of combined trust fund reserve depletion	2034	2034	2034

[a] The annual real interest rate is the effective annual yield on asset reserves held by the trust funds divided by the annual rate of growth in the CPI.
[b] The real interest rate assumptions used for this analysis are consistent with those assumed for the three alternative scenarios. All other assumptions used for this analysis are from alternative II.

For the 25-year period, the cost rate decreases with increasing real interest rates from 16.90 percent (for an ultimate real interest rate of 1.8 percent) to 16.79 percent (for an ultimate real interest rate of 2.8 percent). For the 50-year period, it decreases from 17.24 percent to 17.05 percent and, for the 75-year period, it decreases from 17.51 percent to 17.26 percent. The actuar-

ial balance increases from -2.60 percent to -2.41 percent for the 25-year period, from -3.39 percent to -3.09 percent for the 50-year period, and from -3.79 percent to -3.43 percent for the 75-year period. A relatively higher real interest rate has the effect of discounting more distant future years relatively more. To the extent that annual cost rates and annual deficits are larger in later years, a higher interest rate decreases the summarized rates, and a lower interest rate increases the summarized rates. Each 0.1-percentage-point increase in the real interest rate increases (improves) the long-range actuarial balance by about 0.04 percent of taxable payroll.

7. Taxable Ratio

Table VI.D7 shows selected measures of OASDI actuarial status under alternative II with three different assumptions about the ratio of taxable payroll to OASDI covered earnings (the taxable ratio). Note that covered earnings are the sum of wages and net self-employment earnings covered by Social Security, and taxable payroll is essentially the amount of covered earnings subject to the Social Security payroll tax up to the contribution and benefit base ($160,200 for 2023). Under the Trustees' assumptions, the taxable ratio at the end of the short-range period (2032) is 81.0 percent, 82.5 percent, and 84.0 percent under alternatives III, II, and I, respectively.

Table VI.D7.—Sensitivity of OASDI Measures to Taxable Ratio Assumptions
[As a percentage of taxable payroll]

Valuation period	Taxable ratio in 2032[a] [b]		
	81.0 percent	82.5 percent	84.0 percent
Summarized income rate:			
25-year: 2023-47	14.37	14.34	14.31
50-year: 2023-72	13.92	13.90	13.88
75-year: 2023-97	13.80	13.78	13.76
Summarized cost rate:			
25-year: 2023-47	17.08	16.85	16.61
50-year: 2023-72	17.37	17.14	16.93
75-year: 2023-97	17.58	17.38	17.19
Actuarial balance:			
25-year: 2023-47	-2.71	-2.50	-2.30
50-year: 2023-72	-3.44	-3.24	-3.05
75-year: 2023-97	-3.79	-3.61	-3.43
Annual balance for 2097	-4.46	-4.35	-4.23
Year of combined trust fund reserve depletion	2033	2034	2034

[a] The taxable ratio is the ratio of taxable payroll to OASDI covered earnings. These concepts are described in further detail in section V.C.6 of this report.
[b] The taxable ratio assumptions used for this analysis are consistent with those assumed for the three alternative scenarios. All other assumptions used for this analysis are from alternative II.

Because the combined employee-employer tax rate of 12.4 percent is unchanged across all alternatives, the income rate changes a relatively small amount as the taxable ratio increases, due to changes in taxation of benefits and the initial fund as a percentage of taxable payroll.

For the 25-year period, the cost rate decreases with increasing taxable ratios, from 17.08 percent (for a taxable ratio in 2032 of 81.0 percent) to 16.61 percent (for a taxable ratio in 2032 of 84.0 percent). For the 50-year period, it decreases from 17.37 percent to 16.93 percent and, for the 75-year period, it decreases from 17.58 percent to 17.19 percent. The actuarial balance increases from -2.71 percent to -2.30 percent for the 25-year period, from -3.44 percent to -3.05 percent for the 50-year period, and from -3.79 percent to -3.43 percent for the 75-year period.

The cost rate decreases with an increase in taxable payroll because the increase in taxable payroll occurs immediately. The increase in benefit amounts occurs much more gradually as new beneficiaries become entitled. In addition, the change in the taxable ratio does not affect COLAs or the national average wage index. Each 1.0 percentage-point increase in the taxable ratio in 2032 increases (improves) the long-range actuarial balance by about 0.12 percent of taxable payroll.

8. Disability Incidence Rates

Table VI.D8 shows selected measures of OASDI actuarial status on the basis of alternative II with three different assumptions about future disability incidence rates. Under the Trustees' assumptions, the ultimate age-sex-adjusted[1] incidence rate is 3.8, 4.8, and 5.8 awards per thousand exposed for alternatives I, II, and III, respectively. These ultimate rates are reached by 2032 under all three alternatives. Under the Trustees' assumptions, incidence rates by age and sex for all three alternatives vary during the early years of the projection period before reaching their long-term average values.

[1] Age-sex-adjusted to the disability-exposed population as of the year 2000.

Table VI.D8.—Sensitivity of OASDI Measures to Disability Incidence Assumptions
[As a percentage of taxable payroll]

Valuation period	Ultimate disability incidence rate[a] 3.8	4.8	5.8
Summarized income rate:			
25-year: 2023-47	14.33	14.34	14.35
50-year: 2023-72	13.89	13.90	13.92
75-year: 2023-97	13.76	13.78	13.79
Summarized cost rate:			
25-year: 2023-47	16.53	16.85	17.15
50-year: 2023-72	16.78	17.14	17.50
75-year: 2023-97	17.01	17.38	17.77
Actuarial balance:			
25-year: 2023-47	-2.20	-2.50	-2.79
50-year: 2023-72	-2.89	-3.24	-3.58
75-year: 2023-97	-3.25	-3.61	-3.98
Annual balance for 2097	-3.92	-4.35	-4.89
Year of combined trust fund reserve depletion	2034	2034	2033

[a] The disability incidence rates used for this analysis are consistent with those assumed for the three alternative scenarios. All other assumptions used for this analysis are from alternative II.

For the 25-year period, the cost rate increases with increasing disability incidence rates, from 16.53 percent (for the relatively low rates assumed for alternative I) to 17.15 percent (for the relatively high rates assumed for alternative III). For the 50-year period, it increases from 16.78 percent to 17.50 percent, and for the 75-year period, it increases from 17.01 percent to 17.77 percent. The actuarial balance decreases from -2.20 percent to -2.79 percent for the 25-year period, from -2.89 percent to -3.58 percent for the 50-year period, and from -3.25 percent to -3.98 percent for the 75-year period.

9. Disability Termination Rates

Table VI.D9 shows selected measures of OASDI actuarial status on the basis of alternative II with three different assumptions about future disability termination rates, including deaths and recoveries.

Under the Trustees' assumptions, death rates for disabled-worker beneficiaries for all three alternatives decline throughout the long-range period. The age-sex-adjusted death rate[1] of 28.6 deaths per thousand disabled-worker beneficiaries in 2022 declines to 21.5, 12.4, and 6.1 deaths per thousand in 2097 for alternatives I, II, and III, respectively. These levels are about 25 percent, 57 percent, and 79 percent lower, respectively, than the level in

[1] Age-sex-adjusted to the disabled-worker population as of the year 2000.

2022. For this sensitivity analysis, total population death rates by age and sex are assumed to be the same as those used for the alternative II assumptions.

The ultimate age-sex-adjusted recovery rate[1] used for this analysis is 12.5 recoveries per thousand disabled-worker beneficiaries for the alternative I assumptions, 10.4 recoveries per thousand disabled-worker beneficiaries for the alternative II assumptions, and 8.3 recoveries per thousand disabled-worker beneficiaries for the alternative III assumptions.

Table VI.D9.—Sensitivity of OASDI Measures to Disability Termination Assumptions
[As a percentage of taxable payroll]

Valuation period	Disability termination rates (death; recovery)[a] 21.5; 12.5	12.4; 10.4	6.1; 8.3
Summarized income rate:			
25-year: 2023-47	14.34	14.34	14.34
50-year: 2023-72	13.90	13.90	13.90
75-year: 2023-97	13.77	13.78	13.78
Summarized cost rate:			
25-year: 2023-47	16.79	16.85	16.89
50-year: 2023-72	17.07	17.14	17.20
75-year: 2023-97	17.31	17.38	17.45
Actuarial balance:			
25-year: 2023-47	-2.45	-2.50	-2.55
50-year: 2023-72	-3.18	-3.24	-3.29
75-year: 2023-97	-3.53	-3.61	-3.67
Annual balance for 2097	-4.23	-4.35	-4.50
Year of combined trust fund reserve depletion	2034	2034	2034

[a] The disability termination rates used for this analysis are consistent with those assumed for the three alternative scenarios. All other assumptions used for this analysis are from alternative II.

For the 25-year period, the cost rate increases with decreasing disability termination rates, from 16.79 percent (for the relatively high termination rates assumed for alternative I) to 16.89 percent (for the relatively low termination rates assumed for alternative III). For the 50-year period, it increases from 17.07 percent to 17.20 percent, and for the 75-year period, it increases from 17.31 percent to 17.45 percent. The actuarial balance decreases from -2.45 percent to -2.55 percent for the 25-year period, from -3.18 percent to -3.29 percent for the 50-year period, and from -3.53 percent to -3.67 percent for the 75-year period.

[1] Age-sex-adjusted to the disabled-worker population as of the year 2000. The disability recovery rates for each alternative vary slightly over the last 65 years of the 75-year projection period, so the ultimate rates are presented as averages for years 2033 through 2097.

E. STOCHASTIC PROJECTIONS AND UNCERTAINTY

Significant uncertainty surrounds the estimates under the intermediate assumptions, especially for a period as long as 75 years. This appendix presents stochastic projections, a way to illustrate the uncertainty of these estimates. The stochastic projections supplement the traditional methods of examining such uncertainty.

1. Background

The Trustees have traditionally shown estimates using the low-cost and high-cost sets of specified assumptions to illustrate the potential implications of uncertainty. These low-cost and high-cost estimates provide a range of possible outcomes for the projections. However, they do not provide an indication of the probability that actual future experience will be inside or outside this range. This appendix presents the results of a stochastic model that estimates a probability distribution of future outcomes of the financial status of the combined OASI and DI Trust Funds. This model was introduced in the 2003 report and enhanced in the 2021 report to include parameter uncertainty for the expected mean for the key variables described in the next section.

2. Stochastic Methodology

Other sections of this report provide estimates of the financial status of the combined OASI and DI Trust Funds using a scenario-based model. For the scenario-based model, the Trustees use three alternative scenarios (low-cost, intermediate, and high-cost) that use specific assumptions for key variables. In general, the Trustees assume that each of these variables will reach an ultimate value at a specific point during the long-range period, and will maintain that value throughout the remainder of the period. The three alternative scenarios assume separate, specified values for each of these variables. Chapter V contains more details about each of these assumptions.

This appendix presents estimates of the probability that key measures of OASDI solvency will fall in certain ranges, based on 5,000 independent stochastic simulations. Each simulation allows key variables to vary throughout the long-range period. These key variables include total fertility rates, changes in mortality rates, new arrival lawful permanent resident (LPR) and other-than-LPR immigration levels, rates of adjustment of status (from other-than-LPR to LPR), rates of legal emigration (from the population of citizens and LPRs), changes in the Consumer Price Index, changes in average real wages, unemployment rates, trust fund real yield rates, and disability incidence and recovery rates. The fluctuation of each variable over time is simu-

lated using historical data and standard time-series techniques. Generally, each variable is modeled using an equation that: (1) captures a relationship between current and prior years' values of the variable, and (2) introduces random variation based on variation observed in the historical period. For some variables, the equations also reflect relationships with other variables. The equations contain parameters that are estimated using historical data for periods from about 20 years to over 100 years, depending on the nature and quality of the available data. Each time-series equation is designed so that, in the absence of random variation over time, the value of the variable for each year equals its value for the intermediate scenario.[1]

For each equation in a given simulation, the stochastic model assigns random variation to (1) year-by-year error term values and (2) simulation-specific mean term levels that provide variation in the central tendency across simulations. Each simulation produces estimates for all key variables and for the overall financial status of the combined OASI and DI Trust Funds. This appendix shows the distribution of results from 5,000 simulations of the model.

Readers should interpret the results from this model with an understanding of the model's limitations. Results are sensitive to equation specifications, degrees of interdependence among variables, and the historical periods used for estimating model coefficients. For some variables, recent historical variation may not provide a realistic representation of the potential variation for the future. Also, results would differ if additional variables (such as labor force participation rates, retirement rates, marriage rates, and divorce rates) were also allowed to vary randomly. Time-series modeling reflects only what occurred in the historical period. Future uncertainty exists not only for the underlying central tendency but also for the frequency and size of occasional longer-term shifts in the central tendency. Many experts predict, and history suggests, that the future will likely bring substantial shifts that are not fully reflected in the historical period used for the current model. As a result, readers should understand that the true range of uncertainty might be larger than indicated in this appendix.

3. Stochastic Results

This section illustrates the results for the stochastic simulations of two fundamental measures of actuarial status: annual cost rates and trust fund ratios.

[1] More detail on this model, and stochastic modeling in general, is available at www.ssa.gov/OACT/stochastic/index.html.

The latter measure is highlighted in section II.D of this report. Section 4 of this appendix follows with a comparison of stochastic results to results from the alternative scenarios for these and other measures, and an analysis of the differences.

Figure VI.E1 displays the probability distribution of the year-by-year OASDI cost rates (that is, cost as a percentage of taxable payroll). The range of the annual cost rates widens as the projections move further into the future, which reflects increasing uncertainty. Because there is relatively little variation in income rates across the 5,000 stochastic simulations, the figure includes only the income rate for the intermediate scenario. The two outermost cost rate lines in this figure indicate the range within which future annual cost rates are projected to occur 95 percent of the time (i.e., a 95-percent confidence interval). In other words, the current model estimates that there is a 2.5 percent probability that the cost rate for a given year will exceed the upper end of this range and a 2.5 percent probability that it will fall below the lower end of this range. Other lines in the figure delineate the 80-percent confidence interval and the median cost rate. The median (50th percentile) cost rate for each year is the rate for which half of the simulated outcomes are higher and half are lower for that year. These lines do not represent the results of individual stochastic simulations. Instead, for each given year, they represent the percentile distribution of annual cost rates based on all stochastic simulations for that year.

Figure VI.E1.—Long-Range OASDI Cost Rates From Stochastic Modeling

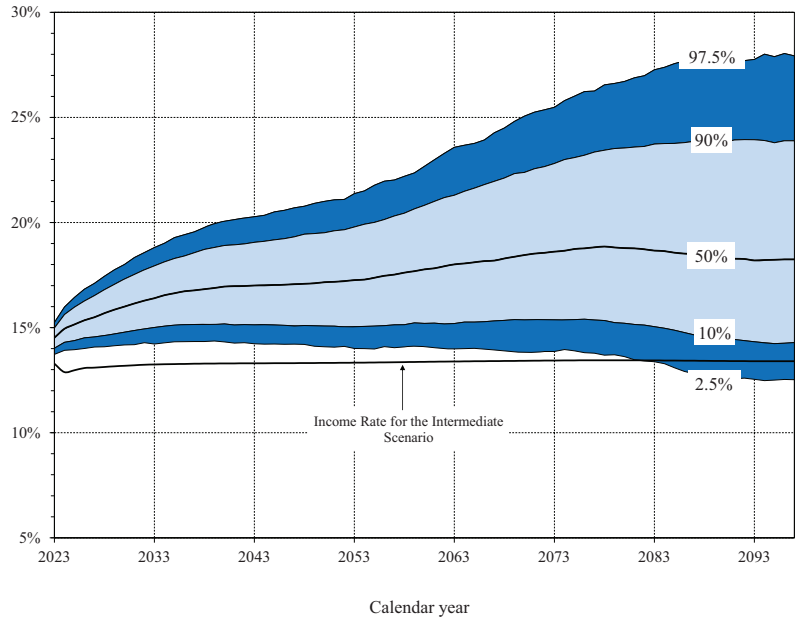

Figure VI.E2 presents the simulated probability distribution of the annual trust fund ratios for the combined OASI and DI Trust Funds. The lines in this figure display the median set (50th percentile) of estimated annual trust fund ratios and delineate the 95-percent and 80-percent confidence intervals estimated for future annual trust fund ratios. Again, none of these lines represent the path of a single simulation. For each given year, they represent the percentile distribution of trust fund ratios based on all stochastic simulations for that year.

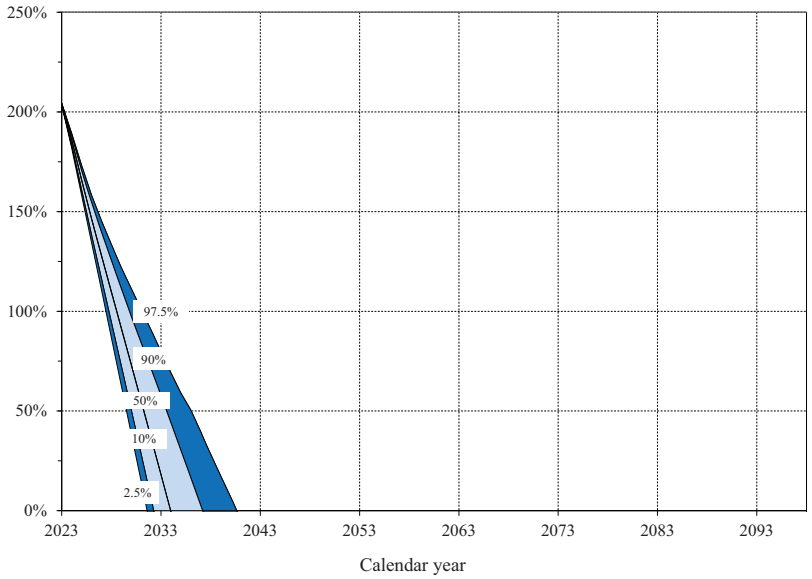
Figure VI.E2 shows that the 95-percent confidence interval for the trust fund reserve depletion year ranges from 2031 to 2040, relatively early in the 75-year projection period. The figure also shows that there is a 50-percent probability of trust fund reserve depletion by the end of 2033 (the median reserve depletion year). The median reserve depletion date is late in 2033; the reserve depletion date for the intermediate scenario is in mid-2034.

Figure VI.E2.—Long-Range OASDI Trust Fund Ratios From Stochastic Modeling



4. Comparison of Results: Stochastic to Low-Cost, Intermediate, and High-Cost Alternative Scenarios

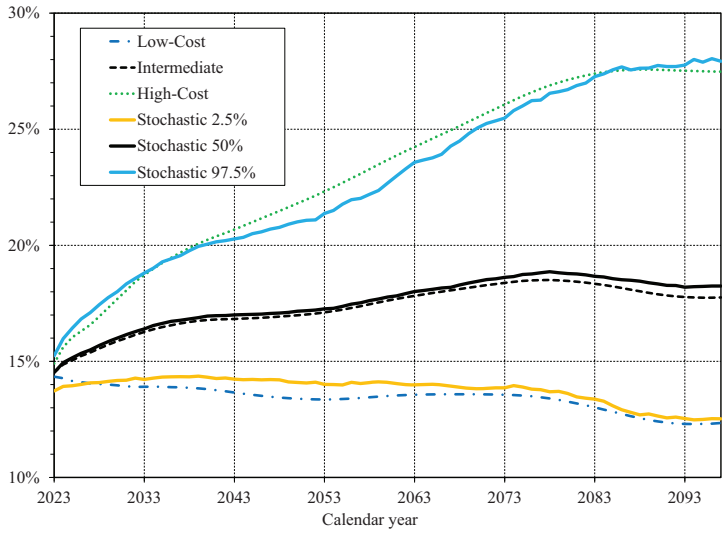
This section compares results from two different approaches for illustrating ranges of uncertainty in measures of trust fund actuarial status. One approach uses results from the low-cost, intermediate, and high-cost alternative scenarios. The other approach uses distributions of results from the stochastic simulations. Each of these approaches provides insights into uncertainty. Comparing the results requires an understanding of fundamental differences in the approaches.

One fundamental difference relates to the presentation of distributional results. Figure VI.E3 shows projected OASDI annual cost rates for the low-cost, intermediate, and high-cost alternative scenarios along with the annual cost rates at the 2.5th percentile, 50th percentile, and 97.5th percentile for the stochastic simulations. While all values on each line for the alternative scenarios are results from a single specified scenario, the values on each stochastic line may be results from different simulations for different years. The one stochastic simulation (from the 5,000 simulations) that yields results closest to a particular percentile for one projected year may yield results that

are distant from that percentile in another projected year. Because each stochastic simulation shows substantial variability from year to year, the range shown between the 2.5th and 97.5th percentiles is broader than would be seen if simulations followed a smooth trend like in the alternative scenarios.

Both the alternative scenarios and the stochastic results suggest that the range of potential cost rates above the central levels (those for the intermediate scenario and for the stochastic median, respectively) is larger than the range below these central results. The difference between the central results and the higher cost levels (the high-cost alternative scenario and the upper end of the 95-percent confidence range, respectively) is about 1.6 to 1.8 times as large as the difference between the central and lower cost levels for both models by the end of the projection period.

Figure VI.E3.—OASDI Cost Rates: Comparison of Stochastic to Low-Cost, Intermediate, and High-Cost Alternative Scenarios
[As a percentage of taxable payroll]



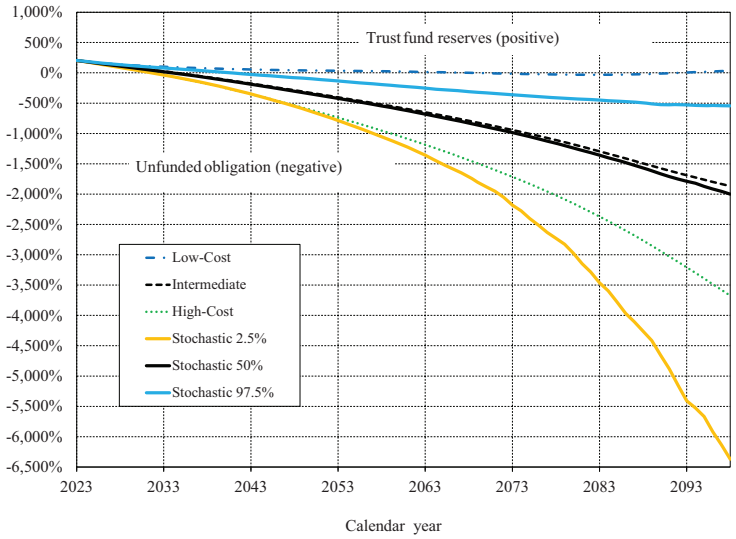
Another fundamental difference between the alternative scenarios and the stochastic simulations is the method of assigning values for assumptions. For the alternative scenarios, specific values are assigned for each of the key demographic, economic, and program-specific variables. The high-cost alternative scenario uses parameter values that increase estimated annual cost as a percent of payroll, while the low-cost alternative scenario uses parameter

values that decrease annual cost as a percent of payroll. (One parameter, the interest rate, has no effect on annual cost as a percent of payroll for either the alternative scenarios or the stochastic simulations.) In contrast, the stochastic method independently assigns random variation to each of the key demographic and economic variables for each year in each of the 5,000 stochastic simulations. For each of the stochastic simulations, the assigned values for different variables result in varying and often offsetting effects on projected cost as a percent of payroll, with some tending toward higher cost and some tending toward lower cost. This difference tends to narrow the range of cost as a percent of payroll across the 95-percent confidence interval.

It is important to understand that the stochastic model's 95-percent confidence intervals for any summary measure of trust fund finances would tend to be narrower than the range produced for the low-cost and high-cost alternative scenarios, even if the stochastic model's 95-percent confidence interval for annual cost rates were identical to the range defined by the low-cost and high-cost scenarios. This is true because summary measures of trust fund finances depend on cost rates for many years, and the probability that annual cost rates, on average for individual stochastic simulations, will be at least as low (high) as the 2.5 (97.5) percentile line is significantly lower than 2.5 percent. As a result, the relationship between the ranges presented for annual cost rates and summary measures of trust fund finances is fundamentally different for the stochastic model than it is for the low-cost and high-cost alternative scenarios.

Figure VI.E4 compares the ranges of trust fund (unfunded obligation) ratios for the alternative scenarios to the 95-percent confidence interval of the stochastic simulations. This figure extends figure VI.E2 to show unfunded obligation ratios, expressed as negative values below the zero percent line. An unfunded obligation ratio is the ratio of the unfunded obligation accumulated through the beginning of the year to the cost for that year.

Figure VI.E4.—OASDI Trust Fund (Unfunded Obligation) Ratios: Comparison of Stochastic to Low-Cost, Intermediate, and High-Cost Alternative Scenarios[a]
[Trust fund reserves (unfunded obligation) as a percentage of annual cost]



[a] An unfunded obligation, shown as a negative value in this figure, is equivalent to the amount the trust funds would need to have borrowed to date in order to pay all scheduled benefits (on a timely basis) after trust fund reserves are depleted. Note that current law does not permit the trust funds to borrow.

As mentioned above, a summary measure that accumulates annual values tends to smooth the kind of annual fluctuations that occur in stochastic simulations. Therefore, one might expect the range across the stochastic confidence interval for trust fund (unfunded obligation) ratios to be narrower and fall within the range seen across the high-cost and low-cost alternative scenarios, as it does for the actuarial balance measure. But this is not the case, largely due to the way interest rates are assigned.

For the stochastic model, real interest rates for each simulation are assigned to be essentially independent of other variables, so the rate for compounding of trust fund reserves (unfunded obligations) is essentially uncorrelated with the level of cost as a percent of payroll. On the other hand, real interest rates are assigned to be higher for the low-cost alternative scenario and lower for the high-cost alternative scenario. High interest rates raise the level of the positive trust fund ratio in the low-cost alternative scenario somewhat, but this effect is limited because the magnitude of reserves is small. However, low interest rates substantially reduce the magnitude of the unfunded obligation ratio for the high-cost alternative scenario because the magnitude of

unfunded obligations is relatively large. As a result, the trust fund (unfunded obligation) ratios are shifted, albeit unevenly, higher (or less negative) for both the high-cost and low-cost alternative scenarios relative to those of the stochastic simulations.

This interest rate effect on the alternative scenarios is not as evident for some other summary measures of actuarial status, such as the actuarial balance. Because the actuarial balance reflects the cumulative effects of interest in both its numerator and denominator, the interest rate effect is much less pronounced. In contrast, cumulative interest affects only the numerator of the trust fund (unfunded obligation) ratio. There is also no significant interest rate effect on the trust fund depletion date.

Other factors also contribute, to varying degrees, to the difference in ranges between the results of the alternative scenarios and the stochastic simulations. The contrasts in results and methods do not mean that either approach to illustrating ranges of uncertainty is superior to the other. The ranges are different and explainable.

Table VI.E1 displays long-range actuarial estimates for the combined OASDI program using the two methods of illustrating uncertainty: alternative scenarios and stochastic simulations. The table shows scenario-based estimates for the intermediate, low-cost, and high-cost assumptions. It also shows stochastic estimates for the median (50th percentile) and for the 80-percent and 95-percent confidence intervals. Each individual stochastic estimate in the table is the level at that percentile from the distribution of the 5,000 simulations. For each given percentile, the values in the table for each long-range actuarial measure are generally from different stochastic simulations.

The median stochastic estimates displayed in table VI.E1 are similar to the intermediate scenario-based estimates. The median estimate of the long-range actuarial balance is -3.69 percent of taxable payroll, about 0.08 percentage point lower (more negative) than projected in the intermediate scenario. The median estimate for the open-group unfunded obligation is $22.8 trillion, about $0.4 trillion larger than the $22.4 trillion estimate in the intermediate scenario. The median first projected year for which cost exceeds non-interest income (as it did in 2010 through 2022), and remains in excess of non-interest income throughout the remainder of the long-range period, is 2023. This is the same year as projected in the intermediate scenario. The median projected date at which trust fund reserves first become depleted is late in 2033; the reserve depletion date for the intermediate scenario is mid-2034. The median estimates of the annual cost rate for the 75th year of the projection period are 18.25 percent of taxable payroll and

6.14 percent of gross domestic product (GDP). The comparable estimates in the intermediate scenario are 17.75 percent of payroll and 5.98 percent of GDP.

For three measures in table VI.E1 (the actuarial balance, the first projected year cost exceeds non-interest income and remains in excess through 2097, and the first year trust fund reserves become depleted), the 95-percent stochastic confidence interval falls within the range defined by the low-cost and high-cost scenarios. For the remaining three measures (the open-group unfunded obligation, the annual cost in the 75th year as a percent of taxable payroll, and the annual cost in the 75th year as a percent of GDP), one or both of the bounds of the 95-percent stochastic confidence interval fall outside the range defined by the low-cost and high-cost scenarios.

Table VI.E1.—Long-Range Estimates Relating to the Actuarial Status of the Combined OASDI Program
[Comparison of scenario-based and stochastic results]

	Traditional scenario-based model			Stochastic model				
					80-percent confidence interval		95-percent confidence interval	
	Intermediate	Low-cost	High-cost	Median 50th percentile	10th percentile	90th percentile	2.5th percentile	97.5th percentile
Actuarial balance	-3.61	-0.10	-8.37	-3.69	-5.75	-2.03	-7.17	-1.18
Open-group unfunded obligation (in trillions)	$22.4	-$.4	$42.9	$22.8	$10.5	$44.3	$5.8	$60.9
First projected year cost exceeds non-interest income and remains in excess through 2097	2023	[a]	2023	2023	2023	2023	2023	[a]
First year trust fund reserves become depleted [b]	2034	2067	2031	2033	2032	2037	2031	2040
Annual cost in 75th year (percent of taxable payroll)	17.75	12.34	27.48	18.25	14.29	23.89	12.52	27.93
Annual cost in 75th year (percent of GDP)	5.98	4.52	8.54	6.14	4.84	7.97	4.25	9.21

[a] Cost is projected to exceed non-interest income for a temporary period, before falling below non-interest income by the end of the projection period.
[b] For the low-cost scenario and for some stochastic simulations, the first year in which trust fund reserves become depleted does not indicate a permanent depletion of reserves.

F. INFINITE HORIZON PROJECTIONS

Another measure of trust fund financial status is the infinite horizon unfunded obligation, which takes account of all past and future annual balances, even those after the next 75 years. The extension of the time period past 75 years assumes that the current law for the OASDI program and the demographic and economic trends used for the 75-year projection continue indefinitely.

Table VI.F1 shows that the OASDI open-group unfunded obligation over the infinite horizon is $65.9 trillion in present value, which is $43.4 trillion larger than for the 75-year period. The $43.4 trillion increment reflects a significant financing gap projected for OASDI for years after 2097 into perpetuity. Of course, the degree of uncertainty associated with estimates increases substantially for years further in the future.

The $65.9 trillion infinite horizon open-group unfunded obligation is equal to 4.6 percent of taxable payroll or 1.4 percent of GDP over the same period. These relative measures of the unfunded obligation over the infinite horizon express its magnitude in relation to the resources potentially available to finance the shortfall.

The summarized shortfalls for the 75-year period and through the infinite horizon both reflect annual cash-flow shortfalls for all years after trust fund reserve depletion. The annual shortfalls after trust fund reserve depletion rise slowly and reflect increases in life expectancy. The summarized shortfalls over the infinite horizon, as percentages of taxable payroll and GDP, are larger than the shortfalls for the 75-year period.

To illustrate the magnitude of the projected infinite horizon shortfall, consider that it could be eliminated with additional revenue equivalent to an immediate increase in the combined payroll tax rate from 12.4 percent to about 17.0 percent,[1] or with cost reductions equivalent to an immediate and permanent reduction in benefits for all current and future beneficiaries by about 26.9 percent.

[1] While an increase in the payroll tax rate would cause some behavioral changes in earnings and ensuing changes in benefit levels, such changes are not included in the calculations because they are assumed to have roughly offsetting effects on OASDI actuarial status over the infinite horizon.

Table VI.F1.—Unfunded OASDI Obligations Through the Infinite Horizon and the 75-Year Projection Period, Based on Intermediate Assumptions
[Present values as of January 1, 2023; dollar amounts in trillions]

		Expressed as a percentage of future payroll and GDP	
	Present value	Taxable payroll	GDP
Unfunded obligation through the infinite horizon[a]	$65.9	4.6	1.4
Unfunded obligation through 2097[b]	22.4	3.4	1.2

[a] Present value of future cost less future non-interest income, reduced by the amount of trust fund asset reserves at the beginning of 2023. Expressed as a percentage of payroll and GDP for the period 2023 through the infinite horizon.
[b] Present value of future cost less future non-interest income through 2097, reduced by the amount of trust fund reserves at the beginning of 2023. Expressed as a percentage of payroll and GDP for the period 2023 through 2097.

Notes:
1. The present values of future taxable payroll for 2023-97 and for 2023 through the infinite horizon are $655.0 trillion and $1,439.1 trillion, respectively.
2. The present values of GDP for 2023-97 and for 2023 through the infinite horizon are $1,865.3 trillion and $4,612.7 trillion, respectively. Present values of GDP shown in the Medicare Trustees Report differ slightly due to the use of discount rates that are specific to each program's trust fund holdings.

Last year, the Trustees projected that the infinite horizon unfunded obligation was $61.8 trillion in present value discounted to January 1, 2022. If the assumptions, methods, and starting values had not changed, moving the valuation date forward by 1 year to January 1, 2023 would have discounted future values by 1 year less, thus increasing the measured unfunded obligation by about $1.4 trillion, to $63.2 trillion. The net effects of changes in assumptions, methods, law, and starting values increased the infinite horizon unfunded obligation by an additional $2.7 trillion. This net increase occurred for a variety of reasons, particularly changes in recent economic data and near-term assumptions, and changes in programmatic data and methods. See section IV.B.6 for details regarding changes in law, data, methods, and assumptions.

Compared to last year's report, the unfunded obligation over the infinite horizon in this year's report increased by 0.1 percentage point as both a share of taxable payroll and a share of GDP. The unfunded obligation over the 75-year projection period increased by 0.2 percentage point as a share of taxable payroll and increased by 0.1 percentage point as a share of GDP.

a. Unfunded Obligations for Past, Current, and Future Participants

Table VI.F2 separates the components of the infinite horizon unfunded obligation (with the exception of General Fund reimbursements) among past, current, and future participants. The table does not separate past General Fund reimbursements among participants because there is no clear basis for attributing the reimbursements across generations.

Past participants are defined as those no longer alive as of the valuation date. Current participants are those age 15 and older as of 2023. Future participants are those under age 15 or not yet born.

The excess of the present value of cost for past and current participants over the present value of dedicated tax income for past and current participants produces an unfunded obligation for past and current participants of $49.1 trillion. Table VI.F2 also shows an unfunded obligation of $48.4 trillion for past and current participants, including past and future General Fund reimbursements. Future participants are scheduled to pay dedicated taxes of $17.5 trillion less into the system than the cost of their scheduled benefits ($148.8 trillion of dedicated tax income as compared to $166.3 trillion of cost). The unfunded obligation for all participants through the infinite horizon thus equals $65.9 trillion.

Making Social Security solvent over the infinite horizon requires some combination of increased revenue or reduced benefits for current and future participants amounting to $65.9 trillion in present value, 4.6 percent of future taxable payroll, or 1.4 percent of future GDP.

Table VI.F2.—Present Values Through the Infinite Horizon for Various Categories of Program Participants, Based on Intermediate Assumptions
[Present values as of January 1, 2023; dollar amounts in trillions]

		Expressed as a percentage of future payroll and GDP	
	Present value	Taxable payroll	GDP
Present value of past cost	$76.4	5.3	1.7
Less present value of past dedicated tax income	78.5	5.5	1.7
Plus present value of future cost for current participants	95.7	6.6	2.1
Less present value of future dedicated tax income for current participants	44.4	3.1	1.0
Equals unfunded obligation for past and current participants excluding General Fund reimbursements	49.1	3.4	1.1
Less present value of past General Fund reimbursements[a]	.7	[b]	[c]
Less present value of future General Fund reimbursements through the infinite horizon[a]	[d]	[b]	[c]
Equals unfunded obligation for past and current participants including General Fund reimbursements	48.4	3.4	1.0
Plus present value of cost for future participants through the infinite horizon	166.3	11.6	3.6
Less present value of dedicated tax income for future participants through the infinite horizon	148.8	10.3	3.2
Equals unfunded obligation for all participants through the infinite horizon	65.9	4.6	1.4

[a] Distribution of General Fund reimbursements among past, current, and future participants cannot be determined.
[b] Less than 0.05 percent of taxable payroll.
[c] Less than 0.05 percent of GDP.
[d] Less than $50 billion.

Notes:

1. The present value of future taxable payroll for 2023 through the infinite horizon is $1,439.1 trillion.
2. The present value of GDP for 2023 through the infinite horizon is $4,612.7 trillion.
3. Components may not sum to totals because of rounding.

G. ESTIMATES FOR OASDI AND HI, SEPARATE AND COMBINED

In this appendix, the Trustees present long-range actuarial estimates for the OASDI and Hospital Insurance (HI) programs both separately and on a combined basis. These estimates facilitate analysis of the adequacy of the income and asset reserves of these programs relative to their cost under current law. This appendix does not include estimates for the Supplementary Medical Insurance (SMI) program because adequate financing is guaranteed in the law and because the SMI program is not financed through a payroll tax. For more information on Medicare estimates, please see the 2023 Medicare Trustees Report.

The information in this appendix on combined operations, while significant, should not obscure the analysis of the financial status of the individual trust funds, which are legally separate and cannot be commingled. In addition, the factors which determine the costs of the OASI, DI, and HI programs differ substantially.

1. Estimates as a Percentage of Taxable Payroll

Comparing cost and income rates for the OASDI and HI programs as percentages of taxable payroll requires a note of caution. The taxable payrolls for the HI program are larger than those for the OASDI program because: (1) a larger maximum taxable amount was established for the HI program in 1991, with the maximum eliminated altogether for the HI program in 1994; (2) larger proportions of Federal, State, and local government employees are covered under the HI program; and (3) the earnings of railroad workers are included directly in the HI taxable payroll but are not included in the OASDI taxable payroll. (Railroad worker contributions for the equivalent of OASDI benefits are accounted for in a net interchange that occurs annually between the OASDI and Railroad Retirement programs.) As a result, the HI taxable payroll is 25 percent larger than the OASDI taxable payroll on average over the long-range period.

As with the OASI and DI Trust Funds, income to the HI Trust Fund comes primarily from contributions paid by employees, employers, and self-employed persons. Table VI.G1 shows the OASDI and HI contribution rates that are authorized in the Federal Insurance Contributions Act.

Table VI.G1.—Payroll Tax Contribution Rates for the OASDI and HI Programs
[In percent]

	Employees and employers, combined[a]		Employees only	Self employed[b]		
Calendar years	OASDI up to base[c]	HI all earnings[d]	HI over limit[e]	OASDI up to base[c]	HI all earnings[d]	HI over limit[e]

1979-80	10.16	2.10	—	7.05	1.05	—
1981	10.70	2.60	—	8.00	1.30	—
1982-83	10.80	2.60	—	8.05	1.30	—
1984[f]	11.40	2.60	—	11.40	2.60	—
1985[f]	11.40	2.70	—	11.40	2.70	—
1986-87[f]	11.40	2.90	—	11.40	2.90	—
1988-89[f]	12.12	2.90	—	12.12	2.90	—
1990-2010[g]	12.40	2.90	—	12.40	2.90	—
2011-2012[h]	10.40	2.90	—	10.40	2.90	—
2013 and later	12.40	2.90	0.90	12.40	2.90	0.90

[a] Except as noted below, the combined employee/employer rate is divided equally between employees and employers.

[b] Beginning in 1990, self-employed persons receive a deduction, for purposes of computing their net earnings, equal to half of the combined OASDI and HI contributions that would be payable without regard to the contribution and benefit base. The OASDI contribution rate then applies to net earnings after this deduction, but subject to the OASDI base.

[c] The payroll tax on earnings for the OASDI program applies to annual earnings up to a contribution and benefit base indexed to the average wage level. The base is $160,200 for 2023.

[d] Prior to 1994, the payroll tax on earnings for the HI program applied to annual earnings up to a contribution base. The HI contribution base was eliminated beginning in 1994.

[e] Starting with Federal personal income tax returns for tax year 2013, earned income exceeding $200,000 for individual filers and $250,000 for married couples filing jointly is subject to an additional HI tax of 0.9 percent. These income limits are not indexed after 2013.

[f] In 1984 only, employees received an immediate credit of 0.3 percent of taxable wages against their OASDI payroll tax contributions. The self-employed received similar credits of 2.7 percent, 2.3 percent, and 2.0 percent against their combined OASDI and Hospital Insurance (HI) contributions on net earnings from self-employment in 1984, 1985, and 1986-89, respectively. The General Fund of the Treasury reimbursed the trust funds for these credits.

[g] Public Law 111-147 exempted most employers from paying the employer share of OASDI payroll tax on wages paid during the period March 19, 2010 through December 31, 2010 to certain qualified individuals hired after February 3, 2010. The General Fund of the Treasury reimbursed the trust funds for the payroll tax revenue forgone under this law.

[h] Public Law 111-312, Public Law 112-78, and Public Law 112-96 reduced the OASDI payroll tax rate for 2011 and 2012 by 2 percentage points for employees and for self-employed workers. The General Fund of the Treasury reimbursed the trust funds for the payroll tax revenue forgone under these laws.

Table VI.G2 shows the Trustees' estimates of annual income rates and cost rates for the OASDI program and the HI program under the intermediate, low-cost, and high-cost sets of assumptions described earlier in this report. The income rates reflect the payroll tax rates shown in table VI.G1, revenue from taxation of scheduled OASDI benefits for both the OASDI and HI

Trust Funds, and any reimbursements from the General Fund of the Treasury. For the HI program, the income rates also reflect: (1) the additional 0.9-percent tax on employees for relatively high earnings and the portion of total payroll to which the 0.9-percent rate applies, (2) premium revenues, and (3) monies from fraud and abuse control activities. Annual income and cost rates indicate the cash-flow operation of the programs. Therefore, income rates exclude interest earned on trust fund asset reserves. Table VI.G2 also shows annual balances, which are the differences between annual income rates and cost rates.

The Trustees project that the OASDI and HI cost rates will rise generally above current levels under the intermediate and high-cost sets of assumptions. The greatest increase occurs from 2023 to about 2040 under the intermediate and high-cost assumptions for OASDI and the intermediate assumptions for HI, and from 2023 to 2060 under the high-cost assumptions for HI. Under the intermediate assumptions, the OASDI cost rate increases by 22 percent from its current level by 2097, while under the high-cost assumptions, the cost rate increases by 84 percent by 2097. For HI, cost rates increase by 37 percent and 177 percent from 2023 to 2097 under the intermediate and high-cost assumptions, respectively. Under the low-cost assumptions, the OASDI and HI cost rates decrease from 2023 to 2097 by 14 percent and 36 percent, respectively.

The Trustees project annual deficits for every year of the projection period for both the OASDI and HI programs under the high-cost assumptions and for OASDI under the intermediate assumptions. Under the intermediate assumptions, HI annual balances are projected to be positive in 2023 and 2024 and negative and decreasing from 2025 through 2044. Thereafter, HI annual balances slowly increase (become less negative). Under the low-cost assumptions, OASDI annual balances are negative through 2081, and are positive and mostly increasing thereafter, reaching 0.74 percent of payroll for 2097. HI annual balances as a percent of payroll are positive and mostly increasing throughout the projection period under the low-cost assumptions, reaching 2.24 percent of HI taxable payroll by 2097.

Table VI.G2.—OASDI and HI Annual Income Rates, Cost Rates, and Balances, Calendar Years 2023-2100
[As a percentage of taxable payroll[a]]

2055	13.63	22.69	-9.06	4.14	9.06	-4.92
2060	13.70	23.68	-9.98	4.23	9.62	-5.39
2065	13.77	24.60	-10.83	4.31	10.06	-5.74
2070	13.83	25.52	-11.69	4.40	10.33	-5.93
2075	13.89	26.43	-12.53	4.48	10.39	-5.92
2080	13.94	27.12	-13.18	4.55	10.36	-5.81
2085	13.97	27.51	-13.53	4.61	10.24	-5.63
2090	13.98	27.56	-13.58	4.65	10.08	-5.43
2095	13.98	27.50	-13.52	4.68	9.92	-5.23
2100	13.98	27.51	-13.53	4.72	10.22	-5.50

[a] The taxable payroll for HI is significantly larger than the taxable payroll for OASDI because the HI taxable maximum amount was eliminated beginning in 1994, and because HI covers all Federal civilian employees, all State and local government employees hired after April 1, 1986, and railroad employees.
[b] OASDI benefit payments which were scheduled to be paid on January 3 for some past and future years were actually paid on December 31 as required by the statutory provision for early delivery of benefit payments when the normal payment delivery date is a Saturday, Sunday, or legal public holiday. For comparability with the values for historical years and the projections in this report, all trust fund operations and asset reserves reflect the 12 months of benefits scheduled for payment each year.

Notes:
1. The income rate excludes interest income.

2. The Trustees show income and cost estimates generally on a cash basis for the OASDI program and on an incurred basis for the HI program.

3. Components may not sum to totals because of rounding.

Table VI.G3 shows summarized values over the 25-year, 50-year, and 75-year valuation periods. For each of those periods, the summarized income rates include beginning trust fund asset reserves, and the summarized cost rates include the cost of accumulating an ending fund reserve equal to 100 percent of annual cost at the end of the period.

Table VI.G3.—Summarized OASDI and HI Income Rates and Cost Rates for Valuation Periods,[a] Calendar Years 2023-2097
[As a percentage of taxable payroll[b]]

Valuation period	OASDI			HI		
	Income rate	Cost rate[c]	Actuarial balance	Income rate	Cost rate	Actuarial balance
Intermediate:						
25-year:						
2023-47	14.34	16.85	-2.50	3.77	4.48	-0.70
50-year:						
2023-72	13.90	17.14	-3.24	3.92	4.63	-.70
75-year:						
2023-97	13.78	17.38	-3.61	4.05	4.67	-.62
Low-cost:						
25-year:						
2023-47	14.10	14.42	-.31	3.73	3.32	.42
50-year:						
2023-72	13.65	13.94	-.29	3.89	2.86	1.04
75-year:						
2023-97	13.49	13.59	-.10	4.02	2.65	1.37
High-cost:						
25-year:						
2023-47	14.60	19.49	-4.89	3.84	5.98	-2.15
50-year:						
2023-72	14.22	21.18	-6.97	4.00	7.46	-3.46
75-year:						
2023-97	14.16	22.52	-8.37	4.14	8.08	-3.94

[a] Income rates include beginning trust fund asset reserves and cost rates include the cost of reaching an ending target trust fund equal to 100 percent of annual cost at the end of the period.
[b] The taxable payroll for HI is significantly larger than the taxable payroll for OASDI because the HI taxable maximum amount was eliminated beginning 1994, and because HI covers all Federal civilian employees, all State and local government employees hired after April 1, 1986, and railroad employees.
[c] OASDI benefit payments which were scheduled to be paid on January 3 for some past and future years were actually paid on December 31 as required by the statutory provision for early delivery of benefit payments when the normal payment delivery date is a Saturday, Sunday, or legal public holiday. For comparability with the values for historical years and the projections in this report, all trust fund operations and asset reserves reflect the 12 months of benefits scheduled for payment each year.

Note: Components may not sum to totals because of rounding.

The Trustees project that the OASDI and HI programs will each experience large actuarial deficits for the 25-year, 50-year, and 75-year valuation periods under the high-cost assumptions. Actuarial deficits under the intermediate assumptions are smaller than those for the high-cost assumptions for all three valuation periods. Under the low-cost assumptions, the OASDI program has relatively small actuarial deficits for all three valuation periods, while the HI program has positive actuarial balances for all three valuation periods.

2. Estimates as a Percentage of Gross Domestic Product

This section presents long-range projections of the operations of the combined Old-Age and Survivors Insurance and Disability Insurance (OASI and DI) Trust Funds and of the Hospital Insurance (HI) Trust Fund, expressed as a percentage of gross domestic product (GDP). While expressing fund operations as a percentage of taxable payroll is a very useful approach for assessing the financial status of the programs (see section IV.B.1), expressing them as a percentage of the total value of goods and services produced in the United States provides an additional perspective.

Table VI.G4 shows non-interest income, total cost, and the resulting balance of the combined OASI and DI Trust Funds, of the HI Trust Fund, and of the combined OASI, DI, and HI Trust Funds, expressed as percentages of GDP on the basis of each of the three alternative sets of assumptions. Table VI.G4 also contains estimates of GDP. For OASDI, non-interest income consists of payroll tax contributions, proceeds from taxation of scheduled OASDI benefits, and any reimbursements from the General Fund of the Treasury. Cost consists of scheduled benefits, administrative expenses, financial interchange with the Railroad Retirement program, and payments for vocational rehabilitation services for disabled beneficiaries. For HI, non-interest income consists of payroll tax contributions (including contributions from railroad employment), up to an additional 0.9 percent tax on earned income for relatively high earners, proceeds from taxation of scheduled OASDI benefits, premium revenues, monies from fraud and abuse control activities, and any reimbursements from the General Fund of the Treasury. Cost consists of outlays (benefits and administrative expenses) for beneficiaries. The Trustees show income and cost estimates generally on a cash basis for the OASDI program[1] and on an incurred basis for the HI program.

The Trustees project the OASDI annual balance (non-interest income less cost) as a percentage of GDP to be negative throughout the projection period under the intermediate and high-cost assumptions. Under the low-cost assumptions, the OASDI annual deficit as a percentage of GDP increases from 2023 to 2024, and then generally decreases through 2053. After 2053, the annual deficits slightly increase through 2067 and then decrease through 2081 before becoming positive for 2082 and later. Under the intermediate assumptions, the OASDI annual deficits as a percentage of GDP increase

[1] OASDI benefits paid for entitlement for a particular month are generally paid in the succeeding month. There are two primary exceptions to this general rule. First, payments can occur with a greater delay when a benefit award is made after the month of initial benefit entitlement. At the time of benefit award, benefits owed for months of prior entitlement are then also paid to the beneficiary. For the projections in this report, such retroactive payments are included in the period where they are paid (at time of award). Second, when benefit payments scheduled for January 3 are paid on the prior December 31, because January 3 falls on a Sunday, such payments are shown in this report for the period they were scheduled to be paid.

from 2023 through 2077, and generally decrease thereafter. Under the high-cost assumptions, annual deficits increase relatively rapidly through 2086, and then slightly decrease through the end of the projection period.

The Trustees project that the HI annual balance as a percentage of GDP will be positive and mostly increasing throughout the projection period, under the low-cost assumptions. Under the intermediate assumptions, the HI annual balance is positive in 2023 and 2024 and negative in 2025. After 2025, annual deficits increase through 2044, and then decline thereafter. Under the high-cost assumptions, the HI annual balance is negative for all years, with annual deficits reaching a peak in 2070 and declining thereafter.

The combined OASDI and HI annual balance as a percentage of GDP is negative throughout the projection period under both the intermediate and high-cost assumptions. Under the low-cost assumptions, the combined OASDI and HI annual balance is negative through 2039, and then positive and mostly rising thereafter. Under the intermediate assumptions, the combined OASDI and HI annual deficits generally increase through 2076 and then decline thereafter, reaching 1.55 percent of GDP by 2097. Under the high-cost assumptions, combined annual deficits rise to a peak of 6.63 percent in 2081 and decrease thereafter.

By 2097, the combined OASDI and HI annual balances as percentages of GDP range from a positive annual balance of 1.28 percent for the low-cost assumptions to an annual deficit of 6.24 percent for the high-cost assumptions. Annual balances differ by a much smaller amount for the tenth projection year, 2032, ranging from an annual deficit of 0.16 percent for the low-cost assumptions to an annual deficit of 2.48 percent for the high-cost assumptions.

The summarized long-range (75-year) actuarial balance as a percentage of GDP for the combined OASDI and HI programs varies among the three alternatives by a relatively large amount, from a positive actuarial balance of 0.58 percent under the low-cost assumptions to an actuarial deficit of 4.54 percent under the high-cost assumptions. The 25-year summarized actuarial balance varies by a smaller amount, from a positive actuarial balance of 0.07 percent of GDP to an actuarial deficit of 2.70 percent. Summarized rates are calculated on a present-value basis. They include the trust fund reserve balances on January 1, 2023 and the cost of reaching a target trust fund level equal to 100 percent of the following year's annual cost at the end of the period. (See section IV.B.4 for further explanation.)

[a] Income for individual years excludes interest on the trust funds. Interest is implicit in all summarized values.

[b] OASDI benefit payments which were scheduled to be paid on January 3 for some past and future years were actually paid on December 31 as required by the statutory provision for early delivery of benefit payments when the normal payment delivery date is a Saturday, Sunday, or legal public holiday. For comparability with the values for historical years and the projections in this report, all trust fund operations and asset reserves reflect the 12 months of benefits scheduled for payment each year.

[c] Summarized rates are calculated on a present-value basis. They include the value of the trust funds on January 1, 2023 and the cost of reaching a target trust fund level equal to 100 percent of annual cost at the end of the period.

Notes:
1. The Trustees show income and cost estimates generally on a cash basis for the OASDI program and on an incurred basis for the HI program.

2. Components may not sum to totals because of rounding.

Table VI.G5 displays annual ratios of OASDI taxable payroll to GDP. These ratios facilitate comparisons of trust fund operations expressed as percentages of taxable payroll and those expressed as percentages of GDP. HI taxable payroll is 25 percent larger than the OASDI taxable payroll on average over the long-range period; see section 1 of this appendix for a detailed description of the difference. For each year, the cost as a percentage of GDP is equal to the cost as a percentage of taxable payroll multiplied by the ratio of taxable payroll to GDP.

Table VI.G5.—Ratio of OASDI Taxable Payroll to GDP, Calendar Years 2023-2100

Calendar year	Intermediate	Low-cost	High-cost
2023	0.359	0.357	0.360

2100	.336	.366	.309

Projections of GDP reflect projected increases in U.S. employment, labor productivity, average hours worked, and the GDP price index (GDP deflator). Projections of taxable payroll reflect the components of growth in GDP along with assumed changes in the ratio of total labor compensation to GDP, the ratio of earnings to total labor compensation, the ratio of OASDI covered earnings to total earnings, and the ratio of taxable to total covered earnings.

Over the long-range period, the ratio of OASDI taxable payroll to GDP is projected to decline mostly due to a projected decline in the ratio of wages and salaries to employee compensation. Over the last six complete economic cycles, the ratio of wages and salaries to employee compensation declined at an average annual rate of 0.17 percent. Over the 65-year period ending in 2097, the ratio of wages and salaries to employee compensation is projected to remain the same for the low-cost assumptions and decline at an average annual rate of 0.10, and 0.20 percent for the intermediate and high-cost assumptions, respectively.

3. Estimates in Dollars

This section presents long-range projections, in dollars, of the operations of the combined OASI and DI Trust Funds and in some cases the HI Trust Fund. Comparing current dollar values over long periods of time is difficult because of the effect of inflation. In order to compare dollar values in a meaningful way, table VI.G6 provides several economic series or indices which can be used to adjust current dollars for changes in prices, wages, or other aspects of economic growth during the projection period. Any series of values can be adjusted by dividing the value for each year by the corresponding index value for the year.

One of the most common forms of standardization is price indexing, which uses some measure of change in the prices of consumer goods. The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W, hereafter referred to as CPI), published by the Bureau of Labor Statistics, Department of Labor, is one such price index. Consistent with the law, the Social Security Administration (SSA) uses this index to determine the annual cost-of-living increases for OASDI monthly benefits. The ultimate annual rate of increase in the CPI is assumed to be 3.0, 2.4, and 1.8 percent for the low-cost, intermediate, and high-cost sets of assumptions, respectively. Table VI.G7 provides CPI-indexed dollar values (those adjusted using the CPI in table VI.G6), which indicate the relative purchasing power of the values over time.

Wage indexing is another type of standardization. It combines the effects of price inflation and real wage growth. The wage index presented here is the national average wage index, as defined in section 209(k)(1) of the Social Security Act. SSA uses this index to annually adjust the contribution and benefit base and other earnings-related program amounts. The average wage is assumed to grow by an average rate of 4.8, 3.6, and 2.4 percent under the low-cost, intermediate, and high-cost assumptions, respectively, between 2032 and 2097. Wage-indexed values indicate the level of a series of values relative to the changing standard of living of workers over time.

The taxable payroll series is used as an index to adjust for the effects of changes in the number of workers and changes in the proportion of earnings that are taxable, as well as for the effects of price inflation and real wage growth. The OASDI taxable payroll consists of all earnings subject to OASDI taxation, with an adjustment for the lower effective tax rate on multiple-employer excess wages. A series of values, divided by the taxable payroll, indicates the percentage of payroll that each value represents, and thus

the extent to which the series of values increases or decreases as a percent of payroll over time.

The GDP series is used as an index to adjust for the growth in the aggregate amount of goods and services produced in the United States. Values adjusted by GDP (see section 2 of this appendix) indicate their relative share of the total output of the economy. No direct assumption is made about growth in taxable payroll or GDP. These series reflect the basic demographic and economic assumptions, as discussed in sections V.A and V.B, respectively.

Discounting at the rate of interest is another way of standardizing current dollars. The compound new-issue interest factor shown in table VI.G6 increases each year by the assumed effective annual nominal yield for special public-debt obligations issuable to the trust funds in the 12 months of the prior year. The compound effective trust-fund interest factor shown in table VI.G6 uses the effective annual yield on all currently-held securities in the combined OASI and DI Trust Funds. The reciprocal of the compound effective trust-fund interest factor approximates the cumulative discount factor used to convert nominal dollar values to present values as of the start of the valuation period in order to create summarized values for this report.

[a] CPI-W indexed to calendar year 2023.
[b] Total earnings subject to OASDI contribution rates, adjusted to reflect the lower effective contribution rates (compared to the combined employee-employer rate) that apply to multiple-employer "excess wages."
[c] For each alternative, incorporates the average of the assumed annual yield for special public-debt obligations issuable to the trust funds in the 12 months of the prior year.
[d] For each alternative, incorporates the annual effective yield for all outstanding special public-debt obligations held by the trust fund, with a half-year's interest effect in each row. The effective yield for a period equals total interest earned during the period divided by the total exposure to interest on asset reserves and all income and cost items during the period. The reciprocals of the factors approximate the discounting/accumulation factors that are used to calculate summarized rates and balances in this report.

Table VI.G7 shows the operations of the combined OASI and DI Trust Funds in CPI-indexed 2023 dollars—that is, adjusted by the CPI indexing series as discussed above. The following items are presented in the table: (1) non-interest income, (2) interest income, (3) total income, (4) cost, and (5) asset reserves at the end of the year. Non-interest income consists of payroll tax contributions, income from taxation of scheduled OASDI benefits, and any reimbursements from the General Fund of the Treasury. Cost consists of scheduled benefits, administrative expenses, financial interchange with the Railroad Retirement program, and payments for vocational rehabilitation services for disabled beneficiaries. Table VI.G7 shows trust fund operations under the intermediate, low-cost, and high-cost sets of assumptions.

2030[c]	1,346.7	15.3	1,362.0	1,793.7	346.0

[a] CPI-indexed 2023 dollars equal current dollars adjusted by the CPI indexing series in table VI.G6.
[b] Benefit payments which were scheduled to be paid on January 3 for some past and future years were actually paid on December 31 as required by the statutory provision for early delivery of benefit payments when the normal payment delivery date is a Saturday, Sunday, or legal public holiday. For comparability with the values for historical years and the projections in this report, all trust fund operations and asset reserves reflect the 12 months of benefits scheduled for payment each year.
[c] The combined OASI and DI Trust Funds become depleted in 2034 under the intermediate assumptions and in 2031 under the high-cost assumptions, so estimates for later years are not shown.
[d] The combined OASI and DI Trust Funds become depleted in 2067 under the low-cost assumptions, but combined asset reserves become positive again by the beginning of 2093 and remain positive through the remainder of the projection period. Estimates are not shown for years in which asset reserves are negative.

Note: Components may not sum to totals because of rounding.

Figure VI.G1 compares annual cost with annual total income and annual non-interest income. The figure shows only the OASDI program under intermediate assumptions, and presents values in CPI-indexed 2023 dollars, consistent with table VI.G7. The difference between the income values for each year is equal to the trust fund interest earnings. The figure illustrates that, under intermediate assumptions, annual cost exceeds both total income and non-interest income for 2023 through 2034, when trust fund reserves become depleted. Estimates after reserve depletion are not shown. For 2023 through 2033 (the year preceding the year of trust fund reserve depletion), annual cost is covered by drawing down combined trust fund reserves. Note that income for 2023 is relatively high because of an estimated large positive adjustment to payroll tax contributions to be made in June 2023.

Figure VI.G1.—Estimated OASDI Income and Cost in CPI-Indexed 2023 Dollars, Based on Intermediate Assumptions
[In billions]

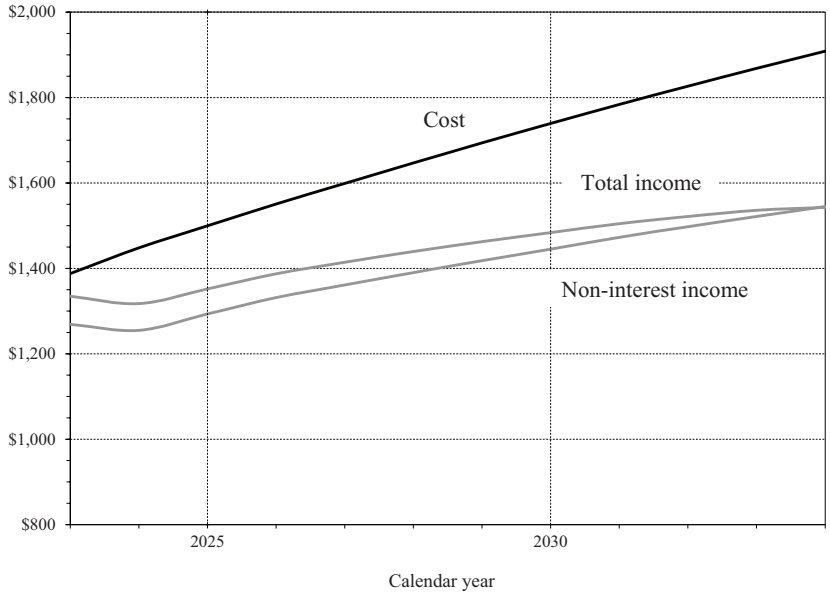

Table VI.G8 presents the operations of the combined OASI and DI Trust Funds in current, or nominal, dollars—that is, in dollars unadjusted for inflation. The following items are presented in the table: (1) non-interest income, (2) interest income, (3) total income, (4) cost, and (5) asset reserves at the end of the year. These estimates are presented using the intermediate, low-cost, and high-cost sets of demographic and economic assumptions to facilitate independent analysis.

[a] Benefit payments which were scheduled to be paid on January 3 for some past and future years were actually paid on December 31 as required by the statutory provision for early delivery of benefit payments when the normal payment delivery date is a Saturday, Sunday, or legal public holiday. For comparability with the values for historical years and the projections in this report, all trust fund operations and asset reserves reflect the 12 months of benefits scheduled for payment each year.

[b] The combined OASI and DI Trust Funds become depleted in 2034 under the intermediate assumptions and in 2031 under the high-cost assumptions, so estimates for later years are not shown.

[c] The combined OASI and DI Trust Funds become depleted in 2067 under the low-cost assumptions, but combined asset reserves become positive again by the beginning of 2093 and remain positive through the remainder of the projection period. Estimates are not shown for years in which asset reserves are negative.

Note: Components may not sum to totals because of rounding.

Table VI.G9 presents values in CPI-indexed 2023 dollars—that is, adjusted by the CPI indexing series discussed at the beginning of this section. This table contains the annual non-interest income and cost of the combined OASI and DI Trust Funds, of the HI Trust Fund, and of the combined OASI, DI, and HI Trust Funds, based on the intermediate, low-cost, and high-cost sets of assumptions. For OASDI, non-interest income consists of payroll tax contributions, proceeds from taxation of scheduled OASDI benefits, and any reimbursements from the General Fund of the Treasury. Cost consists of scheduled benefits, administrative expenses, financial interchange with the Railroad Retirement program, and payments for vocational rehabilitation services for disabled beneficiaries. For HI, non-interest income consists of payroll tax contributions (including contributions from railroad employment), up to an additional 0.9 percent tax on earned income for relatively high earners, proceeds from the taxation of scheduled OASDI benefits, premium revenues, monies from fraud and abuse control activities, and any reimbursements from the General Fund of the Treasury. Total cost consists of scheduled benefits and administrative expenses. The Trustees show income and cost estimates generally on a cash basis for the OASDI program[1] and on an incurred basis for the HI program. Table VI.G9 also shows the annual balance, which equals the difference between non-interest income and cost.

[1] OASDI benefits paid for entitlement for a particular month are generally paid in the succeeding month. There are two primary exceptions to this general rule. First, payments can occur with a greater delay when a benefit award is made after the month of initial benefit entitlement. At the time of benefit award, benefits owed for months of prior entitlement are then also paid to the beneficiary. For the projections in this report, such retroactive payments are included in the period where they are paid (at time of award). Second, when benefit payments scheduled for January 3 are paid on the prior December 31, because January 3 falls on a Sunday, such payments are shown in this report for the period they were scheduled to be paid.

[a] CPI-indexed 2023 dollars equal current dollars adjusted by the CPI indexing series in table VI.G6.
[b] OASDI benefit payments which were scheduled to be paid on January 3 for some past and future years were actually paid on December 31 as required by the statutory provision for early delivery of benefit payments when the normal payment delivery date is a Saturday, Sunday, or legal public holiday. For comparability with the values for historical years and the projections in this report, all trust fund operations and asset reserves reflect the 12 months of benefits scheduled for payment each year.

Note: Components may not sum to totals because of rounding.

Table VI.G10 shows values in current, or nominal, dollars—that is, in dollars unadjusted for inflation. This table presents the annual non-interest income, cost, and balance of the combined OASI and DI Trust Funds, of the HI Trust Fund, and of the combined OASI, DI, and HI Trust Funds, based on the intermediate, low-cost, and high-cost sets of assumptions.

[a] OASDI benefit payments which were scheduled to be paid on January 3 for some past and future years were actually paid on December 31 as required by the statutory provision for early delivery of benefit payments when the normal payment delivery date is a Saturday, Sunday, or legal public holiday. For comparability with the values for historical years and the projections in this report, all trust fund operations and asset reserves reflect the 12 months of benefits scheduled for payment each year.

Note: Components may not sum to totals because of rounding.

H. ANALYSIS OF BENEFIT PAYMENTS FROM THE OASI TRUST FUND WITH RESPECT TO DISABLED BENEFICIARIES

(Required by section 201(c) of the Social Security Act)

Effective January 1957, the OASI Trust Fund pays monthly benefits to disabled children aged 18 and over of retired and deceased workers if the disability began before age 18. The age by which disability must have begun was later changed to age 22. Effective February 1968, the OASI Trust Fund pays reduced monthly benefits to disabled widows and widowers at ages 50 and over. Effective January 1991, the requirements for the disability of the widow or widower were made less restrictive.

At the end of 2022, the OASI Trust Fund was providing monthly benefit payments to about 1,128,000 people because of their disabilities or the disabilities of children. This total includes approximately 21,000 mothers and fathers (wives or husbands under normal retirement age of retired-worker beneficiaries and widows or widowers of deceased insured workers) who met all other qualifying requirements and were receiving unreduced benefits solely because they had disabled-child beneficiaries (or disabled children aged 16 or 17) in their care. In calendar year 2022, the OASI Trust Fund paid a total of $13,266 million to the people described above. Table VI.H1 shows OASI scheduled benefits for disability for selected calendar years during 1960 through 2022 and estimates for 2023 through 2032 based on the intermediate set of assumptions.

Table VI.H1.—Scheduled Benefit Payments From the OASI Trust Fund With Respect to Disabled Beneficiaries

[Beneficiaries in thousands; scheduled benefits in millions]

	Disabled beneficiaries, end of year			Amount of scheduled benefits[a b]		
Calendar year	Total	Children[c]	Widows-widowers[d]	Total	Children[c]	Widows-widowers[e]

2018	1,139	1,027	112	11,767	10,729	1,031
2019	1,144	1,041	103	12,148	11,152	983
2020	1,147	1,051	95	12,351	11,403	934
2021	1,136	1,050	86	12,453	11,578	861
2022	1,128	1,051	78	13,266	12,414	829
Estimates under the intermediate assumptions:						
2023	1,141	1,069	71	14,514	13,669	822
2024	1,153	1,084	69	15,265	14,419	822
2025	1,170	1,102	68	15,939	15,088	826
2026	1,189	1,121	68	16,706	15,828	853
2027	1,209	1,140	69	17,515	16,606	883
2028	1,227	1,157	70	18,343	17,395	921
2029	1,246	1,177	69	19,204	18,224	952
2030	1,264	1,196	68	20,081	19,092	960
2031	1,284	1,216	68	21,006	19,989	987
2032	1,305	1,236	69	21,996	20,938	1,028

[a] Beginning in 1966, includes payments for vocational rehabilitation services.

[b] Amounts for 2020 and 2021 are adjusted to include in 2021 operations those benefit payments regularly scheduled in the law to be paid on January 3, 2021, which were actually paid on December 31, 2020 as required by the statutory provision for early benefit payments when the normal delivery date is on a weekend or holiday. Such shifts in payments across calendar years have occurred in the past, including in 2016, and will occur periodically in the future whenever January 3rd falls on a Sunday. In order to provide a consistent perspective on trust fund operations over time, all trust fund operations in each year reflect the 12 months of benefits that are regularly scheduled for payment in that year.

[c] Also includes certain mothers and fathers (see text).

[d] In 1984 and later years, includes only disabled widows and widowers aged 50-59, because disabled widows and widowers age 60 and older are eligible for the same benefit as a nondisabled aged widow or widower. Therefore, they are not receiving benefits solely because of a disability.

[e] In 1983 and prior years, includes the offsetting effect of lower benefits payable to disabled widows and widowers who continued to receive benefits after attaining age 60 (62, for disabled widowers prior to 1973), compared to the higher nondisabled widow's and widower's benefits that would otherwise be payable. In 1984 and later years, includes only scheduled benefits to disabled widows and widowers aged 50-59 (see footnote d).

Note: Components may not sum to totals because of rounding.

Under the intermediate assumptions, estimated total scheduled benefits paid from the OASI Trust Fund with respect to disabled beneficiaries will increase from $14,514 million in calendar year 2023 to $21,996 million in calendar year 2032.

In calendar year 2022, benefit payments (including payments for vocational rehabilitation services) with respect to disabled persons from the OASI Trust Fund and from the DI Trust Fund (including payments from the DI fund to all children and spouses of disabled-worker beneficiaries) totaled $156,861 million. Of this amount, $13,266 million, or 8.5 percent, represented payments from the OASI Trust Fund. Table VI.H2 contains these and similar figures for selected calendar years during 1960 through 2022 and estimates for calendar years 2023 through 2032.

Table VI.H2.—Scheduled Benefit Payments[a] Under the OASDI Program With Respect to Disabled Beneficiaries
[Amounts in millions]

Calendar year	Total[b]	DI Trust Fund[c]	OASI Trust Fund	
			Amount[d]	Percentage of total
Historical data:				
1960	$627	$568	$59	9.4
1965	1,707	1,573	134	7.9
1970	3,386	3,085	301	8.9
1975	9,169	8,505	664	7.2

2020	155,933	143,582	12,351	7.9
2021	152,538	140,085	12,453	8.2
2022	156,861	143,595	13,266	8.5
Estimates under the intermediate assumptions:				
2023	162,584	148,070	14,514	8.9
2024	170,786	155,521	15,265	8.9
2025	181,291	165,353	15,939	8.8
2026	192,051	175,345	16,706	8.7
2027	201,292	183,777	17,515	8.7
2028	209,539	191,196	18,343	8.8
2029	216,103	196,899	19,204	8.9
2030	222,804	202,723	20,081	9.0
2031	230,957	209,952	21,006	9.1
2032	240,239	218,243	21,996	9.2

[a] Amounts for 2020 and 2021 are adjusted to include in 2021 operations those benefit payments regularly scheduled in the law to be paid on January 3, 2021, which were actually paid on December 31, 2020 as required by the statutory provision for early benefit payments when the normal delivery date is on a weekend or holiday. Such shifts in payments across calendar years have occurred in the past, including in 2016, and will occur periodically in the future whenever January 3rd falls on a Sunday. In order to provide a consistent perspective on trust fund operations over time, all trust fund operations in each year reflect the 12 months of benefits that are regularly scheduled for payment in that year.

[b] Beginning in 1966, includes payments for vocational rehabilitation services.

[c] Scheduled benefits for disabled workers and their children and spouses.

[d] Scheduled benefits for disabled children aged 18 and over, for certain mothers and fathers (see text), and for disabled widows and widowers (see footnote e, table VI.H1).

Note: Components may not sum to totals because of rounding.

I. GLOSSARY

Actuarial balance. The difference between the summarized income rate and the summarized cost rate as a percentage of taxable payroll over a given valuation period.

Actuarial deficit. A negative actuarial balance.

Administrative expenses. Expenses incurred by the Social Security Administration and the Department of the Treasury in administering the OASDI program and the provisions of the Internal Revenue Code relating to the collection of contributions. Such administrative expenses are paid from the OASI and DI Trust Funds.

Advance tax transfers. Amounts representing the estimated total OASDI tax contributions for a given month. From May 1983 through November 1990, such amounts were credited to the OASI and DI Trust Funds at the beginning of each month. The trust funds reimbursed the General Fund of the Treasury for the associated loss of interest. Advance tax transfers are no longer made unless needed in order to pay benefits.

Alternatives I, II, or III. See "Assumptions."

Annual balance. The difference between the income rate and the cost rate for a given year.

Asset reserves. See "Trust fund reserves".

Assumptions. Values related to future trends in key factors that affect the trust funds. Demographic assumptions include fertility, mortality, net immigration, marriage, and divorce. Economic assumptions include unemployment rates, average earnings, inflation, interest rates, and productivity. Program-specific assumptions include retirement patterns, and disability incidence and termination rates. This report presents three sets of demographic, economic, and program-specific assumptions:

- Alternative II is the intermediate set of assumptions, and represents the Trustees' best estimates of likely future demographic, economic, and program-specific conditions.
- Alternative I is a low-cost set of assumptions—it assumes relatively rapid economic growth, high inflation, and favorable (from the standpoint of program financing) demographic and program-specific conditions.
- Alternative III is a high-cost set of assumptions—it assumes relatively slow economic growth, low inflation, and unfavorable (from the standpoint of program financing) demographic and program-specific conditions.

See tables V.A2, V.B1, and V.B2.

Automatic cost-of-living benefit increase. The annual increase in benefits, effective for December, reflecting the increase, if any, in the cost of living. A

benefit increase is applicable only after a beneficiary becomes eligible for benefits. In general, the benefit increase equals the percentage increase in the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) measured from the third quarter of the last year for which there was an increase to the third quarter of the current year. If there is no increase in the CPI-W, there is no cost-of-living benefit increase. See table V.C1.

Auxiliary benefits. Monthly benefits payable to a spouse or child of a retired or disabled worker, or to a survivor of a deceased worker.

Average indexed monthly earnings—AIME. The measure of lifetime earnings used in determining the primary insurance amount (PIA) for most workers who attain age 62, become disabled, or die after 1978. A worker's actual past earnings are adjusted by changes in the average wage index, in order to bring them up to their approximately equivalent value at the time of retirement or other eligibility for benefits.

Average wage index—AWI. A series that generally increases with the average amount of total wages per worker with any wages for each year after 1950, including wages in noncovered employment and wages in covered employment in excess of the OASDI contribution and benefit base. (See Title 20, Chapter III, section 404.211(c) of the Code of Federal Regulations for a more precise definition.) The average wage index is used to index the taxable earnings of most workers first becoming eligible for benefits in 1979 or later, and for automatic adjustments in the contribution and benefit base, bend points, earnings test exempt amounts, and other wage-indexed amounts. See tables V.C1 and VI.G6.

Award. An administrative determination that an individual is entitled to receive a specified type of OASDI benefit. Awards can represent not only new entrants to the benefit rolls but also persons already on the rolls who become entitled to a different type of benefit. Awards usually result in the immediate payment of benefits, although payments may be deferred or withheld depending on the individual's particular circumstances.

Baby boom. The period from the end of World War II (1946) through 1965 marked by unusually high birth rates.

Bend points. The dollar amounts defining the AIME or PIA brackets in the benefit formulas. For the bend points for years 1979 and later, see table V.C2.

Beneficiary. A person who has been awarded benefits on the basis of his or her own or another's earnings record. The benefits may be either in current-payment status or withheld.

Benefit award. See "Award."

Benefit conversion. See "Disability conversion."

Benefit payments. The amounts disbursed for OASI and DI benefits by the Department of the Treasury.

Benefit termination. See "Termination."

Best estimate assumptions. See "Assumptions."

Board. See "Board of Trustees."

Board of Trustees. A Board established by the Social Security Act to oversee the financial operations of the Federal Old-Age and Survivors Insurance Trust Fund and the Federal Disability Insurance Trust Fund. The Board is composed of six members. Four members serve by virtue of their positions in the Federal Government: the Secretary of the Treasury, who is the Managing Trustee; the Secretary of Labor; the Secretary of Health and Human Services; and the Commissioner of Social Security. The President appoints and the Senate confirms the other two members to serve as public representatives. Also referred to as the "Board" or the "Trustees."

Cash flow. Actual or projected revenue (other than interest paid to the trust funds) and costs reflecting the levels of payroll tax contribution rates and benefits scheduled in the law. Net cash flow is the difference between noninterest income and cost.

Consumer Price Index—CPI. An official measure of inflation in consumer prices. In this report, CPI refers to the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W). The Bureau of Labor Statistics, Department of Labor, publishes historical values for the CPI-W.

Contribution and benefit base. Annual dollar amount above which earnings in employment covered under the OASDI program are neither taxable nor creditable for benefit-computation purposes. (Also referred to as maximum contribution and benefit base, annual creditable maximum, taxable maximum, and maximum taxable.) See tables V.C1 and V.C6. See "Hospital Insurance (HI) contribution base."

Contributions. See "Payroll tax contributions."

Conversion. See "Disability conversion."

Cost. The cost shown for a year includes benefits scheduled for payment in the year (without regard to the ability to make the payments in full), administrative expenses, financial interchange with the Railroad Retirement program, and payments for vocational rehabilitation services for disabled beneficiaries.

Cost-of-living adjustment. See "Automatic cost-of-living benefit increase."

Cost rate. The cost rate for a year is the ratio of the cost of the program to the taxable payroll for the year.

Covered earnings. Wages or earnings from self-employment covered by the OASDI program.

Covered employment. All employment for which earnings are creditable for Social Security purposes. The program covers almost all employment. Some exceptions are:

- State and local government employees whose employer has not elected to be covered under Social Security and who are participating in an employer-provided pension plan.
- Current Federal civilian workers hired before 1984 who have not elected to be covered.
- Self-employed workers earning less than $400 in a calendar year.

Covered worker. A person who has earnings creditable for Social Security purposes based on services for wages in covered employment or income from covered self-employment.

CPI-indexed dollars. Amounts adjusted by the CPI to the value of the dollar in a particular year.

Creditable earnings. Wages or self-employment earnings posted to a worker's earnings record. Such earnings determine eligibility for benefits and the amount of benefits on that worker's record. The contribution and benefit base is the maximum amount of creditable earnings for each worker in a calendar year.

Current-cost financing. See "Pay-as-you-go financing."

Current dollars. Amounts expressed in nominal dollars with no adjustment for inflation.

Currently insured status. A worker is currently insured when he or she has accumulated six quarters of coverage during the 13-quarter period ending with the current quarter.

Current-payment status. Status of a beneficiary to whom a benefit is being paid for a given month (with or without deductions, provided the deductions add to less than a full month's benefit).

Deemed filing. Under certain circumstances, a person applying for or receiving either an aged-spouse benefit or a retired-worker benefit is required to also file for the other of these two types of benefits. For those first eligible for benefits before 2016, this requirement applies to any person under normal retirement age who is eligible for the other benefit as of the starting month for the first benefit. For those first eligible for benefits in 2016 and later, this requirement applies whenever the person is eligible for the other benefit. This can occur at any age, and in months after the starting month of the first benefit.

Deemed wage credit. See "Military service wage credits."

Delayed retirement credits. Increases in the benefit amount for certain individuals who did not receive benefits for months after attaining normal retirement age but before age 70. Delayed retirement credits apply to benefits for

January of the year following the year they are earned or for the month of attainment of age 70, whichever comes first. See table V.C3.

Demographic assumptions. See "Assumptions."

Disability. For Social Security purposes, the inability to engage in any substantial gainful activity (see "Substantial gainful activity—SGA") by reason of any medically determinable physical or mental impairment that can be expected to result in death or to last for a continuous period of not less than 12 months. Special rules apply for workers at ages 55 and over whose disability is based on blindness.

The law generally requires that a person be disabled continuously for 5 months before he or she can qualify for a disabled-worker benefit.

Disability conversion ratio. For a given year, the ratio of the number of disability conversions to the average number of disabled-worker beneficiaries at all ages during the year.

Disability conversion. Upon attainment of normal retirement age, a disabled-worker beneficiary is automatically converted to retired-worker status.

Disability incidence rate. The proportion of workers in a given year, insured for but not receiving disability benefits, who apply for and are awarded disability benefits.

Disability Insurance (DI) Trust Fund. See "Trust fund."

Disability insured status. A worker is disability insured if he or she is: (1) a fully insured worker who has accumulated 20 quarters of coverage during the 40-quarter period ending with the current quarter, (2) a fully insured worker aged 24-30 who has accumulated quarters of coverage during one-half of the quarters elapsed after the quarter of attainment of age 21 and up to and including the current quarter, or (3) a fully insured worker under age 24 who has accumulated six quarters of coverage during the 12-quarter period ending with the current quarter.

Disability prevalence rate. The proportion of persons insured for disability benefits who are disabled-worker beneficiaries in current-payment status.

Disability termination rate. The proportion of disabled-worker beneficiaries in a given year whose disability benefits terminate as a result of their recovery or death.

Disabled-worker benefit. A monthly benefit payable to a disabled worker under normal retirement age and insured for disability. Before November 1960, disability benefits were limited to disabled workers aged 50-64.

Dual entitlement. A person may be entitled to more than one benefit at the same time. For example, a person may be entitled as a retired worker on his or her own record and as a spouse on another record. However, a person's benefit amount can never exceed the highest single benefit to which that per-

son is entitled. Some benefits are calculated independently with the larger benefit being paid or the smaller benefit being paid plus the excess amount of the larger one.

Earnings. Unless otherwise qualified, all wages from employment and net earnings from self-employment, whether or not they are taxable or covered.

Earnings test. The provision requiring the withholding of benefits if beneficiaries under normal retirement age have earnings in excess of certain exempt amounts. See table V.C1.

Economic assumptions. See "Assumptions."

Effective interest rate. See "Interest rate."

Excess wages. Wages in excess of the contribution and benefit base on which a worker initially makes payroll tax contributions, usually as a result of working for more than one employer during a year. Employee payroll taxes on excess wages are refundable to affected employees, while the employer taxes are not refundable.

Expenditures. Actual payments made or expected to be made under current law, including benefits paid or payable, administrative expenses, financial interchange with the Railroad Retirement program, and payments for vocational rehabilitation services for disabled beneficiaries. Includes only the portion of cost that is payable with the financing provisions in current law.

Exposed population. For any event (such as being awarded a benefit, or dying), the group that is exposed to the possibility of experiencing the event. For example, the exposed population for disabled worker awards (incidence) is the disability insured population less those already receiving benefits.

Federal Insurance Contributions Act—FICA. Provision authorizing payroll taxes on the wages of employed persons to provide for Old-Age, Survivors, and Disability Insurance, and for Hospital Insurance. Workers and their employers generally pay the tax in equal amounts.

Financial interchange. Provisions of the Railroad Retirement Act providing for transfers between the trust funds and the Social Security Equivalent Benefit Account of the Railroad Retirement program in order to place each trust fund in the same financial position it would have been had railroad employment always been covered under Social Security.

Fiscal year. The accounting year of the United States Government. Starting in 1976, a fiscal year is the 12-month period ending September 30. For example, fiscal year 2023 began October 1, 2022, and will end September 30, 2023.

Full advance funding. A financing method in which contributions are established to match the full cost of future benefits as these costs are incurred through current service. Such financing methods also provide for amortization over a fixed period of any financial obligation that is incurred at the

beginning of the program (or subsequent modification) as a result of granting credit for past service.

Fully insured status. A worker is fully insured when his or her total number of quarters of coverage is greater than or equal to the number of years elapsed after the year of attainment of age 21 (but not less than six). Once a worker has accumulated 40 quarters of coverage, he or she remains permanently fully insured.

General Fund of the Treasury. Funds held by the Treasury of the United States, other than income collected for a specific purpose (such as Social Security), and maintained in a separate account for that purpose.

General Fund reimbursements. Payments from the General Fund of the Treasury to the trust funds for specific items defined in the law, including:

- The cost of noncontributory wage credits for military service before 1957, and periodic adjustments of previous determinations.
- The cost in 1971-82 of deemed wage credits for military service performed after 1956.
- The cost of benefits to certain uninsured persons who attained age 72 before 1968.
- The cost of payroll tax credits provided to employees in 1984 and self-employed persons in 1984-89 by Public Law 98-21.
- The cost in 2009-17 of excluding certain self-employment earnings from SECA taxes under Public Law 110-246.
- Payroll tax revenue forgone under the provisions of Public Laws 111-147, 111-312, 112-78, and 112-96.
- A portion of proceeds from repayments of loans authorized under Public Law 116-136.

The General Fund also reimburses the trust funds for various other items, including interest on checks which are not negotiated 6 months after the month of issue and costs incurred in performing certain legislatively mandated activities not directly related to administering the OASI and DI programs.

Gross domestic product—GDP. The total dollar value of all goods and services produced by labor and property located in the United States, regardless of who supplies the labor or property.

Hospital Insurance (HI) contribution base. Annual dollar amount above which earnings in employment covered under the HI program are not taxable. (Also referred to as maximum contribution base, taxable maximum, and maximum taxable.) Beginning in 1994, the HI contribution base was eliminated.

High-cost assumptions. See "Assumptions."

Hospital Insurance (HI) Trust Fund. See "Trust fund."

Immigration. See "Lawful permanent resident (LPR) immigration" and "Other-than-LPR immigration."

Income. Income for a given year is the sum of tax revenue on a cash basis (payroll tax contributions and income from the taxation of scheduled benefits), reimbursements from the General Fund of the Treasury, if any, and interest credited to the trust funds.

Income rate. Ratio of non-interest income to the OASDI taxable payroll for the year.

Infinite horizon. The period extending indefinitely into the future.

Inflation. An increase in the general price level of goods and services.

Insured status. The state or condition of having sufficient quarters of coverage to meet the eligibility requirements for retired-worker or disabled-worker benefits, or to permit the worker's spouse and children or survivors to establish eligibility for benefits in the event of his or her disability, retirement, or death. See "Quarter of coverage."

Interest. A payment in exchange for the use of money during a specified period.

Interest rate. Interest rates on new public-debt obligations issuable to Federal trust funds (see "Special public-debt obligation") are determined monthly. Such rates are equal to the average market yield on all outstanding marketable U.S. securities not due or callable until after 4 years from the date the rate is determined. See table V.B2 for historical and assumed future interest rates on new special-issue securities. The effective interest rate for a trust fund is the ratio of the interest earned by the fund over a given period of time to the average level of asset reserves held by the fund during the period. The effective rate of interest thus represents a measure of the overall average interest earnings on the fund's portfolio of investments. See table VI.G6 for projected compound new-issue interest factors and compound effective trust-fund interest factors.

Interfund borrowing. The borrowing of asset reserves by a trust fund (OASI, DI, or HI) from another trust fund when the first fund is in danger of depletion. The Social Security Act permitted interfund borrowing only during 1982 through 1987, and required all amounts borrowed to be repaid prior to the end of 1989. The only exercise of this authority occurred in 1982, when the OASI Trust Fund borrowed from the DI and HI Trust Funds. The final repayment of borrowed amounts occurred in 1986.

Intermediate assumptions. See "Assumptions."

Lawful permanent resident (LPR) immigration. Persons who enter the Social Security area population and are granted LPR status, or who are already in the Social Security area population and adjust their status to become LPRs. Persons who enter the country with legal visas but without

LPR status, such as temporary foreign workers and students, are not included in the "LPR immigration" category.

Legal emigration. Lawful permanent residents and citizens who leave the Social Security area population.

Life expectancy. Average remaining number of years expected prior to death. Period life expectancy is calculated for a given year using the actual or expected death rates at each age for that year. Cohort life expectancy, sometimes referred to as generational life expectancy, is calculated for individuals at a specific age in a given year using actual or expected death rates from the years in which the individuals would actually reach each succeeding age if they survive.

Long-range. The first 75 projection years. The Trustees make long-range actuarial estimates for this period because it covers approximately the maximum remaining lifetime for virtually all current Social Security participants.

Low-cost assumptions. See "Assumptions."

Lump-sum death payment. A lump sum, generally $255, payable on the death of a fully or currently insured worker. The lump sum is payable to the surviving spouse of the worker, under most circumstances, or to the worker's children.

Maximum family benefit. The maximum monthly amount that can be paid on a worker's earnings record. Whenever the total of the individual monthly benefits payable to all the beneficiaries entitled on one earnings record exceeds the maximum, each dependent's or survivor's benefit is proportionately reduced. Benefits payable to divorced spouses or surviving divorced spouses are not reduced under the family maximum provision.

Medicare. A nationwide, Federally administered health insurance program authorized in 1965 under Title XVIII of the Social Security Act to cover the cost of hospitalization, medical care, and some related services for most persons age 65 and over. In 1972, lawmakers extended coverage to persons receiving Social Security Disability Insurance payments for 2 years and persons with End-Stage Renal Disease. (For beneficiaries whose primary or secondary diagnosis is Amyotrophic Lateral Sclerosis, the 2-year waiting period is waived.) In 2010, persons exposed to environmental health hazards within areas under a corresponding emergency declaration became Medicare-eligible. In 2006, prescription drug coverage was added as well. Medicare consists of two separate but coordinated trust funds—Hospital Insurance (HI, Part A) and Supplementary Medical Insurance (SMI). The SMI Trust Fund is composed of two separate accounts—the Part B account and the Part D account. Almost all persons who are aged 65 and over or disabled and who are entitled to HI are eligible to enroll in Part B and Part D on a voluntary basis by paying monthly premiums.

Military service wage credits. Credits toward OASDI earnings records for benefit computation purposes, recognizing that military personnel receive non-wage compensation (such as food and shelter) in addition to their basic pay and other cash payments. Military personnel do not pay payroll taxes on these credits. Noncontributory wage credits of $160 were provided for each month of active military service from September 16, 1940, through December 31, 1956. For years after 1956, the basic pay of military personnel is covered under the Social Security program on a contributory basis. In addition to the contributory credits for basic pay, noncontributory wage credits of $300 were granted for each calendar quarter, from January 1957 through December 1977, in which a person received pay for military service. Noncontributory wage credits of $100 were granted for each $300 of military wages, up to a maximum credit of $1,200 per calendar year, from January 1978 through December 2001.

National average wage index—AWI. See "Average wage index—AWI."

Non-interest income. Non-interest income for a given year is the sum of tax revenue on a cash basis (payroll tax contributions and income from the taxation of scheduled benefits) and reimbursements from the General Fund of the Treasury, if any.

Nonresident alien beneficiary. An OASDI beneficiary who is not a U.S. citizen and who is living abroad while receiving benefits.

Normal retirement age—NRA. The age at which a person may first become entitled to retirement benefits without reduction based on age. For persons reaching age 62 before 2000, the normal retirement age is 65. It increases gradually to 67 for persons reaching age 62 in 2022 or later, beginning with an increase to 65 years and 2 months for persons reaching age 62 in 2000. See table V.C3.

Old-Age and Survivors Insurance (OASI) Trust Fund. See "Trust fund."

Old-law base. Amount the contribution and benefit base would have been if the 1977 amendments had not provided for ad hoc increases. The Social Security Amendments of 1972 provided for automatic annual indexing of the contribution and benefit base. The Social Security Amendments of 1977 specified ad hoc bases for 1978-81, with subsequent bases updated in accordance with the normal indexing procedure. See table V.C2.

Open-group unfunded obligation. See "Unfunded obligation."

Other-than-LPR emigration. Other-than-LPR immigrants who leave the Social Security area population or who adjust their status to become LPRs.

Other-than-LPR immigration. Persons who enter the Social Security area population and stay to the end of the year without being granted LPR status, such as undocumented immigrants, and foreign workers and students entering with temporary visas.

Par value. The value printed on the face of a bond. For special issues held by the trust funds, par value is the redemption value at any time up to maturity.

Partial advance funding. A financing method in which contribution levels are established to provide a substantial accumulation of trust fund asset reserves, thereby generating interest income to the trust funds and reducing the need for contribution increases or cost reductions in periods when costs are relatively high or income is relatively low. The trust fund buildup under partial advance funding is smaller than it would be with full advance funding.

Pay-as-you-go financing. A financing method in which contribution levels are established with the intent to produce annual income levels required to pay current benefits, with trust fund asset reserves built up only to the extent needed to prevent immediate depletion of the fund reserves by random fluctuations.

Payroll tax contributions. The amount based on a percent of earnings, up to an annual maximum, that must be paid by:

- employers and employees on wages from employment under the Federal Insurance Contributions Act,
- the self-employed on net earnings from self-employment under the Self-Employment Contributions Act, and
- States on the wages paid in 1986 and earlier to State and local government employees covered under the Social Security Act through voluntary agreements under section 218 of the act.

Also referred to as payroll taxes.

Population in the Social Security area. See "Social Security area population."

Potential GDP. Sustainable trend level of GDP (see "Gross domestic product—GDP"). That is, the hypothetical level of GDP that would be achieved at full sustainable employment and use of capital. For the purposes of this report, potential GDP is estimated consistent with long-range ultimate assumptions for the unemployment rate and other economic variables and can be interpreted as the hypothetical level of GDP in the absence of business cycles and other short-term fluctuations.

Present value. The equivalent value, at the present time, of a stream of values (either income or cost, past or future). Present value is used widely in calculations involving financial transactions over long periods of time to account for the time value of money, by discounting or accumulating these transactions at the rate of interest. Present-value calculations for this report use the effective yield on combined OASI and DI Trust Fund asset reserves.

Primary insurance amount—PIA. The monthly amount payable to a retired worker who begins to receive benefits at normal retirement age or, generally, to a disabled worker. This amount, which is typically related to the worker's average monthly wage or average indexed monthly earnings, is also used as a base for computing all types of benefits payable on an individual's earnings record.

Primary-insurance-amount formula. The mathematical formula relating the PIA to the AIME for workers who attain age 62, become disabled, or die after 1978. The PIA is equal to the sum of 90 percent of AIME up to the first bend point, plus 32 percent of AIME above the first bend point up to the second bend point, plus 15 percent of AIME in excess of the second bend point. Automatic benefit increases are applied beginning with the year of eligibility. See table V.C2 for historical and assumed future bend points and table V.C1 for historical and assumed future benefit increases.

Quarter of coverage. Basic unit of measurement for determining insured status. For 1978, a worker earned one quarter of coverage, up to four, for each $250 of that worker's annual covered earnings. After 1978, the $250 amount increases automatically with increases in the national average wage index. See table V.C2.

Railroad Retirement. A Federal insurance program, similar to Social Security, designed for workers in the railroad industry. The provisions of the Railroad Retirement Act provide for a system of coordination and financial interchange between the Railroad Retirement program and the Social Security program.

Reallocation of payroll tax rates. An increase in the payroll tax rate for either the OASI or DI Trust Fund, with a corresponding reduction in the rate for the other fund, so that the total OASDI payroll tax rate is not changed.

Real wage differential. The difference between the percentage increases in: (1) the average annual wage in covered employment and (2) the average annual Consumer Price Index. See section V.B.

Recession. A period of adverse economic conditions, generally defined as two or more successive calendar quarters of negative real growth in gross domestic product.

Reserves. See "Trust fund reserves."

Retired-worker benefit. A monthly benefit payable to a fully insured retired worker aged 62 or older or to a person entitled under the transitionally insured status provision in the law.

Retirement earnings test. See "Earnings test."

Retirement eligibility age. The age, currently age 62, at which a fully insured individual first becomes eligible to receive retired-worker benefits.

Scheduled benefits. The level of benefits specified under current law.

Scenario-based model. A model with specified assumptions for and relationships among variables. Under such a model, any specified set of assumptions determines a single outcome directly reflecting the specifications.

Self-employment. Operation of a trade or business by an individual or by a partnership in which an individual is a member.

Self-Employment Contributions Act–SECA. Provision authorizing Social Security payroll taxes on the net earnings of most self-employed persons.

Short-range. The first 10 projection years. The Social Security Act requires estimates for 5 years; the Trustees prepare estimates for an additional 5 years to help clarify trends that are only starting to develop in the mandated first 5-year period.

Social Security Act. Provisions of the law governing most operations of the Social Security program. The original Social Security Act is Public Law 74-271, enacted August 14, 1935. With subsequent amendments, the Social Security Act consists of 21 titles, of which three have been repealed. Title II of the Social Security Act authorizes the Old-Age, Survivors, and Disability Insurance program.

Social Security area population. The population composed of: (1) residents of the 50 States and the District of Columbia (adjusted for net census undercount); (2) civilian residents of Puerto Rico, the Virgin Islands, Guam, American Samoa, and the Northern Mariana Islands; (3) Federal civilian employees and persons in the U.S. Armed Forces abroad and their dependents; (4) non-citizens living abroad who are insured for Social Security benefits; and (5) all other U.S. citizens abroad.

Solvency. A program is solvent at a point in time if it is able to pay scheduled benefits when due with scheduled financing. For example, the OASDI program is solvent over any period for which the trust funds maintain a positive level of asset reserves.

Special public-debt obligation. Securities of the United States Government issued exclusively to the OASI, DI, HI, and SMI Trust Funds and other Federal trust funds. Section 201(d) of the Social Security Act provides that the public-debt obligations issued for purchase by the OASI and DI Trust Funds shall have maturities fixed with due regard for the needs of the funds. The usual practice has been to spread the holdings of special issues, as of each June 30, so that the amounts maturing in each of the next 15 years are approximately equal. Special public-debt obligations are redeemable at par value at any time and carry interest rates determined by law (see "Interest rate"). See tables VI.A4 and VI.A5 for a listing of the obligations held by the OASI and DI Trust Funds, respectively.

Stochastic model. A model used for projecting a probability distribution of potential outcomes. Such models allow for random variation in one or more variables through time. The random variation is generally based on fluctuations observed in historical data for a selected period. A large number of sim-

ulations, each of which reflects random variation in the variable(s), produce a distribution of potential outcomes.

Substantial gainful activity—SGA. The level of work activity used to establish disability. A finding of disability requires that a person be unable to engage in substantial gainful activity. A person who earns more than a certain monthly amount (net of impairment-related work expenses) is ordinarily considered to be engaging in SGA. The amount of monthly earnings considered as SGA depends on the nature of a person's disability. The Social Security Act specifies a higher SGA amount for statutorily blind individuals; Federal regulations specify a lower SGA amount for non-blind individuals. Both SGA amounts increase with increases in the national average wage index.

Summarized balance. The difference between the summarized income rate and the summarized cost rate, expressed as a percentage of GDP. The difference between the summarized income rate and cost rate as a percentage of taxable payroll is referred to as the actuarial balance.

Summarized cost rate. The ratio of the present value of cost to the present value of the taxable payroll (or GDP) for the years in a given period, expressed as a percentage. To evaluate the financial adequacy of the program, the summarized cost rate is adjusted to include the cost of reaching and maintaining a target trust fund level. A trust fund level of about 1 year's cost is considered to be an adequate reserve for unforeseen contingencies; therefore, the targeted trust fund ratio is 100 percent of annual cost. Accordingly, the adjusted summarized cost rate is equal to the ratio of: (1) the sum of the present value of the cost during the period plus the present value of the targeted ending trust fund level to (2) the present value of the taxable payroll (or GDP) during the projection period.

Summarized income rate. The ratio of the present value of scheduled noninterest income to the present value of taxable payroll (or GDP) for the years in a given period, expressed as a percentage. To evaluate the financial adequacy of the program, the summarized income rate is adjusted to include asset reserves on hand at the beginning of the period. Accordingly, the adjusted summarized income rate equals the ratio of: (1) the sum of the trust fund reserve at the beginning of the period plus the present value of noninterest income during the period to (2) the present value of the taxable payroll (or GDP) for the years in the period.

Supplemental Security Income—SSI. A Federally administered program (often with State supplementation) of cash assistance for needy aged, blind, or disabled persons. The General Fund of the Treasury funds Federal expenditures for the SSI program. The Social Security Administration administers it.

Supplementary Medical Insurance (SMI) Trust Fund. See "Trust fund."

Survivor benefit. Benefit payable to a survivor of a deceased worker.

Sustainable solvency. Sustainable solvency for the financing of the program under a specified set of assumptions is achieved when the projected trust fund ratio is positive throughout the 75-year projection period and is either stable or rising at the end of the period.

Taxable earnings. Wages or self-employment income, in employment covered by the OASDI or HI programs, that is under the applicable annual maximum taxable limit. For 1994 and later, no maximum taxable limit applies to the HI program.

Taxable payroll. A weighted sum of taxable wages and taxable self-employment income. When multiplied by the combined employee-employer payroll tax rate, taxable payroll yields the total amount of payroll taxes incurred by employees, employers, and the self-employed for work during the period.

Taxable self-employment income. The maximum amount of net earnings from self-employment by an earner which, when added to any taxable wages, does not exceed the contribution and benefit base. For HI beginning in 1994, all net earnings from self-employment.

Taxable wages. See "Taxable earnings."

Taxation of benefits. Beginning in 1984, Federal law subjected up to 50 percent of an individual's or a couple's OASDI benefits to Federal income taxation under certain circumstances. Treasury allocates the revenue derived from this provision to the OASI and DI Trust Funds on the basis of the income taxes paid on the benefits from each fund. Beginning in 1994, the law increased the maximum percentage from 50 percent to 85 percent. The HI Trust Fund receives the additional tax revenue resulting from the increase to 85 percent.

Taxes. See "Payroll tax contributions" and "Taxation of benefits."

Termination. Cessation of payment because the beneficiary is no longer entitled to receive a specific type of benefit. For example, benefits might terminate as a result of the death of the beneficiary, the recovery of a disabled beneficiary, or the attainment of age 18 by a child beneficiary. In some cases, an individual may cease one benefit and this is not a termination because they become immediately entitled to another type of benefit, such as the conversion of a disabled-worker beneficiary at normal retirement age to a retired-worker beneficiary.

Test of long-range close actuarial balance. The conditions required to meet this test are:

- The trust fund satisfies the test of short-range financial adequacy; and
- The trust fund ratio stays above zero throughout the 75-year projection period, such that benefits would be payable in a timely manner throughout the period.

The Trustees apply the test to OASI, DI, and the combined OASDI program based on the intermediate set of assumptions.

Test of short-range financial adequacy. The conditions required to meet this test are:

- If the trust fund ratio is at least 100 percent at the beginning of the 10-year projection period, then it must remain at or above 100 percent throughout the entire projection period;
- If the ratio is initially less than 100 percent, then it must reach at least 100 percent within 5 years (without reserve depletion at any time during this period) and then remain at or above 100 percent throughout the remainder of the 10-year period.

The Trustees apply the test to OASI, DI, and the combined OASDI program based on the intermediate set of assumptions.

Total-economy productivity. The ratio of real GDP to hours worked by all workers. Also referred to as "labor productivity."

Total fertility rate. The sum of the single-year-of-age birth rates for girls and women aged 14 through 49, where the rate for age 14 includes births to girls aged 14 and under, and the rate for age 49 includes births to women aged 49 and over. The total fertility rate may be interpreted as the average number of children that would be born to a woman if she were to experience, at each age of her life, the birth rate observed in, or assumed for, a specified year, and if she were to survive the entire childbearing period.

Trust fund. Separate accounts in the United States Treasury which hold the payroll taxes received under the Federal Insurance Contributions Act and the Self-Employment Contributions Act; payroll taxes resulting from coverage of State and local government employees; any sums received under the financial interchange with the railroad retirement account; voluntary hospital and medical insurance premiums; and reimbursements or payments from the General Fund of the Treasury. As required by law, the Department of the Treasury invests funds not required to meet current expenditures in interest-bearing securities backed by the full faith and credit of the U.S. Government. The interest earned is also deposited in the trust funds.

- **Old-Age and Survivors Insurance (OASI).** The trust fund used for paying monthly benefits to retired-worker (old-age) beneficiaries, their spouses and children, and to survivors of deceased insured workers.
- **Disability Insurance (DI).** The trust fund used for paying monthly benefits to disabled-worker beneficiaries, their spouses and children, and for providing rehabilitation services to the disabled.

- **Hospital Insurance (HI).** The Medicare trust fund that covers specified inpatient hospital services, posthospital skilled nursing care, home health services, and hospice care for aged and disabled individuals who meet the eligibility requirements. Also known as Medicare Part A.
- **Supplementary Medical Insurance (SMI).** The Medicare trust fund composed of the Part B Account, the Part D Account, and the Transitional Assistance Account. The Part B Account pays for a portion of the costs of physicians' services, outpatient hospital services, and other related medical and health services for voluntarily enrolled aged and disabled individuals. The Part D Account pays private plans to provide prescription drug coverage, beginning in 2006. The Transitional Assistance Account paid for transitional assistance under the prescription drug card program in 2004 and 2005.

The trust funds are distinct legal entities which operate independently. Fund operations are sometimes combined on a hypothetical basis.

Trust fund ratio. A measure of trust fund adequacy. The asset reserves at the beginning of a year (equal to the reserves at the end of the prior year), which do not include advance tax transfers, expressed as a percentage of the cost for the year. The trust fund ratio represents the proportion of a year's cost which could be paid solely with the reserves at the beginning of the year.

Trust fund reserve depletion. The point at which reserves in a trust fund are insufficient to pay scheduled benefits in full and on time.

Trust fund reserves. The cumulative excess of trust fund income over trust fund cost over all years to date. These reserves are held by the trust funds in the form of Treasury notes and bonds, other securities guaranteed by the Federal Government, certain Federally sponsored agency obligations, and cash.

Trustees. See "Board of Trustees."

Undisbursed balances. In general, refers to the cumulative differences between the actual cash payments for a month compared to security redemptions from the trust fund reserves made on a preliminary basis to cover such cash payments during the same month. On a monthly basis, the Social Security Administration (SSA) pays benefits and makes payments for other programmatic expenses associated with the trust funds. During each month, SSA draws cash from the trust funds on a preliminary basis, which results in Treasury redeeming invested securities to cover such payments. This monthly difference can be either positive or negative depending on net monthly activity, and is added to the balance at the end of the prior month.

A net positive undisbursed balance represents a situation where cumulative redemptions from the trust fund's securities are more than was needed to cover actual program cash payments through the end of the month. A net negative balance represents a situation where cumulative program cash pay-

ments exceeded the amount redeemed from the invested securities. A negative value requires future redemption of additional invested securities.

In addition, about every seven years, when January 3 falls on a Sunday, benefit payments scheduled to be paid on January 3rd are actually paid on December 31 of the preceding year, as required by the statutory provision included in the 1977 Social Security Amendments for early delivery of benefit payments when the normal payment delivery date is a Saturday, Sunday, or legal public holiday. Consistent with practice in prior reports and for comparability with other historical years and the projections in this report, all trust fund operations and asset reserves reflect the 12 months of benefits scheduled for payment in each year. Therefore, such advance payments are included as positive values in the undisbursed balance at the end of the calendar years in which the advance payments are made.

Unfunded obligation. A measure of the shortfall of trust fund income to fully cover program cost through a specified date after depletion of trust fund asset reserves. This measure can be expressed in present value dollars, discounted to the beginning of the valuation period, by computing the excess of the present value of the projected cost of the program through a specified date over the sum of: (1) the value of trust fund reserves at the beginning of the valuation period; and (2) the present value of the projected non-interest income of the program through a specified date, assuming scheduled tax rates and benefit levels. This measure can apply for all participants through a specified date, i.e., the open group, or be limited to a specified subgroup of participants.

Unfunded obligation ratio. The unfunded obligation accumulated through the beginning of a year expressed as a percentage of the cost for the year.

Unnegotiated check. A check which has not been cashed 6 months after the end of the month in which the check was issued. When a check has been outstanding for a year, the Department of the Treasury administratively cancels the check and reimburses the issuing trust fund separately for the amount of the check and interest for the period the check was outstanding. The appropriate trust fund also receives an interest adjustment for the time the check was outstanding if it is cashed 6 to 12 months after the month of issue. If a check is presented for payment after it has been administratively canceled, a replacement check is issued.

Valuation period. A period of years which is considered as a unit for purposes of calculating the financial status of a trust fund.

Vocational rehabilitation (VR). Services provided to disabled persons to help them to return to gainful employment. VR services are designed to provide an individual with the training or other services that are needed to return to work, to begin working, or to enter a new line of work. The trust funds, and the General Fund in the case of individuals also receiving Supplemental

Security Income disability benefits, reimburse the providers of such services only in those cases where the services contributed to the successful rehabilitation of the beneficiaries.

STATEMENT OF ACTUARIAL OPINION

It is my opinion that: (1) the techniques and methodology used herein to evaluate the actuarial status of the Federal Old-Age and Survivors Insurance and Disability Insurance Trust Funds are based upon sound principles of actuarial practice and are generally accepted within the actuarial profession; and (2) the assumptions used and the resulting actuarial estimates are, individually and in the aggregate, reasonable for the purpose of evaluating the actuarial status of the trust funds, taking into consideration the past experience and future expectations for the population, the economy, and the program. I am a member of the American Academy of Actuaries and I meet the Qualification Standards of the American Academy of Actuaries to render this actuarial opinion.

Stephen C. Goss

Associate, Society of Actuaries
Member, American Academy of Actuaries

NEWS RELEASE
BUREAU OF LABOR STATISTICS
U.S. DEPARTMENT OF LABOR

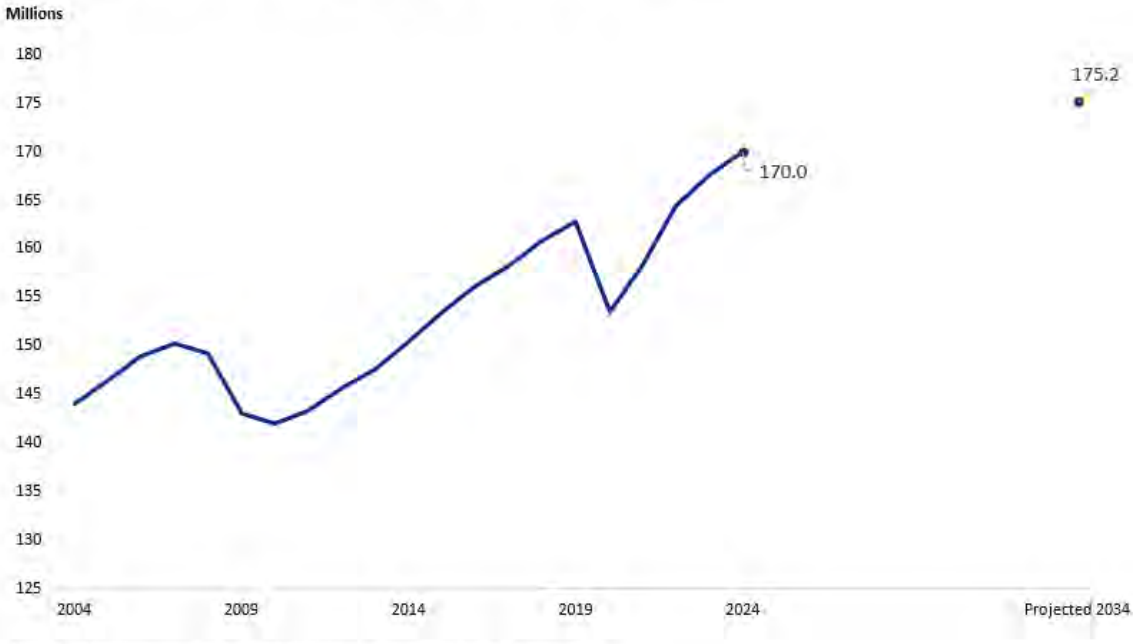
For release 10:00 a.m. (ET) Thursday, August 28, 2025 USDL-25-1324

Technical information: (202) 691-5700 • ep-info@bls.gov • www.bls.gov/emp
Media contact: (202) 691-5902 • PressOffice@bls.gov

EMPLOYMENT PROJECTIONS — 2024–2034

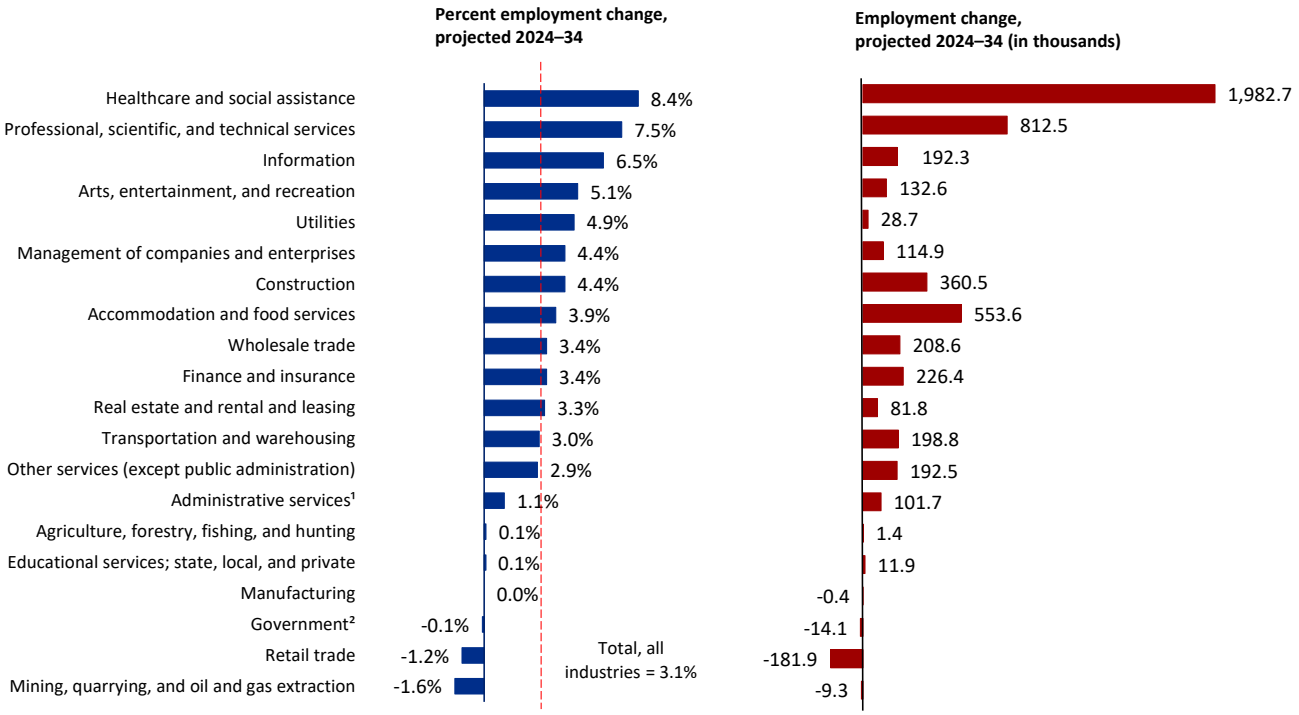
The U.S. economy is projected to add 5.2 million jobs from 2024 to 2034, the U.S. Bureau of Labor Statistics (BLS) reported today. Total employment is projected to increase to 175.2 million and grow 3.1 percent, which is slower than the 13.0-percent growth recorded over the 2014−24 decade. (See chart 1.)

Chart 1. Total employment, 2004–24 and projected 2034



Note: Total employment includes wage and salary employment and self-employment.

Chart 2. Employment change by industry sector, projected 2024–34



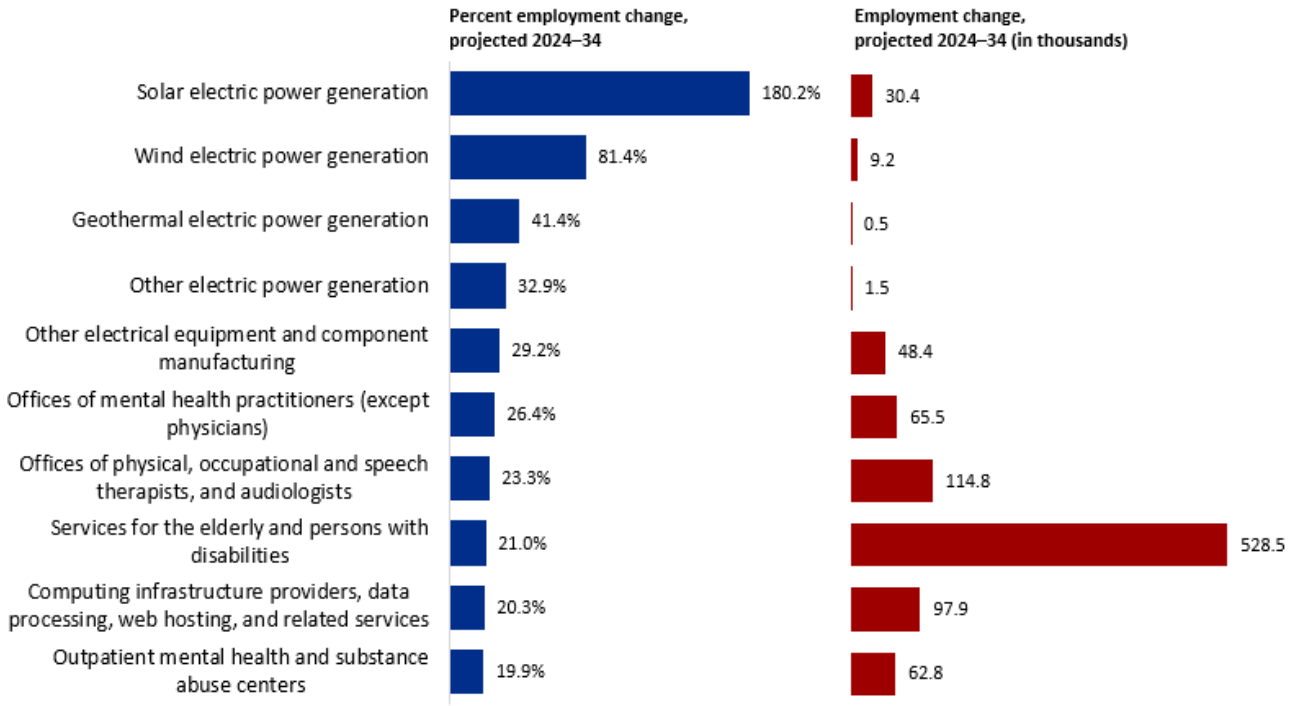
[1]Administrative and support and waste management and remediation services
[2]Excluding state and local education and hospitals
Note: Employment refers to wage and salary employment.

Industry Employment

Healthcare and social assistance is projected to have the largest job growth and be the fastest growing industry sector (+8.4 percent). Employment growth in this sector is expected to be primarily driven by both the aging population and the growing prevalence of chronic conditions, such as heart disease, cancer, and diabetes.

Demand for artificial intelligence (AI)-based systems, data processing, software development, research services, and associated consulting services are expected to drive the need for workers in both the professional, scientific, and technical services sector (+7.5 percent) and the information sector (+6.5 percent). (See chart 2.)

Chart 3. Ten fastest growing industries, projected 2024–34



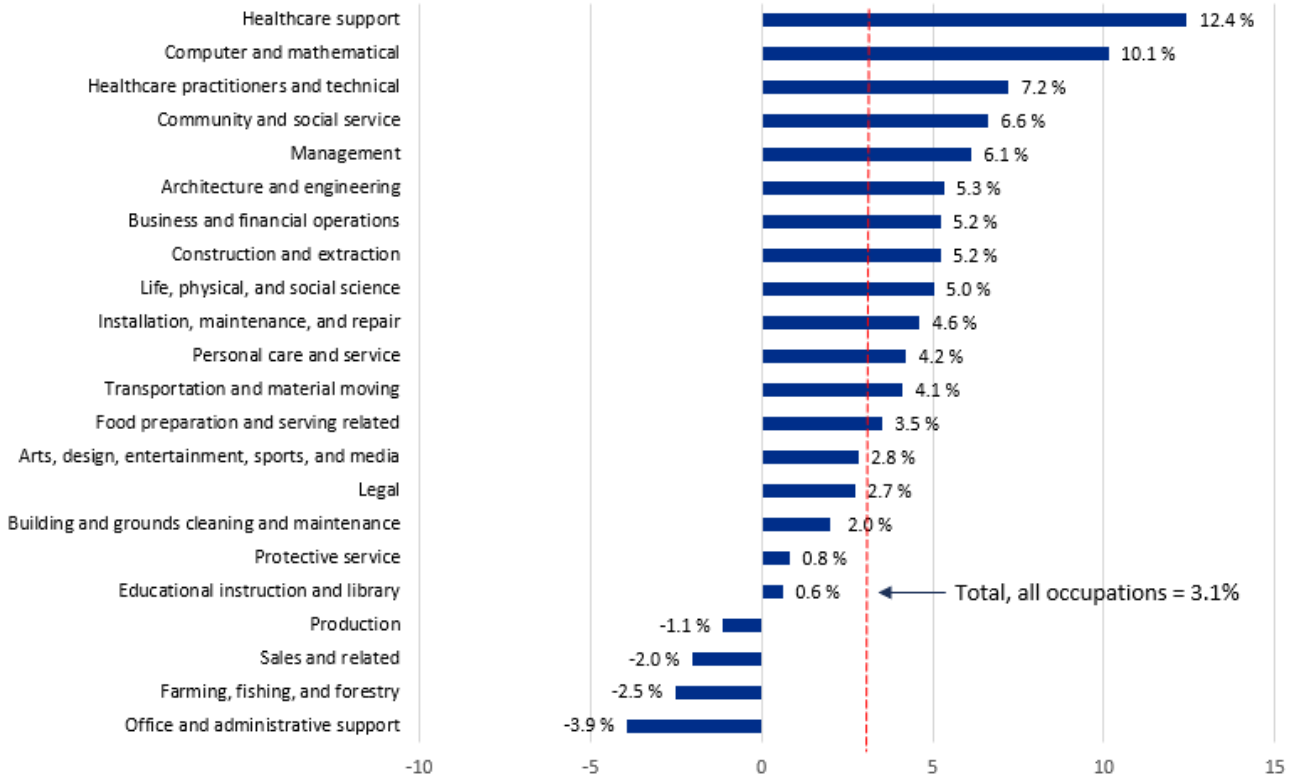
Note: Employment refers to wage and salary employment.

Mining, quarrying, and oil and gas extraction declines (-1.6 percent) are expected to be driven in part by productivity gains through the adoption of emerging technologies, such as robotics and drones, used in extraction. Though not the fastest decline, retail trade (-1.2 percent) is projected to lose the most jobs of any sector as automation, consolidation, and e-commerce are likely to continue to have a negative employment effect on sales occupations at retail outlets. However, the growing volume of online purchases is expected to support employment growth in transportation and warehousing (+3.0 percent), primarily due to an increasing volume of parcel shipments and deliveries.

Increased demand for electricity, primarily related to AI integration, electric vehicles (EVs), and new data centers, is expected over the next decade. As a result, the four top fastest growing industries are related to energy generation. Solar, wind, geothermal, and other electric power generation, which includes tidal power, are projected to be the fastest growing industries over the projections period. (See chart 3.) The four fastest growing industries combined are projected to add 41,600 jobs. The projected fifth-fastest growing industry, other electrical equipment and component manufacturing, includes battery production used for storage and in EVs, is projected to add 48,400 jobs.

Among the ten fastest growing industries, the services for the elderly and persons with disabilities industry (+21.0 percent) is projected to add 528,500 new jobs, the most of any detailed industries. Demand for in-home care will contribute to this growth.

Chart 4. Projected percent change in employment, by occupational group, 2024–34



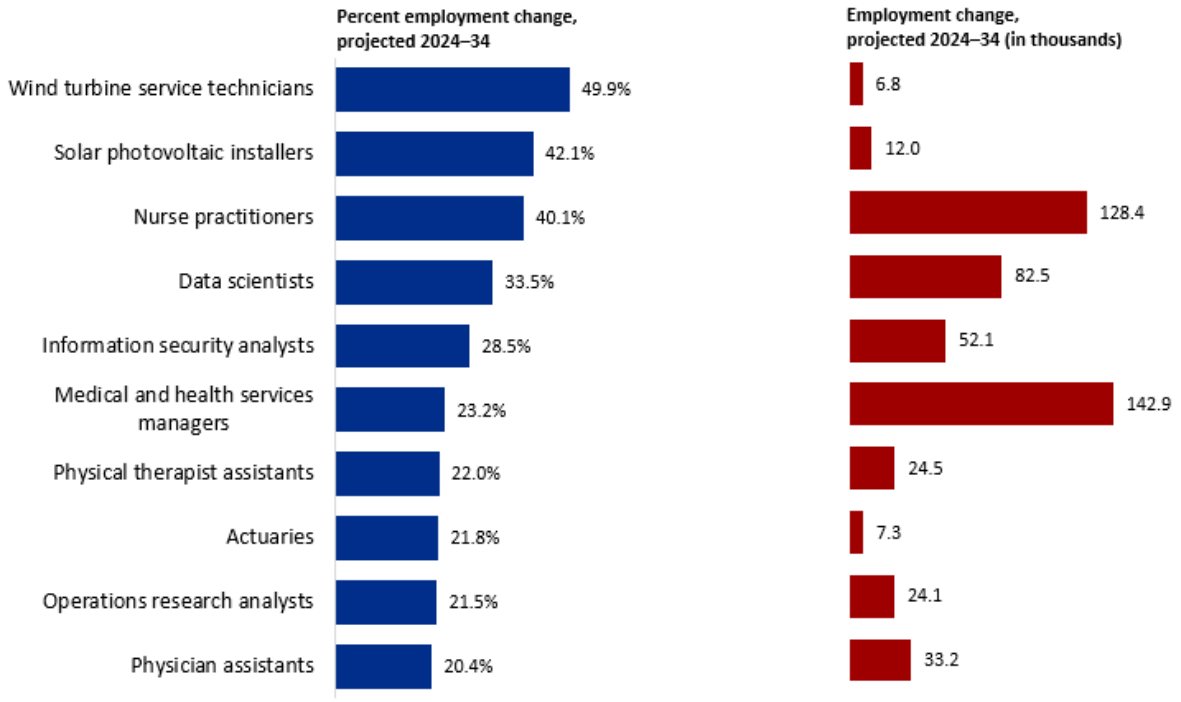
Occupational Employment

Just as fast growth is expected in the healthcare and social assistance sector, healthcare support occupations and healthcare practitioners and technical occupations are projected to be among the fastest growing occupational groups, growing 12.4 percent and 7.2 percent, respectively, from 2024 to 2034. (See chart 4.) The growing elderly population, which typically has greater healthcare needs compared to younger groups, will increase demand for long-term care and therapy services. The healthcare occupations with the fastest projected employment growth—such as nurse practitioners, physical therapist assistants, and physician assistants—assist in meeting this growing demand for care. (See chart 5.) These occupations are key members of care teams, delivering many healthcare services.

Similarly, the projected fast growth for community and social service occupations (+6.6 percent) will stem from more individuals seeking assistance for a variety of challenges, such as marriage and family counseling as well as substance abuse counseling and support.

Technological advancements may also lead to improved productivity for some occupations. The use of automated systems, including AI, is expected to contribute to declining employment of office and administrative support workers. Similarly, the growth of e-commerce as well as the integration of AI systems in sales activities, such as in routine calls, chats, and analysis of sales, are expected to limit demand for many sales workers, leading to employment declines. Advancements in automation will also continue to reduce demand for production occupations.

Chart 5. Ten fastest growing occupations, projected 2024–34



Computer and mathematical occupations are projected to grow the second fastest of any occupational group (+10.1 percent), which is more than three times the average rate of growth projected for the total economy (+3.1 percent). The fast growth of these occupations is expected to stem in part from demand for continued development of AI solutions and an increasing amount of data available for analysis. The growing demand to build AI models, conduct data analysis, and integrate applications into business practices is expected to drive employment of data scientists, the fourth fastest growing occupation in the economy. In addition, the frequency and severity of cyberattacks and data breaches on U.S. businesses is expected to lead to greater demand for information security analysts.

The projected fastest growing occupations over the 2024−34 decade are wind turbine service technicians and solar photovoltaic installers. Although fast growing, the two occupations combined will add fewer than 20,000 new jobs. The repair and maintenance of wind turbines is expected to drive demand for wind turbine service technicians, while installation of new solar panels will lead to the need for more solar photovoltaic installers.

Interpreting the Employment Projections

The Employment Projections (EP) program estimates specific values for projected employment levels and growth rates. However, this precision in the data does not account for the inherent uncertainty of predicting long-term changes in the labor market. Focusing on the direction and relative size of projected changes, rather than on the precise value estimates, may yield similar insights into employment trends and themes across occupations and industries.

The EP program also conducts research on factors that are expected to affect employment, which may not be reflected in historical data, such as emerging technologies and new legislation. Adjustments based on this research are generally applied conservatively such as when there is convincing evidence for a long-term structural change.

More Information

- Detailed information on the 2024–34 industry and occupational employment projections will appear in a separate *Monthly Labor Review* article, to be published later in 2025.
- The *Occupational Outlook Handbook* (*OOH*) includes information on about 600 detailed occupations in over 300 occupational profiles, covering about 4 out of 5 jobs in the economy. Each profile features the 2024–34 projections, along with assessments of the job outlook, work activities, wages, education and training requirements, and more.
- The *OOH* is available online at www.bls.gov/ooh.
- Field of degree pages are available online at www.bls.gov/ooh/field-of-degree/home.htm.
- Information about the importance of various skills by occupation can be found at www.bls.gov/emp/data/skills-data.htm.
- Descriptions of the classification systems and projections methods used can be found on the Employments Projections Methodology Overview page at www.bls.gov/emp/methods-overview.htm.
- Tables with detailed, comprehensive projections data are available online at www.bls.gov/emp/tables.htm.
- Definitions for terms used in this news release are available in the BLS Glossary at www.bls.gov/bls/glossary.htm.

If you are deaf, hard of hearing, or have a speech disability, please dial 7-1-1 to access telecommunications relay services.

Technical Note

BLS publishes projections for the labor force, the macroeconomy, industry output and employment, and occupational employment. More information is available online:

- Labor force: https://www.bls.gov/emp/data/labor-force.htm
- Aggregate economy: https://www.bls.gov/emp/data/aggregate-economy.htm
- Industry output and employment: https://www.bls.gov/emp/data/industry-out-and-emp.htm
- Occupational employment: https://www.bls.gov/emp/data/occupational-data.htm

The projections data provide a potential scenario for changes in the economy over a decade. The projections focus on long-term structural trends of the economy and do not try to anticipate future business cycle activity. To meet this objective, specific assumptions are made about the labor force, macroeconomy, industry output and employment, and occupational employment. The projections are not intended to be a forecast of what the future will be but instead are a description of what would be expected to happen under these specific assumptions and circumstances. When these assumptions are not realized, actual values will differ from projections.

Labor supply and demand assumptions

BLS projects the labor force (labor supply) as an input into the macroeconomic projections. BLS also assumes that the economy will be at full employment in the projected year, with the labor market at equilibrium. That is, employment in the projected year will be roughly equivalent to the projected labor force minus a level of frictional unemployment (the relationship is not exact because labor force is a count of people, while employment is a count of jobs, and individual people can hold more than one job). BLS does not project an overall labor shortage or surplus because in the BLS projections data framework, labor supply (the labor force) and labor demand (employment) are linked – a projected increase in labor supply necessarily results in an increase in employment.

Technological progress assumptions

As with many variables, BLS assumes that labor productivity and technological progress will be in line with the historical experience. That is, productivity will increase and technology will progress, but because the BLS method involves analyzing historical relationships in the data and projecting them forward, the future is assumed to behave comparably to the past. (Previous sets of projections data may be accessed via the Projections Archive: https://www.bls.gov/emp/data/projections-archive.htm.) In a future state where technology advances much more rapidly than it has historically, it is unlikely that historical relationships would hold, and therefore BLS projection methods are unlikely to yield reasonable results.

Recent developments in artificial intelligence (AI) have raised the prospect that the future rate of technological progress could be higher than in the past. BLS projection methods could reflect this in a faster rate of labor productivity growth. This would in turn result in a higher level of gross domestic product (GDP) growth (maintaining the BLS full employment

assumption). If this higher rate of productivity growth is uniform across all industries, there is no impact on BLS employment projections – output is higher, productivity is higher, and employment is the same. However, a higher aggregate level of productivity growth could also be reflected differentially in industry productivity. BLS methods could capture this, but BLS has no data on which to base these differential productivity impacts. BLS therefore chooses to present a scenario with technological progress in line with historical patterns, which allows the projections to be grounded by historical data relationships rather than introducing adjustments that would be highly speculative.

BLS does conduct research on factors that are expected to impact employment, particularly those which may not be reflected in historical data, such as new technologies. However, BLS generally applies adjustments based on this research conservatively, where there is convincing evidence for a change. Developments in AI are proceeding rapidly, and the uncertainty about potential impacts remains very high. Projections are always uncertain, and the exact impact of developments such as new technologies on the labor market ten years out is impossible to predict with precision. As a result, BLS releases new projections annually to incorporate new data, research, and analysis. For more details on how BLS assesses and incorporates AI's potential labor market impacts on its employment projections, illustrated via case studies from the 2023–33 projections cycle, see Christine Machovec, Michael J. Rieley, and Emily Rolen, "Incorporating AI impacts in BLS employment projections: occupational case studies," *Monthly Labor Review*, U.S. Bureau of Labor Statistics, February 2025.

The historical record does show that technology impacts occupations, but that these changes tend to be gradual, not sudden. Occupations involve complex combinations of tasks, and even when technology advances rapidly, it can take time for employers and workers to figure out how to incorporate new technology into business practices. New technologies may change the composition or weighting of tasks performed by an occupation even if they do not impact overall demand for an occupation. For more details on the historical record, see Michael J. Handel, "Growth trends for selected occupations considered at risk from automation," *Monthly Labor Review*, U.S. Bureau of Labor Statistics, July 2022.

For more information, visit the Employment Projections Handbook of Methods page online at https://www.bls.gov/opub/hom/emp/home.htm.

Frequently asked questions about the employment projections are online at https://www.bls.gov/emp/frequently-asked-questions.htm.

Users and Uses

The BLS projections are used by high school and college students, their teachers and parents, jobseekers, career counselors, and guidance specialists to determine jobs in demand. The projections also are used by state workforce agencies to prepare state and area projections that, together with the national projections, are widely used by policymakers to make decisions about education and training, funding allocations, and program offerings. These projections of jobs in demand help improve the alignment between education and training and the

hiring needs of employers. In addition, other federal agencies, researchers, and academics use the projections to understand trends in the economy and labor market.

Projections of industry and occupational employment are prepared by each state, using input from the BLS national projections. State projections data are available at Projections Central https://www.projectionscentral.org.

KAUFFMAN INDICATORS OF ENTREPRENEURSHIP

The Kauffman Indicators of Entrepreneurship offers in-depth measures, reports, and accompanying interactive data visualizations that present entrepreneurial trends in the United States.

FEATURED INDICATOR

Entrepreneurial Jobs Indicators

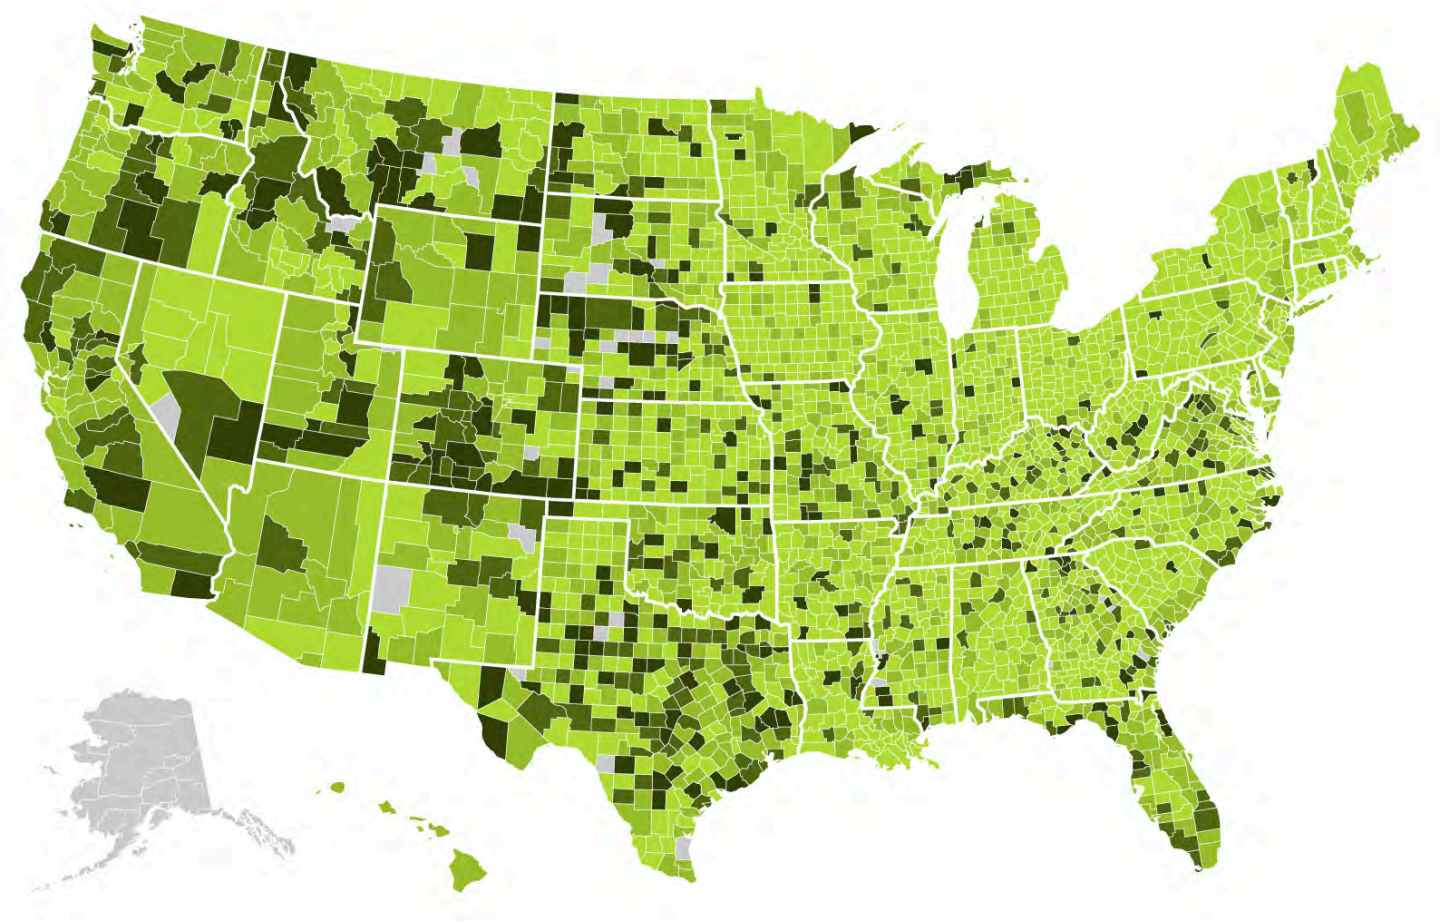
CREATION 2020

Number of net new jobs created at firms aged 0-1 year old per 1,000 people

Creation, measured as net new job change per 1,000 people, reflects the increase or decrease in the number of jobs created in a specific geography by a particular firm age group. Here, a positive value for creation indicates that more jobs are created than lost at firms 0-1 year old in the specific geographic area while a negative value indicates more job losses than job gains.

Compare all states →

Privacy - Terms

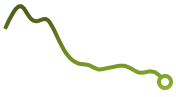


Entrepreneurial Jobs Indicators

VIEW SERIES

The Entrepreneurial Jobs Indicators series captures dimensions related to the quantity and quality of private sector jobs, allowing for comparisons by firm age group (source of jobs) and geography (location of jobs).

CONTRIBUTION



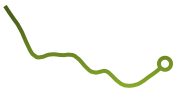
3.15%

NATIONAL RATE 2020

The share of private sector jobs held at firms aged 0-1 year old

---

COMPENSATION



66.40%

NATIONAL RATE 2020

Relative earnings of private sector jobs at firms aged 0-1 year old in a specific geography compared to the average earnings at firms of all ages across the U.S.

CREATION

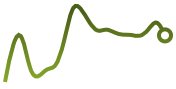
3.99

NATIONAL RATE 2020

Number of net new jobs created at firms aged 0-1 year old per 1,000 people

---

CONSTANCY



53.48%

NATIONAL RATE 2020

Share of jobs held at firms aged 0-1 year old that are stable (lasting three or more quarters)

New Employer Business

VIEW SERIES

The New Employer Business series provides information on new employer businesses, a subset of all entrepreneurial activity. This series includes measures which capture trends in the emergence of these businesses, their representation in the population and among all firms, and the time it takes these businesses to make a first payroll.

RATE OF NEW EMPLOYER BUSINESS ACTUALIZATION

9.16%

NATIONAL RATE 2021

Percent of all new businesses that make a first payroll within eight quarters of business application

---

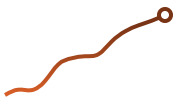
RATE OF NEW EMPLOYER BUSINESSES

0.15

NATIONAL RATE 2021

Number of new employer businesses per 100 people

NEW EMPLOYER BUSINESS VELOCITY



2.06

NATIONAL RATE 2017

Average time to become an employer business, in quarters, within an eight quarter window

---

EMPLOYER BUSINESS NEWNESS

6.98%

NATIONAL RATE 2019

New employers as a share of all employer firms

Early-Stage Entrepreneurship

VIEW SERIES

The Early-Stage Entrepreneurship series is a set of measures that represents new business creation in the United States, integrating several high-quality, timely sources of information on early-stage entrepreneurship.

RATE OF NEW ENTREPRENEURS

0.36%

NATIONAL RATE 2021

Percent of population that starts a new business

OPPORTUNITY SHARE OF NEW ENTREPRENEURS

80.87%

NATIONAL RATE 2021

Percent of new entrepreneurs who created a business by choice instead of necessity

STARTUP EARLY JOB CREATION

4.74

NATIONAL RATE 2021

Average number of jobs created by startups in their first year (normalized by population)

STARTUP EARLY SURVIVAL RATE

81.70%

NATIONAL RATE 2021

Percent of startups that are still active after one year

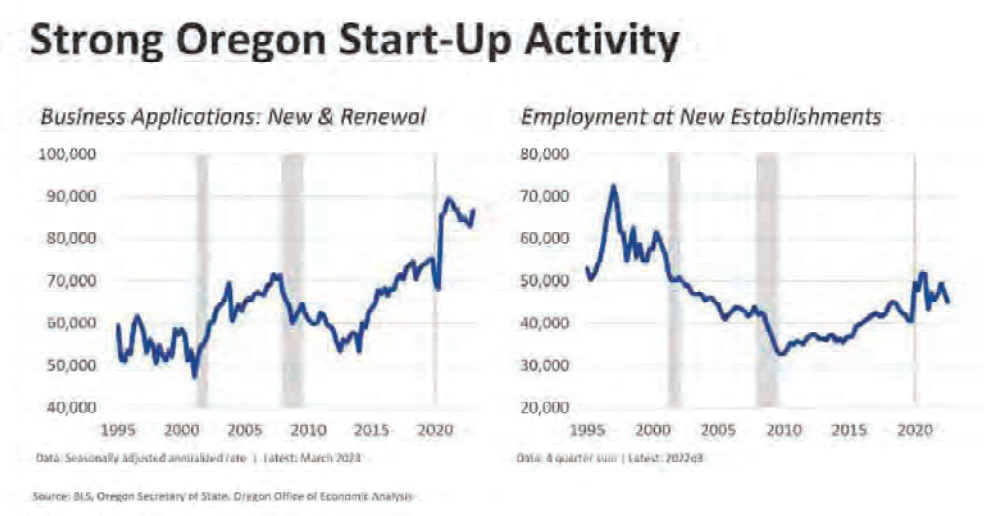
Oregon Office of Economic Analysis

Oregon Economic News, Analysis and Outlook

Strong Start-Up Activity Continues

Posted by: **Josh Lehner** | May 3, 2023

Last week we talked a bit about the labor force outlook and how Oregon appears to be at or near its potential given the strong cyclical economy and aging demographics. Besides labor, the other major driver of economic growth is productivity, which requires business investment and gains in the various types of capital: financial, human, natural, physical, and social. Historically a key source of these gains comes from new businesses. Generally new firms bring new ideas, and/or improved processes that are more efficient to the marketplace. Older or more rigid businesses get left behind as part of the creative destruction process. Start-up activity had clearly been trending down for decades leading up to the pandemic. Since then, new business formation has increased noticeably and appears to be sticking, at least so far as seen in the latest edition of the Graph of the Week.



Running a business is hard. Many firms do not make it beyond their first year or two. Only a couple eventually grow to become a huge, successful firm. As such, one way our office thinks about this is not at the individual firm level, but for Oregon's economy overall. Even if the probability that any given business will be successful remains the same, if you have more ping pong balls in the hopper, your overall probability that one of them will be successful is higher. And while simply having more businesses does not

necessarily lead to increased business investment and productivity gains, it sure is an encouraging signal about those possibilities in the years ahead.

In terms of the outlook for start-up activity there are some crosscurrents. Personal savings and home equity are the most common funding source for new businesses. While those are higher today, and can continue to support and drive this ongoing strength in start-up activity, the impacts of high inflation, rising interest rates, and recession risks likely weighs on new activity a bit. Additionally, we know venture capital and banking lending is tighter today than earlier in the pandemic, which will likely slow new business formation as well.

Now, on the upside two items stand out. One is the potential for a general shift in the economy, especially related to working-from-home type jobs and businesses, which allows more people to test out their ideas if they so choose. Two is demographics. While young college dropouts may be the stereotype of who are entrepreneurs, most are actually middle-aged. Research from the Census Bureau finds the average age of the entrepreneur at founding is 42 and the average age of the most successful of the new businesses is 45. Obviously, there is a range of ages and outcomes, but on a demographically-adjusted basis entrepreneurship rates peak in the late 30s and early 40s. The fact that the large Millennial generation is now in their 30s and increasingly in their 40s, that is a big demographic tailwind to new business formation. A key here is that entrepreneurs tend to get a bit of work experience and in doing so they identify a need or a new way to do things that is more efficient, and then go out and try to improve that thing they have identified, and hopefully make money along the way.

Finally, as noted at the top, if we think about the capital and labor as the nuts and bolts of growth, there are a few implications given we have a pretty good idea where labor stands today. It means attracting and retaining talent is even more important (and getting the expected rebound in migration is huge for the long-run outlook). It also means capital takes on extra importance, and in terms of the range of possible outcomes, it is more of a wildcard at the moment.

U.S. Census Bureau News

U.S. Department of Commerce • Washington, D.C. 20233

FOR IMMEDIATE RELEASE
TUESDAY, FEBRUARY 20, 2024, AT 10:00 A.M. EST

Data Inquiries Economic Indicators Division, Retail Indicator Branch: (301) 763-2713 CB24-24
Media Inquiries Public Information Office: (301) 763-3030

QUARTERLY RETAIL E-COMMERCE SALES
4th QUARTER 2023

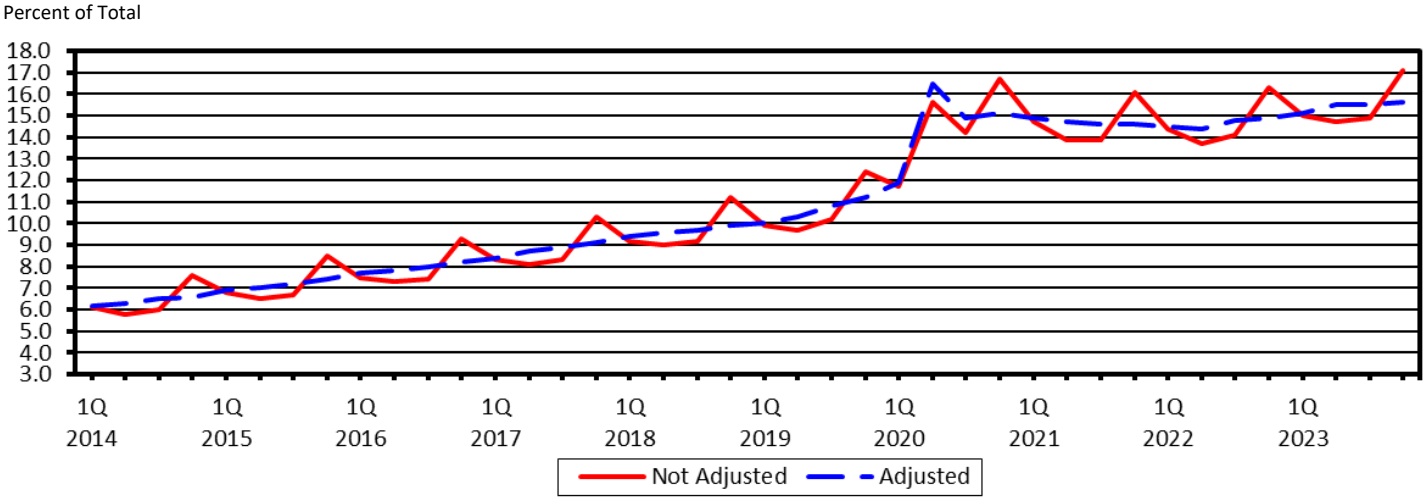
Intention to Revise E-commerce Estimates: Quarterly retail e-commerce estimates will be revised based on the results of the 2022 Annual Retail Trade Survey. Revised not adjusted estimates and corresponding adjusted estimates are scheduled for release on May 17, 2024 at 10:00 a.m. EDT.

The Census Bureau of the Department of Commerce announced today that the estimate of U.S. retail e-commerce sales for the fourth quarter of 2023, adjusted for seasonal variation, but not for price changes, was $285.2 billion, an increase of 0.8 percent (±1.1%)* from the third quarter of 2023. Total retail sales for the fourth quarter of 2023 were estimated at $1,831.4 billion, an increase of 0.4 percent (±0.4%)* from the third quarter of 2023. The fourth quarter 2023 e-commerce estimate increased 7.5 percent (±1.2%) from the fourth quarter of 2022 while total retail sales increased 2.8 percent (±0.4%) in the same period. E-commerce sales in the fourth quarter of 2023 accounted for 15.6 percent of total sales.

On a not adjusted basis, the estimate of U.S. retail e-commerce sales for the fourth quarter of 2023 totaled $324.8 billion, an increase of 19.5 percent (±1.1%) from the third quarter of 2023. The fourth quarter 2023 e-commerce estimate increased 7.2 percent (±1.2%) from the fourth quarter of 2022 while total retail sales increased 2.4 percent (±0.4%) in the same period. E-commerce sales in the fourth quarter of 2023 accounted for 17.1 percent of total sales.

Total e-commerce sales for 2023 were estimated at $1,118.7 billion, an increase of 7.6 percent (±1.2%) from 2022. Total retail sales in 2023 increased 2.1 percent (±0.4%) from 2022. E-commerce sales in 2023 accounted for 15.4 percent of total sales. E-commerce sales in 2022 accounted for 14.7 percent of total sales.

Estimated Quarterly U.S. Retail E-commerce Sales as a Percent of Total Quarterly Retail Sales:
1st Quarter 2014 – 4th Quarter 2023



The Quarterly Retail E-Commerce sales estimate for the first quarter of 2024 is scheduled for release on May 17, 2024 at 10:00 A.M. EDT.

For information, including estimates from 4th quarter 1999 forward, visit the Census Bureau's Web site at <http://www.census.gov/retail>. For additional information about Census Bureau e-business measurement programs and plans visit <https://www.census.gov/programs-surveys/e-stats.html>.

** The 90% confidence interval includes zero. The Census Bureau does not have sufficient statistical evidence to conclude that the actual change is different from zero.*

Table 1. Estimated Quarterly U.S. Retail Sales: Total and E-commerce[1]

(Estimates are based on data from the Monthly Retail Trade Survey and administrative records.)

Quarter	Retail Sales (millions of dollars)		E-commerce as a Percent of Total	Percent Change From Prior Quarter		Percent Change From Same Quarter A Year Ago	
	Total	E-commerce		Total	E-commerce	Total	E-commerce
Adjusted[2]							
4th quarter 2023(p)	1,831,393	285,224	15.6	0.4	0.8	2.8	7.5
3rd quarter 2023(r)	1,824,811	282,922	15.5	1.5	1.8	2.2	7.1
2nd quarter 2023	1,797,503	277,841	15.5	-0.2	2.2	0.6	7.6
1st quarter 2023	1,801,241	271,867	15.1	1.1	2.5	3.5	7.5
4th quarter 2022(r)	1,782,161	265,314	14.9	-0.2	0.5	6.0	7.7
Not Adjusted							
4th quarter 2023(p)	1,902,695	324,816	17.1	4.1	19.5	2.4	7.2
3rd quarter 2023(r)	1,827,290	271,797	14.9	-0.3	0.9	2.0	7.8
2nd quarter 2023	1,831,959	269,287	14.7	9.0	6.5	0.5	7.6
1st quarter 2023	1,680,614	252,773	15.0	-9.5	-16.6	3.5	7.8
4th quarter 2022	1,857,200	303,120	16.3	3.7	20.2	5.8	6.9

(p) Preliminary estimate. (r) Revised estimate.

[1] E-commerce sales are sales of goods and services where the buyer places an order, or the price and terms of the sale are negotiated over an Internet, mobile device (M-commerce), extranet, Electronic Data Interchange (EDI) network, electronic mail, or other comparable online system. Payment may or may not be made online.
[2] Estimates are adjusted for seasonal variation, but not for price changes. Total sales estimates are also adjusted for trading-day differences and moving holidays.

Note: Table 2 provides estimated measures of sampling variability. For information on confidentiality protection, sampling error, nonsampling error, sample design, and definitions, see http://www.census.gov/retail/mrts/how_surveys_are_collected.html.

Table 2. Estimated Measures of Sampling Variability for Quarterly U.S. Retail Sales Estimates: Total and E-commerce

(Estimates are shown as percents and are based on data from the Monthly Retail Trade Survey.)

Quarter	Coefficient of Variation (CV)		Standard Error (SE) for E-commerce as a Percent of Total	SE for Percent Change From Prior Quarter		SE for Percent Change From Same Quarter A Year Ago	
	Total	E-commerce		Total	E-commerce	Total	E-commerce
4th quarter 2023(p)	0.7	1.8	0.2	0.2	0.6	0.2	0.7
3rd quarter 2023(r)	0.8	1.8	0.2	0.1	0.2	0.2	0.7
2nd quarter 2023	0.8	1.8	0.2	0.1	0.4	0.2	0.9
1st quarter 2023	0.7	1.7	0.2	0.2	0.4	0.2	0.9
4th quarter 2022	0.6	1.5	0.2	0.2	0.5	0.1	0.6

(p) Preliminary estimate. (r) Revised estimate. (Z) Estimate is less than 0.05%.

Note: Estimated measures of sampling variability are based on data not adjusted for seasonal variation, trading-day differences, or moving holidays, and are used to make confidence statements about both adjusted and not adjusted estimates. For information on confidentiality protection, sampling error, nonsampling error, sample design, and definitions, see http://www.census.gov/retail/mrts/how_surveys_are_collected.html.

Survey Description

Retail e-commerce sales are estimated from the same sample used for the Monthly Retail Trade Survey (MRTS) to estimate preliminary and final U.S. retail sales. Advance U.S. retail sales are estimated from a subsample of the MRTS sample that is not of adequate size to measure changes in retail e-commerce sales.

A stratified simple random sampling method is used to select approximately 10,800 retail firms excluding food services whose sales are then weighted and benchmarked to represent the complete universe of over two million retail firms. The MRTS sample is probability based and represents all employer firms engaged in retail activities as defined by the North American Industry Classification System (NAICS). Coverage includes all retailers whether or not they are engaged in e-commerce. Online travel services, financial brokers and dealers, and ticket sales agencies are **not** classified as retail and are **not** included in either the total retail or retail e-commerce sales estimates. Nonemployers are represented in the estimates through benchmarking to prior annual survey estimates that include nonemployer sales based on administrative records. E-commerce sales are included in the total monthly sales estimates.

The MRTS sample is updated on an ongoing basis to account for new retail employer businesses (including those selling via the Internet), business deaths, and other changes to the retail business universe. Firms are asked each month to report e-commerce sales separately. For each month of the quarter, data for nonresponding sampling units are imputed from responding sampling units falling within the same kind of business and sales size category or based on historical performance of that company. Responding firms account for approximately 70 percent of the e-commerce sales estimate and about 68 percent of the estimate of U.S. retail sales for any quarter.

For each month of the quarter, estimates are obtained by summing weighted sales (either reported or imputed). The monthly estimates are benchmarked to prior annual survey estimates. Estimates for the quarter are obtained by summing the monthly benchmarked estimates. The estimate for the most recent quarter is a preliminary estimate. Therefore, the estimate is subject to revision. Data users who create their own estimates using data from this report should cite the Census Bureau as the source of the input data only.

Adjusted Estimates

This report publishes estimates that have been adjusted for seasonal variation and holiday and trading-day differences, but not for price changes. We used quarterly e-commerce sales estimates for 4th quarter 1999 to the current quarter as input to the X-13ARIMA-SEATS program to derive the adjusted estimates. For sales, we derived quarterly adjusted estimates by summing adjusted monthly sales estimates for each respective quarter. Seasonal adjustment of estimates is an approximation based on current and past experiences.

The X-13ARIMA-SEATS software improves upon the X-12 ARIMA seasonal adjustment software by providing enhanced diagnostics as well as incorporating an enhanced version of the Bank of Spain's SEATS (Signal Extraction in ARIMA Time Series) software, which uses an ARIMA model-based procedure instead of the X-11 filter-based approach to estimate seasonal factors. The X-13ARIMA-SEATS and X-12 ARIMA software produce identical results when using X-13ARIMA-SEATS with the X-11 filter-based adjustments. The X-13ARIMA-SEATS software and additional information on the X-13ARIMA-SEATS program may be found at https://www.census.gov/data/software/x13as.html.

Note that the retail estimates continue to be adjusted using the X-11 filter-based adjustment procedure.

Reliability of Estimates

Because the estimates in this report are based on a sample survey, they contain sampling error and nonsampling error.

Sampling error is the difference between the estimate and the result that would be obtained from a complete enumeration of the population conducted under the same survey conditions. This error occurs because only a subset of the entire population is measured in a sample survey. Standard errors and coefficients of variation, as given in Table 2 of this report, are estimated measures of sampling variation.

The margin of error, as used on page 1, gives a range about the estimate which is a 90 percent confidence interval. If, for example, the estimated percent change is -11.4% and its estimated standard error is 1.2%, then the margin of error is ±1.753 x 1.2% or 2.1%, and the 90 percent confidence interval is -13.5% to -9.3%. Confidence intervals are computed based on the particular sample selected and canvassed. If one repeats the process of drawing all possible samples and forming all corresponding confidence intervals, approximately 90 percent of these individual confidence intervals would contain the estimate computed from a complete enumeration of all units on the sampling frame. If the confidence interval contains 0%, then one does not have sufficient evidence to conclude at the 90 percent confidence level that the change is different from zero.

Nonsampling error encompasses all other factors that contribute to the total error of a sample survey estimate. This type of error can occur because of nonresponse, insufficient coverage of the universe of retail businesses with e-commerce sales, mistakes in the recording and coding of data, and other errors of collection, response, coverage, or processing. Although not directly measured, precautionary steps are taken to minimize the effects of nonsampling error.

ECONOMY, MARKET & TRENDS

More Retailers Are Rolling out Small-Format Stores

By Holly Dutton
January 8, 2024

Even before the pandemic, the retail sector was experiencing the rise of e-commerce and changing preferences in how people shop, as retailers began exploring pop-ups and other kinds of experiential strategies. At the same time, traditional malls were continuing to struggle, especially older, lower-tier properties. Now, three years after COVID-19 upended retail and led to closings and companies rethinking how best to attract shoppers, the latest trend taking hold revolves around a more curated approach. Companies including Macy's, Nordstrom, Kohl's, and IKEA are rolling out small-format stores around the country, often in suburban areas, as they try other ways to connect with their customers.

URBAN LAND

Era of experimentation

Big-name retailers may have made headlines recently in announcing plans for more of these small concept stores, but the idea is ...ething the industry has been exploring for more than a decade. Wal-Mart experimented with smaller-format stores in 2011, with ...d-down Wal-Mart Express locations that ranged between 12,000 and 15,000 square feet (between 1,115 and 1,395 sq m) in size.

By 2016, the idea garnered even more attention when Amazon unveiled its Amazon Go store. The concept was announced as a "new kind of corner store" where shoppers could grab a coffee, snacks, a quick lunch, or return an Amazon package.

Amazon executives envisioned the smaller stores—ranging in size from 450 square feet (42 sq m) to 2,700 square feet (250 sq m)—opening in office lobbies and in hospitals. What set these stores apart, aside from their diminutive size, was that they required no waiting in line and no exchange of money. As shoppers entered the store, they scanned their Amazon Go app at a gate, and whatever they left with would be charged to their account.

Although the Amazon stores opened in several markets around the country—including New York, Seattle, and San Francisco—company leaders announced earlier this year that they were closing many of the locations, as they looked to cut costs and shrink their real estate footprint.

Other early adopters of the small-store concept included IKEA, which opened a small concept store in San Francisco in August 2023 to long lines, and Best Buy, which opened its first small-format store in Monroe, North Carolina, a town in the Charlotte metropolitan area, last year. Every retailer has its own particular vision and reasons behind the decision to build a smaller-sized store, but on its face, small concept stores offer a lot of positives.

"A smaller concept store may be easier to gear toward local tastes and culture, which can help create stronger connections with new and existing customers," says Stephanie Cegielski, vice president of research and public relations at the International Council of Shopping Centers.

Compared with a large retail format, small-format stores typically require smaller buildouts and operating costs. Smaller layouts also more flexibility for a retailer that allows placement of more stores in growing secondary and tertiary markets.

Amid efforts to reach their customer base, many retailers are choosing to open these small-format stores in suburban areas, given the higher percentage of Americans working from home since the pandemic. Another driver of the push for more suburban locations is more dense, urban areas' often having zoning laws that prevent a retailer from opening up a more traditionally sized store. "A smaller format store may offer an accessible point of entry," Cegielski says.

In this post-pandemic time, when the industry is still experiencing a normalization of shopping behaviors exacerbated by inflation, retailers must think differently about the rules of retail. "Scale still matters, but it's about being much more specific about building to local scale and geographic density, and understanding what customers are looking for," says Nate Shenck, managing director and senior partner at Boston Consulting Group, who leads the company's North American retail team. "Almost all retailers are trying to find the next levers for growth, and format experimentation is one of those."

URBAN LAND

ing the customer experience

Nordstrom's small-format strategy, "Closer to You," first launched in 2020, in five major U.S. markets. It focuses on bringing Nordstrom Rack stores closer to its customers and having a more curated selection of products. The stores offer order pick-up, returns, and other services, such as tailors at every location and personal stylists. The rollout of these stores has continued to expand. This summer, Nordstrom executives announced plans to open 23 Nordstrom Rack stores, in mostly suburban markets, across the country, between fall 2023 and spring 2025. The locations will range in size from 23,000 square feet (2,100 sq m) to 36,000 square feet (3,344 sq m).

When Macy's announced its small-format store openings last fall, company leaders said the push toward expanding its small-format stores—and its Bloomingdale's brand, especially—focused on how customers experience a retail setting. "It's all about curation of product and the delivery of a better experience for the customer," incoming Macy's CEO Tony Spring told CNBC's Jim Cramer.

The company is targeting locations in off-mall shopping centers for these new concept stores, which also include Bloomie's, a small-format offshoot of Bloomingdale's. Those stores are about one-fifth the size of the traditional, large-format department store brand and put a high priority on customer service. Bloomie's fitting rooms, for instance, were designed with comfort in mind. The spaces are larger and more inviting, with designated lounge areas where customers are encouraged to take selfies.

"Our small-format stores are efficient to operate, provide the customer with a shopping alternative within our omnichannel ecosystem, and present a unique opportunity to target high-traffic shopping centers," says Macy's COO & CFO Adrian Mitchell in the company's announcement.

IKEA has also made a foray into small-format stores. The company stated last fall that it had opened more than 70 new IKEA locations by late 2023, most of which were small-format stores and the company's Plan and Order locations. In 2021, IKEA opened a small-format store in the Queens borough of New York City that was about half the size of an average IKEA outpost.

Before that store opening, IKEA opened a 17,350-square-foot (1,612 sq m) planning studio in Manhattan's Upper East Side. Both the Queens and the Manhattan locations closed in 2022, but IKEA has focused on opening more of these kinds of stores in markets around the world, including its latest small-format store in Copenhagen, which company leaders touted as being more accessible for the many cyclists who call that city home. IKEA also opened a new small-format store in San Francisco in August 2023.

Downsizing stores can also be a boon to retailers' sustainability efforts. By opening a smaller store, they're already on the right track to decarbonization. A smaller square-footage footprint means a smaller carbon footprint. Plus, whereas a typical store format might include several escalators and elevators running for more than 12 hours a day, a small-format store could avoid them altogether.

Heating and cooling a space with more than 100,000 square feet (9,290 sq m) uses considerably more energy than a store about a third or less that size. Additionally, smaller retail footprints potentially have local environmental benefits on such things as stormwater runoff.

Retailers are increasingly looking at small-format stores to stay competitive and better connect to their customer base, but the shift is also being driven by the ongoing labor shortage that has affected industries across the spectrum. Not only are many retailers finding it hard to staff stores, even when they are able to fill positions, but the cost of labor and operating costs has gotten very high, due to inflation.

"I think it's a combination of a lot of things … driving up costs," says Richard Lake, founding partner of the Washington, D.C.–based firm Roadside Development. Lake points to how many employees it takes to run large-format stores with 150,000 square feet (14,000 sq m) or more, the amount of merchandise that is needed to stock such a store, and public safety considerations including the number of exits and entrances. "The marketplace has gotten to be very fraught," Lake says. "Retailers, just like in the office sector, are looking to shrink their footprint and cut costs."

American Time Use Survey Summary

For release 10:00 a.m. (ET) Thursday, June 26, 2025 USDL-25-1060

Technical information: (202) 691-6339 * atusinfo@bls.gov * www.bls.gov/tus
Media contact: (202) 691-5902 * PressOffice@bls.gov

AMERICAN TIME USE SURVEY -- 2024 RESULTS

In 2024, 87 percent of full-time employed people worked on an average weekday, compared with 29 percent on an average weekend day, the U.S. Bureau of Labor Statistics reported today. Full-time employed people averaged 8.4 hours of work on weekdays they worked, and 5.6 hours on weekend days they worked.

These and other results from the American Time Use Survey (ATUS) were released today. They include the average amount of time per day in 2024 that individuals worked, did household activities, and engaged in leisure and sports activities. Additionally, measures of the average time per day spent providing childcare--both as a primary (or main) activity and while doing other things are provided. For a detailed description of ATUS data and methodology, see the Technical Note.

Working (by Employed People) in 2024

--On days they worked, full-time employed people worked an average of 8.1 hours. They worked 8.4 hours on an average weekday and 5.6 hours on an average weekend day. (See table 4.)

--Many more people worked on weekdays than on weekend days: 80 percent of employed people worked on an average weekday, compared with 30 percent on an average weekend day. Multiple jobholders were more likely than single jobholders to work on an average weekend day--50 percent, compared to 29 percent. (See table 4.)

--Among those who worked on an average weekend day, those with lower levels of education worked more hours than those with higher levels of education. On weekend days they worked, high school graduates with no college spent 6.4 hours working, compared with 4.2 hours for those with a bachelor's degree or higher. (See table 4.)

--The share of employed people who spent time working at home on days worked was about the same in 2024 (33 percent) as in 2023 (35 percent). However, the share of men who spent some time working at home decreased from 34 percent in 2023 to 29 percent in 2024, while the share of women who did so remained the same (36 percent). (See table 6.)

--Among workers age 25 and over, there was little difference in the likelihood to work on an average day for those with a bachelor's degree or higher (68 percent) and those with a high school diploma and no college (66 percent). However, workers with higher levels of education were more likely to work at home than were those who had less education. Fifty percent of employed people with a bachelor's degree or higher performed some work at home on days worked, compared with 18 percent of those with a high school diploma and no college. (See table 6.)

--On days they worked, employed men worked 33 minutes more than employed women. This difference partly reflects women's greater likelihood of working part time. However, even among full-time workers (those usually working 35 hours or more per week), men worked more per day than women--8.2 hours, compared with 7.9 hours. (See table 4.)

Household Activities in 2024

--On an average day, 80 percent of people engaged in household activities--such as housework, cooking, lawn care, or household management--spending about two hours on these activities. (See table 1.)

--Eighty-seven percent of women and 74 percent of men spent some time doing household activities on an average day. On the days they did household activities, women spent an average of 2.7 hours on these activities, while men spent 2.3 hours doing so. (See table 1.)

--Among adults living with children under age 18, those who were not employed spent about an hour more than those who were employed doing household activities on an average day--2.9 hours compared to 1.8 hours. (See tables 8B and 8C.)

--More people engaged in housework on weekend days than on weekdays, on average--41 percent, compared with 36 percent. However, people were slightly more likely to do food preparation and cleanup on weekdays than weekend days--64 percent, compared to 62 percent. (See table 2.)

Leisure and Sports Activities in 2024

--Nearly everyone age 15 and over (94 percent) engaged in some sort of leisure and sport activity, such as watching TV, socializing, or exercising on an average day. While men and women were equally likely to engage in leisure and sports activities, men spent more time

in these activities than did women (5.5 hours, compared with 4.7 hours). (See table 1.)

--On average, adults age 75 and over spent 7.6 hours engaged in leisure and sports activities per day--more than any other age group. Those ages 35 to 44 averaged 3.8 hours doing leisure and sports activities per day--less than all other age groups. (See table 11A.)

--Watching TV was the leisure and sports activity that occupied the most time (2.6 hours per day), accounting for over half of all leisure time, on average (5.1 hours per day). (See tables 1 and 11A.)

--Socializing and communicating, along with playing games and computer use for leisure, occupied the most amount of time spent in leisure and sports activities after watching TV. On an average day, individuals spent 35 minutes socializing and communicating and 34 minutes playing games and using a computer for leisure. They spent twice as much time socializing and communicating on weekend days (56 minutes) than on weekdays (26 minutes). (See tables 1, 11A, and 11B.)

--People were less likely to engage in socializing and communicating on an average day in 2024 than in 2014--30 percent compared with 38 percent. They also spent less time in these activities in 2024 than in 2014--35 minutes compared with 43 minutes. (See table 1.)

--Time spent reading for personal interest and playing games or using a computer for leisure varied greatly by age. On an average day, individuals age 75 and over spent 46 minutes reading while those ages 15 to 19 read for 9 minutes. Conversely, individuals ages 15 to 19 spent 1.3 hours playing games or using a computer for leisure on an average day, while those ages 75 and over spent 26 minutes doing so. (See table 11A.)

--Employed adults living in households with no children under age 18 engaged in leisure and sports activities for 4.5 hours per day, an hour and a half more than did employed adults living with a child under age 6 (3.0 hours). (See table 8B.)

Care of Household Children in 2024

--Adults living in households with children under age 6 spent an average of 2.5 hours per day providing primary childcare to household children. Adults living in households where the youngest child was between the ages of 6 and 17 spent one-third as much time providing primary childcare to household children--50 minutes per day. Primary childcare is childcare that is done as a main activity, such as providing physical care or reading to children. (See table 9.)

--On an average day, among adults living in households with children under age 6, women spent an hour more than men providing primary childcare to household children--3.0 hours compared to 2.0 hours. This includes providing physical care, such as bathing or feeding a child (1.3 hours compared to 42 minutes) and travel related to care of household children (19 minutes compared to 9 minutes), among other activities. (See table 9.)

--On average, among adults living with children under age 6, those who were not employed spent over an hour more per day caring for and helping household children than did employed adults --3.2 hours versus 2.0 hours. (See tables 8B and 8C.)

--Adults living in households with at least one child under age 13 spent an average of 5.2 hours per day providing secondary childcare--that is, they had at least one child in their care while doing activities other than primary childcare. Secondary childcare provided by adults living in households with children under age 13 was most commonly provided while doing leisure activities (1.8 hours) or household activities (1.2 hours). (See table 10.)

--Adults living in households with children under age 6 spent about the same amount of time providing primary childcare on an average weekday and weekend day (2.6 hours and 2.4 hours). However, they spent less time providing secondary childcare on weekdays (4.5 hours) than on weekend days (7.5 hours). (See tables 9 and 10.)

Additional Data

ATUS 2024 data files are available for users to do their own tabulations and analyses. In accordance with BLS and Census Bureau policies that protect the privacy of survey respondents, personally identifying information does not appear on the data files. The 2024 data files are available on the BLS website at www.bls.gov/tus/data.htm.

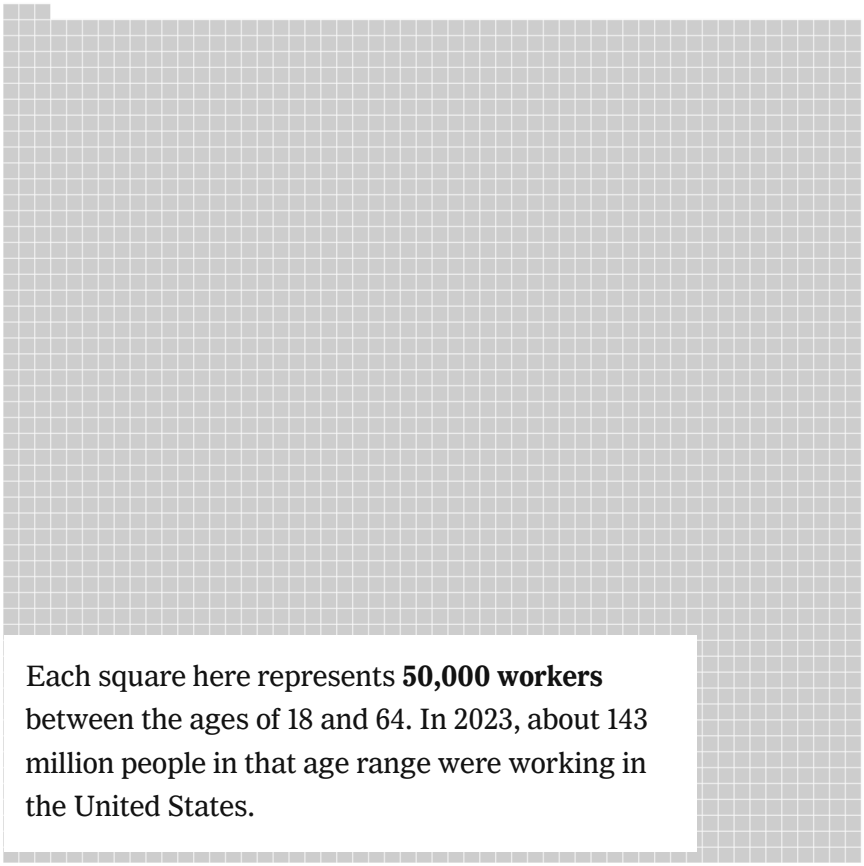
Who Still Works From Home?

By Ben Casselman, Emma Goldberg and Ella Koeze March 8, 2024

The American workplace's experiment with remote work happened, effectively, overnight: With the onset of the pandemic in March 2020, more than half of workers began working from home at least part of the time, according to Gallup. But the shift to a permanent hybrid-work reality has been gradual, with periods of tension as workers across white-collar industries pushed against executives' return-to-office orders.

Those battles have largely come to an end, and workplaces have reached a new hybrid-work status quo. Roughly one-tenth of workers are cobbling together a combination of work in the office and from home, and a similar portion are working entirely remotely.

This population of hybrid and remote workers in the United States doesn't quite mirror the larger population of workers: Government data shows they tend to have more education and are more often white and Asian.



Each square here represents **50,000 workers** between the ages of 18 and 64. In 2023, about 143 million people in that age range were working in the United States.

Roughly 80 percent of those work **fully in person**.
The remaining work either a **hybrid** schedule or **fully remote**.

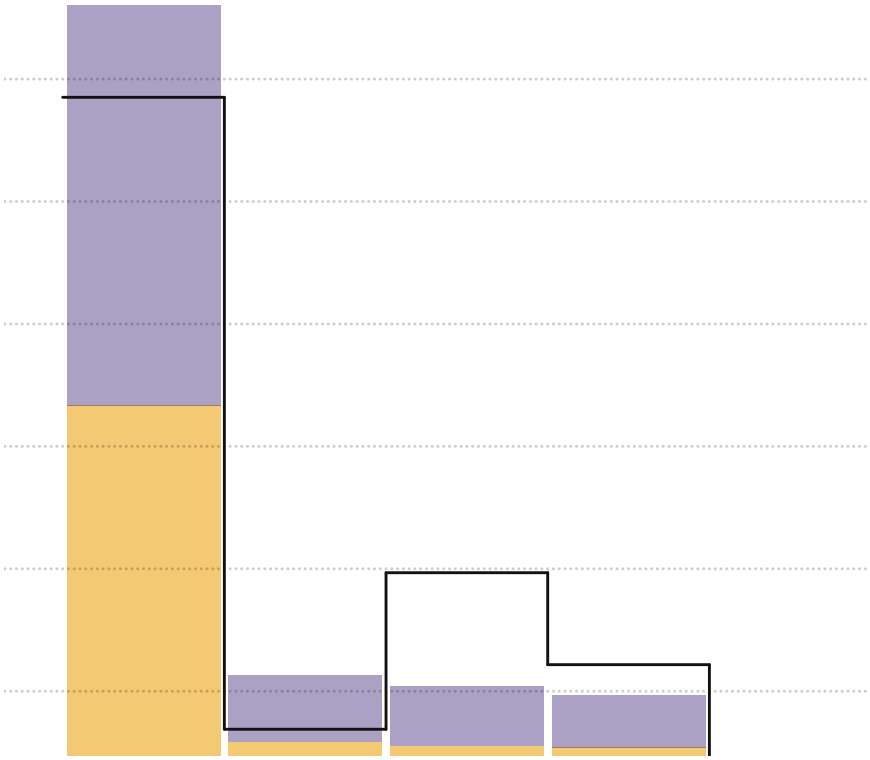
If we look at all workers by their level of education, the biggest group of workers have no college education.

But if we focus on just those who work at home all or some of the time, college educated workers become the most prominent. Working from home is, for the most part, a luxury for the highly educated.

The pandemic laid bare inequalities in the American economy. White-collar workers were in many cases able to do their jobs safely at home, but lower-income workers often had to continue to work in person, even when health risks were highest. And now that the public health emergency is over, that workplace divide — who gets the benefits of remote flexibility and who does not — has become entrenched.

White and Asian workers are more likely to work from home

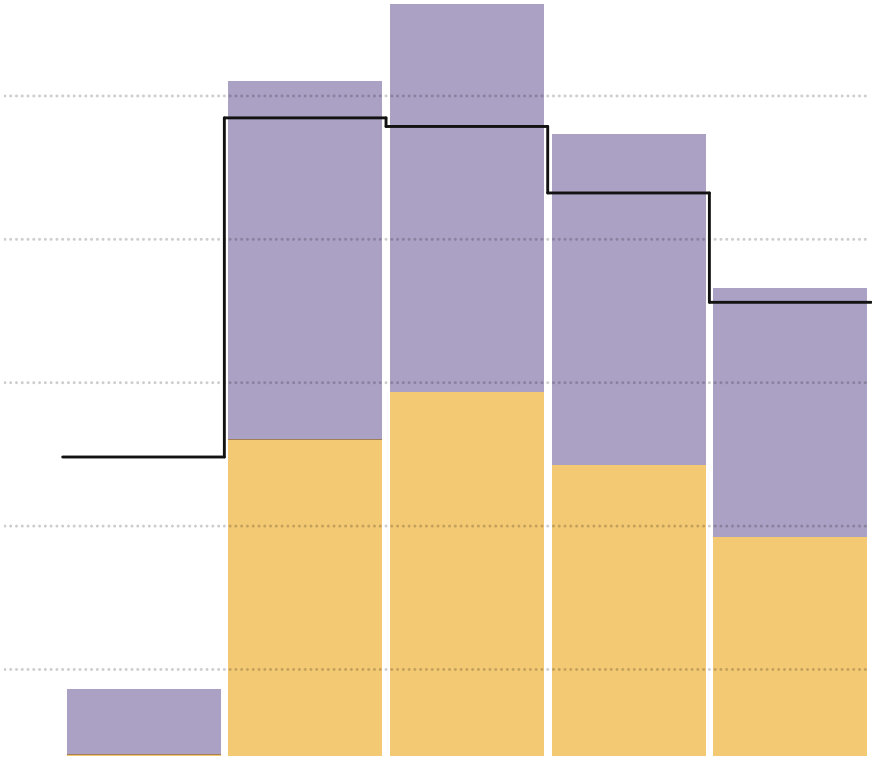
Share of **fully remote** and **hybrid** workers who identify as a given race or ethnicity vs. the same group's share of the entire work force



The divide in who gets the flexibility to work remotely also reflects the country's racial inequalities. Because white and Asian workers are more likely to hold office jobs, they are more likely to have the opportunity to work remotely part or all of the time. Black and Hispanic workers, meanwhile, more frequently hold jobs in food service, construction, retail, health care and other fields that require them to be in person.

The youngest workers are working from home less often

Share of **fully remote** and **hybrid** workers who fall in each age group vs. the same group's share of the entire work force



When employers were first mounting their return-to-office battles, many assumed that their youngest employees would be the toughest to persuade to come back. But today, young people make up a greater share of those working in person than their share of the total work force.

That is partly because a smaller share of Americans under 25 have completed college degrees. Many work in jobs like food service that cannot be done remotely. But that is not the whole story: Even among college graduates, workers in their 20s are more likely to be in the office full time than their older colleagues. That suggests that young workers are embracing the benefits of in-person work: socialization, mentorship and face time with the boss. The potential downsides of fixed office schedules may also matter less to them: Relatively fewer young workers might have children (or aging parents) at home, making remote flexibility less of a priority.

More women work remotely, but it's complicated.

Remote work also breaks down along gender lines — though it does not lend itself to a simple narrative.

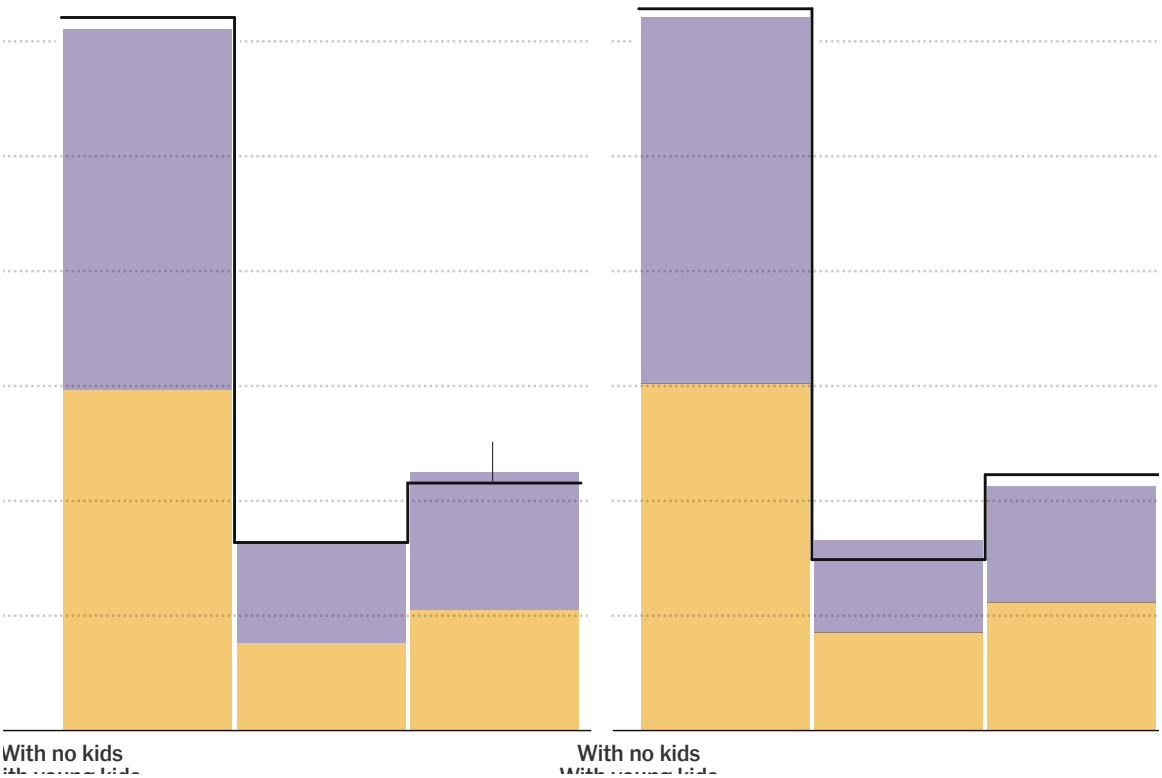
Overall, women are more likely than men to work remotely. That's partly because more women have college degrees, so more of them are in the kind of professional jobs in which flexible arrangements have become the norm. Even among those without college degrees, women are more likely to work at a desk in an administrative or

customer support role, while men more often work in construction, manufacturing and other jobs that can only be done in person.

Looking narrowly at just college graduates, remote work patterns for women and men look more evenly distributed, with men slightly more likely to work remotely than women. But there's one place where the pattern looks different: among parents with young children.

Parents have been some of the biggest winners in the flexible-work era. Remote flexibility made more feasible the constant juggling of professional and caretaking obligations. But it is mothers, not fathers, who appear to be taking the most advantage of workplace flexibility, whether out of choice or necessity.

Share of **fully remote** and **hybrid** **college-educated** workers who have children or not, by gender



Note: Young kids are those 5 years old or younger.

Among college-educated men, having children does not make much difference to whether they work at home or in person. Among women, it's a different story. Mothers of young children are much more likely to work remotely than women without children or mothers of older children.

When possible, disabled workers often choose to go fully remote

Fully remote and hybrid work often get talked about in the same breath. But in some cases, the implications are different.

For many workers with disabilities, the normalization of remote work has offered an opportunity to avoid energy-draining commutes and offices that are not designed to accommodate their needs. For others, it has opened up pathways into industries that were previously difficult to break into.

But those gains come primarily from fully remote work, not the hybrid model that has come to dominate some industries. Workers with disabilities are 22 percent more likely to work fully remotely than otherwise similar workers without disabilities, but only slightly more likely to work a hybrid schedule, according to research from the Economic Innovation Group. Workers with disabilities that limit mobility, such as those who use wheelchairs, were particularly likely to benefit from the opportunity to work entirely from home.

Employers should "understand the significant difference between full-remote and hybrid-remote," the researchers wrote. "A labor market that includes a greater number of full-remote jobs will open the door for far more otherwise qualified workers."

Methodology

The data in this article comes from the Current Population Survey, a monthly survey of 60,000 U.S. households conducted by the Census Bureau. Respondents are asked how many hours they worked the previous week, and how many of those hours they teleworked or worked from home. "Fully remote" workers are those who worked all of their hours remotely; "hybrid" workers are those who worked some but not all of their hours remotely. Respondents who were not employed, or who did not work at all in the previous week, are excluded. Data shown is for calendar year 2023. Figures are rounded throughout.

Downtown Recoveries, 2023 Update

Posted by: **Josh Lehner** | July 18, 2023

We know there have been structural changes as a result of the pandemic. Chief among them is working-from-home is much more common, which impacts urban cores in terms of daily activity and property valuations. Even so, downtowns are not obsolete even if smaller commercial developments in suburban markets do take on more importance today than just a few years ago.

Of course none of this is new information. We have been processing and experiencing these changes in recent years. And by nearly all accounts, the downtown recovery in Portland is lagging some other big cities nationwide, even as the Portland *metro* area is in the middle of the pack when it comes to jobs and income.

All of that said, I wanted to focus for a moment on the downtown recovery data that is most commonly used when discussing these patterns. It comes from researchers out of the University of Toronto and can be found at www.downtownrecovery.com. It is a great resource that tracks cell phone data on the number of people in downtown areas across the U.S. and Canada. It is the data source where the talking point that Portland has the third weakest downtown recovery comes from. Given the information below on different geographic definitions for different downtowns, this talking point needs to be retired, even if downtown issues do need to be addressed.

New data through May just came out and I wanted to highlight a few things. Consider this an addition to the downtown discussion, and not some magnum opus.

#1: Definitions of downtown matter

The researchers use zip codes to define downtown areas. In some cases, particularly in places like San Francisco and Portland, these are narrowly defined areas related to the office towers in the urban core. Downtown Portland in this data is just 97204, which is basically the area south of West Burnside, and East of SW Broadway to the river. Fair enough. That is the *downtown* downtown part of Portland, but does exclude other major parts of the urban core when it comes to the Pearl, Old Town, the areas in and around Portland State University and so on.

In other cities, zip codes include office towers in addition to other things that could impact the “downtown” recovery. In particular the zip code definition of downtown San Diego also includes the airport and the San Diego Zoo. So as tourism has rebounded it could show a stronger “downtown” even if office and central city activities do not show the same strength. I do not know that is the case in San Diego, but it is worth mentioning these definitions matter. Similarly, some downtown zip code definitions include a lot of residential areas, and not in the tall, urban apartment complex sense, but in also in low-density, single-family neighborhoods. Others include other important institutions like universities or religious sites and so on.

This is just how zip codes work sometimes, and I do not fault the researchers. But these different definitions for each city are important to highlight and these comparisons are not purely apples to apples. As such, I will no longer use “third worst downtown recovery” as a talking point, while also acknowledging downtowns need to continue to evolve and societal issues do need to be addressed.

Quick note. Even as these definitions vary by city, I do not think the data is not useful. In fact, I think the variation allows for a more nuanced look at relative patterns. In a sense it’s a bit of a randomized experiment given not all zip codes are created equal, nor are all downtowns. To me the biggest benefit below is the relative patterns seen in comparison to various other economic and societal measures. I do think those findings hold up.

#2: Downtowns are distinct areas, and recoveries are not driven by regional changes

Downtowns are distinct areas, and downtown recoveries are not driven by the broader regional economy. We know the Portland metro area’s economic recovery in terms of jobs and income is right in the middle of the pack among all large metros nationwide. However, Portland’s downtown recovery is weaker. This lack of a clear pattern between regional and downtown strength is seen elsewhere in the country. These first two scatterplots compare the downtown recovery on the vertical axis with regional employment and population changes during the pandemic. Note the relationships here are very weak at best with an R^2 of around 0.03. Some metros, like Austin, Texas have boomed from a regional look during the pandemic, but even their urban core recovery has not been strong. Conversely, somewhere like Honolulu has lagged economically overall, but their downtown recovery has been comparatively strong.

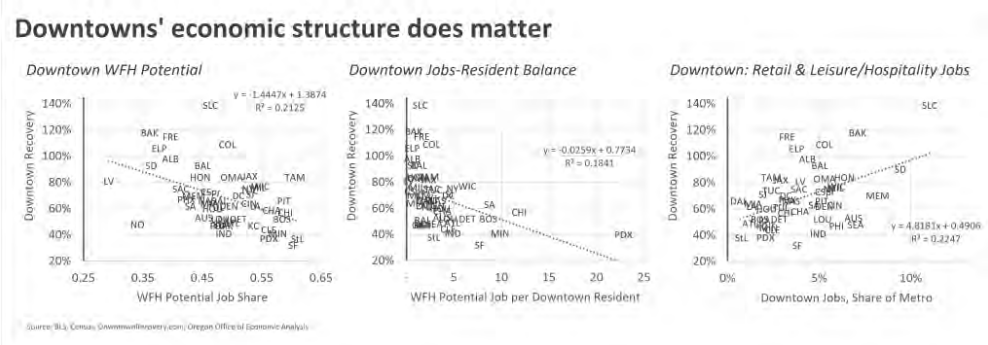
#3: Downtown's economic structure does matter

There are three main sources of demand in downtown: commuters, neighborhood residents, and then people coming to eat, shop, and visit. How any city's downtown was structured ahead of the pandemic does matter for the recovery. Let's take each source of demand in turn.

The scatterplot on the left compares the downtown recovery with the share of downtown jobs that can potentially be done remotely. The more work-from-home type jobs in your downtown, the weaker your downtown recovery likely is. The r^2 here, or goodness of fit, is not exceptionally strong either given there is a lot of variation nationally, but it still is basically 7 times as strong as the regional changes above.



The middle scatterplot gets at the local, neighborhood resident demand piece. If you are going to lose commuters — and you have in a 2 or 3 day WFH world — you need to replace the demand with something. So this chart compares the number of WFH jobs to the number of people living in the downtown. Here Portland is a clear national outlier. The 2020 Census shows there are only about 1,000 people living in 97204 in Portland. Of course that tight definition of downtown Portland matters. There are tens of thousands of Portlanders living in the Pearl, Goose Hollow, by PSU, to say nothing of the NW 21st and NW 23rd areas, the West Hills, parts of the close-in eastside and so on. But this data also speaks to the very distinct parts within the central city. In that sense, downtown Portland predominantly is just office, which are then surrounded by some urban neighborhoods.

Finally, the chart on the right gets at the other source of demand, and the ability and importance of drawing people downtown to eat, shop, and visit. What the chart actually shows is the regional share of retail and leisure and hospitality jobs that are located downtown. If there are more stores, restaurants, theaters, hotels, and the like downtown, people are more likely to go downtown for entertainment and shopping. Certainly Salt Lake — which has the strongest downtown recovery in North America — stands out here. 11% of the metro jobs in retail and leisure and hospitality can be found in their downtown zip codes. This indicates the downtown cluster of entertainment, food, and shopping is very important to the region. (Plus, Temple Square, which is not

technically in the downtown Salt Lake zip codes but is literally across the street, with their renovations and construction projects in recent years could play a factor as well.)

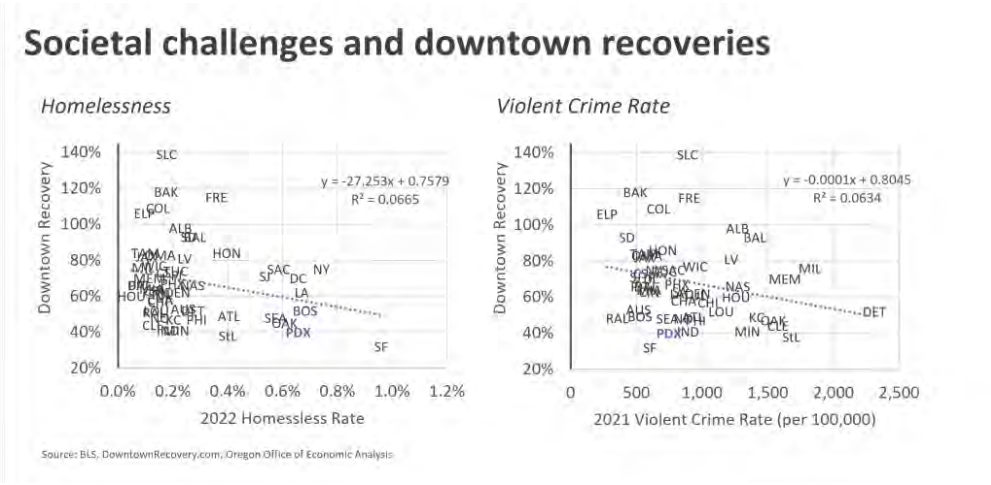
On the other end, places like Portland have a very low concentration of these industries downtown. What that means is there are dining and shopping opportunities spread more broadly throughout the metro area. Portlanders do not have to go downtown unless they want to.

#4: Patterns of crime and homelessness do not match downtown recovery strength

Lastly, one potential issue for downtowns is concerns about public safety. It is important to note that the geographic definitions here do not perfectly align. Downtown recoveries are measured at the zip code level. Homelessness data is counted at the CoC level, which is usually by county in large metro areas. Crime statistics are reported at the department or city level.

Even so, there is a lot of variation in the strength of the downtown recoveries nationwide with the available data on homelessness and crime. Just look at the range of downtown recoveries even among cities with similar type homeless numbers to Portland in the chart on the left, or the wide range of crime rates for cities with similar downtown recovery strengths to Portland in the chart on the right. Overall the r^2 is about 0.06 or 0.07, indicating no statistical relationship.

Note that these charts use the *level* data and not the *change* in these measures. The reason is simple. If you look at the percent change in homelessness or the percent change in crime rates, there is literally zero relationship nationwide (see the slides).



Now, this last finding is a bit more speculative given the different geographic definitions in the available data. And to the extent that public perceptions, if not the actual data, feed into household behaviors in where they decide to eat, shop or visit, that is worth monitoring and discussing.

Bottom Line: Overall, downtowns are distinct areas that do not appear to be impacted by broader, regional changes. Even so, downtowns today are evolving, and will recover. That path may be long, and winding in some cases, but ultimately the demand has to come from somewhere. It can be workers, local residents, and/or visitors. But they must be given the opportunity and reason to be there. Each downton had a slightly different structure pre-pandemic that either helps or impedes recovery in a post-pandemic world. To the extent your downtown is missing one key component, you must rely on the others for growth, or work to improve that missing piece.

Public Law 117–169
117th Congress

An Act

Aug. 16, 2022
[H.R. 5376]

To provide for reconciliation pursuant to title II of S. Con. Res. 14.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

Appropriations authorizations.

TITLE I—COMMITTEE ON FINANCE

Subtitle A—Deficit Reduction

SECTION 10001. AMENDMENT OF 1986 CODE.

Except as otherwise expressly provided, whenever in this subtitle an amendment or repeal is expressed in terms of an amendment to, or repeal of, a section or other provision, the reference shall be considered to be made to a section or other provision of the Internal Revenue Code of 1986.

PART 1—CORPORATE TAX REFORM

SEC. 10101. CORPORATE ALTERNATIVE MINIMUM TAX.

(a) IMPOSITION OF TAX.—

26 USC 55.

(1) IN GENERAL.—Paragraph (2) of section 55(b) is amended to read as follows:

"(2) CORPORATIONS.—

"(A) APPLICABLE CORPORATIONS.—In the case of an applicable corporation, the tentative minimum tax for the taxable year shall be the excess of—

"(i) 15 percent of the adjusted financial statement income for the taxable year (as determined under section 56A), over

"(ii) the corporate AMT foreign tax credit for the taxable year.

"(B) OTHER CORPORATIONS.—In the case of any corporation which is not an applicable corporation, the tentative minimum tax for the taxable year shall be zero.".

(2) APPLICABLE CORPORATION.—Section 59 is amended by adding at the end the following new subsection:

Determinations.

"(k) APPLICABLE CORPORATION.—For purposes of this part—

"(1) APPLICABLE CORPORATION DEFINED.—

"(A) IN GENERAL.—The term 'applicable corporation' means, with respect to any taxable year, any corporation (other than an S corporation, a regulated investment company, or a real estate investment trust) which meets the

average annual adjusted financial statement income test of subparagraph (B) for one or more taxable years which—

"(i) are prior to such taxable year, and

"(ii) end after December 31, 2021.

Effective date.

"(B) AVERAGE ANNUAL ADJUSTED FINANCIAL STATEMENT INCOME TEST.—For purposes of this subsection— Time period.

"(i) a corporation meets the average annual adjusted financial statement income test for a taxable year if the average annual adjusted financial statement income of such corporation (determined without regard to section 56A(d)) for the 3-taxable-year period ending with such taxable year exceeds $1,000,000,000, and

"(ii) in the case of a corporation described in paragraph (2), such corporation meets the average annual adjusted financial statement income test for a taxable year if—

"(I) the corporation meets the requirements of clause (i) for such taxable year (determined after the application of paragraph (2)), and

"(II) the average annual adjusted financial statement income of such corporation (determined without regard to the application of paragraph (2) and without regard to section 56A(d)) for the 3-taxable-year-period ending with such taxable year is $100,000,000 or more.

"(C) EXCEPTION.—Notwithstanding subparagraph (A), the term 'applicable corporation' shall not include any corporation which otherwise meets the requirements of subparagraph (A) if—

"(i) such corporation—

"(I) has a change in ownership, or

"(II) has a specified number (to be determined by the Secretary and which shall, as appropriate, take into account the facts and circumstances of the taxpayer) of consecutive taxable years, including the most recent taxable year, in which the corporation does not meet the average annual adjusted financial statement income test of subparagraph (B), and

"(ii) the Secretary determines that it would not be appropriate to continue to treat such corporation as an applicable corporation.

The preceding sentence shall not apply to any corporation if, after the Secretary makes the determination described in clause (ii), such corporation meets the average annual adjusted financial statement income test of subparagraph (B) for any taxable year beginning after the first taxable year for which such determination applies.

"(D) SPECIAL RULES FOR DETERMINING APPLICABLE CORPORATION STATUS.— Definition.

"(i) IN GENERAL.—Solely for purposes of determining whether a corporation is an applicable corporation under this paragraph, all adjusted financial statement income of persons treated as a single employer with such corporation under subsection (a) or (b) of section 52 (determined with the modifications described in clause (ii)) shall be treated as adjusted financial

statement income of such corporation, and adjusted financial statement income of such corporation shall be determined without regard to paragraphs (2)(D)(i) and (11) of section 56A(c).

"(ii) MODIFICATIONS.—For purposes of this subparagraph—

Applicability.

"(I) section 52(a) shall be applied by substituting 'component members' for 'members', and

"(II) for purposes of applying section 52(b), the term 'trade or business' shall include any activity treated as a trade or business under paragraph (5) or (6) of section 469(c) (determined without regard to the phrase 'To the extent provided in regulations' in such paragraph (6)).

"(iii) COMPONENT MEMBER.—For purposes of this subparagraph, the term 'component member' has the meaning given such term by section 1563(b), except that the determination shall be made without regard to section 1563(b)(2).

"(E) OTHER SPECIAL RULES.—

Applicability.

"(i) CORPORATIONS IN EXISTENCE FOR LESS THAN 3 YEARS.—If the corporation was in existence for less than 3-taxable years, subparagraph (B) shall be applied on the basis of the period during which such corporation was in existence.

Time period.

"(ii) SHORT TAXABLE YEARS.—Adjusted financial statement income for any taxable year of less than 12 months shall be annualized by multiplying the adjusted financial statement income for the short period by 12 and dividing the result by the number of months in the short period.

"(iii) TREATMENT OF PREDECESSORS.—Any reference in this subparagraph to a corporation shall include a reference to any predecessor of such corporation.

"(2) SPECIAL RULE FOR FOREIGN-PARENTED MULTINATIONAL GROUPS.—

"(A) IN GENERAL.—If a corporation is a member of a foreign-parented multinational group for any taxable year, then, solely for purposes of determining whether such corporation meets the average annual adjusted financial statement income test under paragraph (1)(B)(ii)(I) for such taxable year, the adjusted financial statement income of such corporation for such taxable year shall include the adjusted financial statement income of all members of such group. Solely for purposes of this subparagraph, adjusted financial statement income shall be determined without regard to paragraphs (2)(D)(i), (3), (4), and (11) of section 56A(c).

Definition.

"(B) FOREIGN-PARENTED MULTINATIONAL GROUP.—For purposes of subparagraph (A), the term 'foreign-parented multinational group' means, with respect to any taxable year, two or more entities if—

"(i) at least one entity is a domestic corporation and another entity is a foreign corporation,

"(ii) such entities are included in the same applicable financial statement with respect to such year, and

"(iii) either—

"(I) the common parent of such entities is a foreign corporation, or

"(II) if there is no common parent, the entities are treated as having a common parent which is a foreign corporation under subparagraph (D).

"(C) FOREIGN CORPORATIONS ENGAGED IN A TRADE OR BUSINESS WITHIN THE UNITED STATES.—For purposes of this paragraph, if a foreign corporation is engaged in a trade or business within the United States, such trade or business shall be treated as a separate domestic corporation that is wholly owned by the foreign corporation.

"(D) OTHER RULES.—The Secretary shall, applying the principles of this section, prescribe rules for the application of this paragraph, including rules for the determination of— Applicability.

"(i) the entities (if any) which are to be to be treated under subparagraph (B)(iii)(II) as having a common parent which is a foreign corporation,

"(ii) the entities to be included in a foreign-parented multinational group, and

"(iii) the common parent of a foreign-parented multinational group.

"(3) REGULATIONS OR OTHER GUIDANCE.—The Secretary shall provide regulations or other guidance for the purposes of carrying out this subsection, including regulations or other guidance—

"(A) providing a simplified method for determining whether a corporation meets the requirements of paragraph (1), and

"'(B) addressing the application of this subsection to a corporation that experiences a change in ownership.".

(3) REDUCTION FOR BASE EROSION AND ANTI-ABUSE TAX.—Section 55(a)(2) is amended by inserting "plus, in the case of an applicable corporation, the tax imposed by section 59A" before the period at the end. 26 USC 55.

(4) CONFORMING AMENDMENTS.—

(A) Section 55(a) is amended by striking "In the case of a taxpayer other than a corporation, there" and inserting "There".

(B)(i) Section 55(b)(1) is amended—

(I) by striking so much as precedes subparagraph (A) and inserting the following:

"(1) NONCORPORATE TAXPAYERS.—In the case of a taxpayer other than a corporation—", and

(II) by adding at the end the following new subparagraph:

"(D) ALTERNATIVE MINIMUM TAXABLE INCOME.—The term 'alternative minimum taxable income' means the taxable income of the taxpayer for the taxable year— Definition.

"(i) determined with the adjustments provided in section 56 and section 58, and

"(ii) increased by the amount of the items of tax preference described in section 57.

If a taxpayer is subject to the regular tax, such taxpayer shall be subject to the tax imposed by this section (and, if the regular tax is determined by reference to an amount other than taxable income, such amount shall be treated as the taxable income of such taxpayer for purposes of the preceding sentence).".

26 USC 860E.

(ii) Section 860E(a)(4) is amended by striking "55(b)(2)" and inserting "55(b)(1)(D)".

(iii) Section 897(a)(2)(A)(i) is amended by striking "55(b)(2)" and inserting "55(b)(1)(D)".

(C) Section 11(d) is amended by striking "the tax imposed by subsection (a)" and inserting "the taxes imposed by subsection (a) and section 55".

(D) Section 12 is amended by adding at the end the following new paragraph:

"(5) For alternative minimum tax, see section 55.".

(E) Section 882(a)(1) is amended by inserting ", 55," after "section 11".

(F) Section 6425(c)(1)(A) is amended to read as follows:

"(A) the sum of—

"(i) the tax imposed by section 11 or subchapter L of chapter 1, whichever is applicable, plus

"(ii) the tax imposed by section 55, plus

"(iii) the tax imposed by section 59A, over".

(G) Section 6655(e)(2) is amended by inserting ", adjusted financial statement income (as defined in section 56A)," before "and modified taxable income" each place it appears in subparagraphs (A)(i) and (B)(i).

(H) Section 6655(g)(1)(A) is amended by redesignating clauses (ii) and (iii) as clauses (iii) and (iv), respectively, and by inserting after clause (i) the following new clause:

"(ii) the tax imposed by section 55,".

(b) ADJUSTED FINANCIAL STATEMENT INCOME.—

(1) IN GENERAL.—Part VI of subchapter A of chapter 1 is amended by inserting after section 56 the following new section:

26 USC 56A.

"SEC. 56A. ADJUSTED FINANCIAL STATEMENT INCOME.

Definition.

"(a) IN GENERAL.—For purposes of this part, the term 'adjusted financial statement income' means, with respect to any corporation for any taxable year, the net income or loss of the taxpayer set forth on the taxpayer's applicable financial statement for such taxable year, adjusted as provided in this section.

Definition.

"(b) APPLICABLE FINANCIAL STATEMENT.—For purposes of this section, the term 'applicable financial statement' means, with respect to any taxable year, an applicable financial statement (as defined in section 451(b)(3) or as specified by the Secretary in regulations or other guidance) which covers such taxable year.

"(c) GENERAL ADJUSTMENTS.—

"(1) STATEMENTS COVERING DIFFERENT TAXABLE YEARS.—Appropriate adjustments shall be made in adjusted financial statement income in any case in which an applicable financial statement covers a period other than the taxable year.

"(2) SPECIAL RULES FOR RELATED ENTITIES.—

Applicability.

"(A) CONSOLIDATED FINANCIAL STATEMENTS.—If the financial results of a taxpayer are reported on the

applicable financial statement for a group of entities, rules similar to the rules of section 451(b)(5) shall apply.

"(B) CONSOLIDATED RETURNS.—Except as provided in regulations prescribed by the Secretary, if the taxpayer is part of an affiliated group of corporations filing a consolidated return for any taxable year, adjusted financial statement income for such group for such taxable year shall take into account items on the group's applicable financial statement which are properly allocable to members of such group.

"(C) TREATMENT OF DIVIDENDS AND OTHER AMOUNTS.—In the case of any corporation which is not included on a consolidated return with the taxpayer, adjusted financial statement income of the taxpayer with respect to such other corporation shall be determined by only taking into account the dividends received from such other corporation (reduced to the extent provided by the Secretary in regulations or other guidance) and other amounts which are includible in gross income or deductible as a loss under this chapter (other than amounts required to be included under sections 951 and 951A or such other amounts as provided by the Secretary) with respect to such other corporation. Determination.

"(D) TREATMENT OF PARTNERSHIPS.—

"(i) IN GENERAL.—Except as provided by the Secretary, if the taxpayer is a partner in a partnership, adjusted financial statement income of the taxpayer with respect to such partnership shall be adjusted to only take into account the taxpayer's distributive share of adjusted financial statement income of such partnership.

"(ii) ADJUSTED FINANCIAL STATEMENT INCOME OF PARTNERSHIPS.—For the purposes of this part, the adjusted financial statement income of a partnership shall be the partnership's net income or loss set forth on such partnership's applicable financial statement (adjusted under rules similar to the rules of this section).

"(3) ADJUSTMENTS TO TAKE INTO ACCOUNT CERTAIN ITEMS OF FOREIGN INCOME.—

"(A) IN GENERAL.—If, for any taxable year, a taxpayer is a United States shareholder of one or more controlled foreign corporations, the adjusted financial statement income of such taxpayer with respect to such controlled foreign corporation (as determined under paragraph (2)(C)) shall be adjusted to also take into account such taxpayer's pro rata share (determined under rules similar to the rules under section 951(a)(2)) of items taken into account in computing the net income or loss set forth on the applicable financial statement (as adjusted under rules similar to those that apply in determining adjusted financial statement income) of each such controlled foreign corporation with respect to which such taxpayer is a United States shareholder.

"(B) NEGATIVE ADJUSTMENTS.—In any case in which the adjustment determined under subparagraph (A) would result in a negative adjustment for such taxable year—

"(i) no adjustment shall be made under this paragraph for such taxable year, and

"(ii) the amount of the adjustment determined under this paragraph for the succeeding taxable year (determined without regard to this paragraph) shall be reduced by an amount equal to the negative adjustment for such taxable year.

Determination. Applicability.

"(4) EFFECTIVELY CONNECTED INCOME.—In the case of a foreign corporation, to determine adjusted financial statement income, the principles of section 882 shall apply.

"(5) ADJUSTMENTS FOR CERTAIN TAXES.—Adjusted financial statement income shall be appropriately adjusted to disregard any Federal income taxes, or income, war profits, or excess profits taxes (within the meaning of section 901) with respect to a foreign country or possession of the United States, which are taken into account on the taxpayer's applicable financial statement. To the extent provided by the Secretary, the preceding sentence shall not apply to income, war profits, or excess profits taxes (within the meaning of section 901) that are imposed by a foreign country or possession of the United States and taken into account on the taxpayer's applicable financial statement if the taxpayer does not choose to have the benefits of subpart A of part III of subchapter N for the taxable year. The Secretary shall prescribe such regulations or other guidance as may be necessary and appropriate to provide for the proper treatment of current and deferred taxes for purposes of this paragraph, including the time at which such taxes are properly taken into account.

Regulations. Guidelines.

"(6) ADJUSTMENT WITH RESPECT TO DISREGARDED ENTITIES.—Adjusted financial statement income shall be adjusted to take into account any adjusted financial statement income of a disregarded entity owned by the taxpayer.

Applicability.

"(7) SPECIAL RULE FOR COOPERATIVES.—In the case of a cooperative to which section 1381 applies, the adjusted financial statement income (determined without regard to this paragraph) shall be reduced by the amounts referred to in section 1382(b) (relating to patronage dividends and per-unit retain allocations) to the extent such amounts were not otherwise taken into account in determining adjusted financial statement income.

"(8) RULES FOR ALASKA NATIVE CORPORATIONS.—Adjusted financial statement income shall be appropriately adjusted to allow—

"(A) cost recovery and depletion attributable to property the basis of which is determined under section 21(c) of the Alaska Native Claims Settlement Act (43 U.S.C. 1620(c)), and

"(B) deductions for amounts payable made pursuant to section 7(i) or section 7(j) of such Act (43 U.S.C. 1606(i) and 1606(j)) only at such time as the deductions are allowed for tax purposes.

"(9) AMOUNTS ATTRIBUTABLE TO ELECTIONS FOR DIRECT PAYMENT OF CERTAIN CREDITS.—Adjusted financial statement income shall be appropriately adjusted to disregard any amount treated as a payment against the tax imposed by subtitle A pursuant to an election under section 48D(d) or 6417, to the

extent such amount was not otherwise taken into account under paragraph (5).

"(10) CONSISTENT TREATMENT OF MORTGAGE SERVICING INCOME OF TAXPAYER OTHER THAN A REGULATED INVESTMENT COMPANY.—

"(A) IN GENERAL.—Adjusted financial statement income shall be adjusted so as not to include any item of income in connection with a mortgage servicing contract any earlier than when such income is included in gross income under any other provision of this chapter.

"(B) RULES FOR AMOUNTS NOT REPRESENTING REASONABLE COMPENSATION.—The Secretary shall provide regulations to prevent the avoidance of taxes imposed by this chapter with respect to amounts not representing reasonable compensation (as determined by the Secretary) with respect to a mortgage servicing contract. Determination.

"(11) ADJUSTMENT WITH RESPECT TO DEFINED BENEFIT PENSIONS.—

"(A) IN GENERAL.—Except as otherwise provided in rules prescribed by the Secretary in regulations or other guidance, adjusted financial statement income shall be— Regulations. Guidelines.

"(i) adjusted to disregard any amount of income, cost, or expense that would otherwise be included on the applicable financial statement in connection with any covered benefit plan,

"(ii) increased by any amount of income in connection with any such covered benefit plan that is included in the gross income of the corporation under any other provision of this chapter, and

"(iii) reduced by deductions allowed under any other provision of this chapter with respect to any such covered benefit plan.

"(B) COVERED BENEFIT PLAN.—For purposes of this paragraph, the term 'covered benefit plan' means— Definition.

"(i) a defined benefit plan (other than a multiemployer plan described in section 414(f)) if the trust which is part of such plan is an employees' trust described in section 401(a) which is exempt from tax under section 501(a),

"(ii) any qualified foreign plan (as defined in section 404A(e)), or

"(iii) any other defined benefit plan which provides post-employment benefits other than pension benefits.

"(12) TAX-EXEMPT ENTITIES.—In the case of an organization subject to tax under section 511, adjusted financial statement income shall be appropriately adjusted to only take into account any adjusted financial statement income—

"(A) of an unrelated trade or business (as defined in section 513) of such organization, or

"(B) derived from debt-financed property (as defined in section 514) to the extent that income from such property is treated as unrelated business taxable income.

"(13) DEPRECIATION.—Adjusted financial statement income shall be—

"(A) reduced by depreciation deductions allowed under section 167 with respect to property to which section 168 Applicability.

applies to the extent of the amount allowed as deductions in computing taxable income for the taxable year, and

"(B) appropriately adjusted—

"(i) to disregard any amount of depreciation expense that is taken into account on the taxpayer's applicable financial statement with respect to such property, and

"(ii) to take into account any other item specified by the Secretary in order to provide that such property is accounted for in the same manner as it is accounted for under this chapter.

"(14) QUALIFIED WIRELESS SPECTRUM.—

"(A) IN GENERAL.—Adjusted financial statement income shall be—

"(i) reduced by amortization deductions allowed under section 197 with respect to qualified wireless spectrum to the extent of the amount allowed as deductions in computing taxable income for the taxable year, and

"(ii) appropriately adjusted—

"(I) to disregard any amount of amortization expense that is taken into account on the taxpayer's applicable financial statement with respect to such qualified wireless spectrum, and

"(II) to take into account any other item specified by the Secretary in order to provide that such qualified wireless spectrum is accounted for in the same manner as it is accounted for under this chapter.

Definition.

"(B) QUALIFIED WIRELESS SPECTRUM.—For purposes of this paragraph, the term 'qualified wireless spectrum' means wireless spectrum which—

"(i) is used in the trade or business of a wireless telecommunications carrier, and

Effective date.

"(ii) was acquired after December 31, 2007, and before the date of enactment of this section.

Regulations.
Guidelines.
Determination.

"(15) SECRETARIAL AUTHORITY TO ADJUST ITEMS.—The Secretary shall issue regulations or other guidance to provide for such adjustments to adjusted financial statement income as the Secretary determines necessary to carry out the purposes of this section, including adjustments—

"(A) to prevent the omission or duplication of any item, and

"(B) to carry out the principles of part II of subchapter C of this chapter (relating to corporate liquidations), part III of subchapter C of this chapter (relating to corporate organizations and reorganizations), and part II of subchapter K of this chapter (relating to partnership contributions and distributions).

Determinations.

"(d) DEDUCTION FOR FINANCIAL STATEMENT NET OPERATING LOSS.—

"(1) IN GENERAL.—Adjusted financial statement income (determined after application of subsection (c) and without regard to this subsection) shall be reduced by an amount equal to the lesser of—

"(A) the aggregate amount of financial statement net operating loss carryovers to the taxable year, or

"(B) 80 percent of adjusted financial statement income computed without regard to the deduction allowable under this subsection.

"(2) FINANCIAL STATEMENT NET OPERATING LOSS CARRYOVER.—A financial statement net operating loss for any taxable year shall be a financial statement net operating loss carryover to each taxable year following the taxable year of the loss. The portion of such loss which shall be carried to subsequent taxable years shall be the amount of such loss remaining (if any) after the application of paragraph (1).

"(3) FINANCIAL STATEMENT NET OPERATING LOSS DEFINED.— Effective date.
For purposes of this subsection, the term 'financial statement net operating loss' means the amount of the net loss (if any) set forth on the corporation's applicable financial statement (determined after application of subsection (c) and without regard to this subsection) for taxable years ending after December 31, 2019.

"(e) REGULATIONS AND OTHER GUIDANCE.—The Secretary shall provide for such regulations and other guidance as necessary to carry out the purposes of this section, including regulations and other guidance relating to the effect of the rules of this section on partnerships with income taken into account by an applicable corporation.".

(2) CLERICAL AMENDMENT.—The table of sections for part VI of subchapter A of chapter 1 is amended by inserting after the item relating to section 56 the following new item: 26 USC 55 prec.

"Sec. 56A. Adjusted financial statement income.".

(c) CORPORATE AMT FOREIGN TAX CREDIT.—Section 59, as amended by this section, is amended by adding at the end the following new subsection: 26 USC 59.

"(l) CORPORATE AMT FOREIGN TAX CREDIT.—

"(1) IN GENERAL.—For purposes of this part, if an applicable corporation chooses to have the benefits of subpart A of part III of subchapter N for any taxable year, the corporate AMT foreign tax credit for the taxable year of the applicable corporation is an amount equal to sum of—

"(A) the lesser of—

"(i) the aggregate of the applicable corporation's Determination.
pro rata share (as determined under section 56A(c)(3)) of the amount of income, war profits, and excess profits taxes (within the meaning of section 901) imposed by any foreign country or possession of the United States which are—

"(I) taken into account on the applicable financial statement of each controlled foreign corporation with respect to which the applicable corporation is a United States shareholder, and

"(II) paid or accrued (for Federal income tax purposes) by each such controlled foreign corporation, or

"(ii) the product of the amount of the adjustment under section 56A(c)(3) and the percentage specified in section 55(b)(2)(A)(i), and

"(B) in the case of an applicable corporation that is a domestic corporation, the amount of income, war profits, and excess profits taxes (within the meaning of section

901) imposed by any foreign country or possession of the United States to the extent such taxes are—

"(i) taken into account on the applicable corporation's applicable financial statement, and

"(ii) paid or accrued (for Federal income tax purposes) by the applicable corporation.

Time period.

"(2) CARRYOVER OF EXCESS TAX PAID.—For any taxable year for which an applicable corporation chooses to have the benefits of subpart A of part III of subchapter N, the excess of the amount described in paragraph (1)(A)(i) over the amount described in paragraph (1)(A)(ii) shall increase the amount described in paragraph (1)(A)(i) in any of the first 5 succeeding taxable years to the extent not taken into account in a prior taxable year.

"(3) REGULATIONS OR OTHER GUIDANCE.—The Secretary shall provide for such regulations or other guidance as is necessary to carry out the purposes of this subsection.".

(d) TREATMENT OF GENERAL BUSINESS CREDIT.—Section 38(c)(6)(E) is amended to read as follows:

26 USC 38.

Applicability.

"(E) CORPORATIONS.—In the case of a corporation—

"(i) the first sentence of paragraph (1) shall be applied by substituting '25 percent of the taxpayer's net income tax as exceeds $25,000' for 'the greater of' and all that follows,

"(ii) paragraph (2)(A) shall be applied without regard to clause (ii)(I) thereof, and

"(iii) paragraph (4)(A) shall be applied without regard to clause (ii)(I) thereof.".

(e) CREDIT FOR PRIOR YEAR MINIMUM TAX LIABILITY.—

(1) IN GENERAL.—Section 53(e) is amended to read as follows:

"(e) APPLICATION TO APPLICABLE CORPORATIONS.—In the case of a corporation—

"(1) subsection (b)(1) shall be applied by substituting 'the net minimum tax for all prior taxable years beginning after 2022' for 'the adjusted net minimum tax imposed for all prior taxable years beginning after 1986', and

"(2) the amount determined under subsection (c)(1) shall be increased by the amount of tax imposed under section 59A for the taxable year.".

(2) CONFORMING AMENDMENTS.—Section 53(d) is amended—

(A) in paragraph (2), by striking ", except that in the case" and all that follows through "treated as zero", and

(B) by striking paragraph (3).

26 USC 11 note.

(f) EFFECTIVE DATE.—The amendments made by this section shall apply to taxable years beginning after December 31, 2022.

PART 2—EXCISE TAX ON REPURCHASE OF CORPORATE STOCK

SEC. 10201. EXCISE TAX ON REPURCHASE OF CORPORATE STOCK.

(a) IN GENERAL.—Subtitle D is amended by inserting after chapter 36 the following new chapter:

"CHAPTER 37—REPURCHASE OF CORPORATE STOCK

26 USC 4501 prec.

"Sec. 4501. Repurchase of corporate stock.

"SEC. 4501. REPURCHASE OF CORPORATE STOCK.

26 USC 4501.

"(a) GENERAL RULE.—There is hereby imposed on each covered corporation a tax equal to 1 percent of the fair market value of any stock of the corporation which is repurchased by such corporation during the taxable year.

"(b) COVERED CORPORATION.—For purposes of this section, the term 'covered corporation' means any domestic corporation the stock of which is traded on an established securities market (within the meaning of section 7704(b)(1)). Definition.

"(c) REPURCHASE.—For purposes of this section— Definitions.

"(1) IN GENERAL.—The term 'repurchase' means—

"(A) a redemption within the meaning of section 317(b) with regard to the stock of a covered corporation, and

"(B) any transaction determined by the Secretary to be economically similar to a transaction described in subparagraph (A). Determination.

"(2) TREATMENT OF PURCHASES BY SPECIFIED AFFILIATES.—

"(A) IN GENERAL.—The acquisition of stock of a covered corporation by a specified affiliate of such covered corporation, from a person who is not the covered corporation or a specified affiliate of such covered corporation, shall be treated as a repurchase of the stock of the covered corporation by such covered corporation.

"(B) SPECIFIED AFFILIATE.—For purposes of this section, the term 'specified affiliate' means, with respect to any corporation—

"(i) any corporation more than 50 percent of the stock of which is owned (by vote or by value), directly or indirectly, by such corporation, and

"(ii) any partnership more than 50 percent of the capital interests or profits interests of which is held, directly or indirectly, by such corporation.

"(3) ADJUSTMENT.—The amount taken into account under subsection (a) with respect to any stock repurchased by a covered corporation shall be reduced by the fair market value of any stock issued by the covered corporation during the taxable year, including the fair market value of any stock issued or provided to employees of such covered corporation or employees of a specified affiliate of such covered corporation during the taxable year, whether or not such stock is issued or provided in response to the exercise of an option to purchase such stock.

"(d) SPECIAL RULES FOR ACQUISITION OF STOCK OF CERTAIN FOREIGN CORPORATIONS.— Determinations.

"(1) IN GENERAL.—In the case of an acquisition of stock of an applicable foreign corporation by a specified affiliate of such corporation (other than a foreign corporation or a foreign partnership (unless such partnership has a domestic entity as a direct or indirect partner)) from a person who is not the applicable foreign corporation or a specified affiliate of such applicable foreign corporation, for purposes of this section—

"(A) such specified affiliate shall be treated as a covered corporation with respect to such acquisition,

"(B) such acquisition shall be treated as a repurchase of stock of a covered corporation by such covered corporation, and

"(C) the adjustment under subsection (c)(3) shall be determined only with respect to stock issued or provided by such specified affiliate to employees of the specified affiliate.

"(2) SURROGATE FOREIGN CORPORATIONS.—In the case of a repurchase of stock of a covered surrogate foreign corporation by such covered surrogate foreign corporation, or an acquisition of stock of a covered surrogate foreign corporation by a specified affiliate of such corporation, for purposes of this section—

"(A) the expatriated entity with respect to such covered surrogate foreign corporation shall be treated as a covered corporation with respect to such repurchase or acquisition,

"(B) such repurchase or acquisition shall be treated as a repurchase of stock of a covered corporation by such covered corporation, and

"(C) the adjustment under subsection (c)(3) shall be determined only with respect to stock issued or provided by such expatriated entity to employees of the expatriated entity.

"(3) DEFINITIONS.—For purposes of this subsection—

"(A) APPLICABLE FOREIGN CORPORATION.—The term 'applicable foreign corporation' means any foreign corporation the stock of which is traded on an established securities market (within the meaning of section 7704(b)(1)).

"(B) COVERED SURROGATE FOREIGN CORPORATION.—The term 'covered surrogate foreign corporation' means any surrogate foreign corporation (as determined under section 7874(a)(2)(B) by substituting 'September 20, 2021' for 'March 4, 2003' each place it appears) the stock of which is traded on an established securities market (within the meaning of section 7704(b)(1)), but only with respect to taxable years which include any portion of the applicable period with respect to such corporation under section 7874(d)(1).

"(C) EXPATRIATED ENTITY.—The term 'expatriated entity' has the meaning given such term by section 7874(a)(2)(A).

"(e) EXCEPTIONS.—Subsection (a) shall not apply—

"(1) to the extent that the repurchase is part of a reorganization (within the meaning of section 368(a)) and no gain or loss is recognized on such repurchase by the shareholder under chapter 1 by reason of such reorganization,

"(2) in any case in which the stock repurchased is, or an amount of stock equal to the value of the stock repurchased is, contributed to an employer-sponsored retirement plan, employee stock ownership plan, or similar plan,

"(3) in any case in which the total value of the stock repurchased during the taxable year does not exceed $1,000,000,

"(4) under regulations prescribed by the Secretary, in cases in which the repurchase is by a dealer in securities in the ordinary course of business,

"(5) to repurchases by a regulated investment company (as defined in section 851) or a real estate investment trust, or

"(6) to the extent that the repurchase is treated as a dividend for purposes of this title.

"(f) REGULATIONS AND GUIDANCE.—The Secretary shall prescribe such regulations and other guidance as are necessary or appropriate to carry out, and to prevent the avoidance of, the purposes of this section, including regulations and other guidance—

"(1) to prevent the abuse of the exceptions provided by subsection (e),

"(2) to address special classes of stock and preferred stock, and

"(3) for the application of the rules under subsection (d).".

(b) TAX NOT DEDUCTIBLE.—Paragraph (6) of section 275(a) is amended by inserting "37," before "41". 26 USC 275.

(c) CLERICAL AMENDMENT.—The table of chapters for subtitle D is amended by inserting after the item relating to chapter 36 the following new item: 26 USC 4001 prec.

"CHAPTER 37—REPURCHASE OF CORPORATE STOCK".

(d) EFFECTIVE DATE.—The amendments made by this section shall apply to repurchases (within the meaning of section 4501(c) of the Internal Revenue Code of 1986, as added by this section) of stock after December 31, 2022. 26 USC 4501 note.

PART 3—FUNDING THE INTERNAL REVENUE SERVICE AND IMPROVING TAXPAYER COMPLIANCE

SEC. 10301. ENHANCEMENT OF INTERNAL REVENUE SERVICE RESOURCES.

IN GENERAL.—The following sums are appropriated, out of any money in the Treasury not otherwise appropriated, for the fiscal year ending September 30, 2022:

(1) INTERNAL REVENUE SERVICE.—

(A) IN GENERAL.—

(i) TAXPAYER SERVICES.—For necessary expenses of the Internal Revenue Service to provide taxpayer services, including pre-filing assistance and education, filing and account services, taxpayer advocacy services, and other services as authorized by 5 U.S.C. 3109, at such rates as may be determined by the Commissioner, $3,181,500,000, to remain available until September 30, 2031: *Provided,* That these amounts shall be in addition to amounts otherwise available for such purposes.

(ii) ENFORCEMENT.—For necessary expenses for tax enforcement activities of the Internal Revenue Service to determine and collect owed taxes, to provide legal and litigation support, to conduct criminal investigations (including investigative technology), to provide digital asset monitoring and compliance activities, to enforce criminal statutes related to violations of internal revenue laws and other financial crimes, to purchase and hire passenger motor vehicles (31 U.S.C.

1343(b)), and to provide other services as authorized by 5 U.S.C. 3109, at such rates as may be determined by the Commissioner, $45,637,400,000, to remain available until September 30, 2031: *Provided,* That these amounts shall be in addition to amounts otherwise available for such purposes.

(iii) OPERATIONS SUPPORT.—For necessary expenses of the Internal Revenue Service to support taxpayer services and enforcement programs, including rent payments; facilities services; printing; postage; physical security; headquarters and other IRS-wide administration activities; research and statistics of income; telecommunications; information technology development, enhancement, operations, maintenance, and security; the hire of passenger motor vehicles (31 U.S.C. 1343(b)); the operations of the Internal Revenue Service Oversight Board; and other services as authorized by 5 U.S.C. 3109, at such rates as may be determined by the Commissioner, $25,326,400,000, to remain available until September 30, 2031: *Provided,* That these amounts shall be in addition to amounts otherwise available for such purposes.

(iv) BUSINESS SYSTEMS MODERNIZATION.—For necessary expenses of the Internal Revenue Service's business systems modernization program, including development of callback technology and other technology to provide a more personalized customer service but not including the operation and maintenance of legacy systems, $4,750,700,000, to remain available until September 30, 2031: *Provided,* That these amounts shall be in addition to amounts otherwise available for such purposes.

(B) TASK FORCE TO DESIGN AN IRS-RUN FREE "DIRECT EFILE" TAX RETURN SYSTEM.—For necessary expenses of the Internal Revenue Service to deliver to Congress, within nine months following the date of the enactment of this Act, a report on (I) the cost (including options for differential coverage based on taxpayer adjusted gross income and return complexity) of developing and running a free direct efile tax return system, including costs to build and administer each release, with a focus on multi-lingual and mobile-friendly features and safeguards for taxpayer data; (II) taxpayer opinions, expectations, and level of trust, based on surveys, for such a free direct efile system; and (III) the opinions of an independent third-party on the overall feasibility, approach, schedule, cost, organizational design, and Internal Revenue Service capacity to deliver such a direct efile tax return system, $15,000,000, to remain available until September 30, 2023: *Provided,* That these amounts shall be in addition to amounts otherwise available for such purposes.

(2) TREASURY INSPECTOR GENERAL FOR TAX ADMINISTRATION.—For necessary expenses of the Treasury Inspector General for Tax Administration in carrying out the Inspector General Act of 1978, as amended, including purchase and hire of passenger motor vehicles (31 U.S.C. 1343(b)); and services

authorized by 5 U.S.C. 3109, at such rates as may be determined by the Inspector General for Tax Administration, $403,000,000, to remain available until September 30, 2031: *Provided,* That these amounts shall be in addition to amounts otherwise available for such purposes.

(3) OFFICE OF TAX POLICY.—For necessary expenses of the Office of Tax Policy of the Department of the Treasury to carry out functions related to promulgating regulations under the Internal Revenue Code of 1986, $104,533,803, to remain available until September 30, 2031: *Provided,* That these amounts shall be in addition to amounts otherwise available for such purposes.

(4) UNITED STATES TAX COURT.—For necessary expenses of the United States Tax Court, including contract reporting and other services as authorized by 5 U.S.C. 3109; $153,000,000, to remain available until September 30, 2031: *Provided,* That these amounts shall be in addition to amounts otherwise available for such purposes.

(5) TREASURY DEPARTMENTAL OFFICES.—For necessary expenses of the Departmental Offices of the Department of the Treasury to provide for oversight and implementation support for actions by the Internal Revenue Service to implement this Act and the amendments made by this Act, $50,000,000, to remain available until September 30, 2031: *Provided*, That these amounts shall be in addition to amounts otherwise available for such purposes.

Subtitle B—Prescription Drug Pricing Reform

PART 1—LOWERING PRICES THROUGH DRUG PRICE NEGOTIATION

SEC. 11001. PROVIDING FOR LOWER PRICES FOR CERTAIN HIGH-PRICED SINGLE SOURCE DRUGS.

(a) PROGRAM TO LOWER PRICES FOR CERTAIN HIGH-PRICED SINGLE SOURCE DRUGS.—Title XI of the Social Security Act is amended by adding after section 1184 (42 U.S.C. 1320e–3) the following new part:

"PART E—PRICE NEGOTIATION PROGRAM TO LOWER PRICES FOR CERTAIN HIGH-PRICED SINGLE SOURCE DRUGS

"SEC. 1191. ESTABLISHMENT OF PROGRAM. 42 USC 1320f.

"(a) IN GENERAL.—The Secretary shall establish a Drug Price Negotiation Program (in this part referred to as the 'program'). Under the program, with respect to each price applicability period, the Secretary shall—

"(1) publish a list of selected drugs in accordance with section 1192; Publication. Lists.

"(2) enter into agreements with manufacturers of selected drugs with respect to such period, in accordance with section 1193; Contracts.

"(3) negotiate and, if applicable, renegotiate maximum fair prices for such selected drugs, in accordance with section 1194;

"(4) carry out the publication and administrative duties and compliance monitoring in accordance with sections 1195 and 1196.

"(b) DEFINITIONS RELATING TO TIMING.—For purposes of this part:

"(1) INITIAL PRICE APPLICABILITY YEAR.—The term 'initial price applicability year' means a year (beginning with 2026).

"(2) PRICE APPLICABILITY PERIOD.—The term 'price applicability period' means, with respect to a qualifying single source drug, the period beginning with the first initial price applicability year with respect to which such drug is a selected drug and ending with the last year during which the drug is a selected drug.

"(3) SELECTED DRUG PUBLICATION DATE.—The term 'selected drug publication date' means, with respect to each initial price applicability year, February 1 of the year that begins 2 years prior to such year.

"(4) NEGOTIATION PERIOD.—The term 'negotiation period' means, with respect to an initial price applicability year with respect to a selected drug, the period—

"(A) beginning on the sooner of—

"(i) the date on which the manufacturer of the drug and the Secretary enter into an agreement under section 1193 with respect to such drug; or

"(ii) February 28 following the selected drug publication date with respect to such selected drug; and

"(B) ending on November 1 of the year that begins 2 years prior to the initial price applicability year.

"(c) OTHER DEFINITIONS.—For purposes of this part:

"(1) MANUFACTURER.—The term 'manufacturer' has the meaning given that term in section 1847A(c)(6)(A).

"(2) MAXIMUM FAIR PRICE ELIGIBLE INDIVIDUAL.—The term 'maximum fair price eligible individual' means, with respect to a selected drug—

"(A) in the case such drug is dispensed to the individual at a pharmacy, by a mail order service, or by another dispenser, an individual who is enrolled in a prescription drug plan under part D of title XVIII or an MA–PD plan under part C of such title if coverage is provided under such plan for such selected drug; and

"(B) in the case such drug is furnished or administered to the individual by a hospital, physician, or other provider of services or supplier, an individual who is enrolled under part B of title XVIII, including an individual who is enrolled in an MA plan under part C of such title, if payment may be made under part B for such selected drug.

"(3) MAXIMUM FAIR PRICE.—The term 'maximum fair price' means, with respect to a year during a price applicability period and with respect to a selected drug (as defined in section 1192(c)) with respect to such period, the price negotiated pursuant to section 1194, and updated pursuant to section 1195(b), as applicable, for such drug and year.

"(4) REFERENCE PRODUCT.—The term 'reference product' has the meaning given such term in section 351(i) of the Public Health Service Act.

"(5) TOTAL EXPENDITURES.—The term 'total expenditures' includes, in the case of expenditures with respect to part D of title XVIII, the total gross covered prescription drug costs (as defined in section 1860D–15(b)(3)). The term 'total expenditures' excludes, in the case of expenditures with respect to part B of such title, expenditures for a drug or biological product that are bundled or packaged into the payment for another service.

"(6) UNIT.—The term 'unit' means, with respect to a drug or biological product, the lowest identifiable amount (such as a capsule or tablet, milligram of molecules, or grams) of the drug or biological product that is dispensed or furnished.

"(d) TIMING FOR INITIAL PRICE APPLICABILITY YEAR 2026.—Notwithstanding the provisions of this part, in the case of initial price applicability year 2026, the following rules shall apply for purposes of implementing the program: Regulations. Applicability.

"(1) Subsection (b)(3) shall be applied by substituting 'September 1, 2023' for ', with respect to each initial price applicability year, February 1 of the year that begins 2 years prior to such year'.

"(2) Subsection (b)(4) shall be applied—

"(A) in subparagraph (A)(ii), by substituting 'October 1, 2023' for 'February 28 following the selected drug publication date with respect to such selected drug'; and

"(B) in subparagraph (B), by substituting 'August 1, 2024' for 'November 1 of the year that begins 2 years prior to the initial price applicability year'.

"(3) Section 1192 shall be applied—

"(A) in subsection (b)(1)(A), by substituting 'during the period beginning on June 1, 2022, and ending on May 31, 2023' for 'during the most recent period of 12 months prior to the selected drug publication date (but ending not later than October 31 of the year prior to the year of such drug publication date), with respect to such year, for which data are available'; and

"(B) in subsection (d)(1)(A), by substituting 'during the period beginning on June 1, 2022, and ending on May 31, 2023' for 'during the most recent period for which data are available of at least 12 months prior to the selected drug publication date (but ending no later than October 31 of the year prior to the year of such drug publication date), with respect to such year'.

"(4) Section 1193(a) shall be applied by substituting 'October 1, 2023' for 'February 28 following the selected drug publication date with respect to such selected drug'.

"(5) Section 1194(b)(2) shall be applied—

"(A) in subparagraph (A), by substituting 'October 2, 2023' for 'March 1 of the year of the selected drug publication date, with respect to the selected drug';

"(B) in subparagraph (B), by substituting 'February 1, 2024' for 'the June 1 following the selected drug publication date'; and

"(C) in subparagraph (E), by substituting 'August 1, 2024' for 'the first day of November following the selected

drug publication date, with respect to the initial price applicability year '.

"(6) Section 1195(a)(1) shall be applied by substituting 'September 1, 2024' for 'November 30 of the year that is 2 years prior to such initial price applicability year'.

42 USC 1320f–1.

"SEC. 1192. SELECTION OF NEGOTIATION-ELIGIBLE DRUGS AS SELECTED DRUGS.

Deadlines. Publication. List. Time periods.

"(a) IN GENERAL.—Not later than the selected drug publication date with respect to an initial price applicability year, in accordance with subsection (b), the Secretary shall select and publish a list of—

"(1) with respect to the initial price applicability year 2026, 10 negotiation-eligible drugs described in subparagraph (A) of subsection (d)(1), but not subparagraph (B) of such subsection, with respect to such year (or, all (if such number is less than 10) such negotiation-eligible drugs with respect to such year);

"(2) with respect to the initial price applicability year 2027, 15 negotiation-eligible drugs described in subparagraph (A) of subsection (d)(1), but not subparagraph (B) of such subsection, with respect to such year (or, all (if such number is less than 15) such negotiation-eligible drugs with respect to such year);

"(3) with respect to the initial price applicability year 2028, 15 negotiation-eligible drugs described in subparagraph (A) or (B) of subsection (d)(1) with respect to such year (or, all (if such number is less than 15) such negotiation-eligible drugs with respect to such year); and

"(4) with respect to the initial price applicability year 2029 or a subsequent year, 20 negotiation-eligible drugs described in subparagraph (A) or (B) of subsection (d)(1), with respect to such year (or, all (if such number is less than 20) such negotiation-eligible drugs with respect to such year).

Subject to subsection (c)(2) and section 1194(f)(5), each drug published on the list pursuant to the previous sentence shall be subject to the negotiation process under section 1194 for the negotiation period with respect to such initial price applicability year (and the renegotiation process under such section as applicable for any subsequent year during the applicable price applicability period).

"(b) SELECTION OF DRUGS.—

"(1) IN GENERAL.—In carrying out subsection (a), subject to paragraph (2), the Secretary shall, with respect to an initial price applicability year, do the following:

Determination. Time periods.

"(A) Rank negotiation-eligible drugs described in subsection (d)(1) according to the total expenditures for such drugs under parts B and D of title XVIII, as determined by the Secretary, during the most recent period of 12 months prior to the selected drug publication date (but ending not later than October 31 of the year prior to the year of such drug publication date), with respect to such year, for which data are available, with the negotiation-eligible drugs with the highest total expenditures being ranked the highest.

"(B) Select from such ranked drugs with respect to such year the negotiation-eligible drugs with the highest such rankings.

Applicability.

"(2) HIGH SPEND PART D DRUGS FOR 2026 AND 2027.—With respect to the initial price applicability year 2026 and with

respect to the initial price applicability year 2027, the Secretary shall apply paragraph (1) as if the reference to 'negotiation-eligible drugs described in subsection (d)(1)' were a reference to 'negotiation-eligible drugs described in subsection (d)(1)(A)' and as if the reference to 'total expenditures for such drugs under parts B and D of title XVIII' were a reference to 'total expenditures for such drugs under part D of title XVIII'.

"(c) SELECTED DRUG.—

Time period. Determination.

"(1) IN GENERAL.—For purposes of this part, in accordance with subsection (e)(2) and subject to paragraph (2), each negotiation-eligible drug included on the list published under subsection (a) with respect to an initial price applicability year shall be referred to as a 'selected drug' with respect to such year and each subsequent year beginning before the first year that begins at least 9 months after the date on which the Secretary determines at least one drug or biological product—

"(A) is approved or licensed (as applicable)—

"(i) under section 505(j) of the Federal Food, Drug, and Cosmetic Act using such drug as the listed drug; or

"(ii) under section 351(k) of the Public Health Service Act using such drug as the reference product; and

"(B) is marketed pursuant to such approval or licensure.

"(2) CLARIFICATION.—A negotiation-eligible drug—

"(A) that is included on the list published under subsection (a) with respect to an initial price applicability year; and

"(B) for which the Secretary makes a determination described in paragraph (1) before or during the negotiation period with respect to such initial price applicability year;

shall not be subject to the negotiation process under section 1194 with respect to such negotiation period and shall continue to be considered a selected drug under this part with respect to the number of negotiation-eligible drugs published on the list under subsection (a) with respect to such initial price applicability year.

"(d) NEGOTIATION-ELIGIBLE DRUG.—

Determinations. Time periods. Definition.

"(1) IN GENERAL.—For purposes of this part, subject to paragraph (2), the term 'negotiation-eligible drug' means, with respect to the selected drug publication date with respect to an initial price applicability year, a qualifying single source drug, as defined in subsection (e), that is described in either of the following subparagraphs (or, with respect to the initial price applicability year 2026 or 2027, that is described in subparagraph (A)):

"(A) PART D HIGH SPEND DRUGS.—The qualifying single source drug is, determined in accordance with subsection (e)(2), among the 50 qualifying single source drugs with the highest total expenditures under part D of title XVIII, as determined by the Secretary in accordance with paragraph (3), during the most recent 12-month period for which data are available prior to such selected drug publication date (but ending no later than October 31 of the year prior to the year of such drug publication date).

"(B) PART B HIGH SPEND DRUGS.—The qualifying single source drug is, determined in accordance with subsection (e)(2), among the 50 qualifying single source drugs with the highest total expenditures under part B of title XVIII, as determined by the Secretary in accordance with paragraph (3), during such most recent 12-month period, as described in subparagraph (A).

"(2) EXCEPTION FOR SMALL BIOTECH DRUGS.—

"(A) IN GENERAL.—Subject to subparagraph (C), the term 'negotiation-eligible drug' shall not include, with respect to the initial price applicability years 2026, 2027, and 2028, a qualifying single source drug that meets either of the following:

"(i) PART D DRUGS.—The total expenditures for the qualifying single source drug under part D of title XVIII, as determined by the Secretary in accordance with paragraph (3)(B), during 2021—

"(I) are equal to or less than 1 percent of the total expenditures under such part D, as so determined, for all covered part D drugs (as defined in section 1860D–2(e)) during such year; and

"(II) are equal to at least 80 percent of the total expenditures under such part D, as so determined, for all covered part D drugs for which the manufacturer of the drug has an agreement in effect under section 1860D–14A during such year.

"(ii) PART B DRUGS.—The total expenditures for the qualifying single source drug under part B of title XVIII, as determined by the Secretary in accordance with paragraph (3)(B), during 2021—

"(I) are equal to or less than 1 percent of the total expenditures under such part B, as so determined, for all qualifying single source drugs for which payment may be made under such part B during such year; and

"(II) are equal to at least 80 percent of the total expenditures under such part B, as so determined, for all qualifying single source drugs of the manufacturer for which payment may be made under such part B during such year.

"(B) CLARIFICATIONS RELATING TO MANUFACTURERS.—

"(i) AGGREGATION RULE.—All persons treated as a single employer under subsection (a) or (b) of section 52 of the Internal Revenue Code of 1986 shall be treated as one manufacturer for purposes of this paragraph.

Effective dates.

"(ii) LIMITATION.—A drug shall not be considered to be a qualifying single source drug described in clause (i) or (ii) of subparagraph (A) if the manufacturer of such drug is acquired after 2021 by another manufacturer that does not meet the definition of a specified manufacturer under section 1860D–14C(g)(4)(B)(ii), effective at the beginning of the plan year immediately following such acquisition or, in the case of an acquisition before 2025, effective January 1, 2025.

"(C) DRUGS NOT INCLUDED AS SMALL BIOTECH DRUGS.—A new formulation, such as an extended release formulation, of a qualifying single source drug shall not be considered a qualifying single source drug described in subparagraph (A).

"(3) CLARIFICATIONS AND DETERMINATIONS.—

"(A) PREVIOUSLY SELECTED DRUGS AND SMALL BIOTECH DRUGS EXCLUDED.—In applying subparagraphs (A) and (B) of paragraph (1), the Secretary shall not consider or count—

"(i) drugs that are already selected drugs; and

"(ii) for initial price applicability years 2026, 2027, and 2028, qualifying single source drugs described in paragraph (2)(A).

"(B) USE OF DATA.—In determining whether a qualifying single source drug satisfies any of the criteria described in paragraph (1) or (2), the Secretary shall use data that is aggregated across dosage forms and strengths of the drug, including new formulations of the drug, such as an extended release formulation, and not based on the specific formulation or package size or package type of the drug.

"(e) QUALIFYING SINGLE SOURCE DRUG.—

"(1) IN GENERAL.—For purposes of this part, the term 'qualifying single source drug' means, with respect to an initial price applicability year, subject to paragraphs (2) and (3), a covered part D drug (as defined in section 1860D–2(e)) that is described in any of the following or a drug or biological product for which payment may be made under part B of title XVIII that is described in any of the following: Definition.

"(A) DRUG PRODUCTS.—A drug— Time periods.

"(i) that is approved under section 505(c) of the Federal Food, Drug, and Cosmetic Act and is marketed pursuant to such approval;

"(ii) for which, as of the selected drug publication date with respect to such initial price applicability year, at least 7 years will have elapsed since the date of such approval; and

"(iii) that is not the listed drug for any drug that is approved and marketed under section 505(j) of such Act.

"(B) BIOLOGICAL PRODUCTS.—A biological product—

"(i) that is licensed under section 351(a) of the Public Health Service Act and is marketed under section 351 of such Act;

"(ii) for which, as of the selected drug publication date with respect to such initial price applicability year, at least 11 years will have elapsed since the date of such licensure; and

"(iii) that is not the reference product for any biological product that is licensed and marketed under section 351(k) of such Act.

"(2) TREATMENT OF AUTHORIZED GENERIC DRUGS.—

"(A) IN GENERAL.—In the case of a qualifying single source drug described in subparagraph (A) or (B) of paragraph (1) that is the listed drug (as such term is used in section 505(j) of the Federal Food, Drug, and Cosmetic Act) or a product described in clause (ii) of subparagraph

(B), with respect to an authorized generic drug, in applying the provisions of this part, such authorized generic drug and such listed drug or such product shall be treated as the same qualifying single source drug.

"(B) AUTHORIZED GENERIC DRUG DEFINED.—For purposes of this paragraph, the term 'authorized generic drug' means—

"(i) in the case of a drug, an authorized generic drug (as such term is defined in section 505(t)(3) of the Federal Food, Drug, and Cosmetic Act); and

"(ii) in the case of a biological product, a product that—

"(I) has been licensed under section 351(a) of such Act; and

"(II) is marketed, sold, or distributed directly or indirectly to retail class of trade under a different labeling, packaging (other than repackaging as the reference product in blister packs, unit doses, or similar packaging for use in institutions), product code, labeler code, trade name, or trade mark than the reference product.

"(3) EXCLUSIONS.—In this part, the term 'qualifying single source drug' does not include any of the following:

"(A) CERTAIN ORPHAN DRUGS.—A drug that is designated as a drug for only one rare disease or condition under section 526 of the Federal Food, Drug, and Cosmetic Act and for which the only approved indication (or indications) is for such disease or condition.

Time periods. Determination.

"(B) LOW SPEND MEDICARE DRUGS.—A drug or biological product with respect to which the total expenditures under parts B and D of title XVIII, as determined by the Secretary in accordance with subsection (d)(3)(B)—

"(i) with respect to initial price applicability year 2026, is less than, during the period beginning on June 1, 2022, and ending on May 31, 2023, $200,000,000;

"(ii) with respect to initial price applicability year 2027, is less than, during the most recent 12-month period applicable under subparagraphs (A) and (B) of subsection (d)(1) for such year, the dollar amount specified in clause (i) increased by the annual percentage increase in the consumer price index for all urban consumers (all items; United States city average) for the period beginning on June 1, 2023, and ending on September 30, 2024; or

"(iii) with respect to a subsequent initial price applicability year, is less than, during the most recent 12-month period applicable under subparagraphs (A) and (B) of subsection (d)(1) for such year, the dollar amount specified in this subparagraph for the previous initial price applicability year increased by the annual percentage increase in such consumer price index for the 12-month period ending on September 30 of the year prior to the year of the selected drug publication date with respect to such subsequent initial price applicability year.

"(C) PLASMA-DERIVED PRODUCTS.—A biological product that is derived from human whole blood or plasma.

"SEC. 1193. MANUFACTURER AGREEMENTS. 42 USC 1320f–2.

"(a) IN GENERAL.—For purposes of section 1191(a)(2), the Secretary shall enter into agreements with manufacturers of selected drugs with respect to a price applicability period, by not later than February 28 following the selected drug publication date with respect to such selected drug, under which— Deadline.

"(1) during the negotiation period for the initial price applicability year for the selected drug, the Secretary and the manufacturer, in accordance with section 1194, negotiate to determine (and, by not later than the last date of such period, agree to) a maximum fair price for such selected drug of the manufacturer in order for the manufacturer to provide access to such price— Determination. Deadline.

"(A) to maximum fair price eligible individuals who with respect to such drug are described in subparagraph (A) of section 1191(c)(2) and are dispensed such drug (and to pharmacies, mail order services, and other dispensers, with respect to such maximum fair price eligible individuals who are dispensed such drugs) during, subject to paragraph (2), the price applicability period; and

"(B) to hospitals, physicians, and other providers of services and suppliers with respect to maximum fair price eligible individuals who with respect to such drug are described in subparagraph (B) of such section and are furnished or administered such drug during, subject to paragraph (2), the price applicability period;

"(2) the Secretary and the manufacturer shall, in accordance with section 1194, renegotiate (and, by not later than the last date of the period of renegotiation, agree to) the maximum fair price for such drug, in order for the manufacturer to provide access to such maximum fair price (as so renegotiated)— Deadline.

"(A) to maximum fair price eligible individuals who with respect to such drug are described in subparagraph (A) of section 1191(c)(2) and are dispensed such drug (and to pharmacies, mail order services, and other dispensers, with respect to such maximum fair price eligible individuals who are dispensed such drugs) during any year during the price applicability period (beginning after such renegotiation) with respect to such selected drug; and

"(B) to hospitals, physicians, and other providers of services and suppliers with respect to maximum fair price eligible individuals who with respect to such drug are described in subparagraph (B) of such section and are furnished or administered such drug during any year described in subparagraph (A);

"(3) subject to subsection (d), access to the maximum fair price (including as renegotiated pursuant to paragraph (2)), with respect to such a selected drug, shall be provided by the manufacturer to—

"(A) maximum fair price eligible individuals, who with respect to such drug are described in subparagraph (A) of section 1191(c)(2), at the pharmacy, mail order service, or other dispenser at the point-of-sale of such drug (and

shall be provided by the manufacturer to the pharmacy, mail order service, or other dispenser, with respect to such maximum fair price eligible individuals who are dispensed such drugs), as described in paragraph (1)(A) or (2)(A), as applicable; and

"(B) hospitals, physicians, and other providers of services and suppliers with respect to maximum fair price eligible individuals who with respect to such drug are described in subparagraph (B) of such section and are furnished or administered such drug, as described in paragraph (1)(B) or (2)(B), as applicable;

"(4) the manufacturer submits to the Secretary, in a form and manner specified by the Secretary, for the negotiation period for the price applicability period (and, if applicable, before any period of renegotiation pursuant to section 1194(f)) with respect to such drug—

"(A) information on the non-Federal average manufacturer price (as defined in section 8126(h)(5) of title 38, United States Code) for the drug for the applicable year or period; and

Requirement.

"(B) information that the Secretary requires to carry out the negotiation (or renegotiation process) under this part; and

Compliance.
Requirements.
Determination.

"(5) the manufacturer complies with requirements determined by the Secretary to be necessary for purposes of administering the program and monitoring compliance with the program.

"(b) AGREEMENT IN EFFECT UNTIL DRUG IS NO LONGER A SELECTED DRUG.—An agreement entered into under this section shall be effective, with respect to a selected drug, until such drug is no longer considered a selected drug under section 1192(c).

Determination.

"(c) CONFIDENTIALITY OF INFORMATION.—Information submitted to the Secretary under this part by a manufacturer of a selected drug that is proprietary information of such manufacturer (as determined by the Secretary) shall be used only by the Secretary or disclosed to and used by the Comptroller General of the United States for purposes of carrying out this part.

"(d) NONDUPLICATION WITH 340B CEILING PRICE.—Under an agreement entered into under this section, the manufacturer of a selected drug—

"(1) shall not be required to provide access to the maximum fair price under subsection (a)(3), with respect to such selected drug and maximum fair price eligible individuals who are eligible to be furnished, administered, or dispensed such selected drug at a covered entity described in section 340B(a)(4) of the Public Health Service Act, to such covered entity if such selected drug is subject to an agreement described in section 340B(a)(1) of such Act and the ceiling price (defined in section 340B(a)(1) of such Act) is lower than the maximum fair price for such selected drug; and

Requirement.

"(2) shall be required to provide access to the maximum fair price to such covered entity with respect to maximum fair price eligible individuals who are eligible to be furnished, administered, or dispensed such selected drug at such entity at such ceiling price in a nonduplicated amount to the ceiling price if such maximum fair price is below the ceiling price for such selected drug.

"SEC. 1194. NEGOTIATION AND RENEGOTIATION PROCESS. 42 USC 1320f–3.

"(a) IN GENERAL.—For purposes of this part, under an agreement under section 1193 between the Secretary and a manufacturer of a selected drug (or selected drugs), with respect to the period for which such agreement is in effect and in accordance with subsections (b), (c), and (d), the Secretary and the manufacturer—

"(1) shall during the negotiation period with respect to such drug, in accordance with this section, negotiate a maximum fair price for such drug for the purpose described in section 1193(a)(1); and

"(2) renegotiate, in accordance with the process specified pursuant to subsection (f), such maximum fair price for such drug for the purpose described in section 1193(a)(2) if such drug is a renegotiation-eligible drug under such subsection.

"(b) NEGOTIATION PROCESS REQUIREMENTS.—

"(1) METHODOLOGY AND PROCESS.—The Secretary shall develop and use a consistent methodology and process, in accordance with paragraph (2), for negotiations under subsection (a) that aims to achieve the lowest maximum fair price for each selected drug.

"(2) SPECIFIC ELEMENTS OF NEGOTIATION PROCESS.—As part of the negotiation process under this section, with respect to a selected drug and the negotiation period with respect to the initial price applicability year with respect to such drug, the following shall apply: Applicability. Deadlines.

"(A) SUBMISSION OF INFORMATION.—Not later than March 1 of the year of the selected drug publication date, with respect to the selected drug, the manufacturer of the drug shall submit to the Secretary, in accordance with section 1193(a)(4), the information described in such section.

"(B) INITIAL OFFER BY SECRETARY.—Not later than the June 1 following the selected drug publication date, the Secretary shall provide the manufacturer of the selected drug with a written initial offer that contains the Secretary's proposal for the maximum fair price of the drug and a concise justification based on the factors described in section 1194(e) that were used in developing such offer. Proposal.

"(C) RESPONSE TO INITIAL OFFER.— Proposal.

"(i) IN GENERAL.—Not later than 30 days after the date of receipt of an initial offer under subparagraph (B), the manufacturer shall either accept such offer or propose a counteroffer to such offer.

"(ii) COUNTEROFFER REQUIREMENTS.—If a manufacturer proposes a counteroffer, such counteroffer—

"(I) shall be in writing; and

"(II) shall be justified based on the factors described in subsection (e).

"(D) RESPONSE TO COUNTEROFFER.—After receiving a counteroffer under subparagraph (C), the Secretary shall respond in writing to such counteroffer.

"(E) DEADLINE.—All negotiations between the Secretary and the manufacturer of the selected drug shall end prior to the first day of November following the selected drug publication date, with respect to the initial price applicability year.

"(F) LIMITATIONS ON OFFER AMOUNT.—In negotiating the maximum fair price of a selected drug, with respect to the initial price applicability year for the selected drug, and, as applicable, in renegotiating the maximum fair price for such drug, with respect to a subsequent year during the price applicability period for such drug, the Secretary shall not offer (or agree to a counteroffer for) a maximum fair price for the selected drug that—

"(i) exceeds the ceiling determined under subsection (c) for the selected drug and year; or

"(ii) as applicable, is less than the floor determined under subsection (d) for the selected drug and year.

"(c) CEILING FOR MAXIMUM FAIR PRICE.—

"(1) GENERAL CEILING.—

"(A) IN GENERAL.—The maximum fair price negotiated under this section for a selected drug, with respect to the first initial price applicability year of the price applicability period with respect to such drug, shall not exceed the lower of the amount under subparagraph (B) or the amount under subparagraph (C).

"(B) SUBPARAGRAPH (B) AMOUNT.—An amount equal to the following:

"(i) COVERED PART D DRUG.—In the case of a covered part D drug (as defined in section 1860D–2(e)), the sum of the plan specific enrollment weighted amounts for each prescription drug plan or MA–PD plan (as determined under paragraph (2)).

"(ii) PART B DRUG OR BIOLOGICAL.—In the case of a drug or biological product for which payment may be made under part B of title XVIII, the payment amount under section 1847A(b)(4) for the drug or biological product for the year prior to the year of the selected drug publication date with respect to the initial price applicability year for the drug or biological product.

"(C) SUBPARAGRAPH (C) AMOUNT.—An amount equal to the applicable percent described in paragraph (3), with respect to such drug, of the following:

"(i) INITIAL PRICE APPLICABILITY YEAR 2026.—In the case of a selected drug with respect to which such initial price applicability year is 2026, the average non-Federal average manufacturer price for such drug for 2021 (or, in the case that there is not an average non-Federal average manufacturer price available for such drug for 2021, for the first full year following the market entry for such drug), increased by the percentage increase in the consumer price index for all urban consumers (all items; United States city average) from September 2021 (or December of such first full year following the market entry), as applicable, to September of the year prior to the year of the selected drug publication date with respect to such initial price applicability year.

"(ii) INITIAL PRICE APPLICABILITY YEAR 2027 AND SUBSEQUENT YEARS.—In the case of a selected drug with respect to which such initial price applicability year is 2027 or a subsequent year, the lower of—

"(I) the average non-Federal average manufacturer price for such drug for 2021 (or, in the case that there is not an average non-Federal average manufacturer price available for such drug for 2021, for the first full year following the market entry for such drug), increased by the percentage increase in the consumer price index for all urban consumers (all items; United States city average) from September 2021 (or December of such first full year following the market entry), as applicable, to September of the year prior to the year of the selected drug publication date with respect to such initial price applicability year; or

"(II) the average non-Federal average manufacturer price for such drug for the year prior to the selected drug publication date with respect to such initial price applicability year.

"(2) PLAN SPECIFIC ENROLLMENT WEIGHTED AMOUNT.—For purposes of paragraph (1)(B)(i), the plan specific enrollment weighted amount for a prescription drug plan or an MA–PD plan with respect to a covered Part D drug is an amount equal to the product of—

"(A) the negotiated price of the drug under such plan under part D of title XVIII, net of all price concessions received by such plan or pharmacy benefit managers on behalf of such plan, for the most recent year for which data is available; and

"(B) a fraction—

"(i) the numerator of which is the total number of individuals enrolled in such plan in such year; and

"(ii) the denominator of which is the total number of individuals enrolled in a prescription drug plan or an MA–PD plan in such year.

"(3) APPLICABLE PERCENT DESCRIBED.—For purposes of this subsection, the applicable percent described in this paragraph is the following:

"(A) SHORT-MONOPOLY DRUGS AND VACCINES.—With respect to a selected drug (other than an extended-monopoly drug and a long-monopoly drug), 75 percent.

"(B) EXTENDED-MONOPOLY DRUGS.—With respect to an extended-monopoly drug, 65 percent.

"(C) LONG-MONOPOLY DRUGS.—With respect to a long-monopoly drug, 40 percent.

"(4) EXTENDED-MONOPOLY DRUG DEFINED.—

"(A) IN GENERAL.—In this part, subject to subparagraph (B), the term 'extended-monopoly drug' means, with respect to an initial price applicability year, a selected drug for which at least 12 years, but fewer than 16 years, have elapsed since the date of approval of such drug under section 505(c) of the Federal Food, Drug, and Cosmetic Act or since the date of licensure of such drug under section 351(a) of the Public Health Service Act, as applicable. Time period.

"(B) EXCLUSIONS.—The term 'extended-monopoly drug' shall not include any of the following:

"(i) A vaccine that is licensed under section 351 of the Public Health Service Act and marketed pursuant to such section.

"(ii) A selected drug for which a manufacturer had an agreement under this part with the Secretary with respect to an initial price applicability year that is before 2030.

"(C) CLARIFICATION.—Nothing in subparagraph (B)(ii) shall limit the transition of a selected drug described in paragraph (3)(A) to a long-monopoly drug if the selected drug meets the definition of a long-monopoly drug.

"(5) LONG-MONOPOLY DRUG DEFINED.—

Time period.

"(A) IN GENERAL.—In this part, subject to subparagraph (B), the term 'long-monopoly drug' means, with respect to an initial price applicability year, a selected drug for which at least 16 years have elapsed since the date of approval of such drug under section 505(c) of the Federal Food, Drug, and Cosmetic Act or since the date of licensure of such drug under section 351(a) of the Public Health Service Act, as applicable.

"(B) EXCLUSION.—The term 'long-monopoly drug' shall not include a vaccine that is licensed under section 351 of the Public Health Service Act and marketed pursuant to such section.

Time period.

"(6) AVERAGE NON-FEDERAL AVERAGE MANUFACTURER PRICE.—In this part, the term 'average non-Federal average manufacturer price' means the average of the non-Federal average manufacturer price (as defined in section 8126(h)(5) of title 38, United States Code) for the 4 calendar quarters of the year involved.

Time periods.

"(d) TEMPORARY FLOOR FOR SMALL BIOTECH DRUGS.—In the case of a selected drug that is a qualifying single source drug described in section 1192(d)(2) and with respect to which the first initial price applicability year of the price applicability period with respect to such drug is 2029 or 2030, the maximum fair price negotiated under this section for such drug for such initial price applicability year may not be less than 66 percent of the average non-Federal average manufacturer price for such drug (as defined in subsection (c)(6)) for 2021 (or, in the case that there is not an average non-Federal average manufacturer price available for such drug for 2021, for the first full year following the market entry for such drug), increased by the percentage increase in the consumer price index for all urban consumers (all items; United States city average) from September 2021 (or December of such first full year following the market entry), as applicable, to September of the year prior to the selected drug publication date with respect to the initial price applicability year.

"(e) FACTORS.—For purposes of negotiating the maximum fair price of a selected drug under this part with the manufacturer of the drug, the Secretary shall consider the following factors, as applicable to the drug, as the basis for determining the offers and counteroffers under subsection (b) for the drug:

"(1) MANUFACTURER-SPECIFIC DATA.—The following data, with respect to such selected drug, as submitted by the manufacturer:

"(A) Research and development costs of the manufacturer for the drug and the extent to which the manufacturer has recouped research and development costs.

"(B) Current unit costs of production and distribution of the drug.

"(C) Prior Federal financial support for novel therapeutic discovery and development with respect to the drug.

"(D) Data on pending and approved patent applications, exclusivities recognized by the Food and Drug Administration, and applications and approvals under section 505(c) of the Federal Food, Drug, and Cosmetic Act or section 351(a) of the Public Health Service Act for the drug.

"(E) Market data and revenue and sales volume data for the drug in the United States.

"(2) EVIDENCE ABOUT ALTERNATIVE TREATMENTS.—The following evidence, as available, with respect to such selected drug and therapeutic alternatives to such drug:

"(A) The extent to which such drug represents a therapeutic advance as compared to existing therapeutic alternatives and the costs of such existing therapeutic alternatives.

"(B) Prescribing information approved by the Food and Drug Administration for such drug and therapeutic alternatives to such drug.

"(C) Comparative effectiveness of such drug and therapeutic alternatives to such drug, taking into consideration the effects of such drug and therapeutic alternatives to such drug on specific populations, such as individuals with disabilities, the elderly, the terminally ill, children, and other patient populations.

"(D) The extent to which such drug and therapeutic alternatives to such drug address unmet medical needs for a condition for which treatment or diagnosis is not addressed adequately by available therapy.

In using evidence described in subparagraph (C), the Secretary shall not use evidence from comparative clinical effectiveness research in a manner that treats extending the life of an elderly, disabled, or terminally ill individual as of lower value than extending the life of an individual who is younger, nondisabled, or not terminally ill.

"(f) RENEGOTIATION PROCESS.—

"(1) IN GENERAL.—In the case of a renegotiation-eligible drug (as defined in paragraph (2)) that is selected under paragraph (3), the Secretary shall provide for a process of renegotiation (for years (beginning with 2028) during the price applicability period, with respect to such drug) of the maximum fair price for such drug consistent with paragraph (4). Effective date.

"(2) RENEGOTIATION-ELIGIBLE DRUG DEFINED.—In this section, the term 'renegotiation-eligible drug' means a selected drug that is any of the following:

"(A) ADDITION OF NEW INDICATION.—A selected drug for which a new indication is added to the drug.

"(B) CHANGE OF STATUS TO AN EXTENDED-MONOPOLY DRUG.—A selected drug that—

"(i) is not an extended-monopoly or a long-monopoly drug; and

"(ii) for which there is a change in status to that of an extended-monopoly drug.

"(C) CHANGE OF STATUS TO A LONG-MONOPOLY DRUG.—A selected drug that—

"(i) is not a long-monopoly drug; and

"(ii) for which there is a change in status to that of a long-monopoly drug.

Determination.

"(D) MATERIAL CHANGES.—A selected drug for which the Secretary determines there has been a material change of any of the factors described in paragraph (1) or (2) of subsection (e).

Effective date.

"(3) SELECTION OF DRUGS FOR RENEGOTIATION.—For each year (beginning with 2028), the Secretary shall select among renegotiation-eligible drugs for renegotiation as follows:

"(A) ALL EXTENDED-MONOPOLY NEGOTIATION-ELIGIBLE DRUGS.—The Secretary shall select all renegotiation-eligible drugs described in paragraph (2)(B).

"(B) ALL LONG-MONOPOLY NEGOTIATION-ELIGIBLE DRUGS.—The Secretary shall select all renegotiation-eligible drugs described in paragraph (2)(C).

"(C) REMAINING DRUGS.—Among the remaining renegotiation-eligible drugs described in subparagraphs (A) and (D) of paragraph (2), the Secretary shall select renegotiation-eligible drugs for which the Secretary expects renegotiation is likely to result in a significant change in the maximum fair price otherwise negotiated.

"(4) RENEGOTIATION PROCESS.—

"(A) IN GENERAL.—The Secretary shall specify the process for renegotiation of maximum fair prices with the manufacturer of a renegotiation-eligible drug selected for renegotiation under this subsection.

"(B) CONSISTENT WITH NEGOTIATION PROCESS.—The process specified under subparagraph (A) shall, to the extent practicable, be consistent with the methodology and process established under subsection (b) and in accordance with subsections (c), (d), and (e), and for purposes of applying subsections (c)(1)(A) and (d), the reference to the first initial price applicability year of the price applicability period with respect to such drug shall be treated as the first initial price applicability year of such period for which the maximum fair price established pursuant to such renegotiation applies, including for applying subsection (c)(3)(B) in the case of renegotiation-eligible drugs described in paragraph (3)(A) of this subsection and subsection (c)(3)(C) in the case of renegotiation-eligible drugs described in paragraph (3)(B) of this subsection.

"(5) CLARIFICATION.—A renegotiation-eligible drug for which the Secretary makes a determination described in section 1192(c)(1) before or during the period of renegotiation shall not be subject to the renegotiation process under this section.

Effective date.

"(g) CLARIFICATION.—The maximum fair price for a selected drug described in subparagraph (A) or (B) of paragraph (1) shall take effect no later than the first day of the first calendar quarter that begins after the date described in subparagraph (A) or (B), as applicable.

"SEC. 1195. PUBLICATION OF MAXIMUM FAIR PRICES.

Deadlines.
Time periods.
42 USC 1320f–4.

"(a) IN GENERAL.—With respect to an initial price applicability year and a selected drug with respect to such year—

"(1) not later than November 30 of the year that is 2 years prior to such initial price applicability year, the Secretary shall publish the maximum fair price for such drug negotiated with the manufacturer of such drug under this part; and

"(2) not later than March 1 of the year prior to such initial price applicability year, the Secretary shall publish, subject to section 1193(c), the explanation for the maximum fair price with respect to the factors as applied under section 1194(e) for such drug described in paragraph (1).

"(b) UPDATES.—

"(1) SUBSEQUENT YEAR MAXIMUM FAIR PRICES.—For a selected drug, for each year subsequent to the first initial price applicability year of the price applicability period with respect to such drug, with respect to which an agreement for such drug is in effect under section 1193, not later than November 30 of the year that is 2 years prior to such subsequent year, the Secretary shall publish the maximum fair price applicable to such drug and year, which shall be—

"(A) subject to subparagraph (B), the amount equal to the maximum fair price published for such drug for the previous year, increased by the annual percentage increase in the consumer price index for all urban consumers (all items; United States city average) for the 12-month period ending with the July immediately preceding such November 30; or

"(B) in the case the maximum fair price for such drug was renegotiated, for the first year for which such price as so renegotiated applies, such renegotiated maximum fair price.

Determination.

"(2) PRICES NEGOTIATED AFTER DEADLINE.—In the case of a selected drug with respect to an initial price applicability year for which the maximum fair price is determined under this part after the date of publication under this section, the Secretary shall publish such maximum fair price by not later than 30 days after the date such maximum price is so determined.

"SEC. 1196. ADMINISTRATIVE DUTIES AND COMPLIANCE MONITORING.

42 USC 1320f–5.

"(a) ADMINISTRATIVE DUTIES.—For purposes of section 1191(a)(4), the administrative duties described in this section are the following:

"(1) The establishment of procedures to ensure that the maximum fair price for a selected drug is applied before—

"(A) any coverage or financial assistance under other health benefit plans or programs that provide coverage or financial assistance for the purchase or provision of prescription drug coverage on behalf of maximum fair price eligible individuals; and

"(B) any other discounts.

"(2) The establishment of procedures to compute and apply the maximum fair price across different strengths and dosage forms of a selected drug and not based on the specific formulation or package size or package type of such drug.

"(3) The establishment of procedures to carry out the provisions of this part, as applicable, with respect to—

"(A) maximum fair price eligible individuals who are enrolled in a prescription drug plan under part D of title XVIII or an MA–PD plan under part C of such title; and

"(B) maximum fair price eligible individuals who are enrolled under part B of such title, including who are enrolled in an MA plan under part C of such title.

"(4) The establishment of a negotiation process and renegotiation process in accordance with section 1194.

"(5) The establishment of a process for manufacturers to submit information described in section 1194(b)(2)(A).

"(6) The sharing with the Secretary of the Treasury of such information as is necessary to determine the tax imposed by section 5000D of the Internal Revenue Code of 1986, including the application of such tax to a manufacturer, producer, or importer or the determination of any date described in section 5000D(c)(1) of such Code. For purposes of the preceding sentence, such information shall include—

"(A) the date on which the Secretary receives notification of any termination of an agreement under the Medicare coverage gap discount program under section 1860D-14A and the date on which any subsequent agreement under such program is entered into;

"(B) the date on which the Secretary receives notification of any termination of an agreement under the manufacturer discount program under section 1860D-14C and the date on which any subsequent agreement under such program is entered into; and

"(C) the date on which the Secretary receives notification of any termination of a rebate agreement described in section 1927(b) and the date on which any subsequent rebate agreement described in such section is entered into.

"(7) The establishment of procedures for purposes of applying section 1192(d)(2)(B).

"(b) COMPLIANCE MONITORING.—The Secretary shall monitor compliance by a manufacturer with the terms of an agreement under section 1193 and establish a mechanism through which violations of such terms shall be reported.

42 USC 1320f–6.

"SEC. 1197. CIVIL MONETARY PENALTIES.

"(a) VIOLATIONS RELATING TO OFFERING OF MAXIMUM FAIR PRICE.—Any manufacturer of a selected drug that has entered into an agreement under section 1193, with respect to a year during the price applicability period with respect to such drug, that does not provide access to a price that is equal to or less than the maximum fair price for such drug for such year—

"(1) to a maximum fair price eligible individual who with respect to such drug is described in subparagraph (A) of section 1191(c)(2) and who is dispensed such drug during such year (and to pharmacies, mail order services, and other dispensers, with respect to such maximum fair price eligible individuals who are dispensed such drugs); or

"(2) to a hospital, physician, or other provider of services or supplier with respect to maximum fair price eligible individuals who with respect to such drug is described in subparagraph (B) of such section and is furnished or administered such drug

by such hospital, physician, or provider or supplier during such year;

shall be subject to a civil monetary penalty equal to ten times the amount equal to the product of the number of units of such drug so furnished, dispensed, or administered during such year and the difference between the price for such drug made available for such year by such manufacturer with respect to such individual or hospital, physician, provider of services, or supplier and the maximum fair price for such drug for such year.

"(b) VIOLATIONS OF CERTAIN TERMS OF AGREEMENT.—Any manufacturer of a selected drug that has entered into an agreement under section 1193, with respect to a year during the price applicability period with respect to such drug, that is in violation of a requirement imposed pursuant to section 1193(a)(5), including the requirement to submit information pursuant to section 1193(a)(4), shall be subject to a civil monetary penalty equal to $1,000,000 for each day of such violation.

"(c) FALSE INFORMATION.—Any manufacturer that knowingly provides false information pursuant to section 1196(a)(7) shall be subject to a civil monetary penalty equal to $100,000,000 for each item of such false information.

"(d) APPLICATION.—The provisions of section 1128A (other than subsections (a) and (b)) shall apply to a civil monetary penalty under this section in the same manner as such provisions apply to a penalty or proceeding under section 1128A(a).

"SEC. 1198. LIMITATION ON ADMINISTRATIVE AND JUDICIAL REVIEW. 42 USC 1320f–7.

"There shall be no administrative or judicial review of any of the following:

"(1) The determination of a unit, with respect to a drug or biological product, pursuant to section 1191(c)(6).

"(2) The selection of drugs under section 1192(b), the determination of negotiation-eligible drugs under section 1192(d), and the determination of qualifying single source drugs under section 1192(e).

"(3) The determination of a maximum fair price under subsection (b) or (f) of section 1194.

"(4) The determination of renegotiation-eligible drugs under section 1194(f)(2) and the selection of renegotiation-eligible drugs under section 1194(f)(3).".

(b) APPLICATION OF MAXIMUM FAIR PRICES AND CONFORMING AMENDMENTS.—

(1) UNDER MEDICARE.—

(A) APPLICATION TO PAYMENTS UNDER PART B.—Section 1847A(b)(1)(B) of the Social Security Act (42 U.S.C. 1395w–3a(b)(1)(B)) is amended by inserting "or in the case of such a drug or biological product that is a selected drug (as referred to in section 1192(c)), with respect to a price applicability period (as defined in section 1191(b)(2)), 106 percent of the maximum fair price (as defined in section 1191(c)(3)) applicable for such drug and a year during such period" after "paragraph (4)".

(B) APPLICATION UNDER MA OF COST-SHARING FOR PART B DRUGS BASED OFF OF NEGOTIATED PRICE.—Section 1852(a)(1)(B)(iv) of the Social Security Act (42 U.S.C. 1395w–22(a)(1)(B)(iv)) is amended—

(i) by redesignating subclause (VII) as subclause (VIII); and

(ii) by inserting after subclause (VI) the following subclause:

"(VII) A drug or biological product that is a selected drug (as referred to in section 1192(c)).".

(C) EXCEPTION TO PART D NON-INTERFERENCE.—Section 1860D–11(i) of the Social Security Act (42 U.S.C. 1395w–111(i)) is amended—

(i) in paragraph (1), by striking "and" at the end;

(ii) in paragraph (2), by striking "or institute a price structure for the reimbursement of covered part D drugs." and inserting ", except as provided under section 1860D–4(b)(3)(l); and"; and

(iii) by adding at the end the following new paragraph:

"(3) may not institute a price structure for the reimbursement of covered part D drugs, except as provided under part E of title XI.".

(D) APPLICATION AS NEGOTIATED PRICE UNDER PART D.—Section 1860D–2(d)(1) of the Social Security Act (42 U.S.C. 1395w–102(d)(1)) is amended—

(i) in subparagraph (B), by inserting ", subject to subparagraph (D)," after "negotiated prices"; and

(ii) by adding at the end the following new subparagraph:

"(D) APPLICATION OF MAXIMUM FAIR PRICE FOR SELECTED DRUGS.—In applying this section, in the case of a covered part D drug that is a selected drug (as referred to in section 1192(c)), with respect to a price applicability period (as defined in section 1191(b)(2)), the negotiated prices used for payment (as described in this subsection) shall be no greater than the maximum fair price (as defined in section 1191(c)(3)) for such drug and for each year during such period plus any dispensing fees for such drug.".

(E) COVERAGE OF SELECTED DRUGS.—Section 1860D–4(b)(3) of the Social Security Act (42 U.S.C. 1395w–104(b)(3)) is amended by adding at the end the following new subparagraph:

"(I) REQUIRED INCLUSION OF SELECTED DRUGS.—

Time periods.

"(i) IN GENERAL.—For 2026 and each subsequent year, the PDP sponsor offering a prescription drug plan shall include each covered part D drug that is a selected drug under section 1192 for which a maximum fair price (as defined in section 1191(c)(3)) is in effect with respect to the year.

"(ii) CLARIFICATION.—Nothing in clause (i) shall be construed as prohibiting a PDP sponsor from removing such a selected drug from a formulary if such removal would be permitted under section 423.120(b)(5)(iv) of title 42, Code of Federal Regulations (or any successor regulation).".

(F) INFORMATION FROM PRESCRIPTION DRUG PLANS AND MA–PD PLANS REQUIRED.—

(i) PRESCRIPTION DRUG PLANS.—Section 1860D–12(b) of the Social Security Act (42 U.S.C. 1395w–

112(b)) is amended by adding at the end the following new paragraph:

"(8) PROVISION OF INFORMATION RELATED TO MAXIMUM FAIR PRICES.—Each contract entered into with a PDP sponsor under this part with respect to a prescription drug plan offered by such sponsor shall require the sponsor to provide information to the Secretary as requested by the Secretary for purposes of carrying out section 1194.". Contracts. Requirement.

(ii) MA–PD PLANS.—Section 1857(f)(3) of the Social Security Act (42 U.S.C. 1395w–27(f)(3)) is amended by adding at the end the following new subparagraph:

"(E) PROVISION OF INFORMATION RELATED TO MAXIMUM FAIR PRICES.—Section 1860D–12(b)(8).".

(G) CONDITIONS FOR COVERAGE.—

(i) MEDICARE PART D.—Section 1860D–43(c) of the Social Security Act (42 U.S.C. 1395w–153(c)) is amended—

(I) by redesignating paragraphs (1) and (2) as subparagraphs (A) and (B), respectively;

(II) by striking "AGREEMENTS.—Subsection" and inserting the following: "AGREEMENTS.—

"(1) IN GENERAL.—Subject to paragraph (2), subsection"; and

(III) by adding at the end the following new paragraph:

"(2) EXCEPTION.—Paragraph (1)(A) shall not apply to a covered part D drug of a manufacturer for any period described in section 5000D(c)(1) of the Internal Revenue Code of 1986 with respect to the manufacturer.".

(ii) MEDICAID AND MEDICARE PART B.—Section 1927(a)(3) of the Social Security Act (42 U.S.C. 1396r–8(a)(3)) is amended by adding at the end the following new sentence: "The preceding sentence shall not apply to a single source drug or innovator multiple source drug of a manufacturer for any period described in section 5000D(c)(1) of the Internal Revenue Code of 1986 with respect to the manufacturer.".

(H) DISCLOSURE OF INFORMATION UNDER MEDICARE PART D.—

(i) CONTRACT REQUIREMENTS.—Section 1860D–12(b)(3)(D)(i) of the Social Security Act (42 U.S.C. 1395w–112(b)(3)(D)(i)) is amended by inserting ", or carrying out part E of title XI" after "appropriate)".

(ii) SUBSIDIES.—Section 1860D–15(f)(2)(A)(i) of the Social Security Act (42 U.S.C. 1395w–115(f)(2)(A)(i)) is amended by inserting "or part E of title XI" after "this section".

(2) DRUG PRICE NEGOTIATION PROGRAM PRICES INCLUDED IN BEST PRICE.—Section 1927(c)(1)(C) of the Social Security Act (42 U.S.C. 1396r–8(c)(1)(C)) is amended—

(A) in clause (i)(VI), by striking "any prices charged" and inserting "subject to clause (ii)(V), any prices charged"; and

(B) in clause (ii)—

(i) in subclause (III), by striking "; and" at the end;

(ii) in subclause (IV), by striking the period at the end and inserting "; and"; and

(iii) by adding at the end the following new subclause:

"(V) in the case of a rebate period and a covered outpatient drug that is a selected drug (as referred to in section 1192(c)) during such rebate period, shall be inclusive of the maximum fair price (as defined in section 1191(c)(3)) for such drug with respect to such period.".

(3) MAXIMUM FAIR PRICES EXCLUDED FROM AVERAGE MANUFACTURER PRICE.—Section 1927(k)(1)(B)(i) of the Social Security Act (42 U.S.C. 1396r–8(k)(1)(B)(i)) is amended—

(A) in subclause (IV) by striking "; and" at the end;

(B) in subclause (V) by striking the period at the end and inserting "; and"; and

(C) by adding at the end the following new subclause:

"(VI) any reduction in price paid during the rebate period to the manufacturer for a drug by reason of application of part E of title XI.".

42 USC 1320f note.

(c) IMPLEMENTATION FOR 2026 THROUGH 2028.—The Secretary of Health and Human Services shall implement this section, including the amendments made by this section, for 2026, 2027, and 2028 by program instruction or other forms of program guidance.

SEC. 11002. SPECIAL RULE TO DELAY SELECTION AND NEGOTIATION OF BIOLOGICS FOR BIOSIMILAR MARKET ENTRY.

(a) IN GENERAL.—Part E of title XI of the Social Security Act, as added by section 11001, is amended—

42 USC 1320f–1.

(1) in section 1192—

(A) in subsection (a), in the flush matter following paragraph (4), by inserting "and subsection (b)(3)" after "the previous sentence";

(B) in subsection (b)—

(i) in paragraph (1), by adding at the end the following new subparagraph:

"(C) In the case of a biological product for which the inclusion of the biological product as a selected drug on a list published under subsection (a) has been delayed under subsection (f)(2), remove such biological product from the rankings under subparagraph (A) before making the selections under subparagraph (B).."; and

(ii) by adding at the end the following new paragraph:

"(3) INCLUSION OF DELAYED BIOLOGICAL PRODUCTS.—Pursuant to subparagraphs (B)(ii)(I) and (C)(i) of subsection (f)(2), the Secretary shall select and include on the list published under subsection (a) the biological products described in such subparagraphs. Such biological products shall count towards the required number of drugs to be selected under subsection (a)(1).."; and

(C) by adding at the end the following new subsection:

"(f) SPECIAL RULE TO DELAY SELECTION AND NEGOTIATION OF BIOLOGICS FOR BIOSIMILAR MARKET ENTRY.—

"(1) APPLICATION.—

"(A) IN GENERAL.—Subject to subparagraph (B), in the case of a biological product that would (but for this subsection) be an extended-monopoly drug (as defined in section 1194(c)(4)) included as a selected drug on the list published under subsection (a) with respect to an initial price applicability year, the rules described in paragraph (2) shall apply if the Secretary determines that there is a high likelihood (as described in paragraph (3)) that a biosimilar biological product (for which such biological product will be the reference product) will be licensed and marketed under section 351(k) of the Public Health Service Act before the date that is 2 years after the selected drug publication date with respect to such initial price applicability year. Determination. Time period.

"(B) REQUEST REQUIRED.—

"(i) IN GENERAL.—The Secretary shall not provide for a delay under—

"(I) paragraph (2)(A) unless a request is made for such a delay by a manufacturer of a biosimilar biological product prior to the selected drug publication date for the list published under subsection (a) with respect to the initial price applicability year for which the biological product may have been included as a selected drug on such list but for subparagraph (2)(A); or

"(II) paragraph (2)(B)(iii) unless a request is made for such a delay by such a manufacturer prior to the selected drug publication date for the list published under subsection (a) with respect to the initial price applicability year that is 1 year after the initial price applicability year for which the biological product described in subsection (a) would have been included as a selected drug on such list but for paragraph (2)(A). Time period.

"(ii) INFORMATION AND DOCUMENTS.—

"(I) IN GENERAL.—A request made under clause (i) shall be submitted to the Secretary by such manufacturer at a time and in a form and manner specified by the Secretary, and contain—

"(aa) information and documents necessary for the Secretary to make determinations under this subsection, as specified by the Secretary and including, to the extent available, items described in subclause (III); and

"(bb) all agreements related to the biosimilar biological product filed with the Federal Trade Commission or the Assistant Attorney General pursuant to subsections (a) and (c) of section 1112 of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003.

"(II) ADDITIONAL INFORMATION AND DOCUMENTS.—After the Secretary has reviewed the request and materials submitted under subclause (I), the manufacturer shall submit any additional

information and documents requested by the Secretary necessary to make determinations under this subsection.

"(III) ITEMS DESCRIBED.—The items described in this clause are the following:

"(aa) The manufacturing schedule for such biosimilar biological product submitted to the Food and Drug Administration during its review of the application under such section 351(k).

Time period.

"(bb) Disclosures (in filings by the manufacturer of such biosimilar biological product with the Securities and Exchange Commission required under section 12(b), 12(g), 13(a), or 15(d) of the Securities Exchange Act of 1934 about capital investment, revenue expectations, and actions taken by the manufacturer that are typical of the normal course of business in the year (or the 2 years, as applicable) before marketing of a biosimilar biological product) that pertain to the marketing of such biosimilar biological product, or comparable documentation that is distributed to the shareholders of privately held companies.

"(C) AGGREGATION RULE.—

"(i) IN GENERAL.—All persons treated as a single employer under subsection (a) or (b) of section 52 of the Internal Revenue Code of 1986, or in a partnership, shall be treated as one manufacturer for purposes of paragraph (2)(D)(iv).

"(ii) PARTNERSHIP DEFINED.—In clause (i), the term 'partnership' means a syndicate, group, pool, joint venture, or other organization through or by means of which any business, financial operation, or venture is carried on by the manufacturer of the biological product and the manufacturer of the biosimilar biological product.

Time periods. Determination.

"(2) RULES DESCRIBED.—The rules described in this paragraph are the following:

"(A) DELAYED SELECTION AND NEGOTIATION FOR 1 YEAR.—If a determination of high likelihood is made under paragraph (3), the Secretary shall delay the inclusion of the biological product as a selected drug on the list published under subsection (a) until such list is published with respect to the initial price applicability year that is 1 year after the initial price applicability year for which the biological product would have been included as a selected drug on such list.

"(B) IF NOT LICENSED AND MARKETED DURING THE INITIAL DELAY.—

"(i) IN GENERAL.—If, during the time period between the selected drug publication date on which the biological product would have been included on the list as a selected drug pursuant to subsection (a) but for subparagraph (A) and the selected drug publication date with respect to the initial price applicability year that is 1 year after the initial price applicability

year for which such biological product would have been included as a selected drug on such list, the Secretary determines that the biosimilar biological product for which the manufacturer submitted the request under paragraph (1)(B)(i)(II) (and for which the Secretary previously made a high likelihood determination under paragraph (3)) has not been licensed and marketed under section 351(k) of the Public Health Service Act, the Secretary shall, at the request of such manufacturer—

"(I) reevaluate whether there is a high likelihood (as described in paragraph (3)) that such biosimilar biological product will be licensed and marketed under such section 351(k) before the date that is 2 years after the selected drug publication date for which such biological product would have been included as a selected drug on such list published but for subparagraph (A); and

"(II) evaluate whether, on the basis of clear and convincing evidence, the manufacturer of such biosimilar biological product has made a significant amount of progress (as determined by the Secretary) towards both such licensure and the marketing of such biosimilar biological product (based on information from items described in subclauses (I)(bb) and (II) of paragraph (1)(B)(ii)) since the receipt by the Secretary of the request made by such manufacturer under paragraph (1)(B)(i)(I). Evaluation.

"(ii) SELECTION AND NEGOTIATION.—If the Secretary determines that there is not a high likelihood that such biosimilar biological product will be licensed and marketed as described in clause (i)(I) or there has not been a significant amount of progress as described in clause (i)(II)—

"(I) the Secretary shall include the biological product as a selected drug on the list published under subsection (a) with respect to the initial price applicability year that is 1 year after the initial price applicability year for which such biological product would have been included as a selected drug on such list but for subparagraph (A); and

"(II) the manufacturer of such biological product shall pay a rebate under paragraph (4) with respect to the year for which such manufacturer would have provided access to a maximum fair price for such biological product but for subparagraph (A).

"(iii) SECOND 1-YEAR DELAY.—If the Secretary determines that there is a high likelihood that such biosimilar biological product will be licensed and marketed (as described in clause (i)(I)) and a significant amount of progress has been made by the manufacturer of such biosimilar biological product towards such licensure and marketing (as described in clause (i)(II)), the Secretary shall delay the inclusion of the biological product as a selected drug on the list published under

subsection (a) until the selected drug publication date of such list with respect to the initial price applicability year that is 2 years after the initial price applicability year for which such biological product would have been included as a selected drug on such list but for this subsection.

"(C) IF NOT LICENSED AND MARKETED DURING THE YEAR TWO DELAY.—If, during the time period between the selected drug publication date of the list for which the biological product would have been included as a selected drug but for subparagraph (B)(iii) and the selected drug publication date with respect to the initial price applicability year that is 2 years after the initial price applicability year for which such biological product would have been included as a selected drug on such list but for this subsection, the Secretary determines that such biosimilar biological product has not been licensed and marketed—

"(i) the Secretary shall include such biological product as a selected drug on such list with respect to the initial price applicability year that is 2 years after the initial price applicability year for which such biological product would have been included as a selected drug on such list; and

"(ii) the manufacturer of such biological product shall pay a rebate under paragraph (4) with respect to the years for which such manufacturer would have provided access to a maximum fair price for such biological product but for this subsection.

"(D) LIMITATIONS ON DELAYS.—

"(i) LIMITED TO 2 YEARS.—In no case shall the Secretary delay the inclusion of a biological product on the list published under subsection (a) for more than 2 years.

"(ii) EXCLUSION OF BIOLOGICAL PRODUCTS THAT TRANSITIONED TO A LONG-MONOPOLY DRUG DURING THE DELAY.—In the case of a biological product for which the inclusion on the list published pursuant to subsection (a) was delayed by 1 year under subparagraph (A) and for which there would have been a change in status to a long-monopoly drug (as defined in section 1194(c)(5)) if such biological product had been a selected drug, in no case may the Secretary provide for a second 1-year delay under subparagraph (B)(iii).

"(iii) EXCLUSION OF BIOLOGICAL PRODUCTS IF MORE THAN 1 YEAR SINCE LICENSURE.—In no case shall the Secretary delay the inclusion of a biological product on the list published under subsection (a) if more than 1 year has elapsed since the biosimilar biological product has been licensed under section 351(k) of the Public Health Service Act and marketing has not commenced for such biosimilar biological product.

"(iv) CERTAIN MANUFACTURERS OF BIOSIMILAR BIOLOGICAL PRODUCTS EXCLUDED.—In no case shall the Secretary delay the inclusion of a biological product

as a selected drug on the list published under subsection (a) if Secretary determined that the manufacturer of the biosimilar biological product described in paragraph (1)(A)—

"(I) is the same as the manufacturer of the reference product described in such paragraph or is treated as being the same pursuant to paragraph (1)(C); or

"(II) has, based on information from items described in paragraph (1)(B)(ii)(I)(bb), entered into any agreement described in such paragraph with the manufacturer of the reference product described in paragraph (1)(A) that—

"(aa) requires or incentivizes the manufacturer of the biosimilar biological product to submit a request described in paragraph (1)(B); or

"(bb) restricts the quantity (either directly or indirectly) of the biosimilar biological product that may be sold in the United States over a specified period of time.

"(3) HIGH LIKELIHOOD.—For purposes of this subsection, there is a high likelihood described in paragraph (1) or paragraph (2), as applicable, if the Secretary finds that—

"(A) an application for licensure under section 351(k) of the Public Health Service Act for the biosimilar biological product has been accepted for review or approved by the Food and Drug Administration; and

"(B) information from items described in sub clauses (I)(bb) and (III) of paragraph (1)(B)(ii) submitted to the Secretary by the manufacturer requesting a delay under such paragraph provides clear and convincing evidence that such biosimilar biological product will, within the time period specified under paragraph (1)(A) or (2)(B)(i)(I), be marketed.

"(4) REBATE.—

"(A) IN GENERAL.—For purposes of subparagraphs (B)(ii)(II) and (C)(ii) of paragraph (2), in the case of a biological product for which the inclusion on the list under subsection (a) was delayed under this subsection and for which the Secretary has negotiated and entered into an agreement under section 1193 with respect to such biological product, the manufacturer shall be required to pay a rebate to the Secretary at such time and in such manner as determined by the Secretary.

"(B) AMOUNT.—Subject to subparagraph (C), the amount of the rebate under subparagraph (A) with respect to a biological product shall be equal to the estimated amount— Estimate.

"(i) in the case of a biological product that is a covered part D drug (as defined in section 1860D–2(e)), that is the sum of the products of—

"(I) 75 percent of the amount by which—

"(aa) the average manufacturer price, as reported by the manufacturer of such covered part D drug under section 1927 (or, if not reported by such manufacturer under section

1927, as reported by such manufacturer to the Secretary pursuant to the agreement under section 1193(a)) for such biological product, with respect to each of the calendar quarters of the price applicability period that would have applied but for this subsection; exceeds

"(bb) in the initial price applicability year that would have applied but for a delay under—

"(AA) paragraph (2)(A), the maximum fair price negotiated under section 1194 for such biological product under such agreement; or

"(BB) paragraph (2)(B)(iii), such maximum fair price, increased as described in section 1195(b)(1)(A); and

"(II) the number of units dispensed under part D of title XVIII for such covered part D drug during each such calendar quarter of such price applicability period; and

"(ii) in the case of a biological product for which payment may be made under part B of title XVIII, that is the sum of the products of—

"(I) 80 percent of the amount by which—

"(aa) the payment amount for such biological product under section 1847A(b), with respect to each of the calendar quarters of the price applicability period that would have applied but for this subsection; exceeds

"(bb) in the initial price applicability year that would have applied but for a delay under—

"(AA) paragraph (2)(A), the maximum fair price negotiated under section 1194 for such biological product under such agreement; or

"(BB) paragraph (2)(B)(iii), such maximum fair price, increased as described in section 1195(b)(1)(A); and

"(II) the number of units (excluding units that are packaged into the payment amount for an item or service and are not separately payable under such part B) of the billing and payment code of such biological product administered or furnished under such part B during each such calendar quarter of such price applicability period.

"(C) SPECIAL RULE FOR DELAYED BIOLOGICAL PRODUCTS THAT ARE LONG-MONOPOLY DRUGS.—

Determination.

"(i) IN GENERAL.—In the case of a biological product with respect to which a rebate is required to be paid under this paragraph, if such biological product qualifies as a long-monopoly drug (as defined in section 1194(c)(5)) at the time of its inclusion on the list published under subsection (a), in determining the amount of the rebate for such biological product under subparagraph (B), the amount described in clause (ii) shall

be substituted for the maximum fair price described in clause (i)(I) or (ii)(I) of such subparagraph (B), as applicable.

"(ii) AMOUNT DESCRIBED.—The amount described in this clause is an amount equal to 65 percent of the average non-Federal average manufacturer price for the biological product for 2021 (or, in the case that there is not an average non-Federal average manufacturer price available for such biological product for 2021, for the first full year following the market entry for such biological product), increased by the percentage increase in the consumer price index for all urban consumers (all items; United States city average) from September 2021 (or December of such first full year following the market entry), as applicable, to September of the year prior to the selected drug publication date with respect to the initial price applicability year that would have applied but for this subsection. Time periods.

"(D) REBATE DEPOSITS.—Amounts paid as rebates under this paragraph shall be deposited into—

"(i) in the case payment is made for such biological product under part B of title XVIII, the Federal Supplementary Medical Insurance Trust Fund established under section 1841; and

"(ii) in the case such biological product is a covered part D drug (as defined in section 1860D–2(e)), the Medicare Prescription Drug Account under section 1860D–16 in such Trust Fund.

"(5) DEFINITIONS OF BIOSIMILAR BIOLOGICAL PRODUCT.—In this subsection, the term 'biosimilar biological product' has the meaning given such term in section 1847A(c)(6).";

(2) in section 1193(a)(4)— 42 USC 1320f–2.

(A) in the matter preceding subparagraph (A), by inserting ", and for section 1192(f)," after "section 1194(f))";

(B) in subparagraph (A), by striking "and" at the end;

(C) by adding at the end the following new subparagraph:

"(C) information that the Secretary requires to carry out section 1192(f), including rebates under paragraph (4) of such section; and";

(3) in section 1196(a)(7), by striking "section 1192(d)(2)(B)" and inserting "subsections (d)(2)(B) and (f)(1)(C) of section 1192"; 42 USC 1320f–5.

(4) in section 1197— 42 USC 1320f–6.

(A) by redesignating subsections (b), (c), and (d) as subsections (c), (d), and (e), respectively; and

(B) by inserting after subsection (a) the following new subsection:

"(b) VIOLATIONS RELATING TO PROVIDING REBATES.—Any manufacturer that fails to comply with the rebate requirements under section 1192(f)(4) shall be subject to a civil monetary penalty equal to 10 times the amount of the rebate the manufacturer failed to pay under such section."; and Penalties.

(5) in section 1198(b)(2), by inserting "the application of section 1192(f)," after "section 1192(e)". 42 USC 1320f–7.

(b) CONFORMING AMENDMENTS FOR DISCLOSURE OF CERTAIN INFORMATION.—Section 1927(b)(3)(D)(i) of the Social Security Act (42 U.S.C. 1396r–8(b)(3)(D)(i)) is amended by striking "or to carry out section 1847B" and inserting "or to carry out section 1847B or section 1192(f), including rebates under paragraph (4) of such section".

42 USC 1320f–1 note.

(c) IMPLEMENTATION FOR 2026 THROUGH 2028.—The Secretary of Health and Human Services shall implement this section, including the amendments made by this section, for 2026, 2027, and 2028 by program instruction or other forms of program guidance.

SEC. 11003. EXCISE TAX IMPOSED ON DRUG MANUFACTURERS DURING NONCOMPLIANCE PERIODS.

(a) IN GENERAL.—Subtitle D of the Internal Revenue Code of 1986 is amended by adding at the end the following new chapter:

26 USC 5000D prec.

"CHAPTER 50A—DESIGNATED DRUGS

"Sec. 5000D. Designated drugs during noncompliance periods.

26 USC 5000D.

"SEC. 5000D. DESIGNATED DRUGS DURING NONCOMPLIANCE PERIODS.

"(a) IN GENERAL.—There is hereby imposed on the sale by the manufacturer, producer, or importer of any designated drug during a day described in subsection (b) a tax in an amount such that the applicable percentage is equal to the ratio of—

"(1) such tax, divided by

"(2) the sum of such tax and the price for which so sold.

"(b) NONCOMPLIANCE PERIODS.—A day is described in this subsection with respect to a designated drug if it is a day during one of the following periods:

"(1) The period beginning on the March 1st (or, in the case of initial price applicability year 2026, the October 2nd) immediately following the date on which such drug is included on the list published under section 1192(a) of the Social Security Act and ending on the earlier of—

"(A) the first date on which the manufacturer of such designated drug has in place an agreement described in section 1193(a) of such Act with respect to such drug, or

"(B) the date that the Secretary of Health and Human Services has made a determination described in section 1192(c)(1) of such Act with respect to such designated drug.

"(2) The period beginning on the November 2nd immediately following the March 1st described in paragraph (1) (or, in the case of initial price applicability year 2026, the August 2nd immediately following the October 2nd described in such paragraph) and ending on the earlier of—

"(A) the first date on which the manufacturer of such designated drug and the Secretary of Health and Human Services have agreed to a maximum fair price under an agreement described in section 1193(a) of the Social Security Act, or

"(B) the date that the Secretary of Health and Human Services has made a determination described in section 1192(c)(1) of such Act with respect to such designated drug.

"(3) In the case of any designated drug which is a selected drug (as defined in section 1192(c) of the Social Security Act)

that the Secretary of Health and Human Services has selected for renegotiation under section 1194(f) of such Act, the period beginning on the November 2nd of the year that begins 2 years prior to the first initial price applicability year of the price applicability period for which the maximum fair price established pursuant to such renegotiation applies and ending on the earlier of—

"(A) the first date on which the manufacturer of such designated drug has agreed to a renegotiated maximum fair price under such agreement, or

"(B) the date that the Secretary of Health and Human Services has made a determination described in section 1192(c)(1) of such Act with respect to such designated drug.

"(4) With respect to information that is required to be submitted to the Secretary of Health and Human Services under an agreement described in section 1193(a) of the Social Security Act, the period beginning on the date on which such Secretary certifies that such information is overdue and ending on the date that such information is so submitted.

"(c) SUSPENSION OF TAX.— Contracts.

"(1) IN GENERAL.—A day shall not be taken into account as a day during a period described in subsection (b) if such day is also a day during the period—

"(A) beginning on the first date on which—

"(i) the notice of terminations of all applicable agreements of the manufacturer have been received by the Secretary of Health and Human Services, and Notice.

"(ii) none of the drugs of the manufacturer of the designated drug are covered by an agreement under section 1860D-14A or 1860D-14C of the Social Security Act, and

"(B) ending on the last day of February following the earlier of—

"(i) the first day after the date described in subparagraph (A) on which the manufacturer enters into any subsequent applicable agreement, or

"(ii) the first date any drug of the manufacturer of the designated drug is covered by an agreement under section 1860D-14A or 1860D-14C of the Social Security Act.

"(2) APPLICABLE AGREEMENT.—For purposes of this subsection, the term 'applicable agreement' means the following: Definition.

"(A) An agreement under—

"(i) the Medicare coverage gap discount program under section 1860D-14A of the Social Security Act, or

"(ii) the manufacturer discount program under section 1860D-14C of such Act.

"(B) A rebate agreement described in section 1927(b) of such Act.

"(d) APPLICABLE PERCENTAGE.—For purposes of this section, the term 'applicable percentage' means— Definition.

"(1) in the case of sales of a designated drug during the first 90 days described in subsection (b) with respect to such drug, 65 percent,

"(2) in the case of sales of such drug during the 91st day through the 180th day described in subsection (b) with respect to such drug, 75 percent,

"(3) in the case of sales of such drug during the 181st day through the 270th day described in subsection (b) with respect to such drug, 85 percent, and

"(4) in the case of sales of such drug during any subsequent day, 95 percent.

"(e) DEFINITIONS.—For purposes of this section—

"(1) DESIGNATED DRUG.—The term 'designated drug' means any negotiation-eligible drug (as defined in section 1192(d) of the Social Security Act) included on the list published under section 1192(a) of such Act which is manufactured or produced in the United States or entered into the United States for consumption, use, or warehousing.

"(2) UNITED STATES.—The term 'United States' has the meaning given such term by section 4612(a)(4).

"(3) OTHER TERMS.—The terms 'initial price applicability year', 'price applicability period', and 'maximum fair price' have the meaning given such terms in section 1191 of the Social Security Act.

"(f) SPECIAL RULES.—

Applicability.

"(1) COORDINATION WITH RULES FOR POSSESSIONS OF THE UNITED STATES.—Rules similar to the rules of paragraphs (2) and (4) of section 4132(c) shall apply for purposes of this section.

"(2) ANTI-ABUSE RULE.—In the case of a sale which was timed for the purpose of avoiding the tax imposed by this section, the Secretary may treat such sale as occurring during a day described in subsection (b).

Applicability.

"(g) EXPORTS.—Rules similar to the rules of section 4662(e) (other than section 4662(e)(2)(A)(ii)(II)) shall apply for purposes of this chapter.

Guidelines.

"(h) REGULATIONS.—The Secretary shall prescribe such regulations and other guidance as may be necessary to carry out this section.".

(b) NO DEDUCTION FOR EXCISE TAX PAYMENTS.—Section 275(a)(6) of the Internal Revenue Code of 1986 is amended by inserting "50A," after "46,".

26 USC 275.

(c) CLERICAL AMENDMENT.—The table of chapters for subtitle D of the Internal Revenue Code of 1986 is amended by adding at the end the following new item:

26 USC 4001 prec.

"CHAPTER 50A—DESIGNATED DRUGS".

(d) EFFECTIVE DATE.—The amendments made by this section shall apply to sales after the date of the enactment of this Act.

26 USC 5000D note.

SEC. 11004. FUNDING.

In addition to amounts otherwise available, there is appropriated to the Centers for Medicare & Medicaid Services, out of any money in the Treasury not otherwise appropriated, $3,000,000,000 for fiscal year 2022, to remain available until expended, to carry out the provisions of, including the amendments made by, this part.

PART 2—PRESCRIPTION DRUG INFLATION REBATES

SEC. 11101. MEDICARE PART B REBATE BY MANUFACTURERS.

(a) IN GENERAL.—Section 1847A of the Social Security Act (42 U.S.C. 1395w–3a) is amended by redesignating subsection (i) as subsection (j) and by inserting after subsection (h) the following subsection:

"(i) REBATE BY MANUFACTURERS FOR SINGLE SOURCE DRUGS AND BIOLOGICALS WITH PRICES INCREASING FASTER THAN INFLATION.—

"(1) REQUIREMENTS.—

Deadlines.
Effective dates.
Time periods.
Reports.

"(A) SECRETARIAL PROVISION OF INFORMATION.—Not later than 6 months after the end of each calendar quarter beginning on or after January 1, 2023, the Secretary shall, for each part B rebatable drug, report to each manufacturer of such part B rebatable drug the following for such calendar quarter:

"(i) Information on the total number of units of the billing and payment code described in subparagraph (A)(i) of paragraph (3) with respect to such drug and calendar quarter.

"(ii) Information on the amount (if any) of the excess average sales price increase described in subparagraph (A)(ii) of such paragraph for such drug and calendar quarter.

"(iii) The rebate amount specified under such paragraph for such part B rebatable drug and calendar quarter.

"(B) MANUFACTURER REQUIREMENT.—For each calendar quarter beginning on or after January 1, 2023, the manufacturer of a part B rebatable drug shall, for such drug, not later than 30 days after the date of receipt from the Secretary of the information described in subparagraph (A) for such calendar quarter, provide to the Secretary a rebate that is equal to the amount specified in paragraph (3) for such drug for such calendar quarter.

"(C) TRANSITION RULE FOR REPORTING.—The Secretary may, for each part B rebatable drug, delay the timeframe for reporting the information described in subparagraph (A) for calendar quarters beginning in 2023 and 2024 until not later than September 30, 2025.

"(2) PART B REBATABLE DRUG DEFINED.—

"(A) IN GENERAL.—In this subsection, the term 'part B rebatable drug' means a single source drug or biological (as defined in subparagraph (D) of subsection (c)(6)), including a biosimilar biological product (as defined in subparagraph (H) of such subsection) but excluding a qualifying biosimilar biological product (as defined in subsection (b)(8)(B)(iii)), for which payment is made under this part, except such term shall not include such a drug or biological—

Determination.

"(i) if, as determined by the Secretary, the average total allowed charges for such drug or biological under this part for a year per individual that uses such

a drug or biological are less than, subject to subparagraph (B), $100; or

"(ii) that is a vaccine described in subparagraph (A) or (B) of section 1861(s)(10).

Time periods.

"(B) INCREASE.—The dollar amount applied under subparagraph (A)(i)—

"(i) for 2024, shall be the dollar amount specified under such subparagraph for 2023, increased by the percentage increase in the consumer price index for all urban consumers (United States city average) for the 12-month period ending with June of the previous year; and

"(ii) for a subsequent year, shall be the dollar amount specified in this clause (or clause (i)) for the previous year (without application of subparagraph (C)), increased by the percentage increase in the consumer price index for all urban consumers (United States city average) for the 12-month period ending with June of the previous year.

"(C) ROUNDING.—Any dollar amount determined under subparagraph (B) that is not a multiple of $10 shall be rounded to the nearest multiple of $10.

Time periods.
Estimate.

"(3) REBATE AMOUNT.—

"(A) IN GENERAL.—For purposes of paragraph (1), the amount specified in this paragraph for a part B rebatable drug assigned to a billing and payment code for a calendar quarter is, subject to subparagraphs (B) and (G) and paragraph (4), the estimated amount equal to the product of—

"(i) the total number of units determined under subparagraph (B) for the billing and payment code of such drug; and

"(ii) the amount (if any) by which—

"(I) the amount equal to—

"(aa) in the case of a part B rebatable drug described in paragraph (1)(B) of subsection (b), 106 percent of the amount determined under paragraph (4) of such section for such drug during the calendar quarter; or

"(bb) in the case of a part B rebatable drug described in paragraph (1)(C) of such subsection, the payment amount under such paragraph for such drug during the calendar quarter; exceeds

"(II) the inflation-adjusted payment amount determined under subparagraph (C) for such part B rebatable drug during the calendar quarter.

"(B) TOTAL NUMBER OF UNITS.—For purposes of subparagraph (A)(i), the total number of units for the billing and payment code with respect to a part B rebatable drug furnished during a calendar quarter described in subparagraph (A) is equal to—

"(i) the number of units for the billing and payment code of such drug furnished during such calendar quarter, minus

"(ii) the number of units for such billing and payment code of such drug furnished during such calendar quarter—

"(I) with respect to which the manufacturer provides a discount under the program under section 340B of the Public Health Service Act or a rebate under section 1927; or

"(II) that are packaged into the payment amount for an item or service and are not separately payable.

"(C) DETERMINATION OF INFLATION-ADJUSTED PAYMENT AMOUNT.—The inflation-adjusted payment amount determined under this subparagraph for a part B rebatable drug for a calendar quarter is—

"(i) the payment amount for the billing and payment code for such drug in the payment amount benchmark quarter (as defined in subparagraph (D)); increased by

"(ii) the percentage by which the rebate period CPI–U (as defined in subparagraph (F)) for the calendar quarter exceeds the benchmark period CPI–U (as defined in subparagraph (E)).

"(D) PAYMENT AMOUNT BENCHMARK QUARTER.—The term 'payment amount benchmark quarter' means the calendar quarter beginning July 1, 2021. Definition.

"(E) BENCHMARK PERIOD CPI–U.—The term 'benchmark period CPI–U' means the consumer price index for all urban consumers (United States city average) for January 2021. Definition.

"(F) REBATE PERIOD CPI–U.—The term 'rebate period CPI–U' means, with respect to a calendar quarter described in subparagraph (C), the greater of the benchmark period CPI–U and the consumer price index for all urban consumers (United States city average) for the first month of the calendar quarter that is two calendar quarters prior to such described calendar quarter.

"(G) REDUCTION OR WAIVER FOR SHORTAGES AND SEVERE SUPPLY CHAIN DISRUPTIONS.—The Secretary shall reduce or waive the amount under subparagraph (A) with respect to a part B rebatable drug and a calendar quarter—

"(i) in the case of a part B rebatable drug that is described as currently in shortage on the shortage list in effect under section 506E of the Federal Food, Drug, and Cosmetic Act at any point during the calendar quarter; or

"(ii) in the case of a biosimilar biological product, when the Secretary determines there is a severe supply chain disruption during the calendar quarter, such as that caused by a natural disaster or other unique or unexpected event. Determination.

"(4) SPECIAL TREATMENT OF CERTAIN DRUGS AND EXEMPTION.— Effective dates. Applicability. Time periods.

"(A) SUBSEQUENTLY APPROVED DRUGS.—In the case of a part B rebatable drug first approved or licensed by the Food and Drug Administration after December 1, 2020, clause (i) of paragraph (3)(C) shall be applied as if the term 'payment amount benchmark quarter' were defined

under paragraph (3)(D) as the third full calendar quarter after the day on which the drug was first marketed and clause (ii) of paragraph (3)(C) shall be applied as if the term 'benchmark period CPI–U' were defined under paragraph (3)(E) as if the reference to 'January 2021' under such paragraph were a reference to 'the first month of the first full calendar quarter after the day on which the drug was first marketed'.

"(B) TIMELINE FOR PROVISION OF REBATES FOR SUBSEQUENTLY APPROVED DRUGS.—In the case of a part B rebatable drug first approved or licensed by the Food and Drug Administration after December 1, 2020, paragraph (1)(B) shall be applied as if the reference to 'January 1, 2023' under such paragraph were a reference to 'the later of the 6th full calendar quarter after the day on which the drug was first marketed or January 1, 2023'.

"(C) SELECTED DRUGS.—In the case of a part B rebatable drug that is a selected drug (as defined in section 1192(c)) with respect to a price applicability period (as defined in section 1191(b)(2)), in the case such drug is no longer considered to be a selected drug under section 1192(c), for each applicable period (as defined under subsection (g)(7)) beginning after the price applicability period with respect to such drug, clause (i) of paragraph (3)(C) shall be applied as if the term 'payment amount benchmark quarter' were defined under paragraph (3)(D) as the calendar quarter beginning January 1 of the last year during such price applicability period with respect to such selected drug and clause (ii) of paragraph (3)(C) shall be applied as if the term 'benchmark period CPI–U' were defined under paragraph (3)(E) as if the reference to 'January 2021' under such paragraph were a reference to 'the July of the year preceding such last year'.

Effective date.
Time period.

"(5) APPLICATION TO BENEFICIARY COINSURANCE.—In the case of a part B rebatable drug furnished on or after April 1, 2023, if the payment amount described in paragraph (3)(A)(ii)(I) (or, in the case of a part B rebatable drug that is a selected drug (as defined in section 1192(c)), the payment amount described in subsection (b)(1)(B) for such drug) for a calendar quarter exceeds the inflation adjusted payment for such quarter—

"(A) in computing the amount of any coinsurance applicable under this part to an individual to whom such drug is furnished, the computation of such coinsurance shall be equal to 20 percent of the inflation-adjusted payment amount determined under paragraph (3)(C) for such part B rebatable drug; and

Applicability.
Determination.

"(B) the amount of such coinsurance for such calendar quarter, as computed under subparagraph (A), shall be applied as a percent, as determined by the Secretary, to the payment amount that would otherwise apply under subparagraphs (B) or (C) of subsection (b)(1).

"(6) REBATE DEPOSITS.—Amounts paid as rebates under paragraph (1)(B) shall be deposited into the Federal Supplementary Medical Insurance Trust Fund established under section 1841.

"(7) CIVIL MONEY PENALTY.—If a manufacturer of a part B rebatable drug has failed to comply with the requirements under paragraph (1)(B) for such drug for a calendar quarter, the manufacturer shall be subject to, in accordance with a process established by the Secretary pursuant to regulations, a civil money penalty in an amount equal to at least 125 percent of the amount specified in paragraph (3) for such drug for such calendar quarter. The provisions of section 1128A (other than subsections (a) (with respect to amounts of penalties or additional assessments) and (b)) shall apply to a civil money penalty under this paragraph in the same manner as such provisions apply to a penalty or proceeding under section 1128A(a). Time period. Applicability.

"(8) LIMITATION ON ADMINISTRATIVE OR JUDICIAL REVIEW.—There shall be no administrative or judicial review of any of the following:

"(A) The determination of units under this subsection.

"(B) The determination of whether a drug is a part B rebatable drug under this subsection.

"(C) The calculation of the rebate amount under this subsection.

"(D) The computation of coinsurance under paragraph (5) of this subsection.

"(E) The computation of amounts paid under section 1833(a)(1)(EE).".

(b) AMOUNTS PAYABLE; COST-SHARING.—Section 1833 of the Social Security Act (42 U.S.C. 1395l) is amended—

(1) in subsection (a)(1)—

(A) in subparagraph (G), by inserting ", subject to subsection (i)(9)," after "the amounts paid";

(B) in subparagraph (S), by striking "with respect to" and inserting "subject to subparagraph (EE), with respect to";

(C) by striking "and (DD)" and inserting "(DD)"; and

(D) by inserting before the semicolon at the end the following: ", and (EE) with respect to a part B rebatable drug (as defined in paragraph (2) of section 1847A(i)) furnished on or after April 1, 2023, for which the payment amount for a calendar quarter under paragraph (3)(A)(ii)(I) of such section (or, in the case of a part B rebatable drug that is a selected drug (as defined in section 1192(c) for which, the payment amount described in section 1847A(b)(1)(B)) for such drug for such quarter exceeds the inflation-adjusted payment under paragraph (3)(A)(ii)(II) of such section for such quarter, the amounts paid shall be equal to the percent of the payment amount under paragraph (3)(A)(ii)(I) of such section or section 1847A(b)(1)(B), as applicable, that equals the difference between (i) 100 percent, and (ii) the percent applied under section 1847A(i)(5)(B)"; Effective date. Time period. Applicability.

(2) in subsection (i), by adding at the end the following new paragraph:

"(9) In the case of a part B rebatable drug (as defined in paragraph (2) of section 1847A(i)) for which payment under this subsection is not packaged into a payment for a service furnished on or after April 1, 2023, under the revised payment system under this subsection, in lieu of calculation of coinsurance and the amount Effective date. Determination. Applicability.

of payment otherwise applicable under this subsection, the provisions of section 1847A(i)(5) and paragraph (1)(EE) of subsection (a), shall, as determined appropriate by the Secretary, apply under this subsection in the same manner as such provisions of section 1847A(i)(5) and subsection (a) apply under such section and subsection."; and

(3) in subsection (t)(8), by adding at the end the following new subparagraph:

Effective date. Time period. Determination. Applicability.

"(F) PART B REBATABLE DRUGS.—In the case of a part B rebatable drug (as defined in paragraph (2) of section 1847A(i), except if such drug does not have a copayment amount as a result of application of subparagraph (E)) for which payment under this part is not packaged into a payment for a covered OPD service (or group of services) furnished on or after April 1, 2023, and the payment for such drug under this subsection is the same as the amount for a calendar quarter under paragraph (3)(A)(ii)(I) of section 1847A(i), under the system under this subsection, in lieu of calculation of the copayment amount and the amount of payment otherwise applicable under this subsection (other than the application of the limitation described in subparagraph (C)), the provisions of section 1847A(i)(5) and paragraph (1)(EE) of subsection (a), shall, as determined appropriate by the Secretary, apply under this subsection in the same manner as such provisions of section 1847A(i)(5) and subsection (a) apply under such section and subsection.".

(c) CONFORMING AMENDMENTS.—

(1) TO PART B ASP CALCULATION.—Section 1847A(c)(3) of the Social Security Act (42 U.S.C. 1395w–3a(c)(3)) is amended by inserting "subsection (i) or" before "section 1927".

(2) EXCLUDING PART B DRUG INFLATION REBATE FROM BEST PRICE.—Section 1927(c)(1)(C)(ii)(I) of the Social Security Act (42 U.S.C. 1396r–8(c)(1)(C)(ii)(I)) is amended by inserting "or section 1847A(i)" after "this section".

(3) COORDINATION WITH MEDICAID REBATE INFORMATION DISCLOSURE.—Section 1927(b)(3)(D)(i) of the Social Security Act (42 U.S.C. 1396r–8(b)(3)(D)(i)) is amended by inserting "and the rebate" after "the payment amount".

(4) EXCLUDING PART B DRUG INFLATION REBATES FROM AVERAGE MANUFACTURER PRICE.—Section 1927(k)(1)(B)(i) of the Social Security Act (42 U.S.C. 1396r–8(k)(1)(B)(i)), as amended by section 11001(b)(3), is amended—

(A) in subclause (V), by striking "and" at the end;

(B) in subclause (VI), by striking the period at the end and inserting a semicolon; and

(C) by adding at the end the following new subclause:

"(VII) rebates paid by manufacturers under section 1847A(i); and".

Time period.

(d) FUNDING.—In addition to amounts otherwise available, there are appropriated to the Centers for Medicare & Medicaid Services, out of any money in the Treasury not otherwise appropriated, $80,000,000 for fiscal year 2022, including $12,500,000 to carry out the provisions of, including the amendments made by, this section in fiscal year 2022, and $7,500,000 to carry out the provisions of, including the amendments made by, this section

in each of fiscal years 2023 through 2031, to remain available until expended.

SEC. 11102. MEDICARE PART D REBATE BY MANUFACTURERS.

(a) IN GENERAL.—Part D of title XVIII of the Social Security Act is amended by inserting after section 1860D–14A (42 U.S.C. 1395w–114a) the following new section:

"SEC. 1860D–14B. MANUFACTURER REBATE FOR CERTAIN DRUGS WITH PRICES INCREASING FASTER THAN INFLATION. 42 USC 1395w–114b.

"(a) REQUIREMENTS.—

"(1) SECRETARIAL PROVISION OF INFORMATION.—Not later than 9 months after the end of each applicable period (as defined in subsection (g)(7)), subject to paragraph (3), the Secretary shall, for each part D rebatable drug, report to each manufacturer of such part D rebatable drug the following for such period: Reports.

"(A) The amount (if any) of the excess annual manufacturer price increase described in subsection (b)(1)(A)(ii) for each dosage form and strength with respect to such drug and period.

"(B) The rebate amount specified under subsection (b) for each dosage form and strength with respect to such drug and period.

"(2) MANUFACTURER REQUIREMENTS.—For each applicable period, the manufacturer of a part D rebatable drug, for each dosage form and strength with respect to such drug, not later than 30 days after the date of receipt from the Secretary of the information described in paragraph (1) for such period, shall provide to the Secretary a rebate that is equal to the amount specified in subsection (b) for such dosage form and strength with respect to such drug for such period. Deadline.

"(3) TRANSITION RULE FOR REPORTING.—The Secretary may, for each rebatable covered part D drug, delay the timeframe for reporting the information and rebate amount described in subparagraphs (A) and (B) of such paragraph for the applicable periods beginning October 1, 2022, and October 1, 2023, until not later than December 31, 2025. Time period. Effective date.

"(b) REBATE AMOUNT.— Determinations.

"(1) IN GENERAL.—

"(A) CALCULATION.—For purposes of this section, the amount specified in this subsection for a dosage form and strength with respect to a part D rebatable drug and applicable period is, subject to subparagraph (C), paragraph (5)(B), and paragraph (6), the estimated amount equal to the product of—

"(i) subject to subparagraph (B) of this paragraph, the total number of units of such dosage form and strength for each rebatable covered part D drug dispensed under this part during the applicable period; and

"(ii) the amount (if any) by which—

"(I) the annual manufacturer price (as determined in paragraph (2)) paid for such dosage form and strength with respect to such part D rebatable drug for the period; exceeds

"(II) the inflation-adjusted payment amount determined under paragraph (3) for such dosage

form and strength with respect to such part D rebatable drug for the period.

Effective date.

"(B) EXCLUDED UNITS.—For purposes of subparagraph (A)(i), beginning with plan year 2026, the Secretary shall exclude from the total number of units for a dosage form and strength with respect to a part D rebatable drug, with respect to an applicable period, units of each dosage form and strength of such part D rebatable drug for which the manufacturer provides a discount under the program under section 340B of the Public Health Service Act.

"(C) REDUCTION OR WAIVER FOR SHORTAGES AND SEVERE SUPPLY CHAIN DISRUPTIONS.—The Secretary shall reduce or waive the amount under subparagraph (A) with respect to a part D rebatable drug and an applicable period—

"(i) in the case of a part D rebatable drug that is described as currently in shortage on the shortage list in effect under section 506E of the Federal Food, Drug, and Cosmetic Act at any point during the applicable period;

"(ii) in the case of a generic part D rebatable drug (described in subsection (g)(1)(C)(ii)) or a biosimilar (defined as a biological product licensed under section 351(k) of the Public Health Service Act), when the Secretary determines there is a severe supply chain disruption during the applicable period, such as that caused by a natural disaster or other unique or unexpected event; and

"(iii) in the case of a generic Part D rebatable drug (as so described), if the Secretary determines that without such reduction or waiver, the drug is likely to be described as in shortage on such shortage list during a subsequent applicable period.

"(2) DETERMINATION OF ANNUAL MANUFACTURER PRICE.—The annual manufacturer price determined under this paragraph for a dosage form and strength, with respect to a part D rebatable drug and an applicable period, is the sum of the products of—

"(A) the average manufacturer price (as defined in subsection (g)(6)) of such dosage form and strength, as calculated for a unit of such drug, with respect to each of the calendar quarters of such period; and

"(B) the ratio of—

"(i) the total number of units of such dosage form and strength reported under section 1927 with respect to each such calendar quarter of such period; to

"(ii) the total number of units of such dosage form and strength reported under section 1927 with respect to such period, as determined by the Secretary.

"(3) DETERMINATION OF INFLATION-ADJUSTED PAYMENT AMOUNT.—The inflation-adjusted payment amount determined under this paragraph for a dosage form and strength with respect to a part D rebatable drug for an applicable period, subject to paragraph (5), is—

"(A) the benchmark period manufacturer price determined under paragraph (4) for such dosage form and strength with respect to such drug and period; increased by

"(B) the percentage by which the applicable period CPI–U (as defined in subsection (g)(5)) for the period exceeds the benchmark period CPI–U (as defined in subsection (g)(4)).

"(4) DETERMINATION OF BENCHMARK PERIOD MANUFACTURER PRICE.—The benchmark period manufacturer price determined under this paragraph for a dosage form and strength, with respect to a part D rebatable drug and an applicable period, is the sum of the products of—

"(A) the average manufacturer price (as defined in subsection (g)(6)) of such dosage form and strength, as calculated for a unit of such drug, with respect to each of the calendar quarters of the payment amount benchmark period (as defined in subsection (g)(3)); and

"(B) the ratio of—

"(i) the total number of units reported under section 1927 of such dosage form and strength with respect to each such calendar quarter of such payment amount benchmark period; to

"(ii) the total number of units reported under section 1927 of such dosage form and strength with respect to such payment amount benchmark period.

"(5) SPECIAL TREATMENT OF CERTAIN DRUGS AND EXEMPTION.—

"(A) SUBSEQUENTLY APPROVED DRUGS.—In the case of a part D rebatable drug first approved or licensed by the Food and Drug Administration after October 1, 2021, subparagraphs (A) and (B) of paragraph (4) shall be applied as if the term 'payment amount benchmark period' were defined under subsection (g)(3) as the first calendar year beginning after the day on which the drug was first marketed and subparagraph (B) of paragraph (3) shall be applied as if the term 'benchmark period CPI–U' were defined under subsection (g)(4) as if the reference to 'January 2021' under such subsection were a reference to 'January of the first year beginning after the date on which the drug was first marketed'.

Effective dates. Applicability. Time period.

"(B) TREATMENT OF NEW FORMULATIONS.—

"(i) IN GENERAL.—In the case of a part D rebatable drug that is a line extension of a part D rebatable drug that is an oral solid dosage form, the Secretary shall establish a formula for determining the rebate amount under paragraph (1) and the inflation adjusted payment amount under paragraph (3) with respect to such part D rebatable drug and an applicable period, consistent with the formula applied under subsection (c)(2)(C) of section 1927 for determining a rebate obligation for a rebate period under such section.

"(ii) LINE EXTENSION DEFINED.—In this subparagraph, the term 'line extension' means, with respect to a part D rebatable drug, a new formulation of the drug, such as an extended release formulation, but does not include an abuse-deterrent formulation of the drug (as determined by the Secretary), regardless of whether such abuse-deterrent formulation is an extended release formulation.

Effective date.
Applicability.

"(C) SELECTED DRUGS.—In the case of a part D rebatable drug that is a selected drug (as defined in section 1192(c)) with respect to a price applicability period (as defined in section 1191(b)(2)), in the case such drug is no longer considered to be a selected drug under section 1192(c), for each applicable period (as defined under subsection (g)(7)) beginning after the price applicability period with respect to such drug, subparagraphs (A) and (B) of paragraph (4) shall be applied as if the term 'payment amount benchmark period' were defined under subsection (g)(3) as the last year beginning during such price applicability period with respect to such selected drug and subparagraph (B) of paragraph (3) shall be applied as if the term 'benchmark period CPI–U' were defined under subsection (g)(4) as if the reference to 'January 2021' under such subsection were a reference to 'January of the last year beginning during such price applicability period with respect to such drug'.

"(6) RECONCILIATION IN CASE OF REVISED INFORMATION.—The Secretary shall provide for a method and process under which, in the case where a PDP sponsor of a prescription drug plan or an MA organization offering an MA–PD plan submits revisions to the number of units of a rebatable covered part D drug dispensed, the Secretary determines, pursuant to such revisions, adjustments, if any, to the calculation of the amount specified in this subsection for a dosage form and strength with respect to such part D rebatable drug and an applicable period and reconciles any overpayments or underpayments in amounts paid as rebates under this subsection. Any identified underpayment shall be rectified by the manufacturer not later than 30 days after the date of receipt from the Secretary of information on such underpayment.

Deadline.

"(c) REBATE DEPOSITS.—Amounts paid as rebates under subsection (b) shall be deposited into the Medicare Prescription Drug Account in the Federal Supplementary Medical Insurance Trust Fund established under section 1841.

"(d) INFORMATION.—For purposes of carrying out this section, the Secretary shall use information submitted by—

"(1) manufacturers under section 1927(b)(3);

"(2) States under section 1927(b)(2)(A); and

"(3) PDP sponsors of prescription drug plans and MA organization offering MA–PD plans under this part.

"(e) CIVIL MONEY PENALTY.—If a manufacturer of a part D rebatable drug has failed to comply with the requirement under subsection (a)(2) with respect to such drug for an applicable period, the manufacturer shall be subject to a civil money penalty in an amount equal to 125 percent of the amount specified in subsection (b) for such drug for such period. The provisions of section 1128A (other than subsections (a) (with respect to amounts of penalties or additional assessments) and (b)) shall apply to a civil money penalty under this subsection in the same manner as such provisions apply to a penalty or proceeding under section 1128A(a).

Applicability.

"(f) LIMITATION ON ADMINISTRATIVE OR JUDICIAL REVIEW.—There shall be no administrative or judicial review of any of the following:

"(1) The determination of units under this section.

"(2) The determination of whether a drug is a part D rebatable drug under this section.

"(3) The calculation of the rebate amount under this section.

"(g) DEFINITIONS.—In this section:

"(1) PART D REBATABLE DRUG.—

"(A) IN GENERAL.—Except as provided in subparagraph (B), the term 'part D rebatable drug' means, with respect to an applicable period, a drug or biological described in subparagraph (C) that is a covered part D drug (as such term is defined under section 1860D–2(e)).

"(B) EXCLUSION.—

"(i) IN GENERAL.—Such term shall, with respect to an applicable period, not include a drug or biological if the average annual total cost under this part for such period per individual who uses such a drug or biological, as determined by the Secretary, is less than, subject to clause (ii), $100, as determined by the Secretary using the most recent data available or, if data is not available, as estimated by the Secretary. Determinations. Estimate.

"(ii) INCREASE.—The dollar amount applied under clause (i)— Time periods. Effective dates.

"(I) for the applicable period beginning October 1, 2023, shall be the dollar amount specified under such clause for the applicable period beginning October 1, 2022, increased by the percentage increase in the consumer price index for all urban consumers (United States city average) for the 12-month period beginning with October of 2023; and

"(II) for a subsequent applicable period, shall be the dollar amount specified in this clause for the previous applicable period, increased by the percentage increase in the consumer price index for all urban consumers (United States city average) for the 12-month period beginning with October of the previous period.

Any dollar amount specified under this clause that is not a multiple of $10 shall be rounded to the nearest multiple of $10.

"(C) DRUG OR BIOLOGICAL DESCRIBED.—A drug or biological described in this subparagraph is a drug or biological that, as of the first day of the applicable period involved, is—

"(i) a drug approved under a new drug application under section 505(c) of the Federal Food, Drug, and Cosmetic Act;

"(ii) a drug approved under an abbreviated new drug application under section 505(j) of the Federal Food, Drug, and Cosmetic Act, in the case where—

"(I) the reference listed drug approved under section 505(c) of the Federal Food, Drug, and Cosmetic Act, including any 'authorized generic drug' (as that term is defined in section 505(t)(3) of the Federal Food, Drug, and Cosmetic Act), is not being marketed, as identified in the Food and Drug Administration's National Drug Code Directory;

"(II) there is no other drug approved under section 505(j) of the Federal Food, Drug, and Cosmetic Act that is rated as therapeutically equivalent (under the Food and Drug Administration's most recent publication of 'Approved Drug Products with Therapeutic Equivalence Evaluations') and that is being marketed, as identified in the Food and Drug Administration's National Drug Code Directory;

Time period.

"(III) the manufacturer is not a 'first applicant' during the '180-day exclusivity period', as those terms are defined in section 505(j)(5)(B)(iv) of the Federal Food, Drug, and Cosmetic Act; and

"(IV) the manufacturer is not a 'first approved applicant' for a competitive generic therapy, as that term is defined in section 505(j)(5)(B)(v) of the Federal Food, Drug, and Cosmetic Act; or

"(iii) a biological licensed under section 351 of the Public Health Service Act.

"(2) UNIT.—The term 'unit' means, with respect to a part D rebatable drug, the lowest dispensable amount (such as a capsule or tablet, milligram of molecules, or grams) of the part D rebatable drug, as reported under section 1927.

"(3) PAYMENT AMOUNT BENCHMARK PERIOD.—The term 'payment amount benchmark period' means the period beginning January 1, 2021, and ending in the month immediately prior to October 1, 2021.

"(4) BENCHMARK PERIOD CPI–U.—The term 'benchmark period CPI–U' means the consumer price index for all urban consumers (United States city average) for January 2021.

"(5) APPLICABLE PERIOD CPI–U.—The term 'applicable period CPI–U' means, with respect to an applicable period, the consumer price index for all urban consumers (United States city average) for the first month of such applicable period.

"(6) AVERAGE MANUFACTURER PRICE.—The term 'average manufacturer price' has the meaning, with respect to a part D rebatable drug of a manufacturer, given such term in section 1927(k)(1), with respect to a covered outpatient drug of a manufacturer for a rebate period under section 1927.

"(7) APPLICABLE PERIOD.—The term 'applicable period' means a 12-month period beginning with October 1 of a year (beginning with October 1, 2022).

"(h) IMPLEMENTATION FOR 2022, 2023, AND 2024.—The Secretary shall implement this section for 2022, 2023, and 2024 by program instruction or other forms of program guidance.".

(b) CONFORMING AMENDMENTS.—

(1) TO PART B ASP CALCULATION.—Section 1847A(c)(3) of the Social Security Act (42 U.S.C. 1395w–3a(c)(3)), as amended by section 11101(c)(1), is amended by striking "subsection (i) or section 1927" and inserting "subsection (i), section 1927, or section 1860D–14B".

(2) EXCLUDING PART D DRUG INFLATION REBATE FROM BEST PRICE.—Section 1927(c)(1)(C)(ii)(I) of the Social Security Act (42 U.S.C. 1396r–8(c)(1)(C)(ii)(I)), as amended by section 11101(c)(2), is amended by striking "or section 1847A(i)" and inserting ", section 1847A(i), or section 1860D–14B".

(3) COORDINATION WITH MEDICAID REBATE INFORMATION DISCLOSURE.—Section 1927(b)(3)(D)(i) of the Social Security Act (42 U.S.C. 1396r–8(b)(3)(D)(i)), as amended by sections 11002(b) and 11101(c)(3), is amended by striking "or section 1192(f), including rebates under paragraph (4) of such section" and inserting ", section 1192(f), including rebates under paragraph (4) of such section, or section 1860D–14B".

(4) EXCLUDING PART D DRUG INFLATION REBATES FROM AVERAGE MANUFACTURER PRICE.—Section 1927(k)(1)(B)(i) of the Social Security Act (42 U.S.C. 1396r–8(k)(1)(B)(i)), as amended by section 11001(b)(3) and section 11101(c)(4), is amended by adding at the end the following new subclause:

(A) in subclause (VI), by striking "and" at the end;

(B) in subclause (VII), by striking the period at the end and inserting a semicolon; and

(C) by adding at the end the following new subclause:

"(VIII) rebates paid by manufacturers under section 1860D–14B.".

(c) FUNDING.—In addition to amounts otherwise available, there are appropriated to the Centers for Medicare & Medicaid Services, out of any money in the Treasury not otherwise appropriated, $80,000,000 for fiscal year 2022, including $12,500,000 to carry out the provisions of, including the amendments made by, this section in fiscal year 2022, and $7,500,000 to carry out the provisions of, including the amendments made by, this section in each of fiscal years 2023 through 2031, to remain available until expended. Time periods.

PART 3—PART D IMPROVEMENTS AND MAXIMUM OUT-OF-POCKET CAP FOR MEDICARE BENEFICIARIES

SEC. 11201. MEDICARE PART D BENEFIT REDESIGN.

Time periods.

(a) BENEFIT STRUCTURE REDESIGN.—Section 1860D–2(b) of the Social Security Act (42 U.S.C. 1395w–102(b)) is amended—

(1) in paragraph (2)—

(A) in subparagraph (A), in the matter preceding clause (i), by inserting "for a year preceding 2025 and for costs above the annual deductible specified in paragraph (1) and up to the annual out-of-pocket threshold specified in paragraph (4)(B) for 2025 and each subsequent year" after "paragraph (3)";

(B) in subparagraph (C)—

(i) in clause (i), in the matter preceding subclause (I), by inserting "for a year preceding 2025," after "paragraph (4),"; and

(ii) in clause (ii)(III), by striking "and each subsequent year" and inserting "through 2024"; and

(C) in subparagraph (D)—

(i) in clause (i)—

(I) in the matter preceding subclause (I), by inserting "for a year preceding 2025," after "paragraph (4),"; and

(II) in subclause (I)(bb), by striking "a year after 2018" and inserting "each of years 2019 through 2024"; and

(ii) in clause (ii)(V), by striking "2019 and each subsequent year" and inserting "each of years 2019 through 2024";

(2) in paragraph (3)(A)—

(A) in the matter preceding clause (i), by inserting "for a year preceding 2025," after "and (4),"; and

(B) in clause (ii), by striking "for a subsequent year" and inserting "for each of years 2007 through 2024"; and

(3) in paragraph (4)—

(A) in subparagraph (A)—

(i) in clause (i)—

(I) by redesignating subclauses (I) and (II) as items (aa) and (bb), respectively, and moving the margin of each such redesignated item 2 ems to the right;

(II) in the matter preceding item (aa), as redesignated by subclause (I), by striking "is equal to the greater of—" and inserting "is equal to—

"(I) for a year preceding 2024, the greater of—";

(III) by striking the period at the end of item (bb), as redesignated by subclause (I), and inserting "; and"; and

(IV) by adding at the end the following:

"(II) for 2024 and each succeeding year, $0."; and

(ii) in clause (ii)—

(I) by striking "clause (i)(I)" and inserting "clause (i)(I)(aa)"; and

(II) by adding at the end the following new sentence: "The Secretary shall continue to calculate the dollar amounts specified in clause (i)(I)(aa), including with the adjustment under this clause, after 2023 for purposes of section 1860D–14(a)(1)(D)(iii).";

(B) in subparagraph (B)—

(i) in clause (i)—

(I) in subclause (V), by striking "or" at the end;

(II) in subclause (VI)—

(aa) by striking "for a subsequent year" and inserting "for each of years 2021 through 2024"; and

(bb) by striking the period at the end and inserting a semicolon; and

(III) by adding at the end the following new subclauses:

"(VII) for 2025, is equal to $2,000; or

"(VIII) for a subsequent year, is equal to the amount specified in this subparagraph for the previous year, increased by the annual percentage increase described in paragraph (6) for the year involved."; and

(ii) in clause (ii), by striking "clause (i)(II)" and inserting "clause (i)";

(C) in subparagraph (C)—

(i) in clause (i), by striking "and for amounts" and inserting "and, for a year preceding 2025, for amounts"; and

(ii) in clause (iii)—

(I) by redesignating subclauses (I) through (IV) as items (aa) through (dd) and indenting appropriately;

(II) by striking "if such costs are borne or paid" and inserting "if such costs—

"(I) are borne or paid—"; and

(III) in item (dd), by striking the period at the end and inserting "; or"; and

(IV) by adding at the end the following new subclause:

"(II) for 2025 and subsequent years, are reimbursed through insurance, a group health plan, or certain other third party payment arrangements, but not including the coverage provided by a prescription drug plan or an MA–PD plan that is basic prescription drug coverage (as defined in subsection (a)(3)) or any payments by a manufacturer under the manufacturer discount program under section 1860D–14C."; and

(D) in subparagraph (E), by striking "In applying" and inserting "For each of years 2011 through 2024, in applying".

(b) REINSURANCE PAYMENT AMOUNT.—Section 1860D–15(b) of the Social Security Act (42 U.S.C. 1395w–115(b)) is amended—

(1) in paragraph (1)—

(A) by striking "equal to 80 percent" and inserting "equal to—

"(A) for a year preceding 2025, 80 percent";

(B) in subparagraph (A), as added by subparagraph (A), by striking the period at the end and inserting "; and"; and

(C) by adding at the end the following new subparagraph:

"(B) for 2025 and each subsequent year, the sum of—

"(i) with respect to applicable drugs (as defined in section 1860D–14C(g)(2)), an amount equal to 20 percent of such allowable reinsurance costs attributable to that portion of gross covered prescription drug costs as specified in paragraph (3) incurred in the coverage year after such individual has incurred costs that exceed the annual out-of-pocket threshold specified in section 1860D–2(b)(4)(B); and

"(ii) with respect to covered part D drugs that are not applicable drugs (as so defined), an amount equal to 40 percent of such allowable reinsurance costs attributable to that portion of gross covered prescription drug costs as specified in paragraph (3) incurred in the coverage year after such individual has incurred costs that exceed the annual out-of-pocket threshold specified in section 1860D–2(b)(4)(B).";

(2) in paragraph (2)—

(A) by striking "COSTS.—For purposes" and inserting "COSTS.—

"(A) IN GENERAL.—Subject to subparagraph (B), for purposes"; and

(B) by adding at the end the following new subparagraph:

Definition.

"(B) INCLUSION OF MANUFACTURER DISCOUNTS ON APPLICABLE DRUGS.—For purposes of applying subparagraph (A), the term 'allowable reinsurance costs' shall include the portion of the negotiated price (as defined in section 1860D–14C(g)(6)) of an applicable drug (as defined in section 1860D–14C(g)(2)) that was paid by a manufacturer under the manufacturer discount program under section 1860D–14C."; and

(3) in paragraph (3)—

(A) in the first sentence, by striking "For purposes" and inserting "Subject to paragraph (2)(B), for purposes"; and

(B) in the second sentence, by inserting "(or, with respect to 2025 and subsequent years, in the case of an applicable drug, as defined in section 1860D–14C(g)(2), by a manufacturer)" after "by the individual or under the plan".

(c) MANUFACTURER DISCOUNT PROGRAM.—

(1) IN GENERAL.—Part D of title XVIII of the Social Security Act (42 U.S.C. 1395w–101 through 42 U.S.C. 1395w–153), as amended by section 11102, is amended by inserting after section 1860D–14B the following new sections:

42 USC 1395w–114c.

"SEC. 1860D–14C. MANUFACTURER DISCOUNT PROGRAM.

"(a) ESTABLISHMENT.—The Secretary shall establish a manufacturer discount program (in this section referred to as the 'program'). Under the program, the Secretary shall enter into agreements described in subsection (b) with manufacturers and provide for the performance of the duties described in subsection (c).

"(b) TERMS OF AGREEMENT.—

"(1) IN GENERAL.—

Effective date.

"(A) AGREEMENT.—An agreement under this section shall require the manufacturer to provide, in accordance with this section, discounted prices for applicable drugs of the manufacturer that are dispensed to applicable beneficiaries on or after January 1, 2025.

"(B) CLARIFICATION.—Nothing in this section shall be construed as affecting—

"(i) the application of a coinsurance of 25 percent of the negotiated price, as applied under paragraph (2)(A) of section 1860D–2(b), for costs described in such paragraph; or

"(ii) the application of the copayment amount described in paragraph (4)(A) of such section, with respect to costs described in such paragraph.

Deadlines.

"(C) TIMING OF AGREEMENT.—

"(i) SPECIAL RULE FOR 2025.—In order for an agreement with a manufacturer to be in effect under this section with respect to the period beginning on January 1, 2025, and ending on December 31, 2025, the manufacturer shall enter into such agreement not later than March 1, 2024.

"(ii) 2026 AND SUBSEQUENT YEARS.—In order for an agreement with a manufacturer to be in effect under this section with respect to plan year 2026 or a subsequent plan year, the manufacturer shall enter into such agreement not later than a calendar quarter or semi-annual deadline established by the Secretary.

"(2) PROVISION OF APPROPRIATE DATA.—Each manufacturer with an agreement in effect under this section shall collect and have available appropriate data, as determined by the Secretary, to ensure that it can demonstrate to the Secretary compliance with the requirements under the program. Determination.

"(3) COMPLIANCE WITH REQUIREMENTS FOR ADMINISTRATION OF PROGRAM.—Each manufacturer with an agreement in effect under this section shall comply with requirements imposed by the Secretary, as applicable, for purposes of administering the program, including any determination under subparagraph (A) of subsection (c)(1) or procedures established under such subsection (c)(1).

"(4) LENGTH OF AGREEMENT.—

"(A) IN GENERAL.—An agreement under this section shall be effective for an initial period of not less than 12 months and shall be automatically renewed for a period of not less than 1 year unless terminated under subparagraph (B).

"(B) TERMINATION.—

"(i) BY THE SECRETARY.—The Secretary shall provide for termination of an agreement under this section for a knowing and willful violation of the requirements of the agreement or other good cause shown. Such termination shall not be effective earlier than 30 days after the date of notice to the manufacturer of such termination. The Secretary shall provide, upon request, a manufacturer with a hearing concerning such a termination, and such hearing shall take place prior to the effective date of the termination with sufficient time for such effective date to be repealed if the Secretary determines appropriate. Time period. Hearings.

"(ii) BY A MANUFACTURER.—A manufacturer may terminate an agreement under this section for any reason. Any such termination shall be effective, with respect to a plan year— Effective dates.

"(I) if the termination occurs before January 31 of a plan year, as of the day after the end of the plan year; and

"(II) if the termination occurs on or after January 31 of a plan year, as of the day after the end of the succeeding plan year.

"(iii) EFFECTIVENESS OF TERMINATION.—Any termination under this subparagraph shall not affect discounts for applicable drugs of the manufacturer that are due under the agreement before the effective date of its termination.

"(5) EFFECTIVE DATE OF AGREEMENT.—An agreement under this section shall take effect at the start of a calendar quarter or another date specified by the Secretary.

"(c) DUTIES DESCRIBED.—The duties described in this subsection are the following:

"(1) ADMINISTRATION OF PROGRAM.—Administering the program, including—

"(A) the determination of the amount of the discounted price of an applicable drug of a manufacturer;

"(B) the establishment of procedures to ensure that, not later than the applicable number of calendar days after the dispensing of an applicable drug by a pharmacy or mail order service, the pharmacy or mail order service is reimbursed for an amount equal to the difference between—

"(i) the negotiated price of the applicable drug; and

"(ii) the discounted price of the applicable drug;

"(C) the establishment of procedures to ensure that the discounted price for an applicable drug under this section is applied before any coverage or financial assistance under other health benefit plans or programs that provide coverage or financial assistance for the purchase or provision of prescription drug coverage on behalf of applicable beneficiaries as specified by the Secretary; and

"(D) providing a reasonable dispute resolution mechanism to resolve disagreements between manufacturers, prescription drug plans and MA–PD plans, and the Secretary.

"(2) MONITORING COMPLIANCE.—The Secretary shall monitor compliance by a manufacturer with the terms of an agreement under this section.

"(3) COLLECTION OF DATA FROM PRESCRIPTION DRUG PLANS AND MA–PD PLANS.—The Secretary may collect appropriate data from prescription drug plans and MA–PD plans in a timeframe that allows for discounted prices to be provided for applicable drugs under this section.

"(d) ADMINISTRATION.—

"(1) IN GENERAL.—Subject to paragraph (2), the Secretary shall provide for the implementation of this section, including the performance of the duties described in subsection (c).

"(2) LIMITATION.—In providing for the implementation of this section, the Secretary shall not receive or distribute any funds of a manufacturer under the program.

"(e) CIVIL MONEY PENALTY.—

Determination.

"(1) IN GENERAL.—A manufacturer that fails to provide discounted prices for applicable drugs of the manufacturer dispensed to applicable beneficiaries in accordance with an agreement in effect under this section shall be subject to a civil money penalty for each such failure in an amount the Secretary determines is equal to the sum of—

"(A) the amount that the manufacturer would have paid with respect to such discounts under the agreement, which will then be used to pay the discounts which the manufacturer had failed to provide; and

"(B) 25 percent of such amount.

"(2) APPLICATION.—The provisions of section 1128A (other than subsections (a) and (b)) shall apply to a civil money penalty under this subsection in the same manner as such provisions apply to a penalty or proceeding under section 1128A(a).

"(f) CLARIFICATION REGARDING AVAILABILITY OF OTHER COVERED PART D DRUGS.—Nothing in this section shall prevent an applicable beneficiary from purchasing a covered part D drug that is not an applicable drug (including a generic drug or a drug that is not on the formulary of the prescription drug plan or MA–PD plan that the applicable beneficiary is enrolled in).

"(g) DEFINITIONS.—In this section:

"(1) APPLICABLE BENEFICIARY.—The term 'applicable beneficiary' means an individual who, on the date of dispensing a covered part D drug—

"(A) is enrolled in a prescription drug plan or an MA–PD plan;

"(B) is not enrolled in a qualified retiree prescription drug plan; and

"(C) has incurred costs, as determined in accordance with section 1860D–2(b)(4)(C), for covered part D drugs in the year that exceed the annual deductible specified in section 1860D–2(b)(1).

"(2) APPLICABLE DRUG.—The term 'applicable drug', with respect to an applicable beneficiary—

"(A) means a covered part D drug—

"(i) approved under a new drug application under section 505(c) of the Federal Food, Drug, and Cosmetic Act or, in the case of a biologic product, licensed under section 351 of the Public Health Service Act; and

"(ii)(I) if the PDP sponsor of the prescription drug plan or the MA organization offering the MA–PD plan uses a formulary, which is on the formulary of the prescription drug plan or MA–PD plan that the applicable beneficiary is enrolled in;

"(II) if the PDP sponsor of the prescription drug plan or the MA organization offering the MA–PD plan does not use a formulary, for which benefits are available under the prescription drug plan or MA–PD plan that the applicable beneficiary is enrolled in; or

"(III) is provided through an exception or appeal; and

"(B) does not include a selected drug (as referred to under section 1192(c)) during a price applicability period (as defined in section 1191(b)(2)) with respect to such drug.

"(3) APPLICABLE NUMBER OF CALENDAR DAYS.—The term 'applicable number of calendar days' means—

"(A) with respect to claims for reimbursement submitted electronically, 14 days; and

"(B) with respect to claims for reimbursement submitted otherwise, 30 days.

"(4) DISCOUNTED PRICE.—

"(A) IN GENERAL.—The term 'discounted price' means, subject to subparagraphs (B) and (C), with respect to an applicable drug of a manufacturer dispensed during a year to an applicable beneficiary—

"(i) who has not incurred costs, as determined in accordance with section 1860D–2(b)(4)(C), for covered part D drugs in the year that are equal to or exceed the annual out-of-pocket threshold specified in section 1860D–2(b)(4)(B)(i) for the year, 90 percent of the negotiated price of such drug; and

"(ii) who has incurred such costs, as so determined, in the year that are equal to or exceed such threshold for the year, 80 percent of the negotiated price of such drug.

"(B) PHASE-IN FOR CERTAIN DRUGS DISPENSED TO LIS BENEFICIARIES.—

"(i) IN GENERAL.—In the case of an applicable drug of a specified manufacturer (as defined in clause (ii)) that is marketed as of the date of enactment of this subparagraph and dispensed for an applicable beneficiary who is a subsidy eligible individual (as defined in section 1860D–14(a)(3)), the term 'discounted price' means the specified LIS percent (as defined in clause (iii)) of the negotiated price of the applicable drug of the manufacturer.

"(ii) SPECIFIED MANUFACTURER.—

"(I) IN GENERAL.—In this subparagraph, subject to subclause (II), the term 'specified manufacturer' means a manufacturer of an applicable drug for which, in 2021—

"(aa) the manufacturer had a coverage gap discount agreement under section 1860D–14A;

"(bb) the total expenditures for all of the specified drugs of the manufacturer covered by such agreement or agreements for such year and covered under this part during such year represented less than 1.0 percent of the total expenditures under this part for all covered Part D drugs during such year; and

"(cc) the total expenditures for all of the specified drugs of the manufacturer that are single source drugs and biological products for which payment may be made under part B during such year represented less than 1.0 percent of the total expenditures under part B for all drugs or biological products for which payment may be made under such part during such year.

"(II) SPECIFIED DRUGS.—

"(aa) IN GENERAL.—For purposes of this clause, the term 'specified drug' means, with respect to a specified manufacturer, for 2021, an applicable drug that is produced, prepared, propagated, compounded, converted, or processed by the manufacturer.

"(bb) AGGREGATION RULE.—All persons treated as a single employer under subsection (a) or (b) of section 52 of the Internal Revenue Code of 1986 shall be treated as one manufacturer for purposes of this subparagraph. For purposes of making a determination pursuant to the previous sentence, an agreement under this section shall require that a manufacturer provide and attest to such information as specified by the Secretary as necessary.

Determination.
Requirement.
Attestation.

"(III) LIMITATION.—The term 'specified manufacturer' shall not include a manufacturer

Time periods.
Effective dates.

described in subclause (I) if such manufacturer is acquired after 2021 by another manufacturer that is not a specified manufacturer, effective at the beginning of the plan year immediately following such acquisition or, in the case of an acquisition before 2025, effective January 1, 2025.

"(iii) SPECIFIED LIS PERCENT.—In this subparagraph, the 'specified LIS percent' means, with respect to a year—

"(I) for an applicable drug dispensed for an applicable beneficiary described in clause (i) who has not incurred costs, as determined in accordance with section 1860D–2(b)(4)(C), for covered part D drugs in the year that are equal to or exceed the annual out-of-pocket threshold specified in section 1860D–2(b)(4)(B)(i) for the year—

"(aa) for 2025, 99 percent;
"(bb) for 2026, 98 percent;
"(cc) for 2027, 95 percent;
"(dd) for 2028, 92 percent; and
"(ee) for 2029 and each subsequent year, 90 percent; and

"(II) for an applicable drug dispensed for an applicable beneficiary described in clause (i) who has incurred costs, as determined in accordance with section 1860D–2(b)(4)(C), for covered part D drugs in the year that are equal to or exceed the annual out-of-pocket threshold specified in section 1860D–2(b)(4)(B)(i) for the year—

"(aa) for 2025, 99 percent;
"(bb) for 2026, 98 percent;
"(cc) for 2027, 95 percent;
"(dd) for 2028, 92 percent;
"(ee) for 2029, 90 percent;
"(ff) for 2030, 85 percent; and
"(gg) for 2031 and each subsequent year, 80 percent.

"(C) PHASE-IN FOR SPECIFIED SMALL MANUFACTURERS.—

"(i) IN GENERAL.—In the case of an applicable drug of a specified small manufacturer (as defined in clause (ii)) that is marketed as of the date of enactment of this subparagraph and dispensed for an applicable beneficiary, the term 'discounted price' means the specified small manufacturer percent (as defined in clause (iii)) of the negotiated price of the applicable drug of the manufacturer.

"(ii) SPECIFIED SMALL MANUFACTURER.—

"(I) IN GENERAL.—In this subparagraph, subject to subclause (III), the term 'specified small manufacturer' means a manufacturer of an applicable drug for which, in 2021—

"(aa) the manufacturer is a specified manufacturer (as defined in subparagraph (B)(ii)); and

"(bb) the total expenditures under part D for any one of the specified small manufacturer drugs of the manufacturer that are covered by the agreement or agreements under section 1860D–14A of such manufacturer for such year and covered under this part during such year are equal to or more than 80 percent of the total expenditures under this part for all specified small manufacturer drugs of the manufacturer that are covered by such agreement or agreements for such year and covered under this part during such year.

"(II) SPECIFIED SMALL MANUFACTURER DRUGS.—

"(aa) IN GENERAL.—For purposes of this clause, the term 'specified small manufacturer drugs' means, with respect to a specified small manufacturer, for 2021, an applicable drug that is produced, prepared, propagated, compounded, converted, or processed by the manufacturer.

"(bb) AGGREGATION RULE.—All persons treated as a single employer under subsection (a) or (b) of section 52 of the Internal Revenue Code of 1986 shall be treated as one manufacturer for purposes of this subparagraph. For purposes of making a determination pursuant to the previous sentence, an agreement under this section shall require that a manufacturer provide and attest to such information as specified by the Secretary as necessary.

"(III) LIMITATION.—The term 'specified small manufacturer' shall not include a manufacturer described in subclause (I) if such manufacturer is acquired after 2021 by another manufacturer that is not a specified small manufacturer, effective at the beginning of the plan year immediately following such acquisition or, in the case of an acquisition before 2025, effective January 1, 2025.

"(iii) SPECIFIED SMALL MANUFACTURER PERCENT.—In this subparagraph, the term 'specified small manufacturer percent' means, with respect to a year—

"(I) for an applicable drug dispensed for an applicable beneficiary who has not incurred costs, as determined in accordance with section 1860D–2(b)(4)(C), for covered part D drugs in the year that are equal to or exceed the annual out-of-pocket threshold specified in section 1860D–2(b)(4)(B)(i) for the year—

"(aa) for 2025, 99 percent;

"(bb) for 2026, 98 percent;

"(cc) for 2027, 95 percent;

"(dd) for 2028, 92 percent; and

"(ee) for 2029 and each subsequent year, 90 percent; and

"(II) for an applicable drug dispensed for an applicable beneficiary who has incurred costs, as

determined in accordance with section 1860D–2(b)(4)(C), for covered part D drugs in the year that are equal to or exceed the annual out-of-pocket threshold specified in section 1860D–2(b)(4)(B)(i) for the year—

"(aa) for 2025, 99 percent;
"(bb) for 2026, 98 percent;
"(cc) for 2027, 95 percent;
"(dd) for 2028, 92 percent;
"(ee) for 2029, 90 percent;
"(ff) for 2030, 85 percent; and
"(gg) for 2031 and each subsequent year, 80 percent.

"(D) TOTAL EXPENDITURES.—For purposes of this paragraph, the term 'total expenditures' includes, in the case of expenditures with respect to part D, the total gross covered prescription drug costs as defined in section 1860D–15(b)(3). The term 'total expenditures' excludes, in the case of expenditures with respect to part B, expenditures for a drug or biological that are bundled or packaged into the payment for another service.

"(E) SPECIAL CASE FOR CERTAIN CLAIMS.—

"(i) CLAIMS SPANNING DEDUCTIBLE.—In the case where the entire amount of the negotiated price of an individual claim for an applicable drug with respect to an applicable beneficiary does not fall above the annual deductible specified in section 1860D–2(b)(1) for the year, the manufacturer of the applicable drug shall provide the discounted price under this section on only the portion of the negotiated price of the applicable drug that falls above such annual deductible.

"(ii) CLAIMS SPANNING OUT-OF-POCKET THRESHOLD.—In the case where the entire amount of the negotiated price of an individual claim for an applicable drug with respect to an applicable beneficiary does not fall entirely below or entirely above the annual out-of-pocket threshold specified in section 1860D–2(b)(4)(B)(i) for the year, the manufacturer of the applicable drug shall provide the discounted price—

"(I) in accordance with subparagraph (A)(i) on the portion of the negotiated price of the applicable drug that falls below such threshold; and

"(II) in accordance with subparagraph (A)(ii) on the portion of such price of such drug that falls at or above such threshold.

"(5) MANUFACTURER.—The term 'manufacturer' means any entity which is engaged in the production, preparation, propagation, compounding, conversion, or processing of prescription drug products, either directly or indirectly by extraction from substances of natural origin, or independently by means of chemical synthesis, or by a combination of extraction and chemical synthesis. Such term does not include a wholesale distributor of drugs or a retail pharmacy licensed under State law.

"(6) NEGOTIATED PRICE.—The term 'negotiated price' has the meaning given such term for purposes of section 1860D–

2(d)(1)(B), and, with respect to an applicable drug, such negotiated price shall include any dispensing fee and, if applicable, any vaccine administration fee for the applicable drug.

"(7) QUALIFIED RETIREE PRESCRIPTION DRUG PLAN.—The term 'qualified retiree prescription drug plan' has the meaning given such term in section 1860D–22(a)(2).

42 USC 1395w–114d.

"SEC. 1860D–14D. SELECTED DRUG SUBSIDY PROGRAM.

"With respect to covered part D drugs that would be applicable drugs (as defined in section 1860D–14C(g)(2)) but for the application of subparagraph (B) of such section, the Secretary shall provide a process whereby, in the case of an applicable beneficiary (as defined in section 1860D–14C(g)(1)) who, with respect to a year, is enrolled in a prescription drug plan or is enrolled in an MA–PD plan, has not incurred costs that are equal to or exceed the annual out-of-pocket threshold specified in section 1860D–2(b)(4)(B)(i), and is dispensed such a drug, the Secretary (periodically and on a timely basis) provides the PDP sponsor or the MA organization offering the plan, a subsidy with respect to such drug that is equal to 10 percent of the negotiated price (as defined in section 1860D–14C(g)(6)) of such drug.".

(2) SUNSET OF MEDICARE COVERAGE GAP DISCOUNT PROGRAM.—Section 1860D–14A of the Social Security Act (42 U.S.C. 1395w–114a) is amended—

(A) in subsection (a), in the first sentence, by striking "The Secretary" and inserting "Subject to subsection (h), the Secretary"; and

(B) by adding at the end the following new subsection:

"(h) SUNSET OF PROGRAM.—

"(1) IN GENERAL.—The program shall not apply with respect to applicable drugs dispensed on or after January 1, 2025, and, subject to paragraph (2), agreements under this section shall be terminated as of such date.

"(2) CONTINUED APPLICATION FOR APPLICABLE DRUGS DISPENSED PRIOR TO SUNSET.—The provisions of this section (including all responsibilities and duties) shall continue to apply on and after January 1, 2025, with respect to applicable drugs dispensed prior to such date.".

(3) SELECTED DRUG SUBSIDY PAYMENTS FROM MEDICARE PRESCRIPTION DRUG ACCOUNT.—Section 1860D–16(b)(1) of the Social Security Act (42 U.S.C. 1395w–116(b)(1)) is amended—

(A) in subparagraph (C), by striking "and" at the end;

(B) in subparagraph (D), by striking the period at the end and inserting "; and"; and

(C) by adding at the end the following new subparagraph:

"(E) payments under section 1860D–14D (relating to selected drug subsidy payments).".

(d) MEDICARE PART D PREMIUM STABILIZATION.—

(1) 2024 THROUGH 2029.—Section 1860D–13 of the Social Security Act (42 U.S.C. 1395w–113) is amended—

(A) in subsection (a)—

(i) in paragraph (1)(A), by inserting "or (8) (as applicable)" after "paragraph (2)";

(ii) in paragraph (2), in the matter preceding subparagraph (A), by striking "The base" and inserting "Subject to paragraph (8), the base";

(iii) in paragraph (7)—

(I) in subparagraph (B)(ii), by inserting "or (8) (as applicable)" after "paragraph (2)"; and

(II) in subparagraph (E)(i), by inserting "or (8) (as applicable)" after "paragraph (2)"; and

(iv) by adding at the end the following new paragraph:

"(8) PREMIUM STABILIZATION.— Time period.

"(A) IN GENERAL.—The base beneficiary premium under this paragraph for a prescription drug plan for a month in 2024 through 2029 shall be computed as follows:

"(i) 2024.—The base beneficiary premium for a month in 2024 shall be equal to the lesser of—

"(I) the base beneficiary premium computed under paragraph (2) for a month in 2023 increased by 6 percent; or

"(II) the base beneficiary premium computed under paragraph (2) for a month in 2024 that would have applied if this paragraph had not been enacted.

"(ii) 2025.—The base beneficiary premium for a month in 2025 shall be equal to the lesser of—

"(I) the base beneficiary premium computed under clause (i) for a month in 2024 increased by 6 percent; or

"(II) the base beneficiary premium computed under paragraph (2) for a month in 2025 that would have applied if this paragraph had not been enacted.

"(iii) 2026.—The base beneficiary premium for a month in 2026 shall be equal to the lesser of—

"(I) the base beneficiary premium computed under clause (ii) for a month in 2025 increased by 6 percent; or

"(II) the base beneficiary premium computed under paragraph (2) for a month in 2026 that would have applied if this paragraph had not been enacted.

"(iv) 2027.—The base beneficiary premium for a month in 2027 shall be equal to the lesser of—

"(I) the base beneficiary premium computed under clause (iii) for a month in 2026 increased by 6 percent; or

"(II) the base beneficiary premium computed under paragraph (2) for a month in 2027 that would have applied if this paragraph had not been enacted.

"(v) 2028.—The base beneficiary premium for a month in 2028 shall be equal to the lesser of—

"(I) the base beneficiary premium computed under clause (iv) for a month in 2027 increased by 6 percent; or

"(II) the base beneficiary premium computed under paragraph (2) for a month in 2028 that would have applied if this paragraph had not been enacted.

"(vi) 2029.—The base beneficiary premium for a month in 2029 shall be equal to the lesser of—

"(I) the base beneficiary premium computed under clause (v) for a month in 2028 increased by 6 percent; or

"(II) the base beneficiary premium computed under paragraph (2) for a month in 2029 that would have applied if this paragraph had not been enacted.

"(B) CLARIFICATION REGARDING 2030 AND SUBSEQUENT YEARS.—The base beneficiary premium for a month in 2030 or a subsequent year shall be computed under paragraph (2) without regard to this paragraph."; and

(B) in subsection (b)(3)(A)(ii), by striking "subsection (a)(2)" and inserting "paragraph (2) or (8) of subsection (a) (as applicable)".

(2) ADJUSTMENT TO BENEFICIARY PREMIUM PERCENTAGE FOR 2030 AND SUBSEQUENT YEARS.—Section 1860D–13(a) of the Social Security Act (42 U.S.C. 1395w–113(a)), as amended by paragraph (1), is amended—

(A) in paragraph (3)(A), by inserting "(or, for 2030 and each subsequent year, the percent specified under paragraph (9))" after "25.5 percent"; and

(B) by adding at the end the following new paragraph:

Time periods.
Determination.

"(9) PERCENT SPECIFIED.—

"(A) IN GENERAL.—Subject to subparagraph (B), for purposes of paragraph (3)(A), the percent specified under this paragraph for 2030 and each subsequent year is the percent that the Secretary determines is necessary to ensure that the base beneficiary premium computed under paragraph (2) for a month in 2030 is equal to the lesser of—

"(i) the base beneficiary premium computed under paragraph (8)(A)(vi) for a month in 2029 increased by 6 percent; or

"(ii) the base beneficiary premium computed under paragraph (2) for a month in 2030 that would have applied if this paragraph had not been enacted.

"(B) FLOOR.—The percent specified under subparagraph (A) may not be less than 20 percent.".

(3) CONFORMING AMENDMENTS.—

(A) Section 1854(b)(2)(B) of the Social Security Act 42 U.S.C. 1395w–24(b)(2)(B)) is amended by striking "section 1860D–13(a)(2)" and inserting "paragraph (2) or (8) (as applicable) of section 1860D–13(a)".

(B) Section 1860D–11(g)(6) of the Social Security Act (42 U.S.C. 1395w–111(g)(6)) is amended by inserting "(or, for 2030 and each subsequent year, the percent specified under section 1860D–13(a)(9))" after "25.5 percent".

(C) Section 1860D–13(a)(7)(B)(i) of the Social Security Act (42 U.S.C. 1395w–113(a)(7)(B)(i)) is amended—

(i) in subclause (I), by inserting "(or, for 2030 and each subsequent year, the percent specified under paragraph (9))" after "25.5 percent"; and

(ii) in subclause (II), by inserting "(or, for 2030 and each subsequent year, the percent specified under paragraph (9))" after "25.5 percent".

(D) Section 1860D–15(a) of the Social Security Act (42 U.S.C. 1395w–115(a)) is amended—

(i) in the matter preceding paragraph (1), by inserting "(or, for each of 2024 through 2029, the percent applicable as a result of the application of section 1860D–13(a)(8), or, for 2030 and each subsequent year, 100 percent minus the percent specified under section 1860D–13(a)(9))" after "74.5 percent"; and

(ii) in paragraph (1)(B), by striking "paragraph (2) of section 1860D–13(a)" and inserting "paragraph (2) or (8) of section 1860D–13(a) (as applicable)".

(e) CONFORMING AMENDMENTS.— Time periods.

(1) Section 1860D–2 of the Social Security Act (42 U.S.C. 1395w–102) is amended—

(A) in subsection (a)(2)(A)(i)(I), by striking ", or an increase in the initial" and inserting "or, for a year preceding 2025, an increase in the initial";

(B) in subsection (c)(1)(C)—

(i) in the subparagraph heading, by striking "AT INITIAL COVERAGE LIMIT"; and

(ii) by inserting "for a year preceding 2025 or the annual out-of-pocket threshold specified in subsection (b)(4)(B) for the year for 2025 and each subsequent year" after "subsection (b)(3) for the year" each place it appears; and

(C) in subsection (d)(1)(A), by striking "or an initial" and inserting "or, for a year preceding 2025, an initial".

(2) Section 1860D–4(a)(4)(B)(i) of the Social Security Act (42 U.S.C. 1395w–104(a)(4)(B)(i)) is amended by striking "the initial" and inserting "for a year preceding 2025, the initial".

(3) Section 1860D–14(a) of the Social Security Act (42 U.S.C. 1395w–114(a)) is amended—

(A) in paragraph (1)—

(i) in subparagraph (C), by striking "The continuation" and inserting "For a year preceding 2025, the continuation";

(ii) in subparagraph (D)(iii), by striking "1860D–2(b)(4)(A)(i)(I)" and inserting "1860D–2(b)(4)(A)(i)(I)(aa)"; and

(iii) in subparagraph (E), by striking "The elimination" and inserting "For a year preceding 2024, the elimination"; and

(B) in paragraph (2)(E), by striking "1860D–2(b)(4)(A)(i)(I)" and inserting "1860D–2(b)(4)(A)(i)(I)(aa)".

(4) Section 1860D–21(d)(7) of the Social Security Act (42 U.S.C. 1395w–131(d)(7)) is amended by striking "section 1860D–2(b)(4)(B)(i)" and inserting "section 1860D–2(b)(4)(C)(i)".

(5) Section 1860D–22(a)(2)(A) of the Social Security Act (42 U.S.C. 1395w–132(a)(2)(A)) is amended—

(A) by striking "the value of any discount" and inserting the following: "the value of—

"(i) for years prior to 2025, any discount";

(B) in clause (i), as inserted by subparagraph (A) of this paragraph, by striking the period at the end and inserting "; and"; and

(C) by adding at the end the following new clause:

"(ii) for 2025 and each subsequent year, any discount provided pursuant to section 1860D–14C.".

(6) Section 1860D–41(a)(6) of the Social Security Act (42 U.S.C. 1395w–151(a)(6)) is amended—

(A) by inserting "for a year before 2025" after "1860D–2(b)(3)"; and

(B) by inserting "for such year" before the period.

(7) Section 1860D–43 of the Social Security Act (42 U.S.C. 1395w–153) is amended—

(A) in subsection (a)—

(i) by striking paragraph (1) and inserting the following:

"(1) participate in—

"(A) for 2011 through 2024, the Medicare coverage gap discount program under section 1860D–14A; and

"(B) for 2025 and each subsequent year, the manufacturer discount program under section 1860D–14C;";

(ii) by striking paragraph (2) and inserting the following:

"(2) have entered into and have in effect—

"(A) for 2011 through 2024, an agreement described in subsection (b) of section 1860D–14A with the Secretary; and

"(B) for 2025 and each subsequent year, an agreement described in subsection (b) of section 1860D–14C with the Secretary; and"; and

(iii) in paragraph (3), by striking "such section" and inserting "section 1860D–14A"; and

(B) by striking subsection (b) and inserting the following:

Applicability.

"(b) EFFECTIVE DATE.—Paragraphs (1)(A), (2)(A), and (3) of subsection (a) shall apply to covered part D drugs dispensed under this part on or after January 1, 2011, and before January 1, 2025, and paragraphs (1)(B) and (2)(B) of such subsection shall apply to covered part D drugs dispensed under this part on or after January 1, 2025.".

(8) Section 1927 of the Social Security Act (42 U.S.C. 1396r–8) is amended—

(A) in subsection (c)(1)(C)(i)(VI), by inserting before the period at the end the following: "or under the manufacturer discount program under section 1860D–14C"; and

(B) in subsection (k)(1)(B)(i)(V), by inserting before the period at the end the following: "or under section 1860D–14C".

42 USC 1395w–102 note.

(f) IMPLEMENTATION FOR 2024 THROUGH 2026.—The Secretary shall implement this section, including the amendments made by this section, for 2024, 2025, and 2026 by program instruction or other forms of program guidance.

Time periods.

(g) FUNDING.—In addition to amounts otherwise available, there are appropriated to the Centers for Medicare & Medicaid Services, out of any money in the Treasury not otherwise appropriated, $341,000,000 for fiscal year 2022, including $20,000,000 and $65,000,000 to carry out the provisions of, including the amendments made by, this section in fiscal years 2022 and 2023, respectively, and $32,000,000 to carry out the provisions of, including the amendments made by, this section in each of fiscal years 2024 through 2031, to remain available until expended.

SEC. 11202. MAXIMUM MONTHLY CAP ON COST-SHARING PAYMENTS UNDER PRESCRIPTION DRUG PLANS AND MA–PD PLANS.

(a) IN GENERAL.—Section 1860D–2(b) of the Social Security Act (42 U.S.C. 1395w–102(b)) is amended—

(1) in paragraph (2)—

(A) in subparagraph (A), by striking "and (D)" and inserting ", (D), and (E)"; and

(B) by adding at the end the following new subparagraph:

"(E) MAXIMUM MONTHLY CAP ON COST-SHARING PAYMENTS.—

"(i) IN GENERAL.—For plan years beginning on or after January 1, 2025, each PDP sponsor offering a prescription drug plan and each MA organization offering an MA–PD plan shall provide to any enrollee of such plan, including an enrollee who is a subsidy eligible individual (as defined in paragraph (3) of section 1860D–14(a)), the option to elect with respect to a plan year to pay cost-sharing under the plan in monthly amounts that are capped in accordance with this subparagraph. Effective date.

"(ii) DETERMINATION OF MAXIMUM MONTHLY CAP.—For each month in the plan year for which an enrollee in a prescription drug plan or an MA–PD plan has made an election pursuant to clause (i), the PDP sponsor or MA organization shall determine a maximum monthly cap (as defined in clause (iv)) for such enrollee.

"(iii) BENEFICIARY MONTHLY PAYMENTS.—With respect to an enrollee who has made an election pursuant to clause (i), for each month described in clause (ii), the PDP sponsor or MA organization shall bill such enrollee an amount (not to exceed the maximum monthly cap) for the out-of-pocket costs of such enrollee in such month.

"(iv) MAXIMUM MONTHLY CAP DEFINED.—In this subparagraph, the term 'maximum monthly cap' means, with respect to an enrollee—

"(I) for the first month for which the enrollee has made an election pursuant to clause (i), an amount determined by calculating—

"(aa) the annual out-of-pocket threshold specified in paragraph (4)(B) minus the incurred costs of the enrollee as described in paragraph (4)(C); divided by

"(bb) the number of months remaining in the plan year; and

"(II) for a subsequent month, an amount determined by calculating—

"(aa) the sum of any remaining out-of-pocket costs owed by the enrollee from a previous month that have not yet been billed to the enrollee and any additional out-of-pocket costs incurred by the enrollee; divided by

"(bb) the number of months remaining in the plan year.

Applicability.

"(v) ADDITIONAL REQUIREMENTS.—The following requirements shall apply with respect to the option to make an election pursuant to clause (i) under this subparagraph:

"(I) SECRETARIAL RESPONSIBILITIES.—The Secretary shall provide information to part D eligible individuals on the option to make such election through educational materials, including through the notices provided under section 1804(a).

"(II) TIMING OF ELECTION.—An enrollee in a prescription drug plan or an MA–PD plan may make such an election—

"(aa) prior to the beginning of the plan year; or

"(bb) in any month during the plan year.

"(III) PDP SPONSOR AND MA ORGANIZATION RESPONSIBILITIES.—Each PDP sponsor offering a prescription drug plan or MA organization offering an MA–PD plan—

"(aa) may not limit the option for an enrollee to make such an election to certain covered part D drugs;

Notification.

"(bb) shall, prior to the plan year, notify prospective enrollees of the option to make such an election in promotional materials;

"(cc) shall include information on such option in enrollee educational materials;

Notification.

"(dd) shall have in place a mechanism to notify a pharmacy during the plan year when an enrollee incurs out-of-pocket costs with respect to covered part D drugs that make it likely the enrollee may benefit from making such an election;

"(ee) shall provide that a pharmacy, after receiving a notification described in item (dd) with respect to an enrollee, informs the enrollee of such notification;

"(ff) shall ensure that such an election by an enrollee has no effect on the amount paid to pharmacies (or the timing of such payments) with respect to covered part D drugs dispensed to the enrollee; and

"(gg) shall have in place a financial reconciliation process to correct inaccuracies in payments made by an enrollee under this subparagraph with respect to covered part D drugs during the plan year.

"(IV) FAILURE TO PAY AMOUNT BILLED.—If an enrollee fails to pay the amount billed for a month as required under this subparagraph—

"(aa) the election of the enrollee pursuant to clause (i) shall be terminated and the enrollee shall pay the cost-sharing otherwise applicable for any covered part D drugs subsequently dispensed to the enrollee up to the annual out-of-pocket threshold specified in paragraph (4)(B); and

"(bb) the PDP sponsor or MA organization may preclude the enrollee from making an election pursuant to clause (i) in a subsequent plan year.

"(V) CLARIFICATION REGARDING PAST DUE AMOUNTS.—Nothing in this subparagraph shall be construed as prohibiting a PDP sponsor or an MA organization from billing an enrollee for an amount owed under this subparagraph.

"(VI) TREATMENT OF UNSETTLED BALANCES.—Any unsettled balances with respect to amounts owed under this subparagraph shall be treated as plan losses and the Secretary shall not be liable for any such balances outside of those assumed as losses estimated in plan bids."; and

(2) in paragraph (4)—

(A) in subparagraph (C), by striking "subparagraph (E)" and inserting "subparagraph (E) or subparagraph (F)"; and

(B) by adding at the end the following new subparagraph:

"(F) INCLUSION OF COSTS PAID UNDER MAXIMUM MONTHLY CAP OPTION.—In applying subparagraph (A), with respect to an enrollee who has made an election pursuant to clause (i) of paragraph (2)(E), costs shall be treated as incurred if such costs are paid by a PDP sponsor or an MA organization under the option provided under such paragraph.".

(b) APPLICATION TO ALTERNATIVE PRESCRIPTION DRUG COVERAGE.—Section 1860D–2(c) of the Social Security Act (42 U.S.C. 1395w–102(c)) is amended by adding at the end the following new paragraph:

"(4) SAME MAXIMUM MONTHLY CAP ON COST-SHARING.—The maximum monthly cap on cost-sharing payments shall apply to coverage with respect to an enrollee who has made an election pursuant to clause (i) of subsection (b)(2)(E) under the option provided under such subsection.".

(c) IMPLEMENTATION FOR 2025.—The Secretary shall implement this section, including the amendments made by this section, for 2025 by program instruction or other forms of program guidance. 42 USC 1395w–102 note.

(d) FUNDING.—In addition to amounts otherwise available, there are appropriated to the Centers for Medicare & Medicaid Services, out of any money in the Treasury not otherwise appropriated, $10,000,000 for fiscal year 2023, to remain available until expended, to carry out the provisions of, including the amendments made by, this section. Time period.

PART 4—CONTINUED DELAY OF IMPLEMENTATION OF PRESCRIPTION DRUG REBATE RULE

42 USC 1320a–7b note.

SEC. 11301. EXTENSION OF MORATORIUM ON IMPLEMENTATION OF RULE RELATING TO ELIMINATING THE ANTI-KICKBACK STATUTE SAFE HARBOR PROTECTION FOR PRESCRIPTION DRUG REBATES.

Effective date.

The Secretary of Health and Human Services shall not, prior to January 1, 2032, implement, administer, or enforce the provisions of the final rule published by the Office of the Inspector General of the Department of Health and Human Services on November 30, 2020, and titled "Fraud and Abuse; Removal of Safe Harbor Protection for Rebates Involving Prescription Pharmaceuticals and Creation of New Safe Harbor Protection for Certain Point-of-Sale Reductions in Price on Prescription Pharmaceuticals and Certain Pharmacy Benefit Manager Service Fees" (85 Fed. Reg. 76666).

PART 5—MISCELLANEOUS

SEC. 11401. COVERAGE OF ADULT VACCINES RECOMMENDED BY THE ADVISORY COMMITTEE ON IMMUNIZATION PRACTICES UNDER MEDICARE PART D.

(a) ENSURING TREATMENT OF COST-SHARING AND DEDUCTIBLE IS CONSISTENT WITH TREATMENT OF VACCINES UNDER MEDICARE PART B.—Section 1860D–2 of the Social Security Act (42 U.S.C. 1395w–102), as amended by sections 11201 and 11202, is amended—

(1) in subsection (b)—

(A) in paragraph (1)(A), by striking "The coverage" and inserting "Subject to paragraph (8), the coverage";

(B) in paragraph (2)—

(i) in subparagraph (A), by inserting "and paragraph (8)" after "and (E)";

(ii) in subparagraph (C)(i), in the matter preceding subclause (I), by striking "paragraph (4)" and inserting "paragraphs (4) and (8)"; and

(iii) in subparagraph (D)(i), in the matter preceding subclause (I), by striking "paragraph (4)" and inserting "paragraphs (4) and (8)";

(C) in paragraph (3)(A), in the matter preceding clause (i), by striking "and (4)" and inserting "(4), and (8)";

(D) in paragraph (4)(A)(i), by striking "The coverage" and inserting "Subject to paragraph (8), the coverage"; and

(E) by adding at the end the following new paragraph:

"(8) TREATMENT OF COST-SHARING FOR ADULT VACCINES RECOMMENDED BY THE ADVISORY COMMITTEE ON IMMUNIZATION PRACTICES CONSISTENT WITH TREATMENT OF VACCINES UNDER PART B.—

Effective date.

"(A) IN GENERAL.—For plan years beginning on or after January 1, 2023, with respect to an adult vaccine recommended by the Advisory Committee on Immunization Practices (as defined in subparagraph (B))—

"(i) the deductible under paragraph (1) shall not apply; and

"(ii) there shall be no coinsurance or other cost-sharing under this part with respect to such vaccine.

"(B) ADULT VACCINES RECOMMENDED BY THE ADVISORY COMMITTEE ON IMMUNIZATION PRACTICES.—For purposes of this paragraph, the term 'adult vaccine recommended by the Advisory Committee on Immunization Practices' means a covered part D drug that is a vaccine licensed under section 351 of the Public Health Service Act for use by adult populations and administered in accordance with recommendations of the Advisory Committee on Immunization Practices of the Centers for Disease Control and Prevention."; and Definition.

(2) in subsection (c), by adding at the end the following new paragraph:

"(5) TREATMENT OF COST-SHARING FOR ADULT VACCINES RECOMMENDED BY THE ADVISORY COMMITTEE ON IMMUNIZATION PRACTICES.—The coverage is in accordance with subsection (b)(8).".

(b) CONFORMING AMENDMENTS TO COST-SHARING FOR LOW-INCOME INDIVIDUALS.—Section 1860D–14(a) of the Social Security Act (42 U.S.C. 1395w–114(a)), as amended by section 11201, is amended—

(1) in paragraph (1)(D), in each of clauses (ii) and (iii), by striking "In the case" and inserting "Subject to paragraph (6), in the case";

(2) in paragraph (2)—

(A) in subparagraph (B), by striking "A reduction" and inserting "Subject to section 1860D–2(b)(8), a reduction";

(B) in subparagraph (D), by striking "The substitution" and inserting "Subject to paragraph (6), the substitution"; and

(C) in subparagraph (E), by striking "subsection (c)" and inserting "paragraph (6) of this subsection and subsection (c)"; and

(3) by adding at the end the following new paragraph:

"(6) NO APPLICATION OF COST-SHARING OR DEDUCTIBLE FOR ADULT VACCINES RECOMMENDED BY THE ADVISORY COMMITTEE ON IMMUNIZATION PRACTICES.—For plan years beginning on or after January 1, 2023, with respect to an adult vaccine recommended by the Advisory Committee on Immunization Practices (as defined in section 1860D–2(b)(8)(B))— Effective date.

"(A) the deductible under section 1860D–2(b)(1) shall not apply; and

"(B) there shall be no cost-sharing under this section with respect to such vaccine.".

(c) TEMPORARY RETROSPECTIVE SUBSIDY.—

(1) IN GENERAL.—Section 1860D–15 of the Social Security Act (42 U.S.C. 1395w–115) is amended by adding at the end the following new subsection:

"(h) TEMPORARY RETROSPECTIVE SUBSIDY FOR REDUCTION IN COST-SHARING AND DEDUCTIBLE FOR ADULT VACCINES RECOMMENDED BY THE ADVISORY COMMITTEE ON IMMUNIZATION PRACTICES DURING 2023.—

"(1) IN GENERAL.—In addition to amounts otherwise payable under this section to a PDP sponsor of a prescription drug plan or an MA organization offering an MA–PD plan, for plan year 2023, the Secretary shall provide the PDP sponsor

or MA organization offering the plan subsidies in an amount equal to the aggregate reduction in cost-sharing and deductible by reason of the application of section 1860D–2(b)(8) for individuals under the plan during the year.

Deadline.

"(2) TIMING.—The Secretary shall provide a subsidy under paragraph (1), as applicable, not later than 18 months following the end of the applicable plan year.".

(2) TREATMENT AS INCURRED COSTS.—Section 1860D–2(b)(4)(C)(iii)(I) of the Social Security Act (42 U.S.C. 1395w–102(b)(4)(C)(iii)(I)), as amended by section 11201(a)(3)(C), is amended—

(A) in item (cc), by striking "or" at the end; and

(B) by adding at the end the following new item:

"(dd) under section 1860D–15(h); or".

42 USC 1395w–102 note.

(d) RULE OF CONSTRUCTION.—Nothing in this section shall be construed as limiting coverage under part D of title XVIII of the Social Security Act for vaccines that are not recommended by the Advisory Committee on Immunization Practices.

42 USC 1395w–102 note.

(e) IMPLEMENTATION FOR 2023 THROUGH 2025.—The Secretary shall implement this section, including the amendments made by this section, for 2023, 2024, and 2025, by program instruction or other forms of program guidance.

SEC. 11402. PAYMENT FOR BIOSIMILAR BIOLOGICAL PRODUCTS DURING INITIAL PERIOD.

Section 1847A(c)(4) of the Social Security Act (42 U.S.C. 1395w–3a(c)(4)) is amended—

(1) in each of subparagraphs (A) and (B), by redesignating clauses (i) and (ii) as subclauses (I) and (II), respectively, and moving such subclauses 2 ems to the right;

(2) by redesignating subparagraphs (A) and (B) as clauses (i) and (ii) and moving such clauses 2 ems to the right;

(3) by striking "UNAVAILABLE.—In the case" and inserting "UNAVAILABLE.—

"(A) IN GENERAL.—Subject to subparagraph (B), in the case"; and

(4) by adding at the end the following new subparagraph:

"(B) LIMITATION ON PAYMENT AMOUNT FOR BIOSIMILAR BIOLOGICAL PRODUCTS DURING INITIAL PERIOD.—In the case of a biosimilar biological product furnished on or after July 1, 2024, during the initial period described in subparagraph (A) with respect to the biosimilar biological product, the amount payable under this section for the biosimilar biological product is the lesser of the following:

Effective date.

"(i) The amount determined under clause (ii) of such subparagraph for the biosimilar biological product.

"(ii) The amount determined under subsection (b)(1)(B) for the reference biological product.".

SEC. 11403. TEMPORARY INCREASE IN MEDICARE PART B PAYMENT FOR CERTAIN BIOSIMILAR BIOLOGICAL PRODUCTS.

Section 1847A(b)(8) of the Social Security Act (42 U.S.C. 1395w–3a(b)(8)) is amended—

(1) by redesignating subparagraphs (A) and (B) as clauses (i) and (ii), respectively, and moving the margin of each such redesignated clause 2 ems to the right;

(2) by striking "PRODUCT.—The amount" and inserting the following: "PRODUCT.—

"(A) IN GENERAL.—Subject to subparagraph (B), the amount"; and

(3) by adding at the end the following new subparagraph:

"(B) TEMPORARY PAYMENT INCREASE.— Time periods.

"(i) IN GENERAL.—In the case of a qualifying biosimilar biological product that is furnished during the applicable 5-year period for such product, the amount specified in this paragraph for such product with respect to such period is the sum determined under subparagraph (A), except that clause (ii) of such subparagraph shall be applied by substituting '8 percent' for '6 percent'.

"(ii) APPLICABLE 5-YEAR PERIOD.—For purposes of clause (i), the applicable 5-year period for a qualifying biosimilar biological product is—

"(I) in the case of such a product for which payment was made under this paragraph as of September 30, 2022, the 5-year period beginning on October 1, 2022; and Effective date.

"(II) in the case of such a product for which payment is first made under this paragraph during a calendar quarter during the period beginning October 1, 2022, and ending December 31, 2027, the 5-year period beginning on the first day of such calendar quarter during which such payment is first made.

"(iii) QUALIFYING BIOSIMILAR BIOLOGICAL PRODUCT DEFINED.—For purposes of this subparagraph, the term 'qualifying biosimilar biological product' means a biosimilar biological product described in paragraph (1)(C) with respect to which—

"(I) in the case of a product described in clause (ii)(I), the average sales price under paragraph (8)(A)(i) for a calendar quarter during the 5-year period described in such clause is not more than the average sales price under paragraph (4)(A) for such quarter for the reference biological product; and

"(II) in the case of a product described in clause (ii)(II), the average sales price under paragraph (8)(A)(i) for a calendar quarter during the 5-year period described in such clause is not more than the average sales price under paragraph (4)(A) for such quarter for the reference biological product.".

SEC. 11404. EXPANDING ELIGIBILITY FOR LOW-INCOME SUBSIDIES UNDER PART D OF THE MEDICARE PROGRAM. Effective date.

Section 1860D–14(a) of the Social Security Act (42 U.S.C. 1395w–114(a)), as amended by sections 11201 and 11401, is amended—

(1) in the subsection heading, by striking "INDIVIDUALS" and all that follows through "LINE" and inserting "CERTAIN INDIVIDUALS";

(2) in paragraph (1)—

(A) by striking the paragraph heading and inserting "INDIVIDUALS WITH CERTAIN LOW INCOMES"; and

(B) in the matter preceding subparagraph (A)—

(i) by inserting "(or, with respect to a plan year beginning on or after January 1, 2024, 150 percent)" after "135 percent"; and

(ii) by inserting "(or, with respect to a plan year beginning on or after January 1, 2024, paragraph (3)(E))" after "the resources requirement described in paragraph (3)(D)"; and

(3) in paragraph (2)—

(A) by striking the paragraph heading and inserting "OTHER LOW-INCOME INDIVIDUALS"; and

(B) in the matter preceding subparagraph (A), by striking "In the case of a subsidy" and inserting "With respect to a plan year beginning before January 1, 2024, in the case of a subsidy".

SEC. 11405. IMPROVING ACCESS TO ADULT VACCINES UNDER MEDICAID AND CHIP.

(a) MEDICAID.—

(1) REQUIRING COVERAGE OF ADULT VACCINATIONS.—

(A) IN GENERAL.—Section 1902(a)(10)(A) of the Social Security Act (42 U.S.C. 1396a(a)(10)(A)) is amended in the matter preceding clause (i) by inserting "(13)(B)," after "(5),".

(B) MEDICALLY NEEDY.—Section 1902(a)(10)(C)(iv) of such Act (42 U.S.C. 1396a(a)(10)(C)(iv)) is amended by inserting ", (13)(B)," after "(5)".

(2) NO COST SHARING FOR VACCINATIONS.—

(A) GENERAL COST-SHARING LIMITATIONS.—Section 1916 of the Social Security Act (42 U.S.C. 1396o) is amended—

(i) in subsection (a)(2)—

(I) in subparagraph (G), by inserting a comma after "State plan";

(II) in subparagraph (H), by striking "; or" and inserting a comma;

(III) in subparagraph (I), by striking "; and" and inserting ", or"; and

(IV) by adding at the end the following new subparagraph:

"(J) vaccines described in section 1905(a)(13)(B) and the administration of such vaccines; and"; and

(ii) in subsection (b)(2)—

(I) in subparagraph (G), by inserting a comma after "State plan";

(II) in subparagraph (H), by striking "; or" and inserting a comma;

(III) in subparagraph (I), by striking "; and" and inserting ", or"; and

(IV) by adding at the end the following new subparagraph:

"(J) vaccines described in section 1905(a)(13)(B) and the administration of such vaccines; and".

(B) APPLICATION TO ALTERNATIVE COST SHARING.—Section 1916A(b)(3)(B) of the Social Security Act (42 U.S.C.

1396o–1(b)(3)(B)) is amended by adding at the end the following new clause:

"(xiv) Vaccines described in section 1905(a)(13)(B) and the administration of such vaccines.".

(3) INCREASED FMAP FOR ADULT VACCINES AND THEIR ADMINISTRATION.—Section 1905(b) of the Social Security Act (42 U.S.C. 1396d(b)) is amended—

(A) by striking "and (5)" and inserting "(5)";

(B) by striking "services and vaccines described in subparagraphs (A) and (B) of subsection (a)(13), and prohibits cost-sharing for such services and vaccines" and inserting "services described in subsection (a)(13)(A), and prohibits cost-sharing for such services";

(C) by striking "medical assistance for such services and vaccines" and inserting "medical assistance for such services"; and

(D) by inserting ", and (6) during the first 8 fiscal quarters beginning on or after the effective date of this clause, in the case of a State which, as of the date of enactment of the Act titled 'An Act to provide for reconciliation pursuant to title II of S. Con. Res. 14', provides medical assistance for vaccines described in subsection (a)(13)(B) and their administration and prohibits cost-sharing for such vaccines, the Federal medical assistance percentage, as determined under this subsection and subsection (y), shall be increased by 1 percentage point with respect to medical assistance for such vaccines and their administration" before the first period. Time periods.

(b) CHIP.—

(1) REQUIRING COVERAGE OF ADULT VACCINATIONS.—Section 2103(c) of the Social Security Act (42 U.S.C. 1397cc(c)) is amended by adding at the end the following paragraph:

"(12) REQUIRED COVERAGE OF APPROVED, RECOMMENDED ADULT VACCINES AND THEIR ADMINISTRATION.—Regardless of the type of coverage elected by a State under subsection (a), if the State child health plan or a waiver of such plan provides child health assistance or pregnancy-related assistance (as defined in section 2112) to an individual who is 19 years of age or older, such assistance shall include coverage of vaccines described in section 1905(a)(13)(B) and their administration.".

(2) NO COST-SHARING FOR VACCINATIONS.—Section 2103(e)(2) of such Act (42 U.S.C. 1397cc(e)(2)) is amended by inserting "vaccines described in subsection (c)(12) (and the administration of such vaccines)," after "in vitro diagnostic products described in subsection (c)(10) (and administration of such products),".

(c) EFFECTIVE DATE.—The amendments made by this section take effect on the 1st day of the 1st fiscal quarter that begins on or after the date that is 1 year after the date of enactment of this Act and shall apply to expenditures made under a State plan or waiver of such plan under title XIX of the Social Security Act (42 U.S.C. 1396 through 1396w–6) or under a State child health plan or waiver of such plan under title XXI of such Act (42 U.S.C. 1397aa through 1397mm) on or after such effective date. Applicability. 42 USC 1396a note.

SEC. 11406. APPROPRIATE COST-SHARING FOR COVERED INSULIN PRODUCTS UNDER MEDICARE PART D.

(a) IN GENERAL.—Section 1860D–2 of the Social Security Act (42 U.S.C. 1395w–102), as amended by sections 11201, 11202, and 11401, is amended—

(1) in subsection (b)—

(A) in paragraph (1)(A), by striking "paragraph (8)" and inserting "paragraphs (8) and (9)";

(B) in paragraph (2)—

(i) in subparagraph (A), by striking "paragraph (8)" and inserting "paragraphs (8) and (9)";

(ii) in subparagraph (C)(i), in the matter preceding subclause (I), by striking "and (8)" and inserting ", (8), and (9)"; and

(iii) in subparagraph (D)(i), in the matter preceding subclause (I), by striking "and (8)" and inserting ", (8), and (9)";

(C) in paragraph (3)(A), in the matter preceding clause (i), by striking "and (8)" and inserting "(8), and (9)";

(D) in paragraph (4)(A)(i), by striking "paragraph (8)" and inserting "paragraphs (8) and (9)"; and

(E) by adding at the end the following new paragraph:

"(9) TREATMENT OF COST-SHARING FOR COVERED INSULIN PRODUCTS.—

Time periods.

"(A) NO APPLICATION OF DEDUCTIBLE.—For plan year 2023 and subsequent plan years, the deductible under paragraph (1) shall not apply with respect to any covered insulin product.

"(B) APPLICATION OF COST-SHARING.—

"(i) PLAN YEARS 2023 AND 2024.—For plan years 2023 and 2024, the coverage provides benefits for any covered insulin product, regardless of whether an individual has reached the initial coverage limit under paragraph (3) or the out-of-pocket threshold under paragraph (4), with cost-sharing for a month's supply that does not exceed the applicable copayment amount.

"(ii) PLAN YEAR 2025 AND SUBSEQUENT PLAN YEARS.—For a plan year beginning on or after January 1, 2025, the coverage provides benefits for any covered insulin product, prior to an individual reaching the out-of-pocket threshold under paragraph (4), with cost-sharing for a month's supply that does not exceed the applicable copayment amount.

Definition.

"(C) COVERED INSULIN PRODUCT.—In this paragraph, the term 'covered insulin product' means an insulin product that is a covered part D drug covered under the prescription drug plan or MA–PD plan that is approved under section 505 of the Federal Food, Drug, and Cosmetic Act or licensed under section 351 of the Public Health Service Act and marketed pursuant to such approval or licensure, including any covered insulin product that has been deemed to be licensed under section 351 of the Public Health Service Act pursuant to section 7002(e)(4) of the Biologics Price Competition and Innovation Act of 2009 and marketed pursuant to such section.

Definition.

"(D) APPLICABLE COPAYMENT AMOUNT.—In this paragraph, the term 'applicable copayment amount' means, with

respect to a covered insulin product under a prescription drug plan or an MA–PD plan dispensed—

"(i) during plan years 2023, 2024, and 2025, $35; and

"(ii) during plan year 2026 and each subsequent plan year, the lesser of—

"(I) $35;

"(II) an amount equal to 25 percent of the maximum fair price established for the covered insulin product in accordance with part E of title XI; or

"(III) an amount equal to 25 percent of the negotiated price of the covered insulin product under the prescription drug plan or MA–PD plan.

"(E) SPECIAL RULE FOR FIRST 3 MONTHS OF 2023.—With respect to a month's supply of a covered insulin product dispensed during the period beginning on January 1, 2023, and ending on March 31, 2023, a PDP sponsor offering a prescription drug plan or an MA organization offering an MA–PD plan shall reimburse an enrollee within 30 days for any cost-sharing paid by such enrollee that exceeds the cost-sharing applied by the prescription drug plan or MA–PD plan under subparagraph (B)(i) at the point-of-sale for such month's supply."; and

Reimbursement. Deadline.

(2) in subsection (c), by adding at the end the following new paragraph:

"(6) TREATMENT OF COST-SHARING FOR COVERED INSULIN PRODUCTS.—The coverage is provided in accordance with subsection (b)(9).".

(b) CONFORMING AMENDMENTS TO COST-SHARING FOR LOW-INCOME INDIVIDUALS.—Section 1860D–14(a) of the Social Security Act (42 U.S.C. 1395w–114(a)), as amended by sections 11201, 11401, and 11404, is amended—

(1) in paragraph (1)—

Time periods.

(A) in subparagraph (D)(iii), by adding at the end the following new sentence: "For plan year 2023 and subsequent plan years, the copayment amount applicable under the preceding sentence to a month's supply of a covered insulin product (as defined in section 1860D–2(b)(9)(C)) dispensed to the individual may not exceed the applicable copayment amount for the product under the prescription drug plan or MA–PD plan in which the individual is enrolled."; and

(B) in subparagraph (E), by inserting the following before the period at the end: "or under section 1860D–2(b)(9) in the case of a covered insulin product (as defined in subparagraph (C) of such section)"; and

(2) in paragraph (2)—

(A) in subparagraph (B), by striking "section 1860D–2(b)(8)" and inserting "paragraphs (8) and (9) of section 1860D–2(b)";

(B) in subparagraph (D), by adding at the end the following new sentence: "For plan year 2023, the amount of the coinsurance applicable under the preceding sentence to a month's supply of a covered insulin product (as defined in section 1860D–2(b)(9)(C)) dispensed to the individual may not exceed the applicable copayment amount for the

product under the prescription drug plan or MA–PD plan in which the individual is enrolled."; and

(C) in subparagraph (E), by adding at the end the following new sentence: "For plan year 2023, the amount of the copayment or coinsurance applicable under the preceding sentence to a month's supply of a covered insulin product (as defined in section 1860D–2(b)(9)(C)) dispensed to the individual may not exceed the applicable copayment amount for the product under the prescription drug plan or MA–PD plan in which the individual is enrolled.".

(c) TEMPORARY RETROSPECTIVE SUBSIDY.—Section 1860D–15(h) of the Social Security Act (42 U.S.C. 1395w–115(h)), as added by section 11401(c), is amended—

(1) in the subsection heading, by inserting "AND INSULIN" after "PRACTICES"; and

(2) in paragraph (1), by striking "section 1860D–2(b)(8)" and inserting "paragraph (8) or (9) of section 1860D–2(b)".

42 USC 1395w–102 note.

(d) IMPLEMENTATION FOR 2023 THROUGH 2025.—The Secretary shall implement this section for plan years 2023, 2024, and 2025 by program instruction or other forms of program guidance.

(e) FUNDING.—In addition to amounts otherwise available, there is appropriated to the Centers for Medicare & Medicaid Services, out of any money in the Treasury not otherwise appropriated, $1,500,000 for fiscal year 2022, to remain available until expended, to carry out the provisions of, including the amendments made by, this section.

Effective dates.

SEC. 11407. LIMITATION ON MONTHLY COINSURANCE AND ADJUSTMENTS TO SUPPLIER PAYMENT UNDER MEDICARE PART B FOR INSULIN FURNISHED THROUGH DURABLE MEDICAL EQUIPMENT.

(a) WAIVER OF DEDUCTIBLE.—The first sentence of section 1833(b) of the Social Security Act (42 U.S.C. 1395l(b)) is amended—

(1) by striking "and (12)" and inserting "(12)"; and

(2) by inserting before the period the following: ", and (13) such deductible shall not apply with respect to insulin furnished on or after July 1, 2023, through an item of durable medical equipment covered under section 1861(n).".

(b) COINSURANCE.—

(1) IN GENERAL.—Section 1833(a)(1)(S) of the Social Security Act (42 U.S.C. 1395l(a)(1)(S)) is amended—

(A) by inserting "(i) except as provided in clause (ii)," after "(S)"; and

(B) by inserting after "or 1847B)," the following: "and (ii) with respect to insulin furnished on or after July 1, 2023, through an item of durable medical equipment covered under section 1861(n), the amounts paid shall be, subject to the fourth sentence of this subsection, 80 percent of the payment amount established under section 1847A (or section 1847B, if applicable) for such insulin,".

(2) ADJUSTMENT TO SUPPLIER PAYMENTS; LIMITATION ON MONTHLY COINSURANCE.—Section 1833(a) of the Social Security Act (42 U.S.C. 1395l(a)) is amended, in the flush matter at the end, by adding at the end the following new sentence: "The Secretary shall make such adjustments as may be necessary to the amounts paid as specified under paragraph (1)(S)(ii) for insulin furnished on or after July 1, 2023, through

an item of durable medical equipment covered under section 1861(n), such that the amount of coinsurance payable by an individual enrolled under this part for a month's supply of such insulin does not exceed $35.".

(c) IMPLEMENTATION.—The Secretary of Health and Human Services shall implement this section for 2023 by program instruction or other forms of program guidance. 42 USC 1395*l* note.

SEC. 11408. SAFE HARBOR FOR ABSENCE OF DEDUCTIBLE FOR INSULIN.

(a) IN GENERAL.—Paragraph (2) of section 223(c) of the Internal Revenue Code of 1986 is amended by adding at the end the following new subparagraph: 26 USC 223.

"(G) SAFE HARBOR FOR ABSENCE OF DEDUCTIBLE FOR CERTAIN INSULIN PRODUCTS.—

"(i) IN GENERAL.—A plan shall not fail to be treated as a high deductible health plan by reason of failing to have a deductible for selected insulin products.

"(ii) SELECTED INSULIN PRODUCTS.—For purposes of this subparagraph— Definitions.

"(I) IN GENERAL.—The term 'selected insulin products' means any dosage form (such as vial, pump, or inhaler dosage forms) of any different type (such as rapid-acting, short-acting, intermediate-acting, long-acting, ultra long-acting, and premixed) of insulin.

"(II) INSULIN.—The term 'insulin' means insulin that is licensed under subsection (a) or (k) of section 351 of the Public Health Service Act (42 U.S.C. 262) and continues to be marketed under such section, including any insulin product that has been deemed to be licensed under section 351(a) of such Act pursuant to section 7002(e)(4) of the Biologics Price Competition and Innovation Act of 2009 (Public Law 111–148) and continues to be marketed pursuant to such licensure.".

(b) EFFECTIVE DATE.—The amendment made by this section shall apply to plan years beginning after December 31, 2022. 26 USC 223 note.

Subtitle C—Affordable Care Act Subsidies

SEC. 12001. IMPROVE AFFORDABILITY AND REDUCE PREMIUM COSTS OF HEALTH INSURANCE FOR CONSUMERS.

(a) IN GENERAL.—Clause (iii) of section 36B(b)(3)(A) of the Internal Revenue Code of 1986 is amended—

(1) by striking "in 2021 or 2022" and inserting "after December 31, 2020, and before January 1, 2026", and

(2) by striking "2021 AND 2022" in the heading and inserting "2021 THROUGH 2025".

(b) EXTENSION THROUGH 2025 OF RULE TO ALLOW CREDIT TO TAXPAYERS WHOSE HOUSEHOLD INCOME EXCEEDS 400 PERCENT OF THE POVERTY LINE.—Section 36B(c)(1)(E) of the Internal Revenue Code of 1986 is amended—

(1) by striking "in 2021 or 2022" and inserting "after December 31, 2020, and before January 1, 2026", and

(2) by striking "2021 AND 2022" in the heading and inserting "2021 THROUGH 2025".

26 USC 36B note.

(c) EFFECTIVE DATE.—The amendments made by this section shall apply to taxable years beginning after December 31, 2022.

Subtitle D—Energy Security

SEC. 13001. AMENDMENT OF 1986 CODE.

Except as otherwise expressly provided, whenever in this subtitle an amendment or repeal is expressed in terms of an amendment to, or repeal of, a section or other provision, the reference shall be considered to be made to a section or other provision of the Internal Revenue Code of 1986.

PART 1—CLEAN ELECTRICITY AND REDUCING CARBON EMISSIONS

SEC. 13101. EXTENSION AND MODIFICATION OF CREDIT FOR ELECTRICITY PRODUCED FROM CERTAIN RENEWABLE RESOURCES.

26 USC 45.

(a) IN GENERAL.—The following provisions of section 45(d) are each amended by striking "January 1, 2022" each place it appears and inserting "January 1, 2025":

(1) Paragraph (2)(A).
(2) Paragraph (3)(A).
(3) Paragraph (6).
(4) Paragraph (7).
(5) Paragraph (9).
(6) Paragraph (11)(B).

(b) BASE CREDIT AMOUNT.—Section 45 is amended—

(1) in subsection (a)(1), by striking "1.5 cents" and inserting "0.3 cents", and

(2) in subsection (b)(2), by striking "1.5 cent" and inserting "0.3 cent".

(c) APPLICATION OF EXTENSION TO GEOTHERMAL AND SOLAR.—Section 45(d)(4) is amended by striking "and which" and all that follows through "January 1, 2022" and inserting "and the construction of which begins before January 1, 2025".

(d) EXTENSION OF ELECTION TO TREAT QUALIFIED FACILITIES AS ENERGY PROPERTY.—Section 48(a)(5)(C)(ii) is amended by striking "January 1, 2022" and inserting "January 1, 2025".

(e) APPLICATION OF EXTENSION TO WIND FACILITIES.—

(1) IN GENERAL.—Section 45(d)(1) is amended by striking "January 1, 2022" and inserting "January 1, 2025".

(2) APPLICATION OF PHASEOUT PERCENTAGE.—

(A) RENEWABLE ELECTRICITY PRODUCTION CREDIT.—Section 45(b)(5) is amended by inserting "which is placed in service before January 1, 2022" after "using wind to produce electricity".

(B) ENERGY CREDIT.—Section 48(a)(5)(E) is amended by inserting "placed in service before January 1, 2022, and" before "treated as energy property".

(3) QUALIFIED OFFSHORE WIND FACILITIES UNDER ENERGY CREDIT.—Section 48(a)(5)(F)(i) is amended by striking "offshore wind facility" and all that follows and inserting the following: "offshore wind facility, subparagraph (E) shall not apply.".

(f) WAGE AND APPRENTICESHIP REQUIREMENTS.—Section 45(b) is amended by adding at the end the following new paragraphs: 26 USC 45.

"(6) INCREASED CREDIT AMOUNT FOR QUALIFIED FACILITIES.—

"(A) IN GENERAL.—In the case of any qualified facility which satisfies the requirements of subparagraph (B), the amount of the credit determined under subsection (a) (determined after the application of paragraphs (1) through (5) and without regard to this paragraph) shall be equal to such amount multiplied by 5.

"(B) QUALIFIED FACILITY REQUIREMENTS.—A qualified facility meets the requirements of this subparagraph if it is one of the following:

"(i) A facility with a maximum net output of less than 1 megawatt (as measured in alternating current).

"(ii) A facility the construction of which begins prior to the date that is 60 days after the Secretary publishes guidance with respect to the requirements of paragraphs (7)(A) and (8). Time period. Publication. Guidelines.

"(iii) A facility which satisfies the requirements of paragraphs (7)(A) and (8).

"(7) PREVAILING WAGE REQUIREMENTS.—

"(A) IN GENERAL.—The requirements described in this subparagraph with respect to any qualified facility are that the taxpayer shall ensure that any laborers and mechanics employed by the taxpayer or any contractor or subcontractor in—

"(i) the construction of such facility, and

"(ii) with respect to any taxable year, for any portion of such taxable year which is within the period described in subsection (a)(2)(A)(ii), the alteration or repair of such facility, Determination.

shall be paid wages at rates not less than the prevailing rates for construction, alteration, or repair of a similar character in the locality in which such facility is located as most recently determined by the Secretary of Labor, in accordance with subchapter IV of chapter 31 of title 40, United States Code. For purposes of determining an increased credit amount under paragraph (6)(A) for a taxable year, the requirement under clause (ii) is applied to such taxable year in which the alteration or repair of the qualified facility occurs." Applicability.

"(B) CORRECTION AND PENALTY RELATED TO FAILURE TO SATISFY WAGE REQUIREMENTS.—

"(i) IN GENERAL.—In the case of any taxpayer which fails to satisfy the requirement under subparagraph (A) with respect to the construction of any qualified facility or with respect to the alteration or repair of a facility in any year during the period described in subparagraph (A)(ii), such taxpayer shall be deemed to have satisfied such requirement under such subparagraph with respect to such facility for any year if, with respect to any laborer or mechanic who was paid wages at a rate below the rate described in such subparagraph for any period during such year, such taxpayer—

"(I) makes payment to such laborer or mechanic in an amount equal to the sum of—

"(aa) an amount equal to the difference between—

"(AA) the amount of wages paid to such laborer or mechanic during such period, and

"(BB) the amount of wages required to be paid to such laborer or mechanic pursuant to such subparagraph during such period, plus

"(bb) interest on the amount determined under item (aa) at the underpayment rate established under section 6621 (determined by substituting '6 percentage points' for '3 percentage points' in subsection (a)(2) of such section) for the period described in such item, and

"(II) makes payment to the Secretary of a penalty in an amount equal to the product of—

"(aa) $5,000, multiplied by

"(bb) the total number of laborers and mechanics who were paid wages at a rate below the rate described in subparagraph (A) for any period during such year.

"(ii) DEFICIENCY PROCEDURES NOT TO APPLY.—Subchapter B of chapter 63 (relating to deficiency procedures for income, estate, gift, and certain excise taxes) shall not apply with respect to the assessment or collection of any penalty imposed by this paragraph.

Determination. Applicability.

"(iii) INTENTIONAL DISREGARD.—If the Secretary determines that any failure described in clause (i) is due to intentional disregard of the requirements under subparagraph (A), such clause shall be applied—

"(I) in subclause (I), by substituting 'three times the sum' for 'the sum', and

"(II) in subclause (II), by substituting '$10,000' for '5,000' in item (aa) thereof.

Regulations. Deadline.

"(iv) LIMITATION ON PERIOD FOR PAYMENT.—Pursuant to rules issued by the Secretary, in the case of a final determination by the Secretary with respect to any failure by the taxpayer to satisfy the requirement under subparagraph (A), subparagraph (B)(i) shall not apply unless the payments described in subclauses (I) and (II) of such subparagraph are made by the taxpayer on or before the date which is 180 days after the date of such determination.

"(8) APPRENTICESHIP REQUIREMENTS.—The requirements described in this paragraph with respect to the construction of any qualified facility are as follows:

"(A) LABOR HOURS.—

"(i) PERCENTAGE OF TOTAL LABOR HOURS.—Taxpayers shall ensure that, with respect to the construction of any qualified facility, not less than the applicable percentage of the total labor hours of the construction, alteration, or repair work (including such work performed by any contractor or subcontractor)

with respect to such facility shall, subject to subparagraph (B), be performed by qualified apprentices.

"(ii) APPLICABLE PERCENTAGE.—For purposes of clause (i), the applicable percentage shall be— Effective dates.

"(I) in the case of a qualified facility the construction of which begins before January 1, 2023, 10 percent,

"(II) in the case of a qualified facility the construction of which begins after December 31, 2022, and before January 1, 2024, 12.5 percent, and

"(III) in the case of a qualified facility the construction of which begins after December 31, 2023, 15 percent.

"(B) APPRENTICE TO JOURNEYWORKER RATIO.—The requirement under subparagraph (A)(i) shall be subject to any applicable requirements for apprentice-to-journeyworker ratios of the Department of Labor or the applicable State apprenticeship agency.

"(C) PARTICIPATION.—Each taxpayer, contractor, or subcontractor who employs 4 or more individuals to perform construction, alteration, or repair work with respect to the construction of a qualified facility shall employ 1 or more qualified apprentices to perform such work.

"(D) EXCEPTION.—

"(i) IN GENERAL.—A taxpayer shall not be treated as failing to satisfy the requirements of this paragraph if such taxpayer—

"(I) satisfies the requirements described in clause (ii), or

"(II) subject to clause (iii), in the case of any failure by the taxpayer to satisfy the requirement under subparagraphs (A) and (C) with respect to the construction, alteration, or repair work on any qualified facility to which subclause (I) does not apply, makes payment to the Secretary of a penalty in an amount equal to the product of—

"(aa) $50, multiplied by

"(bb) the total labor hours for which the requirement described in such subparagraph was not satisfied with respect to the construction, alteration, or repair work on such qualified facility.

"(ii) GOOD FAITH EFFORT.—For purposes of clause (i), a taxpayer shall be deemed to have satisfied the requirements under this paragraph with respect to a qualified facility if such taxpayer has requested qualified apprentices from a registered apprenticeship program, as defined in section 3131(e)(3)(B), and—

"(I) such request has been denied, provided that such denial is not the result of a refusal by the taxpayer or any contractors or subcontractors engaged in the performance of construction, alteration, or repair work with respect to such qualified facility to comply with the established standards and requirements of the registered apprenticeship program, or

Deadline.

"(II) the registered apprenticeship program fails to respond to such request within 5 business days after the date on which such registered apprenticeship program received such request.

Determination.

"(iii) INTENTIONAL DISREGARD.—If the Secretary determines that any failure described in subclause (i)(II) is due to intentional disregard of the requirements under subparagraphs (A) and (C), subclause (i)(II) shall be applied by substituting '$500' for '$50' in item (aa) thereof.

"(E) DEFINITIONS.—For purposes of this paragraph—

"(i) LABOR HOURS.—The term 'labor hours'—

"(I) means the total number of hours devoted to the performance of construction, alteration, or repair work by any individual employed by the taxpayer or by any contractor or subcontractor, and

"(II) excludes any hours worked by—

"(aa) foremen,

"(bb) superintendents,

"(cc) owners, or

"(dd) persons employed in a bona fide executive, administrative, or professional capacity (within the meaning of those terms in part 541 of title 29, Code of Federal Regulations).

"(ii) QUALIFIED APPRENTICE.—The term 'qualified apprentice' means an individual who is employed by the taxpayer or by any contractor or subcontractor and who is participating in a registered apprenticeship program, as defined in section 3131(e)(3)(B).

Determination.

"(9) REGULATIONS AND GUIDANCE.—The Secretary shall issue such regulations or other guidance as the Secretary determines necessary to carry out the purposes of this subsection, including regulations or other guidance which provides for requirements for recordkeeping or information reporting for purposes of administering the requirements of this subsection.".

(g) DOMESTIC CONTENT, PHASEOUT, AND ENERGY COMMUNITIES.—Section 45(b), as amended by subsection (f), is amended—

26 USC 45.

(1) by redesignating paragraph (9) as paragraph (12), and

(2) by inserting after paragraph (8) the following:

"(9) DOMESTIC CONTENT BONUS CREDIT AMOUNT.—

"(A) IN GENERAL.—In the case of any qualified facility which satisfies the requirement under subparagraph (B)(i), the amount of the credit determined under subsection (a) (determined after the application of paragraphs (1) through (8)) shall be increased by an amount equal to 10 percent of the amount so determined.

"(B) REQUIREMENT.—

Certification.

"(i) IN GENERAL.—The requirement described in this clause is satisfied with respect to any qualified facility if the taxpayer certifies to the Secretary (at such time, and in such form and manner, as the Secretary may prescribe) that any steel, iron, or manufactured product which is a component of such facility (upon completion of construction) was produced in the

United States (as determined under section 661 of title 49, Code of Federal Regulations).

"(ii) STEEL AND IRON.—In the case of steel or iron, clause (i) shall be applied in a manner consistent with section 661.5 of title 49, Code of Federal Regulations. Applicability.

"(iii) MANUFACTURED PRODUCT.—For purposes of clause (i), the manufactured products which are components of a qualified facility upon completion of construction shall be deemed to have been produced in the United States if not less than the adjusted percentage (as determined under subparagraph (C)) of the total costs of all such manufactured products of such facility are attributable to manufactured products (including components) which are mined, produced, or manufactured in the United States.

"(C) ADJUSTED PERCENTAGE.—

"(i) IN GENERAL.—Subject to subclause (ii), for purposes of subparagraph (B)(iii), the adjusted percentage shall be 40 percent.

"(ii) OFFSHORE WIND FACILITY.—For purposes of subparagraph (B)(iii), in the case of a qualified facility which is an offshore wind facility, the adjusted percentage shall be 20 percent.

"(10) PHASEOUT FOR ELECTIVE PAYMENT.—

"(A) IN GENERAL.—In the case of a taxpayer making an election under section 6417 with respect to a credit under this section, the amount of such credit shall be replaced with—

"(i) the value of such credit (determined without regard to this paragraph), multiplied by

"(ii) the applicable percentage.

"(B) 100 PERCENT APPLICABLE PERCENTAGE FOR CERTAIN QUALIFIED FACILITIES.—In the case of any qualified facility—

"(i) which satisfies the requirements under paragraph (9)(B), or

"(ii) with a maximum net output of less than 1 megawatt (as measured in alternating current),

the applicable percentage shall be 100 percent.

"(C) PHASED DOMESTIC CONTENT REQUIREMENT.—Subject to subparagraph (D), in the case of any qualified facility which is not described in subparagraph (B), the applicable percentage shall be— Effective dates.

"(i) if construction of such facility began before January 1, 2024, 100 percent, and

"(ii) if construction of such facility began in calendar year 2024, 90 percent.

"(D) EXCEPTION.—

"(i) IN GENERAL.—For purposes of this paragraph, the Secretary shall provide exceptions to the requirements under this paragraph if—

"(I) the inclusion of steel, iron, or manufactured products which are produced in the United States increases the overall costs of construction of qualified facilities by more than 25 percent, or

"(II) relevant steel, iron, or manufactured products are not produced in the United States in sufficient and reasonably available quantities or of a satisfactory quality.

"(ii) APPLICABLE PERCENTAGE.—In any case in which the Secretary provides an exception pursuant to clause (i), the applicable percentage shall be 100 percent.

"(11) SPECIAL RULE FOR QUALIFIED FACILITY LOCATED IN ENERGY COMMUNITY.—

"(A) IN GENERAL.—In the case of a qualified facility which is located in an energy community, the credit determined under subsection (a) (determined after the application of paragraphs (1) through (10), without the application of paragraph (9)) shall be increased by an amount equal to 10 percent of the amount so determined.

Definition.

"(B) ENERGY COMMUNITY.—For purposes of this paragraph, the term 'energy community' means—

"(i) a brownfield site (as defined in subparagraphs (A), (B), and (D)(ii)(III) of section 101(39) of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (42 U.S.C. 9601(39))),

Determinations.

"(ii) a metropolitan statistical area or non-metropolitan statistical area which—

"(I) has (or, at any time during the period beginning after December 31, 2009, had) 0.17 percent or greater direct employment or 25 percent or greater local tax revenues related to the extraction, processing, transport, or storage of coal, oil, or natural gas (as determined by the Secretary), and

"(II) has an unemployment rate at or above the national average unemployment rate for the previous year (as determined by the Secretary), or

"(iii) a census tract—

Effective dates.

"(I) in which—

"(aa) after December 31, 1999, a coal mine has closed, or

"(bb) after December 31, 2009, a coal-fired electric generating unit has been retired, or

"(II) which is directly adjoining to any census tract described in subclause (I).".

26 USC 45.

(h) CREDIT REDUCED FOR TAX-EXEMPT BONDS.—Section 45(b)(3) is amended to read as follows:

"(3) CREDIT REDUCED FOR TAX-EXEMPT BONDS.—The amount of the credit determined under subsection (a) with respect to any facility for any taxable year (determined after the application of paragraphs (1) and (2)) shall be reduced by the amount which is the product of the amount so determined for such year and the lesser of 15 percent or a fraction—

"(A) the numerator of which is the sum, for the taxable year and all prior taxable years, of proceeds of an issue of any obligations the interest on which is exempt from tax under section 103 and which is used to provide financing for the qualified facility, and

"(B) the denominator of which is the aggregate amount of additions to the capital account for the qualified facility for the taxable year and all prior taxable years.

The amounts under the preceding sentence for any taxable year shall be determined as of the close of the taxable year.". Determination.

(i) ROUNDING ADJUSTMENT.—

(1) IN GENERAL.—Section 45(b)(2) is amended by striking the second sentence and inserting the following: "If the 0.3 cent amount as increased under the preceding sentence is not a multiple of 0.05 cent, such amount shall be rounded to the nearest multiple of 0.05 cent. In any other case, if an amount as increased under this paragraph is not a multiple of 0.1 cent, such amount shall be rounded to the nearest multiple of 0.1 cent.". 26 USC 45.

(2) CONFORMING AMENDMENT.—Section 45(b)(4)(A) is amended by striking "last sentence" and inserting "last two sentences".

(j) HYDROPOWER.—

(1) ELIMINATION OF CREDIT RATE REDUCTION FOR QUALIFIED HYDROELECTRIC PRODUCTION AND MARINE AND HYDROKINETIC RENEWABLE ENERGY.—Section 45(b)(4)(A), as amended by the preceding provisions of this section, is amended by striking "(7), (9), or (11)" and inserting "or (7)".

(2) MARINE AND HYDROKINETIC RENEWABLE ENERGY.—Section 45 is amended—

(A) in subsection (c)(10)(A)—

(i) in clause (iii), by striking "or",

(ii) in clause (iv), by striking the period at the end and inserting ", or" and

(iii) by adding at the end the following:

"(v) pressurized water used in a pipeline (or similar man-made water conveyance) which is operated—

"(I) for the distribution of water for agricultural, municipal, or industrial consumption, and

"(II) not primarily for the generation of electricity.", and

(B) in subsection (d)(11)(A), by striking "150" and inserting "25".

(k) EFFECTIVE DATES.— Applicability. 26 USC 45 note.

(1) IN GENERAL.—Except as provided in paragraphs (2) and (3), the amendments made by this section shall apply to facilities placed in service after December 31, 2021.

(2) CREDIT REDUCED FOR TAX-EXEMPT BONDS.—The amendment made by subsection (h) shall apply to facilities the construction of which begins after the date of enactment of this Act.

(3) DOMESTIC CONTENT, PHASEOUT, ENERGY COMMUNITIES, AND HYDROPOWER.—The amendments made by subsections (g) and (j) shall apply to facilities placed in service after December 31, 2022.

SEC. 13102. EXTENSION AND MODIFICATION OF ENERGY CREDIT.

(a) EXTENSION OF CREDIT.—The following provisions of section 48 are each amended by striking "January 1, 2024" each place it appears and inserting "January 1, 2025":

(1) Subsection (a)(2)(A)(i)(II).

(2) Subsection (a)(3)(A)(ii).

(3) Subsection (c)(1)(D).
(4) Subsection (c)(2)(D).
(5) Subsection (c)(3)(A)(iv).
(6) Subsection (c)(4)(C).
(7) Subsection (c)(5)(D).

(b) FURTHER EXTENSION FOR CERTAIN ENERGY PROPERTY.—Section 48(a)(3)(A)(vii) is amended by striking "January 1, 2024" and inserting "January 1, 2035". 26 USC 48.

(c) PHASEOUT OF CREDIT.—Section 48(a) is amended by striking paragraphs (6) and (7) and inserting the following new paragraph:

Effective dates.

"(6) PHASEOUT FOR CERTAIN ENERGY PROPERTY.—In the case of any qualified fuel cell property, qualified small wind property, or energy property described in clause (i) or clause (ii) of paragraph (3)(A) the construction of which begins after December 31, 2019, and which is placed in service before January 1, 2022, the energy percentage determined under paragraph (2) shall be equal to 26 percent.".

(d) BASE ENERGY PERCENTAGE AMOUNT; PHASEOUT OF CERTAIN ENERGY PROPERTY.—

(1) BASE ENERGY PERCENTAGE AMOUNT.—Section 48(a) is amended—

(A) in paragraph (2)(A)—

(i) in clause (i), by striking "30 percent" and inserting "6 percent", and

(ii) in clause (ii), by striking "10 percent" and inserting "2 percent", and

(B) in paragraph (5)(A)(ii), by striking "30 percent" and inserting "6 percent".

(2) PHASEOUT OF CERTAIN ENERGY PROPERTY.—Section 48(a), as amended by the preceding provisions of this Act, is amended by adding at the end the following new paragraph:

Effective dates.
Time periods.

"(7) PHASEOUT FOR CERTAIN ENERGY PROPERTY.—In the case of any energy property described in clause (vii) of paragraph (3)(A), the energy percentage determined under paragraph (2) shall be equal to—

"(A) in the case of any property the construction of which begins before January 1, 2033, and which is placed in service after December 31, 2021, 6 percent,

"(B) in the case of any property the construction of which begins after December 31, 2032, and before January 1, 2034, 5.2 percent, and

"(C) in the case of any property the construction of which begins after December 31, 2033, and before January 1, 2035, 4.4 percent.".

(e) 6 PERCENT CREDIT FOR GEOTHERMAL.—Section 48(a)(2)(A)(i)(II) is amended by striking "paragraph (3)(A)(i)" and inserting "clause (i) or (iii) of paragraph (3)(A)".

(f) ENERGY STORAGE TECHNOLOGIES; QUALIFIED BIOGAS PROPERTY; MICROGRID CONTROLLERS; EXTENSION OF OTHER PROPERTY.—

(1) IN GENERAL.—Section 48(a)(3)(A) is amended by striking "or" at the end of clause (vii), and by adding at the end the following new clauses:

"(ix) energy storage technology,
"(x) qualified biogas property, or
"(xi) microgrid controllers,".

(2) APPLICATION OF 6 PERCENT CREDIT.—Section 48(a)(2)(A)(i) is amended by striking "and" at the end of subclauses (IV) and (V) and adding at the end the following new subclauses: 26 USC 48.

"(VI) energy storage technology,

"(VII) qualified biogas property,

"(VIII) microgrid controllers, and

"(IX) energy property described in clauses (v) and (vii) of paragraph (3)(A), and".

(3) DEFINITIONS.—Section 48(c) is amended by adding at the end the following new paragraphs:

"(6) ENERGY STORAGE TECHNOLOGY.—

"(A) IN GENERAL.—The term 'energy storage technology' means—

"(i) property (other than property primarily used in the transportation of goods or individuals and not for the production of electricity) which receives, stores, and delivers energy for conversion to electricity (or, in the case of hydrogen, which stores energy), and has a nameplate capacity of not less than 5 kilowatt hours, and

"(ii) thermal energy storage property.

"(B) MODIFICATIONS OF CERTAIN PROPERTY.—In the case of any property which either—

"(i) was placed in service before the date of enactment of this section and would be described in subparagraph (A)(i), except that such property has a capacity of less than 5 kilowatt hours and is modified in a manner that such property (after such modification) has a nameplate capacity of not less than 5 kilowatt hours, or

"(ii) is described in subparagraph (A)(i) and is modified in a manner that such property (after such modification) has an increase in nameplate capacity of not less than 5 kilowatt hours,

such property shall be treated as described in subparagraph (A)(i) except that the basis of any existing property prior to such modification shall not be taken into account for purposes of this section. In the case of any property to which this subparagraph applies, subparagraph (D) shall be applied by substituting 'modification' for 'construction'. Applicability.

"(C) THERMAL ENERGY STORAGE PROPERTY.—

"(i) IN GENERAL.—Subject to clause (ii), for purposes of this paragraph, the term 'thermal energy storage property' means property comprising a system which—

"(I) is directly connected to a heating, ventilation, or air conditioning system,

"(II) removes heat from, or adds heat to, a storage medium for subsequent use, and

"(III) provides energy for the heating or cooling of the interior of a residential or commercial building.

"(ii) EXCLUSION.—The term 'thermal energy storage property' shall not include—

"(I) a swimming pool,

"(II) combined heat and power system property, or

"(III) a building or its structural components.

"(D) TERMINATION.—The term 'energy storage technology' shall not include any property the construction of which begins after December 31, 2024.

"(7) QUALIFIED BIOGAS PROPERTY.—

"(A) IN GENERAL.—The term 'qualified biogas property' means property comprising a system which—

"(i) converts biomass (as defined in section 45K(c)(3), as in effect on the date of enactment of this paragraph) into a gas which—

"(I) consists of not less than 52 percent methane by volume, or

"(II) is concentrated by such system into a gas which consists of not less than 52 percent methane, and

"(ii) captures such gas for sale or productive use, and not for disposal via combustion.

"(B) INCLUSION OF CLEANING AND CONDITIONING PROPERTY.—The term 'qualified biogas property' includes any property which is part of such system which cleans or conditions such gas.

"(C) TERMINATION.—The term 'qualified biogas property' shall not include any property the construction of which begins after December 31, 2024.

"(8) MICROGRID CONTROLLER.—

"(A) IN GENERAL.—The term 'microgrid controller' means equipment which is—

"(i) part of a qualified microgrid, and

"(ii) designed and used to monitor and control the energy resources and loads on such microgrid.

"(B) QUALIFIED MICROGRID.—The term 'qualified microgrid' means an electrical system which—

"(i) includes equipment which is capable of generating not less than 4 kilowatts and not greater than 20 megawatts of electricity,

"(ii) is capable of operating—

"(I) in connection with the electrical grid and as a single controllable entity with respect to such grid, and

"(II) independently (and disconnected) from such grid, and

"(iii) is not part of a bulk-power system (as defined in section 215 of the Federal Power Act (16 U.S.C. 824o)).

"(C) TERMINATION.—The term 'microgrid controller' shall not include any property the construction of which begins after December 31, 2024.".

(4) DENIAL OF DOUBLE BENEFIT FOR QUALIFIED BIOGAS PROPERTY.—Section 45(e) is amended by adding at the end the following new paragraph:

26 USC 45.

"(12) COORDINATION WITH ENERGY CREDIT FOR QUALIFIED BIOGAS PROPERTY.—The term 'qualified facility' shall not include any facility which produces electricity from gas produced by qualified biogas property (as defined in section 48(c)(7)) if a

credit is allowed under section 48 with respect to such property for the taxable year or any prior taxable year.".

(5) PUBLIC UTILITY PROPERTY.—Paragraph (2) of section 50(d) is amended— 26 USC 50.

(A) by adding after the first sentence the following new sentence: "At the election of a taxpayer, this paragraph shall not apply to any energy storage technology (as defined in section 48(c)(6)), provided—", and

(B) by adding the following new subparagraphs:

"(A) no election under this paragraph shall be permitted if the making of such election is prohibited by a State or political subdivision thereof, by any agency or instrumentality of the United States, or by a public service or public utility commission or other similar body of any State or political subdivision that regulates public utilities as described in section 7701(a)(33)(A),

"(B) an election under this paragraph shall be made separately with respect to each energy storage technology by the due date (including extensions) of the Federal tax return for the taxable year in which the energy storage technology is placed in service by the taxpayer, and once made, may be revoked only with the consent of the Secretary, and

"(C) an election shall not apply with respect to any energy storage technology if such energy storage technology has a maximum capacity equal to or less than 500 kilowatt hours.".

(g) FUEL CELLS USING ELECTROMECHANICAL PROCESSES.—

(1) IN GENERAL.—Section 48(c)(1) is amended—

(A) in subparagraph (A)(i)—

(i) by inserting "or electromechanical" after "electrochemical", and

(ii) by inserting "(1 kilowatt in the case of a fuel cell power plant with a linear generator assembly)" after "0.5 kilowatt", and

(B) in subparagraph (C)—

(i) by inserting ", or linear generator assembly," after "a fuel cell stack assembly", and

(ii) by inserting "or electromechanical" after "electrochemical".

(2) LINEAR GENERATOR ASSEMBLY LIMITATION.—Section 48(c)(1) is amended by redesignating subparagraph (D) as subparagraph (E) and by inserting after subparagraph (C) the following new subparagraph:

"(D) LINEAR GENERATOR ASSEMBLY.—The term 'linear generator assembly' does not include any assembly which contains rotating parts.".

(h) DYNAMIC GLASS.—Section 48(a)(3)(A)(ii) is amended by inserting ", or electrochromic glass which uses electricity to change its light transmittance properties in order to heat or cool a structure," after "sunlight".

(i) COORDINATION WITH LOW INCOME HOUSING TAX CREDIT.—Paragraph (3) of section 50(c) is amended—

(1) by striking "and" at the end of subparagraph (A),

(2) by striking the period at the end of subparagraph (B) and inserting ", and", and

(3) by adding at the end the following new subparagraph:

"(C) paragraph (1) shall not apply for purposes of determining eligible basis under section 42.".

(j) INTERCONNECTION PROPERTY.—Section 48(a), as amended by the preceding provisions of this Act, is amended by adding at the end the following new paragraph:

26 USC 48.

Definitions.
Determination.

"(8) INTERCONNECTION PROPERTY.—

"(A) IN GENERAL.—For purposes of determining the credit under subsection (a), energy property shall include amounts paid or incurred by the taxpayer for qualified interconnection property in connection with the installation of energy property (as defined in paragraph (3)) which has a maximum net output of not greater than 5 megawatts (as measured in alternating current), to provide for the transmission or distribution of the electricity produced or stored by such property, and which are properly chargeable to the capital account of the taxpayer.

"(B) QUALIFIED INTERCONNECTION PROPERTY.—The term 'qualified interconnection property' means, with respect to an energy project which is not a microgrid controller, any tangible property—

"(i) which is part of an addition, modification, or upgrade to a transmission or distribution system which is required at or beyond the point at which the energy project interconnects to such transmission or distribution system in order to accommodate such interconnection,

"(ii) either—

"(I) which is constructed, reconstructed, or erected by the taxpayer, or

"(II) for which the cost with respect to the construction, reconstruction, or erection of such property is paid or incurred by such taxpayer, and

"(iii) the original use of which, pursuant to an interconnection agreement, commences with a utility.

"(C) INTERCONNECTION AGREEMENT.—The term 'interconnection agreement' means an agreement with a utility for the purposes of interconnecting the energy property owned by such taxpayer to the transmission or distribution system of such utility.

"(D) UTILITY.—For purposes of this paragraph, the term 'utility' means the owner or operator of an electrical transmission or distribution system which is subject to the regulatory authority of a State or political subdivision thereof, any agency or instrumentality of the United States, a public service or public utility commission or other similar body of any State or political subdivision thereof, or the governing or ratemaking body of an electric cooperative.

"(E) SPECIAL RULE FOR INTERCONNECTION PROPERTY.—In the case of expenses paid or incurred for interconnection property, amounts otherwise chargeable to capital account with respect to such expenses shall be reduced under rules similar to the rules of section 50(c).".

(k) ENERGY PROJECTS, WAGE REQUIREMENTS, AND APPRENTICESHIP REQUIREMENTS.—Section 48(a), as amended by the preceding provisions of this Act, is amended by adding at the end the following new paragraphs:

"(9) INCREASED CREDIT AMOUNT FOR ENERGY PROJECTS.—

"(A) IN GENERAL.—

"(i) RULE.—In the case of any energy project which satisfies the requirements of subparagraph (B), the amount of the credit determined under this subsection (determined after the application of paragraphs (1) through (8) and without regard to this clause) shall be equal to such amount multiplied by 5.

"(ii) ENERGY PROJECT DEFINED.—For purposes of this subsection, the term 'energy project' means a project consisting of one or more energy properties that are part of a single project.

"(B) PROJECT REQUIREMENTS.—A project meets the requirements of this subparagraph if it is one of the following:

"(i) A project with a maximum net output of less than 1 megawatt of electrical (as measured in alternating current) or thermal energy.

"(ii) A project the construction of which begins before the date that is 60 days after the Secretary publishes guidance with respect to the requirements of paragraphs (10)(A) and (11). Time period. Publication. Guidelines.

"(iii) A project which satisfies the requirements of paragraphs (10)(A) and (11).

"(10) PREVAILING WAGE REQUIREMENTS.—

"(A) IN GENERAL.—The requirements described in this subparagraph with respect to any energy project are that the taxpayer shall ensure that any laborers and mechanics employed by the taxpayer or any contractor or subcontractor in—

"(i) the construction of such energy project, and

"(ii) for the 5-year period beginning on the date such project is originally placed in service, the alteration or repair of such project, Time period.

shall be paid wages at rates not less than the prevailing rates for construction, alteration, or repair of a similar character in the locality in which such project is located as most recently determined by the Secretary of Labor, in accordance with subchapter IV of chapter 31 of title 40, United States Code. Subject to subparagraph (C), for purposes of any determination under paragraph (9)(A)(i) for the taxable year in which the energy project is placed in service, the taxpayer shall be deemed to satisfy the requirement under clause (ii) at the time such project is placed in service.

"(B) CORRECTION AND PENALTY RELATED TO FAILURE TO SATISFY WAGE REQUIREMENTS.—Rules similar to the rules of section 45(b)(7)(B) shall apply. Applicability.

"(C) RECAPTURE.—The Secretary shall, by regulations or other guidance, provide for recapturing the benefit of any increase in the credit allowed under this subsection by reason of this paragraph with respect to any project which does not satisfy the requirements under subparagraph (A) (after application of subparagraph (B)) for the period described in clause (ii) of subparagraph (A) (but which does not cease to be investment credit property within the meaning of section 50(a)). The period and Regulations. Guidelines. Determination.

percentage of such recapture shall be determined under rules similar to the rules of section 50(a).

"(11) APPRENTICESHIP REQUIREMENTS.—Rules similar to the rules of section 45(b)(8) shall apply.".

(l) DOMESTIC CONTENT; PHASEOUT FOR ELECTIVE PAYMENT.— 26 USC 48.
Section 48(a), as amended by the preceding provisions of this Act, is amended by adding at the end the following new paragraphs:

"(12) DOMESTIC CONTENT BONUS CREDIT AMOUNT.—

"(A) IN GENERAL.—In the case of any energy project which satisfies the requirement under subparagraph (B), for purposes of applying paragraph (2) with respect to such property, the energy percentage shall be increased by the applicable credit rate increase.

Applicability. "(B) REQUIREMENT.—Rules similar to the rules of section 45(b)(9)(B) shall apply.

"(C) APPLICABLE CREDIT RATE INCREASE.—For purposes of subparagraph (A), the applicable credit rate increase shall be—

"(i) in the case of an energy project which does not satisfy the requirements of paragraph (9)(B), 2 percentage points, and

"(ii) in the case of an energy project which satisfies the requirements of paragraph (9)(B), 10 percentage points.

Applicability. "(13) PHASEOUT FOR ELECTIVE PAYMENT.—In the case of a taxpayer making an election under section 6417 with respect to a credit under this section, rules similar to the rules of section 45(b)(10) shall apply.".

(m) SPECIAL RULE FOR PROPERTY FINANCED BY TAX-EXEMPT BONDS.—Section 48(a)(4) is amended to read as follows:

Applicability. "(4) SPECIAL RULE FOR PROPERTY FINANCED BY TAX-EXEMPT BONDS.—Rules similar to the rule under section 45(b)(3) shall apply for purposes of this section.".

(n) TREATMENT OF CERTAIN CONTRACTS INVOLVING ENERGY STORAGE.—Section 7701(e) is amended—

(1) in paragraph (3)—

(A) in subparagraph (A)(i), by striking "or" at the end of subclause (II), by striking "and" at the end of subclause (III) and inserting "or", and by adding at the end the following new subclause:

"(IV) the operation of a storage facility, and", and

(B) by adding at the end the following new subparagraph:

Definition. "(F) STORAGE FACILITY.—For purposes of subparagraph (A), the term 'storage facility' means a facility which uses energy storage technology within the meaning of section 48(c)(6).", and

(2) in paragraph (4), by striking "or water treatment works facility" and inserting "water treatment works facility, or storage facility".

(o) INCREASE IN CREDIT RATE FOR ENERGY COMMUNITIES.— Section 48(a), as amended by the preceding provisions of this Act, is amended by adding at the end the following new paragraph:

"(14) INCREASE IN CREDIT RATE FOR ENERGY COMMUNITIES.—

"(A) IN GENERAL.—In the case of any energy project that is placed in service within an energy community (as defined in section 45(b)(11)(B), as applied by substituting 'energy project' for 'qualified facility' each place it appears), for purposes of applying paragraph (2) with respect to energy property which is part of such project, the energy percentage shall be increased by the applicable credit rate increase.

"(B) APPLICABLE CREDIT RATE INCREASE.—For purposes of subparagraph (A), the applicable credit rate increase shall be equal to—

"(i) in the case of any energy project which does not satisfy the requirements of paragraph (9)(B), 2 percentage points, and

"(ii) in the case of any energy project which satisfies the requirements of paragraph (9)(B), 10 percentage points.".

(p) REGULATIONS.—Section 48(a), as amended by the preceding provisions of this Act, is amended by adding at the end the following new paragraph: 26 USC 48.

"(15) REGULATIONS AND GUIDANCE.—The Secretary shall issue such regulations or other guidance as the Secretary determines necessary to carry out the purposes of this subsection, including regulations or other guidance which provides for requirements for recordkeeping or information reporting for purposes of administering the requirements of this subsection.". Determination. Requirements. Records.

(q) EFFECTIVE DATES.— Applicability. 26 USC 45 note.

(1) IN GENERAL.—Except as provided in paragraphs (2) and (3), the amendments made by this section shall apply to property placed in service after December 31, 2021.

(2) OTHER PROPERTY.—The amendments made by subsections (f), (g), (h), (i), (j), (l), (n), and (o) shall apply to property placed in service after December 31, 2022.

(3) SPECIAL RULE FOR PROPERTY FINANCED BY TAX-EXEMPT BONDS.—The amendments made by subsection (m) shall apply to property the construction of which begins after the date of enactment of this Act.

SEC. 13103. INCREASE IN ENERGY CREDIT FOR SOLAR AND WIND FACILITIES PLACED IN SERVICE IN CONNECTION WITH LOW-INCOME COMMUNITIES.

(a) IN GENERAL.—Section 48 is amended by adding at the end the following new subsection:

"(e) SPECIAL RULES FOR CERTAIN SOLAR AND WIND FACILITIES PLACED IN SERVICE IN CONNECTION WITH LOW-INCOME COMMUNITIES.—

"(1) IN GENERAL.—In the case of any qualified solar and wind facility with respect to which the Secretary makes an allocation of environmental justice solar and wind capacity limitation under paragraph (4)—

"(A) the energy percentage otherwise determined under paragraph (2) or (5) of subsection (a) with respect to any eligible property which is part of such facility shall be increased by—

"(i) in the case of a facility described in subclause (I) of paragraph (2)(A)(iii) and not described in subclause (II) of such paragraph, 10 percentage points, and

"(ii) in the case of a facility described in subclause (II) of paragraph (2)(A)(iii), 20 percentage points, and

"(B) the increase in the credit determined under subsection (a) by reason of this subsection for any taxable year with respect to all property which is part of such facility shall not exceed the amount which bears the same ratio to the amount of such increase (determined without regard to this subparagraph) as—

"(i) the environmental justice solar and wind capacity limitation allocated to such facility, bears to

"(ii) the total megawatt nameplate capacity of such facility, as measured in direct current.

"(2) QUALIFIED SOLAR AND WIND FACILITY.—For purposes of this subsection—

Definition.

"(A) IN GENERAL.—The term 'qualified solar and wind facility' means any facility—

"(i) which generates electricity solely from property described in section 45(d)(1) or in clause (i) or (vi) of subsection (a)(3)(A),

"(ii) which has a maximum net output of less than 5 megawatts (as measured in alternating current), and

"(iii) which—

"(I) is located in a low-income community (as defined in section 45D(e)) or on Indian land (as defined in section 2601(2) of the Energy Policy Act of 1992 (25 U.S.C. 3501(2))), or

"(II) is part of a qualified low-income residential building project or a qualified low-income economic benefit project.

"(B) QUALIFIED LOW-INCOME RESIDENTIAL BUILDING PROJECT.—A facility shall be treated as part of a qualified low-income residential building project if—

"(i) such facility is installed on a residential rental building which participates in a covered housing program (as defined in section 41411(a) of the Violence Against Women Act of 1994 (34 U.S.C. 12491(a)(3)), a housing assistance program administered by the Department of Agriculture under title V of the Housing Act of 1949, a housing program administered by a tribally designated housing entity (as defined in section 4(22) of the Native American Housing Assistance and Self-Determination Act of 1996 (25 U.S.C. 4103(22))) or such other affordable housing programs as the Secretary may provide, and

"(ii) the financial benefits of the electricity produced by such facility are allocated equitably among the occupants of the dwelling units of such building.

"(C) QUALIFIED LOW-INCOME ECONOMIC BENEFIT PROJECT.—A facility shall be treated as part of a qualified low-income economic benefit project if at least 50 percent of the financial benefits of the electricity produced by such facility are provided to households with income of—

"(i) less than 200 percent of the poverty line (as defined in section 36B(d)(3)(A)) applicable to a family of the size involved, or

"(ii) less than 80 percent of area median gross income (as determined under section 142(d)(2)(B)).

"(D) FINANCIAL BENEFIT.—For purposes of subparagraphs (B) and (C), electricity acquired at a below-market rate shall not fail to be taken into account as a financial benefit.

"(3) ELIGIBLE PROPERTY.—For purposes of this section, the term 'eligible property' means energy property which— Definition.

"(A) is part of a facility described in section 45(d)(1) for which an election was made under subsection (a)(5), or

"(B) is described in clause (i) or (vi) of subsection (a)(3)(A),

including energy storage technology (as described in subsection (a)(3)(A)(ix)) installed in connection with such energy property.

"(4) ALLOCATIONS.—

"(A) IN GENERAL.—Not later than 180 days after the date of enactment of this subsection, the Secretary shall establish a program to allocate amounts of environmental justice solar and wind capacity limitation to qualified solar and wind facilities. In establishing such program and to carry out the purposes of this subsection, the Secretary shall provide procedures to allow for an efficient allocation process, including, when determined appropriate, consideration of multiple projects in a single application if such projects will be placed in service by a single taxpayer. Deadline. Procedures.

"(B) LIMITATION.—The amount of environmental justice solar and wind capacity limitation allocated by the Secretary under subparagraph (A) during any calendar year shall not exceed the annual capacity limitation with respect to such year.

"(C) ANNUAL CAPACITY LIMITATION.—For purposes of this paragraph, the term 'annual capacity limitation' means 1.8 gigawatts of direct current capacity for each of calendar years 2023 and 2024, and zero thereafter. Definition.

"(D) CARRYOVER OF UNUSED LIMITATION.—If the annual capacity limitation for any calendar year exceeds the aggregate amount allocated for such year under this paragraph, such limitation for the succeeding calendar year shall be increased by the amount of such excess. No amount may be carried under the preceding sentence to any calendar year after 2024 except as provided in section 48E(h)(4)(D)(ii).

"(E) PLACED IN SERVICE DEADLINE.—

"(i) IN GENERAL.—Paragraph (1) shall not apply with respect to any property which is placed in service after the date that is 4 years after the date of the allocation with respect to the facility of which such property is a part. Time period.

"(ii) APPLICATION OF CARRYOVER.—Any amount of environmental justice solar and wind capacity limitation which expires under clause (i) during any calendar year shall be taken into account as an excess described in subparagraph (D) (or as an increase in such excess)

for such calendar year, subject to the limitation imposed by the last sentence of such subparagraph.

Regulations. Guidelines.

"(5) RECAPTURE.—The Secretary shall, by regulations or other guidance, provide for recapturing the benefit of any increase in the credit allowed under subsection (a) by reason of this subsection with respect to any property which ceases to be property eligible for such increase (but which does not cease to be investment credit property within the meaning of section 50(a)). The period and percentage of such recapture shall be determined under rules similar to the rules of section 50(a). To the extent provided by the Secretary, such recapture may not apply with respect to any property if, within 12 months after the date the taxpayer becomes aware (or reasonably should have become aware) of such property ceasing to be property eligible for such increase, the eligibility of such property for such increase is restored. The preceding sentence shall not apply more than once with respect to any facility.".

Determination. Time period.

26 USC 48 note.

(b) EFFECTIVE DATE.—The amendments made by this section shall take effect on January 1, 2023.

SEC. 13104. EXTENSION AND MODIFICATION OF CREDIT FOR CARBON OXIDE SEQUESTRATION.

(a) MODIFICATION OF CARBON OXIDE CAPTURE REQUIREMENTS.—

26 USC 45Q.

(1) IN GENERAL.—Section 45Q(d) is amended to read as follows:

Definition.

"(d) QUALIFIED FACILITY.—For purposes of this section, the term 'qualified facility' means any industrial facility or direct air capture facility—

Effective date.

"(1) the construction of which begins before January 1, 2033, and either—

"(A) construction of carbon capture equipment begins before such date, or

"(B) the original planning and design for such facility includes installation of carbon capture equipment, and

"(2) which—

"(A) in the case of a direct air capture facility, captures not less than 1,000 metric tons of qualified carbon oxide during the taxable year,

"(B) in the case of an electricity generating facility—

"(i) captures not less than 18,750 metric tons of qualified carbon oxide during the taxable year, and

"(ii) with respect to any carbon capture equipment for the applicable electric generating unit at such facility, has a capture design capacity of not less than 75 percent of the baseline carbon oxide production of such unit, or

"(C) in the case of any other facility, captures not less than 12,500 metric tons of qualified carbon oxide during the taxable year.".

(2) DEFINITIONS.—

(A) IN GENERAL.—Section 45Q(e) is amended—

(i) by redesignating paragraphs (1) through (3) as paragraphs (3) through (5), respectively, and

(ii) by inserting after "For purposes of this section—" the following new paragraphs:

"(1) APPLICABLE ELECTRIC GENERATING UNIT.—The term 'applicable electric generating unit' means the principal electric generating unit for which the carbon capture equipment is originally planned and designed.

"(2) BASELINE CARBON OXIDE PRODUCTION.—

"(A) IN GENERAL.—The term 'baseline carbon oxide production' means either of the following: Time periods.

"(i) In the case of an applicable electric generating unit which was originally placed in service more than 1 year prior to the date on which construction of the carbon capture equipment begins, the average annual carbon oxide production, by mass, from such unit during—

"(I) in the case of an applicable electric generating unit which was originally placed in service more than 1 year prior to the date on which construction of the carbon capture equipment begins and on or after the date which is 3 years prior to the date on which construction of such equipment begins, the period beginning on the date such unit was placed in service and ending on the date on which construction of such equipment began, and

"(II) in the case of an applicable electric generating unit which was originally placed in service more than 3 years prior to the date on which construction of the carbon capture equipment begins, the 3 years with the highest annual carbon oxide production during the 12-year period preceding the date on which construction of such equipment began.

"(ii) In the case of an applicable electric generating unit which—

"(I) as of the date on which construction of the carbon capture equipment begins, is not yet placed in service, or

"(II) was placed in service during the 1-year period prior to the date on which construction of the carbon capture equipment begins,

the designed annual carbon oxide production, by mass, as determined based on an assumed capacity factor of 60 percent.

"(B) CAPACITY FACTOR.—The term 'capacity factor' means the ratio (expressed as a percentage) of the actual electric output from the applicable electric generating unit to the potential electric output from such unit.".

(B) CONFORMING AMENDMENT.—Section 142(o)(1)(B) is amended by striking "section 45Q(e)(1)" and inserting "section 45Q(e)(3)". 26 USC 142.

(b) MODIFIED APPLICABLE DOLLAR AMOUNT.—Section 45Q(b)(1)(A) is amended—

(1) in clause (i)—

(A) in subclause (I), by striking "the dollar amount" and all that follows through "such period" and inserting "$17", and

(B) in subclause (II), by striking "the dollar amount" and all that follows through "such period" and inserting "$12", and

(2) in clause (ii)—

(A) in subclause (I), by striking "$50" and inserting "$17", and

(B) in subclause (II), by striking "$35" and inserting "$12".

(c) DETERMINATION OF APPLICABLE DOLLAR AMOUNT.—

Effective dates.
26 USC 45Q.

(1) IN GENERAL.—Section 45Q(b)(1), as amended by the preceding provisions of this Act, is amended—

(A) by redesignating subparagraph (B) as subparagraph (D), and

(B) by inserting after subparagraph (A) the following new subparagraphs:

"(B) SPECIAL RULE FOR DIRECT AIR CAPTURE FACILITIES.—In the case of any qualified facility described in subsection (d)(2)(A) which is placed in service after December 31, 2022, the applicable dollar amount shall be an amount equal to the applicable dollar amount otherwise determined with respect to such qualified facility under subparagraph (A), except that such subparagraph shall be applied—

"(i) by substituting '$36' for '$17' each place it appears, and

"(ii) by substituting '$26' for '$12' each place it appears.

"(C) APPLICABLE DOLLAR AMOUNT FOR ADDITIONAL CARBON CAPTURE EQUIPMENT.—In the case of any qualified facility which is placed in service before January 1, 2023, if any additional carbon capture equipment is installed at such facility and such equipment is placed in service after December 31, 2022, the applicable dollar amount shall be an amount equal to the applicable dollar amount otherwise determined under this paragraph, except that subparagraph (B) shall be applied—

"(i) by substituting 'before January 1, 2023' for 'after December 31, 2022', and

"(ii) by substituting 'the additional carbon capture equipment installed at such qualified facility' for 'such qualified facility'.".

(2) CONFORMING AMENDMENTS.—

(A) Section 45Q(b)(1)(A) is amended by striking "The applicable dollar amount" and inserting "Except as provided in subparagraph (B) or (C), the applicable dollar amount".

(B) Section 45Q(b)(1)(D), as redesignated by paragraph (1)(A), is amended by striking "subparagraph (A)" and inserting "subparagraph (A), (B), or (C)".

(d) WAGE AND APPRENTICESHIP REQUIREMENTS.—Section 45Q is amended by redesignating subsection (h) as subsection (i) and inserting after subsection (g) following new subsection:

"(h) INCREASED CREDIT AMOUNT FOR QUALIFIED FACILITIES AND CARBON CAPTURE EQUIPMENT.—

"(1) IN GENERAL.—In the case of any qualified facility or any carbon capture equipment which satisfy the requirements of paragraph (2), the amount of the credit determined under

subsection (a) shall be equal to such amount (determined without regard to this sentence) multiplied by 5.

"(2) REQUIREMENTS.—The requirements described in this paragraph are that— Time periods. Publication. Guidelines.

"(A) with respect to any qualified facility the construction of which begins on or after the date that is 60 days after the Secretary publishes guidance with respect to the requirements of paragraphs (3)(A) and (4), as well as any carbon capture equipment placed in service at such facility—

"(i) subject to subparagraph (B) of paragraph (3), the taxpayer satisfies the requirements under subparagraph (A) of such paragraph with respect to such facility and equipment, and

"(ii) the taxpayer satisfies the requirements under paragraph (4) with respect to the construction of such facility and equipment,

"(B) with respect to any carbon capture equipment the construction of which begins on or after the date that is 60 days after the Secretary publishes guidance with respect to the requirements of paragraphs (3)(A) and (4), and which is installed at a qualified facility the construction of which began prior to such date—

"(i) subject to subparagraph (B) of paragraph (3), the taxpayer satisfies the requirements under subparagraph (A) of such paragraph with respect to such equipment, and

"(ii) the taxpayer satisfies the requirements under paragraph (4) with respect to the construction of such equipment, or

"(C) the construction of carbon capture equipment begins prior to the date that is 60 days after the Secretary publishes guidance with respect to the requirements of paragraphs (3)(A) and (4), and such equipment is installed at a qualified facility the construction of which begins prior to such date.

"(3) PREVAILING WAGE REQUIREMENTS.— Applicability.

"(A) IN GENERAL.—The requirements described in this subparagraph with respect to any qualified facility and any carbon capture equipment placed in service at such facility are that the taxpayer shall ensure that any laborers and mechanics employed by the taxpayer or any contractor or subcontractor in—

"(i) the construction of such facility or equipment, and

"(ii) with respect to any taxable year, for any portion of such taxable year which is within the period described in paragraph (3)(A) or (4)(A) of subsection (a), the alteration or repair of such facility or such equipment,

shall be paid wages at rates not less than the prevailing rates for construction, alteration, or repair of a similar character in the locality in which such facility and equipment are located as most recently determined by the Secretary of Labor, in accordance with subchapter IV of chapter 31 of title 40, United States Code. For purposes

of determining an increased credit amount under paragraph (1) for a taxable year, the requirement under clause (ii) of this subparagraph is applied to such taxable year in which the alteration or repair of qualified facility occurs.

"(B) CORRECTION AND PENALTY RELATED TO FAILURE TO SATISFY WAGE REQUIREMENTS.—Rules similar to the rules of section 45(b)(7)(B) shall apply.

Applicability.

"(4) APPRENTICESHIP REQUIREMENTS.—Rules similar to the rules of section 45(b)(8) shall apply.

Determination.
Requirements.
Records.

"(5) REGULATIONS AND GUIDANCE.—The Secretary shall issue such regulations or other guidance as the Secretary determines necessary to carry out the purposes of this subsection, including regulations or other guidance which provides for requirements for recordkeeping or information reporting for purposes of administering the requirements of this subsection.".

26 USC 45Q.

(e) CREDIT REDUCED FOR TAX-EXEMPT BONDS.—Section 45Q(f) is amended—

(1) by striking the second paragraph (3), as added at the end of such section by section 80402(e) of the Infrastructure Investment and Jobs Act (Public Law 117-58), and

(2) by adding at the end the following new paragraph:

Applicability.

"(8) CREDIT REDUCED FOR TAX-EXEMPT BONDS.—Rules similar to the rule under section 45(b)(3) shall apply for purposes of this section.".

(f) APPLICATION OF SECTION FOR CERTAIN CARBON CAPTURE EQUIPMENT.—Section 45Q(g) is amended by inserting "the earlier of January 1, 2023, and" before "the end of the calendar year".

(g) ELECTION.—Section 45Q(f), as amended by subsection (e), is amended by adding at the end the following new paragraph:

Time period.

"(9) ELECTION.—For purposes of paragraphs (3) and (4) of subsection (a), a person described in paragraph (3)(A)(ii) may elect, at such time and in such manner as the Secretary may prescribe, to have the 12–year period begin on the first day of the first taxable year in which a credit under this section is claimed with respect to carbon capture equipment which is originally placed in service at a qualified facility on or after the date of the enactment of the Bipartisan Budget Act of 2018 (after application of paragraph (6), where applicable) if—

"(A) no taxpayer claimed a credit under this section with respect to such carbon capture equipment for any prior taxable year,

"(B) the qualified facility at which such carbon capture equipment is placed in service is located in an area affected by a federally-declared disaster (as defined by section 165(i)(5)(A)) after the carbon capture equipment is originally placed in service, and

"(C) such federally-declared disaster results in a cessation of the operation of the qualified facility or the carbon capture equipment after such equipment is originally placed in service.".

(h) REGULATIONS FOR BASELINE CARBON OXIDE PRODUCTION.—Subsection (i) of section 45Q, as redesignated by subsection (d), is amended—

(1) in paragraph (1), by striking "and",

(2) in paragraph (2), by striking the period at the end and inserting ", and", and

(3) by adding at the end the following new paragraph:

"(3) for purposes of subsection (d)(2)(B)(ii), adjust the baseline carbon oxide production with respect to any applicable electric generating unit at any electricity generating facility if, after the date on which the carbon capture equipment is placed in service, modifications which are chargeable to capital account are made to such unit which result in a significant increase or decrease in carbon oxide production.".

(i) EFFECTIVE DATES.—

Applicability. 26 USC 45Q note.

(1) IN GENERAL.—Except as provided in paragraphs (2), (3), and (4), the amendments made by this section shall apply to facilities or equipment placed in service after December 31, 2022.

(2) MODIFICATION OF CARBON OXIDE CAPTURE REQUIREMENTS.—The amendments made by subsection (a) shall apply to facilities or equipment the construction of which begins after the date of enactment of this Act.

(3) APPLICATION OF SECTION FOR CERTAIN CARBON CAPTURE EQUIPMENT.—The amendments made by subsection (f) shall take effect on the date of enactment of this Act.

(4) ELECTION.—The amendments made by subsection (g) shall apply to carbon oxide captured and disposed of after December 31, 2021.

SEC. 13105. ZERO-EMISSION NUCLEAR POWER PRODUCTION CREDIT.

(a) IN GENERAL.—Subpart D of part IV of subchapter A of chapter 1 is amended by adding at the end the following new section:

"SEC. 45U. ZERO-EMISSION NUCLEAR POWER PRODUCTION CREDIT. 26 USC 45U.

"(a) AMOUNT OF CREDIT.—For purposes of section 38, the zero-emission nuclear power production credit for any taxable year is an amount equal to the amount by which—

"(1) the product of—

"(A) 0.3 cents, multiplied by

"(B) the kilowatt hours of electricity—

"(i) produced by the taxpayer at a qualified nuclear power facility, and

"(ii) sold by the taxpayer to an unrelated person during the taxable year, exceeds

"(2) the reduction amount for such taxable year.

"(b) DEFINITIONS.—

"(1) QUALIFIED NUCLEAR POWER FACILITY.—For purposes of this section, the term 'qualified nuclear power facility' means any nuclear facility—

"(A) which is owned by the taxpayer and which uses nuclear energy to produce electricity,

"(B) which is not an advanced nuclear power facility as defined in subsection (d)(1) of section 45J, and

"(C) which is placed in service before the date of the enactment of this section.

"(2) REDUCTION AMOUNT.—

"(A) IN GENERAL.—For purposes of this section, the term 'reduction amount' means, with respect to any qualified nuclear power facility for any taxable year, the amount equal to the lesser of—

"(i) the amount determined under subsection (a)(1), or

"(ii) the amount equal to 16 percent of the excess of—

"(I) subject to subparagraph (B), the gross receipts from any electricity produced by such facility (including any electricity services or products provided in conjunction with the electricity produced by such facility) and sold to an unrelated person during such taxable year, over

"(II) the amount equal to the product of—

"(aa) 2.5 cents, multiplied by

"(bb) the amount determined under subsection (a)(1)(B).

"(B) TREATMENT OF CERTAIN RECEIPTS.—

"(i) IN GENERAL.—Subject to clause (iii), the amount determined under subparagraph (A)(ii)(I) shall include any amount received by the taxpayer during the taxable year with respect to the qualified nuclear power facility from a zero-emission credit program. For purposes of determining the amount received during such taxable year, the taxpayer shall take into account any reductions required under such program.

Determination.

"(ii) ZERO-EMISSION CREDIT PROGRAM.—For purposes of this subparagraph, the term 'zero-emission credit program' means any payments with respect to a qualified nuclear power facility as a result of any Federal, State or local government program for, in whole or in part, the zero-emission, zero-carbon, or air quality attributes of any portion of the electricity produced by such facility.

"(iii) EXCLUSION.—For purposes of clause (i), any amount received by the taxpayer from a zero-emission credit program shall be excluded from the amount determined under subparagraph (A)(ii)(I) if the full amount of the credit calculated pursuant to subsection (a) (determined without regard to this subparagraph) is used to reduce payments from such zero-emission credit program.

"(3) ELECTRICITY.—For purposes of this section, the term 'electricity' means the energy produced by a qualified nuclear power facility from the conversion of nuclear fuel into electric power.

"(c) OTHER RULES.—

"(1) INFLATION ADJUSTMENT.—The 0.3 cent amount in subsection (a)(1)(A) and the 2.5 cent amount in subsection (b)(2)(A)(ii)(II)(aa) shall each be adjusted by multiplying such amount by the inflation adjustment factor (as determined under section 45(e)(2), as applied by substituting 'calendar year 2023' for 'calendar year 1992' in subparagraph (B) thereof) for the calendar year in which the sale occurs. If the 0.3 cent amount as increased under this paragraph is not a multiple of 0.05 cent, such amount shall be rounded to the nearest multiple of 0.05 cent. If the 2.5 cent amount as increased under this paragraph is not a multiple of 0.1 cent, such amount shall be rounded to the nearest multiple of 0.1 cent.

Applicability.

"(2) SPECIAL RULES.—Rules similar to the rules of paragraphs (1), (3), (4), and (5) of section 45(e) shall apply for purposes of this section.

"(d) WAGE REQUIREMENTS.—

"(1) INCREASED CREDIT AMOUNT FOR QUALIFIED NUCLEAR POWER FACILITIES.—In the case of any qualified nuclear power facility which satisfies the requirements of paragraph (2)(A), the amount of the credit determined under subsection (a) shall be equal to such amount (as determined without regard to this sentence) multiplied by 5.

"(2) PREVAILING WAGE REQUIREMENTS.—

Determination.

"(A) IN GENERAL.—The requirements described in this subparagraph with respect to any qualified nuclear power facility are that the taxpayer shall ensure that any laborers and mechanics employed by the taxpayer or any contractor or subcontractor in the alteration or repair of such facility shall be paid wages at rates not less than the prevailing rates for alteration or repair of a similar character in the locality in which such facility is located as most recently determined by the Secretary of Labor, in accordance with subchapter IV of chapter 31 of title 40, United States Code.

Applicability.

"(B) CORRECTION AND PENALTY RELATED TO FAILURE TO SATISFY WAGE REQUIREMENTS.—Rules similar to the rules of section 45(b)(7)(B) shall apply.

Determination. Requirements. Records.

"(3) REGULATIONS AND GUIDANCE.—The Secretary shall issue such regulations or other guidance as the Secretary determines necessary to carry out the purposes of this subsection, including regulations or other guidance which provides for requirements for recordkeeping or information reporting for purposes of administering the requirements of this subsection.

"(e) TERMINATION.—This section shall not apply to taxable years beginning after December 31, 2032.".

(b) CONFORMING AMENDMENTS.—

26 USC 38.

(1) Section 38(b) is amended—

(A) in paragraph (32), by striking "plus" at the end,

(B) in paragraph (33), by striking the period at the end and inserting ", plus", and

(C) by adding at the end the following new paragraph:

"(34) the zero-emission nuclear power production credit determined under section 45U(a).".

26 USC 38 prec.

(2) The table of sections for subpart D of part IV of subchapter A of chapter 1 is amended by adding at the end the following new item:

"Sec. 45U. Zero-emission nuclear power production credit.".

26 USC 45U note.

(c) EFFECTIVE DATE.—This section shall apply to electricity produced and sold after December 31, 2023, in taxable years beginning after such date.

PART 2—CLEAN FUELS

SEC. 13201. EXTENSION OF INCENTIVES FOR BIODIESEL, RENEWABLE DIESEL AND ALTERNATIVE FUELS.

(a) BIODIESEL AND RENEWABLE DIESEL CREDIT.—Section 40A(g) is amended by striking "December 31, 2022" and inserting "December 31, 2024".

(b) BIODIESEL MIXTURE CREDIT.—

(1) IN GENERAL.—Section 6426(c)(6) is amended by striking "December 31, 2022" and inserting "December 31, 2024".

26 USC 6427.

(2) FUELS NOT USED FOR TAXABLE PURPOSES.—Section 6427(e)(6)(B) is amended by striking "December 31, 2022" and inserting "December 31, 2024".

(c) ALTERNATIVE FUEL CREDIT.—Section 6426(d)(5) is amended by striking "December 31, 2021" and inserting "December 31, 2024".

(d) ALTERNATIVE FUEL MIXTURE CREDIT.—Section 6426(e)(3) is amended by striking "December 31, 2021" and inserting "December 31, 2024".

(e) PAYMENTS FOR ALTERNATIVE FUELS.—Section 6427(e)(6)(C) is amended by striking "December 31, 2021" and inserting "December 31, 2024".

26 USC 40A note.

(f) EFFECTIVE DATE.—The amendments made by this section shall apply to fuel sold or used after December 31, 2021.

Effective date.
Deadlines.
Claims.
26 USC 6426 note.

(g) SPECIAL RULE.—In the case of any alternative fuel credit properly determined under section 6426(d) of the Internal Revenue Code of 1986 for the period beginning on January 1, 2022, and ending with the close of the last calendar quarter beginning before the date of the enactment of this Act, such credit shall be allowed, and any refund or payment attributable to such credit (including any payment under section 6427(e) of such Code) shall be made, only in such manner as the Secretary of the Treasury (or the Secretary's delegate) shall provide. Such Secretary shall issue guidance within 30 days after the date of the enactment of this Act providing for a one-time submission of claims covering periods described in the preceding sentence. Such guidance shall provide for a 180-day period for the submission of such claims (in such manner as prescribed by such Secretary) to begin not later than 30 days after such guidance is issued. Such claims shall be paid by such Secretary not later than 60 days after receipt. If such Secretary has not paid pursuant to a claim filed under this subsection within 60 days after the date of the filing of such claim, the claim shall be paid with interest from such date determined by using the overpayment rate and method under section 6621 of such Code.

Guidelines.

Guidelines.

Determination.

SEC. 13202. EXTENSION OF SECOND GENERATION BIOFUEL INCENTIVES.

(a) IN GENERAL.—Section 40(b)(6)(J)(i) is amended by striking "2022" and inserting "2025".

26 USC 40 note.

(b) EFFECTIVE DATE.—The amendment made by subsection (a) shall apply to qualified second generation biofuel production after December 31, 2021.

SEC. 13203. SUSTAINABLE AVIATION FUEL CREDIT.

(a) IN GENERAL.—Subpart D of part IV of subchapter A of chapter 1 is amended by inserting after section 40A the following new section:

Definitions.
26 USC 40B.

"SEC. 40B. SUSTAINABLE AVIATION FUEL CREDIT.

"(a) IN GENERAL.—For purposes of section 38, the sustainable aviation fuel credit determined under this section for the taxable year is, with respect to any sale or use of a qualified mixture which occurs during such taxable year, an amount equal to the product of—

"(1) the number of gallons of sustainable aviation fuel in such mixture, multiplied by

"(2) the sum of—

"(A) $1.25, plus

"(B) the applicable supplementary amount with respect to such sustainable aviation fuel. Applicability.

"(b) APPLICABLE SUPPLEMENTARY AMOUNT.—For purposes of this section, the term 'applicable supplementary amount' means, with respect to any sustainable aviation fuel, an amount equal to $0.01 for each percentage point by which the lifecycle greenhouse gas emissions reduction percentage with respect to such fuel exceeds 50 percent. In no event shall the applicable supplementary amount determined under this subsection exceed $0.50.

"(c) QUALIFIED MIXTURE.—For purposes of this section, the term 'qualified mixture' means a mixture of sustainable aviation fuel and kerosene if—

"(1) such mixture is produced by the taxpayer in the United States,

"(2) such mixture is used by the taxpayer (or sold by the taxpayer for use) in an aircraft,

"(3) such sale or use is in the ordinary course of a trade or business of the taxpayer, and

"(4) the transfer of such mixture to the fuel tank of such aircraft occurs in the United States.

"(d) SUSTAINABLE AVIATION FUEL.—

"(1) IN GENERAL.—For purposes of this section, the term 'sustainable aviation fuel' means liquid fuel, the portion of which is not kerosene, which—

"(A) meets the requirements of—

"(i) ASTM International Standard D7566, or

"(ii) the Fischer Tropsch provisions of ASTM International Standard D1655, Annex A1,

"(B) is not derived from coprocessing an applicable material (or materials derived from an applicable material) with a feedstock which is not biomass,

"(C) is not derived from palm fatty acid distillates or petroleum, and

"(D) has been certified in accordance with subsection (e) as having a lifecycle greenhouse gas emissions reduction percentage of at least 50 percent.

"(2) DEFINITIONS.—In this subsection—

"(A) APPLICABLE MATERIAL.—The term 'applicable material' means—

"(i) monoglycerides, diglycerides, and triglycerides,

"(ii) free fatty acids, and

"(iii) fatty acid esters.

"(B) BIOMASS.—The term 'biomass' has the same meaning given such term in section 45K(c)(3).

"(e) LIFECYCLE GREENHOUSE GAS EMISSIONS REDUCTION PERCENTAGE.—For purposes of this section, the term 'lifecycle greenhouse gas emissions reduction percentage' means, with respect to any sustainable aviation fuel, the percentage reduction in lifecycle greenhouse gas emissions achieved by such fuel as compared with petroleum-based jet fuel, as defined in accordance with—

"(1) the most recent Carbon Offsetting and Reduction Scheme for International Aviation which has been adopted by the International Civil Aviation Organization with the agreement of the United States, or

"(2) any similar methodology which satisfies the criteria under section 211(o)(1)(H) of the Clean Air Act (42 U.S.C.

7545(o)(1)(H)), as in effect on the date of enactment of this section.

"(f) REGISTRATION OF SUSTAINABLE AVIATION FUEL PRODUCERS.—No credit shall be allowed under this section with respect to any sustainable aviation fuel unless the producer or importer of such fuel—

"(1) is registered with the Secretary under section 4101, and

"(2) provides—

Certification. Compliance. Requirements.

"(A) certification (in such form and manner as the Secretary shall prescribe) from an unrelated party demonstrating compliance with—

"(i) any general requirements, supply chain traceability requirements, and information transmission requirements established under the Carbon Offsetting and Reduction Scheme for International Aviation described in paragraph (1) of subsection (e), or

"(ii) in the case of any methodology established under paragraph (2) of such subsection, requirements similar to the requirements described in clause (i), and

"(B) such other information with respect to such fuel as the Secretary may require for purposes of carrying out this section.

"(g) COORDINATION WITH CREDIT AGAINST EXCISE TAX.—The amount of the credit determined under this section with respect to any sustainable aviation fuel shall, under rules prescribed by the Secretary, be properly reduced to take into account any benefit provided with respect to such sustainable aviation fuel solely by reason of the application of section 6426 or 6427(e).

"(h) TERMINATION.—This section shall not apply to any sale or use after December 31, 2024.".

(b) CREDIT MADE PART OF GENERAL BUSINESS CREDIT.— Section 38(b), as amended by the preceding provisions of this Act, is amended by striking "plus" at the end of paragraph (33), by striking the period at the end of paragraph (34) and inserting ", plus", and by inserting after paragraph (34) the following new paragraph:

26 USC 38.

"(35) the sustainable aviation fuel credit determined under section 40B.".

(c) COORDINATION WITH BIODIESEL INCENTIVES.—

(1) IN GENERAL.—Section 40A(d)(1) is amended by inserting "or 40B" after "determined under section 40".

(2) CONFORMING AMENDMENT.—Section 40A(f) is amended by striking paragraph (4).

(d) SUSTAINABLE AVIATION FUEL ADDED TO CREDIT FOR ALCOHOL FUEL, BIODIESEL, AND ALTERNATIVE FUEL MIXTURES.—

(1) IN GENERAL.—Section 6426 is amended by adding at the end the following new subsection:

"(k) SUSTAINABLE AVIATION FUEL CREDIT.—

"(1) IN GENERAL.—For purposes of this section, the sustainable aviation fuel credit for the taxable year is, with respect to any sale or use of a qualified mixture, an amount equal to the product of—

"(A) the number of gallons of sustainable aviation fuel in such mixture, multiplied by

"(B) the sum of—

"(i) $1.25, plus

"(ii) the applicable supplementary amount with respect to such sustainable aviation fuel. Applicability.

"(2) DEFINITIONS.—Any term used in this subsection which is also used in section 40B shall have the meaning given such term by section 40B.

"(3) REGISTRATION REQUIREMENT.—For purposes of this subsection, rules similar to the rules of section 40B(f) shall apply.". Applicability.

(2) CONFORMING AMENDMENTS.—

(A) Section 6426 is amended— 26 USC 6426.

(i) in subsection (a)(1), by striking "and (e)" and inserting "(e), and (k)", and

(ii) in subsection (h), by striking "under section 40 or 40A" and inserting "under section 40, 40A, or 40B".

(B) Section 6427(e) is amended—

(i) in the heading, by striking "OR ALTERNATIVE FUEL" and inserting, "ALTERNATIVE FUEL, OR SUSTAINABLE AVIATION FUEL",

(ii) in paragraph (1), by inserting "or the sustainable aviation fuel mixture credit" after "alternative fuel mixture credit", and

(iii) in paragraph (6)—

(I) in subparagraph (C), by striking "and" at the end,

(II) in subparagraph (D), by striking the period at the end and inserting ", and", and

(III) by adding at the end the following new subparagraph:

"(E) any qualified mixture of sustainable aviation fuel (as defined in section 6426(k)(3)) sold or used after December 31, 2024.".

(C) Section 4101(a)(1) is amended by inserting "every person producing or importing sustainable aviation fuel (as defined in section 40B)," before "and every person producing second generation biofuel".

(D) The table of sections for subpart D of subchapter A of chapter 1 is amended by inserting after the item relating to section 40A the following new item: 26 USC 38 prec.

"Sec. 40B. Sustainable aviation fuel credit.".

(e) AMOUNT OF CREDIT INCLUDED IN GROSS INCOME.—Section 87 is amended by striking "and" in paragraph (1), by striking the period at the end of paragraph (2) and inserting ", and", and by adding at the end the following new paragraph:

"(3) the sustainable aviation fuel credit determined with respect to the taxpayer for the taxable year under section 40B(a).".

(f) EFFECTIVE DATE.—The amendments made by this section shall apply to fuel sold or used after December 31, 2022. 26 USC 40B note.

SEC. 13204. CLEAN HYDROGEN.

(a) CREDIT FOR PRODUCTION OF CLEAN HYDROGEN.—

(1) IN GENERAL.—Subpart D of part IV of subchapter A of chapter 1, as amended by the preceding provisions of this Act, is amended by adding at the end the following new section:

26 USC 45V.

"SEC. 45V. CREDIT FOR PRODUCTION OF CLEAN HYDROGEN.

"(a) AMOUNT OF CREDIT.—For purposes of section 38, the clean hydrogen production credit for any taxable year is an amount equal to the product of—

Time period.

"(1) the kilograms of qualified clean hydrogen produced by the taxpayer during such taxable year at a qualified clean hydrogen production facility during the 10-year period beginning on the date such facility was originally placed in service, multiplied by

"(2) the applicable amount (as determined under subsection (b)) with respect to such hydrogen.

"(b) APPLICABLE AMOUNT.—

"(1) IN GENERAL.—For purposes of subsection (a)(2), the applicable amount shall be an amount equal to the applicable percentage of $0.60. If any amount as determined under the preceding sentence is not a multiple of 0.1 cent, such amount shall be rounded to the nearest multiple of 0.1 cent.

Determination.

"(2) APPLICABLE PERCENTAGE.—For purposes of paragraph (1), the applicable percentage shall be determined as follows:

"(A) In the case of any qualified clean hydrogen which is produced through a process that results in a lifecycle greenhouse gas emissions rate of—

"(i) not greater than 4 kilograms of CO2e per kilogram of hydrogen, and

"(ii) not less than 2.5 kilograms of CO2e per kilogram of hydrogen,

the applicable percentage shall be 20 percent.

"(B) In the case of any qualified clean hydrogen which is produced through a process that results in a lifecycle greenhouse gas emissions rate of—

"(i) less than 2.5 kilograms of CO2e per kilogram of hydrogen, and

"(ii) not less than 1.5 kilograms of CO2e per kilogram of hydrogen,

the applicable percentage shall be 25 percent.

"(C) In the case of any qualified clean hydrogen which is produced through a process that results in a lifecycle greenhouse gas emissions rate of—

"(i) less than 1.5 kilograms of CO2e per kilogram of hydrogen, and

"(ii) not less than 0.45 kilograms of CO2e per kilogram of hydrogen,

the applicable percentage shall be 33.4 percent.

"(D) In the case of any qualified clean hydrogen which is produced through a process that results in a lifecycle greenhouse gas emissions rate of less than 0.45 kilograms of CO2e per kilogram of hydrogen, the applicable percentage shall be 100 percent.

"(3) INFLATION ADJUSTMENT.—The $0.60 amount in paragraph (1) shall be adjusted by multiplying such amount by the inflation adjustment factor (as determined under section 45(e)(2), determined by substituting '2022' for '1992' in subparagraph (B) thereof) for the calendar year in which the qualified clean hydrogen is produced. If any amount as increased under the preceding sentence is not a multiple of 0.1 cent, such amount shall be rounded to the nearest multiple of 0.1 cent.

"(c) DEFINITIONS.—For purposes of this section—

"(1) LIFECYCLE GREENHOUSE GAS EMISSIONS.—

"(A) IN GENERAL.—Subject to subparagraph (B), the term 'lifecycle greenhouse gas emissions' has the same meaning given such term under subparagraph (H) of section 211(o)(1) of the Clean Air Act (42 U.S.C. 7545(o)(1)), as in effect on the date of enactment of this section.

"(B) GREET MODEL.—The term 'lifecycle greenhouse gas emissions' shall only include emissions through the point of production (well-to-gate), as determined under the most recent Greenhouse gases, Regulated Emissions, and Energy use in Transportation model (commonly referred to as the 'GREET model') developed by Argonne National Laboratory, or a successor model (as determined by the Secretary).

"(2) QUALIFIED CLEAN HYDROGEN.—

"(A) IN GENERAL.—The term 'qualified clean hydrogen' means hydrogen which is produced through a process that results in a lifecycle greenhouse gas emissions rate of not greater than 4 kilograms of CO2e per kilogram of hydrogen.

"(B) ADDITIONAL REQUIREMENTS.—Such term shall not include any hydrogen unless—

"(i) such hydrogen is produced—

"(I) in the United States (as defined in section 638(1)) or a possession of the United States (as defined in section 638(2)),

"(II) in the ordinary course of a trade or business of the taxpayer, and

"(III) for sale or use, and

"(ii) the production and sale or use of such hydrogen is verified by an unrelated party.

"(C) PROVISIONAL EMISSIONS RATE.—In the case of any hydrogen for which a lifecycle greenhouse gas emissions rate has not been determined for purposes of this section, a taxpayer producing such hydrogen may file a petition with the Secretary for determination of the lifecycle greenhouse gas emissions rate with respect to such hydrogen. Determination.

"(3) QUALIFIED CLEAN HYDROGEN PRODUCTION FACILITY.—The term 'qualified clean hydrogen production facility' means a facility—

"(A) owned by the taxpayer,

"(B) which produces qualified clean hydrogen, and

"(C) the construction of which begins before January 1, 2033. Effective date.

"(d) SPECIAL RULES.—

"(1) TREATMENT OF FACILITIES OWNED BY MORE THAN 1 TAXPAYER.—Rules similar to the rules section 45(e)(3) shall apply for purposes of this section. Applicability.

"(2) COORDINATION WITH CREDIT FOR CARBON OXIDE SEQUESTRATION.—No credit shall be allowed under this section with respect to any qualified clean hydrogen produced at a facility which includes carbon capture equipment for which a credit is allowed to any taxpayer under section 45Q for the taxable year or any prior taxable year.

"(e) INCREASED CREDIT AMOUNT FOR QUALIFIED CLEAN HYDROGEN PRODUCTION FACILITIES.—

"(1) IN GENERAL.—In the case of any qualified clean hydrogen production facility which satisfies the requirements

of paragraph (2), the amount of the credit determined under subsection (a) with respect to qualified clean hydrogen described in subsection (b)(2) shall be equal to such amount (determined without regard to this sentence) multiplied by 5.

"(2) REQUIREMENTS.—A facility meets the requirements of this paragraph if it is one of the following:

"(A) A facility—

Effective date.
Time period.
Publication.
Guidelines.

"(i) the construction of which begins prior to the date that is 60 days after the Secretary publishes guidance with respect to the requirements of paragraphs (3)(A) and (4), and

"(ii) which meets the requirements of paragraph (3)(A) with respect to alteration or repair of such facility which occurs after such date.

"(B) A facility which satisfies the requirements of paragraphs (3)(A) and (4).

Applicability.
Determination.

"(3) PREVAILING WAGE REQUIREMENTS.—

"(A) IN GENERAL.—The requirements described in this subparagraph with respect to any qualified clean hydrogen production facility are that the taxpayer shall ensure that any laborers and mechanics employed by the taxpayer or any contractor or subcontractor in—

"(i) the construction of such facility, and

"(ii) with respect to any taxable year, for any portion of such taxable year which is within the period described in subsection (a)(2), the alteration or repair of such facility,

shall be paid wages at rates not less than the prevailing rates for construction, alteration, or repair of a similar character in the locality in which such facility is located as most recently determined by the Secretary of Labor, in accordance with subchapter IV of chapter 31 of title 40, United States Code. For purposes of determining an increased credit amount under paragraph (1) for a taxable year, the requirement under clause (ii) of this subparagraph is applied to such taxable year in which the alteration or repair of qualified facility occurs.

"(B) CORRECTION AND PENALTY RELATED TO FAILURE TO SATISFY WAGE REQUIREMENTS.—Rules similar to the rules of section 45(b)(7)(B) shall apply.

Applicability.

"(4) APPRENTICESHIP REQUIREMENTS.—Rules similar to the rules of section 45(b)(8) shall apply.

Determination.
Requirements.
Records.

"(5) REGULATIONS AND GUIDANCE.—The Secretary shall issue such regulations or other guidance as the Secretary determines necessary to carry out the purposes of this subsection, including regulations or other guidance which provides for requirements for recordkeeping or information reporting for purposes of administering the requirements of this subsection.

Deadline.
Guidelines.
Determinations.

"(f) REGULATIONS.—Not later than 1 year after the date of enactment of this section, the Secretary shall issue regulations or other guidance to carry out the purposes of this section, including regulations or other guidance for determining lifecycle greenhouse gas emissions.".

26 USC 45V.

(2) CREDIT REDUCED FOR TAX-EXEMPT BONDS.—Section 45V(d), as added by this section, is amended by adding at the end the following new paragraph:

"(3) CREDIT REDUCED FOR TAX-EXEMPT BONDS.—Rules similar to the rule under section 45(b)(3) shall apply for purposes of this section.". Applicability.

(3) MODIFICATION OF EXISTING FACILITIES.—Section 45V(d), as added and amended by the preceding provisions of this section, is amended by adding at the end the following new paragraph: 26 USC 45V.

"(4) MODIFICATION OF EXISTING FACILITIES.—For purposes of subsection (a)(1), in the case of any facility which—

"(A) was originally placed in service before January 1, 2023, and, prior to the modification described in subparagraph (B), did not produce qualified clean hydrogen, and Effective date.

"(B) after the date such facility was originally placed in service—

"(i) is modified to produce qualified clean hydrogen, and

"(ii) amounts paid or incurred with respect to such modification are properly chargeable to capital account of the taxpayer,

such facility shall be deemed to have been originally placed in service as of the date that the property required to complete the modification described in subparagraph (B) is placed in service.".

(4) CONFORMING AMENDMENTS.—

(A) Section 38(b), as amended by the preceding provisions of this Act, is amended—

(i) in paragraph (34), by striking "plus" at the end,

(ii) in paragraph (35), by striking the period at the end and inserting ", plus", and

(iii) by adding at the end the following new paragraph:

"(36) the clean hydrogen production credit determined under section 45V(a).".

(B) The table of sections for subpart D of part IV of subchapter A of chapter 1, as amended by the preceding provisions of this Act, is amended by adding at the end the following new item: 26 USC 38 prec.

"Sec. 45V. Credit for production of clean hydrogen.".

(5) EFFECTIVE DATES.— Applicability. 26 USC 45V note.

(A) IN GENERAL.—The amendments made by paragraphs (1) and (4) of this subsection shall apply to hydrogen produced after December 31, 2022.

(B) CREDIT REDUCED FOR TAX-EXEMPT BONDS.—The amendment made by paragraph (2) shall apply to facilities the construction of which begins after the date of enactment of this Act.

(C) MODIFICATION OF EXISTING FACILITIES.—The amendment made by paragraph (3) shall apply to modifications made after December 31, 2022.

(b) CREDIT FOR ELECTRICITY PRODUCED FROM RENEWABLE RESOURCES ALLOWED IF ELECTRICITY IS USED TO PRODUCE CLEAN HYDROGEN.—

(1) IN GENERAL.—Section 45(e), as amended by the preceding provisions of this Act, is amended by adding at the end the following new paragraph:

"(13) SPECIAL RULE FOR ELECTRICITY USED AT A QUALIFIED CLEAN HYDROGEN PRODUCTION FACILITY.—Electricity produced by the taxpayer shall be treated as sold by such taxpayer to an unrelated person during the taxable year if—

"(A) such electricity is used during such taxable year by the taxpayer or a person related to the taxpayer at a qualified clean hydrogen production facility (as defined in section 45V(c)(3)) to produce qualified clean hydrogen (as defined in section 45V(c)(2)), and

"(B) such use and production is verified (in such form or manner as the Secretary may prescribe) by an unrelated third party.".

(2) SIMILAR RULE FOR ZERO-EMISSION NUCLEAR POWER PRODUCTION CREDIT.—Subsection (c)(2) of section 45U, as added by section 13105 of this Act, is amended by striking "and (5)" and inserting "(5), and (13)".

26 USC 45U.

26 USC 45 note.

(3) EFFECTIVE DATE.—The amendments made by this subsection shall apply to electricity produced after December 31, 2022.

(c) ELECTION TO TREAT CLEAN HYDROGEN PRODUCTION FACILITIES AS ENERGY PROPERTY.—

(1) IN GENERAL.—Section 48(a), as amended by the preceding provisions of this Act, is amended—

(A) by redesignating paragraph (15) as paragraph (16), and

(B) by inserting after paragraph (14) the following new paragraph:

"(15) ELECTION TO TREAT CLEAN HYDROGEN PRODUCTION FACILITIES AS ENERGY PROPERTY.—

"(A) IN GENERAL.—In the case of any qualified property (as defined in paragraph (5)(D)) which is part of a specified clean hydrogen production facility—

"(i) such property shall be treated as energy property for purposes of this section, and

"(ii) the energy percentage with respect to such property is—

"(I) in the case of a facility which is designed and reasonably expected to produce qualified clean hydrogen which is described in a subparagraph (A) of section 45V(b)(2), 1.2 percent,

"(II) in the case of a facility which is designed and reasonably expected to produce qualified clean hydrogen which is described in a subparagraph (B) of such section, 1.5 percent,

"(III) in the case of a facility which is designed and reasonably expected to produce qualified clean hydrogen which is described in a subparagraph (C) of such section, 2 percent, and

"(IV) in the case of a facility which is designed and reasonably expected to produce qualified clean hydrogen which is described in subparagraph (D) of such section, 6 percent.

"(B) DENIAL OF PRODUCTION CREDIT.—No credit shall be allowed under section 45V or section 45Q for any taxable year with respect to any specified clean hydrogen production facility or any carbon capture equipment included at such facility.

"(C) SPECIFIED CLEAN HYDROGEN PRODUCTION FACILITY.—For purposes of this paragraph, the term 'specified clean hydrogen production facility' means any qualified clean hydrogen production facility (as defined in section 45V(c)(3))— Definition.

"(i) which is placed in service after December 31, 2022, Effective date.

"(ii) with respect to which—

"(I) no credit has been allowed under section 45V or 45Q, and

"(II) the taxpayer makes an irrevocable election to have this paragraph apply, and

"(iii) for which an unrelated third party has verified (in such form or manner as the Secretary may prescribe) that such facility produces hydrogen through a process which results in lifecycle greenhouse gas emissions which are consistent with the hydrogen that such facility was designed and expected to produce under subparagraph (A)(ii). Verification.

"(D) QUALIFIED CLEAN HYDROGEN.—For purposes of this paragraph, the term 'qualified clean hydrogen' has the meaning given such term by section 45V(c)(2). Definition.

"(E) REGULATIONS.—The Secretary shall issue such regulations or other guidance as the Secretary determines necessary to carry out the purposes of this section, including regulations or other guidance which recaptures so much of any credit allowed under this section as exceeds the amount of the credit which would have been allowed if the expected production were consistent with the actual verified production (or all of the credit so allowed in the absence of such verification).". Guidelines. Determination.

(2) CONFORMING AMENDMENT.—Paragraph (9)(A)(i) of section 48(a), as added by section 13102, is amended by inserting "and paragraph (15)" after "paragraphs (1) through (8)". 26 USC 48.

(3) EFFECTIVE DATE.—The amendments made by this subsection shall apply to property placed in service after December 31, 2022, and, for any property the construction of which begins prior to January 1, 2023, only to the extent of the basis thereof attributable to the construction, reconstruction, or erection after December 31, 2022. Applicability. 26 USC 48 note.

(d) TERMINATION OF EXCISE TAX CREDIT FOR HYDROGEN.—

(1) IN GENERAL.—Section 6426(d)(2) is amended by striking subparagraph (D) and by redesignating subparagraphs (E), (F), and (G) as subparagraphs (D), (E), and (F), respectively.

(2) CONFORMING AMENDMENT.—Section 6426(e)(2) is amended by striking "(F)" and inserting "(E)".

(3) EFFECTIVE DATE.—The amendments made by this subsection shall apply to fuel sold or used after December 31, 2022. 26 USC 6426 note.

PART 3—CLEAN ENERGY AND EFFICIENCY INCENTIVES FOR INDIVIDUALS

SEC. 13301. EXTENSION, INCREASE, AND MODIFICATIONS OF NONBUSINESS ENERGY PROPERTY CREDIT.

(a) EXTENSION OF CREDIT.—Section 25C(g)(2) is amended by striking "December 31, 2021" and inserting "December 31, 2032".

26 USC 25C.

(b) ALLOWANCE OF CREDIT.—Section 25C(a) is amended to read as follows:

"(a) ALLOWANCE OF CREDIT.—In the case of an individual, there shall be allowed as a credit against the tax imposed by this chapter for the taxable year an amount equal to 30 percent of the sum of—

"(1) the amount paid or incurred by the taxpayer for qualified energy efficiency improvements installed during such taxable year, and

"(2) the amount of the residential energy property expenditures paid or incurred by the taxpayer during such taxable year.".

(c) APPLICATION OF ANNUAL LIMITATION IN LIEU OF LIFETIME LIMITATION.—Section 25C(b) is amended to read as follows:

"(b) LIMITATIONS.—

"(1) IN GENERAL.—The credit allowed under this section with respect to any taxpayer for any taxable year shall not exceed $1,200.

"(2) ENERGY PROPERTY.—The credit allowed under this section by reason of subsection (a)(2) with respect to any taxpayer for any taxable year shall not exceed, with respect to any item of qualified energy property, $600.

"(3) WINDOWS.—The credit allowed under this section by reason of subsection (a)(1) with respect to any taxpayer for any taxable year shall not exceed, in the aggregate with respect to all exterior windows and skylights, $600.

"(4) DOORS.—The credit allowed under this section by reason of subsection (a)(1) with respect to any taxpayer for any taxable year shall not exceed—

"(A) $250 in the case of any exterior door, and

"(B) $500 in the aggregate with respect to all exterior doors.

"(5) HEAT PUMP AND HEAT PUMP WATER HEATERS; BIOMASS STOVES AND BOILERS.—Notwithstanding paragraphs (1) and (2), the credit allowed under this section by reason of subsection (a)(2) with respect to any taxpayer for any taxable year shall not, in the aggregate, exceed $2,000 with respect to amounts paid or incurred for property described in clauses (i) and (ii) of subsection (d)(2)(A) and in subsection (d)(2)(B).".

(d) MODIFICATIONS RELATED TO QUALIFIED ENERGY EFFICIENCY IMPROVEMENTS.—

(1) STANDARDS FOR ENERGY EFFICIENT BUILDING ENVELOPE COMPONENTS.—Section 25C(c)(2) is amended by striking "meets—" and all that follows through the period at the end and inserting the following: "meets—

"(A) in the case of an exterior window or skylight, Energy Star most efficient certification requirements,

"(B) in the case of an exterior door, applicable Energy Star requirements, and

Effective date.

"(C) in the case of any other component, the prescriptive criteria for such component established by the most recent International Energy Conservation Code standard in effect as of the beginning of the calendar year which is 2 years prior to the calendar year in which such component is placed in service.".

(2) ROOFS NOT TREATED AS BUILDING ENVELOPE COMPONENTS.—Section 25C(c)(3) is amended by adding "and" at the

end of subparagraph (B), by striking ", and" at the end of subparagraph (C) and inserting a period, and by striking subparagraph (D).

(3) AIR SEALING INSULATION ADDED TO DEFINITION OF BUILDING ENVELOPE COMPONENT.—Section 25C(c)(3)(A) is amended by inserting ", including air sealing material or system," after "material or system". 26 USC 25C.

(e) MODIFICATION OF RESIDENTIAL ENERGY PROPERTY EXPENDITURES.—Section 25C(d) is amended to read as follows:

"(d) RESIDENTIAL ENERGY PROPERTY EXPENDITURES.—For purposes of this section— Definitions.

"(1) IN GENERAL.—The term 'residential energy property expenditures' means expenditures made by the taxpayer for qualified energy property which is—

"(A) installed on or in connection with a dwelling unit located in the United States and used as a residence by the taxpayer, and

"(B) originally placed in service by the taxpayer.

Such term includes expenditures for labor costs properly allocable to the onsite preparation, assembly, or original installation of the property.

"(2) QUALIFIED ENERGY PROPERTY.—The term 'qualified energy property' means any of the following: Effective dates.

"(A) Any of the following which meet or exceed the highest efficiency tier (not including any advanced tier) established by the Consortium for Energy Efficiency which is in effect as of the beginning of the calendar year in which the property is placed in service:

"(i) An electric or natural gas heat pump water heater.

"(ii) An electric or natural gas heat pump.

"(iii) A central air conditioner.

"(iv) A natural gas, propane, or oil water heater.

"(v) A natural gas, propane, or oil furnace or hot water boiler.

"(B) A biomass stove or boiler which—

"(i) uses the burning of biomass fuel to heat a dwelling unit located in the United States and used as a residence by the taxpayer, or to heat water for use in such a dwelling unit, and

"(ii) has a thermal efficiency rating of at least 75 percent (measured by the higher heating value of the fuel).

"(C) Any oil furnace or hot water boiler which—

"(i) is placed in service after December 31, 2022, and before January 1, 2027, and—

"(I) meets or exceeds 2021 Energy Star efficiency criteria, and

"(II) is rated by the manufacturer for use with fuel blends at least 20 percent of the volume of which consists of an eligible fuel, or

"(ii) is placed in service after December 31, 2026, and—

"(I) achieves an annual fuel utilization efficiency rate of not less than 90, and

"(II) is rated by the manufacturer for use with fuel blends at least 50 percent of the volume of which consists of an eligible fuel.

"(D) Any improvement to, or replacement of, a panelboard, sub-panelboard, branch circuits, or feeders which—

"(i) is installed in a manner consistent with the National Electric Code,

"(ii) has a load capacity of not less than 200 amps,

"(iii) is installed in conjunction with—

"(I) any qualified energy efficiency improvements, or

"(II) any qualified energy property described in subparagraphs (A) through (C) for which a credit is allowed under this section for expenditures with respect to such property, and

"(iv) enables the installation and use of any property described in subclause (I) or (II) of clause (iii).

"(3) ELIGIBLE FUEL.—For purposes of paragraph (2), the term 'eligible fuel' means—

"(A) biodiesel and renewable diesel (within the meaning of section 40A), and

"(B) second generation biofuel (within the meaning of section 40).".

(f) HOME ENERGY AUDITS.—

26 USC 25C.

(1) IN GENERAL.—Section 25C(a), as amended by subsection (b), is amended by striking "and" at the end of paragraph (1), by striking the period at the end of paragraph (2) and inserting ", and", and by adding at the end the following new paragraph:

"(3) the amount paid or incurred by the taxpayer during the taxable year for home energy audits.".

(2) LIMITATION.—Section 25C(b), as amended by subsection (c), is amended adding at the end the following new paragraph:

"(6) HOME ENERGY AUDITS.—

"(A) DOLLAR LIMITATION.—The amount of the credit allowed under this section by reason of subsection (a)(3) shall not exceed $150.

"(B) SUBSTANTIATION REQUIREMENT.—No credit shall be allowed under this section by reason of subsection (a)(3) unless the taxpayer includes with the taxpayer's return of tax such information or documentation as the Secretary may require.".

(3) HOME ENERGY AUDITS.—

(A) IN GENERAL.—Section 25C is amended by redesignating subsections (e), (f), and (g), as subsections (f), (g), and (h), respectively, and by inserting after subsection (d) the following new subsection:

Definition.

"(e) HOME ENERGY AUDITS.—For purposes of this section, the term 'home energy audit' means an inspection and written report with respect to a dwelling unit located in the United States and owned or used by the taxpayer as the taxpayer's principal residence (within the meaning of section 121) which—

Cost estimates.

"(1) identifies the most significant and cost-effective energy efficiency improvements with respect to such dwelling unit, including an estimate of the energy and cost savings with respect to each such improvement, and

"(2) is conducted and prepared by a home energy auditor that meets the certification or other requirements specified by the Secretary in regulations or other guidance (as prescribed by the Secretary not later than 365 days after the date of the enactment of this subsection).". Requirements. Regulations. Guidelines. Deadline.

(B) CONFORMING AMENDMENT.—Section 1016(a)(33) is amended by striking "section 25C(f)" and inserting "section 25C(g)". 26 USC 1016.

(4) LACK OF SUBSTANTIATION TREATED AS MATHEMATICAL OR CLERICAL ERROR.—Section 6213(g)(2) is amended—

(A) in subparagraph (P), by striking "and" at the end,

(B) in subparagraph (Q), by striking the period at the end and inserting ", and", and

(C) by inserting after subparagraph (Q) the following:

"(R) an omission of information or documentation required under section 25C(b)(6)(B) (relating to home energy audits) to be included on a return.".

(g) IDENTIFICATION NUMBER REQUIREMENT.—

(1) IN GENERAL.—Section 25C, as amended by this section, is amended by redesignating subsection (h) as subsection (i) and by inserting after subsection (g) the following new subsection:

"(h) PRODUCT IDENTIFICATION NUMBER REQUIREMENT.— Definitions.

"(1) IN GENERAL.—No credit shall be allowed under subsection (a) with respect to any item of specified property placed in service after December 31, 2024, unless— Effective date.

"(A) such item is produced by a qualified manufacturer, and

"(B) the taxpayer includes the qualified product identification number of such item on the return of tax for the taxable year.

"(2) QUALIFIED PRODUCT IDENTIFICATION NUMBER.—For purposes of this section, the term 'qualified product identification number' means, with respect to any item of specified property, the product identification number assigned to such item by the qualified manufacturer pursuant to the methodology referred to in paragraph (3).

"(3) QUALIFIED MANUFACTURER.—For purposes of this section, the term 'qualified manufacturer' means any manufacturer of specified property which enters into an agreement with the Secretary which provides that such manufacturer will—

"(A) assign a product identification number to each item of specified property produced by such manufacturer utilizing a methodology that will ensure that such number (including any alphanumeric) is unique to each such item (by utilizing numbers or letters which are unique to such manufacturer or by such other method as the Secretary may provide),

"(B) label such item with such number in such manner as the Secretary may provide, and

"(C) make periodic written reports to the Secretary (at such times and in such manner as the Secretary may provide) of the product identification numbers so assigned and including such information as the Secretary may require with respect to the item of specified property to which such number was so assigned. Reports.

"(4) SPECIFIED PROPERTY.—For purposes of this subsection, the term 'specified property' means any qualified energy property and any property described in subparagraph (B) or (C) of subsection (c)(3).".

(2) OMISSION OF CORRECT PRODUCT IDENTIFICATION NUMBER TREATED AS MATHEMATICAL OR CLERICAL ERROR.—Section 6213(g)(2), as amended by the preceding provisions of this Act, is amended— 26 USC 6213.

(A) in subparagraph (Q), by striking "and" at the end,

(B) in subparagraph (R), by striking the period at the end and inserting ", and", and

(C) by inserting after subparagraph (R) the following:

"(S) an omission of a correct product identification number required under section 25C(h) (relating to credit for nonbusiness energy property) to be included on a return.".

(h) ENERGY EFFICIENT HOME IMPROVEMENT CREDIT.—

(1) IN GENERAL.—The heading for section 25C is amended by striking "**NONBUSINESS ENERGY PROPERTY**" and inserting "**ENERGY EFFICIENT HOME IMPROVEMENT CREDIT**".

(2) CLERICAL AMENDMENT.—The table of sections for subpart A of part IV of subchapter A of chapter 1 is amended by striking the item relating to section 25C and inserting after the item relating to section 25B the following item: 26 USC 21 prec.

"Sec. 25C. Energy efficient home improvement credit.".

(i) EFFECTIVE DATES.— Applicability. 26 USC 25C note.

(1) IN GENERAL.—Except as otherwise provided by this subsection, the amendments made by this section shall apply to property placed in service after December 31, 2022.

(2) EXTENSION OF CREDIT.—The amendments made by subsection (a) shall apply to property placed in service after December 31, 2021.

(3) IDENTIFICATION NUMBER REQUIREMENT.—The amendments made by subsection (g) shall apply to property placed in service after December 31, 2024.

SEC. 13302. RESIDENTIAL CLEAN ENERGY CREDIT.

(a) EXTENSION OF CREDIT.—

(1) IN GENERAL.—Section 25D(h) is amended by striking "December 31, 2023" and inserting "December 31, 2034".

(2) APPLICATION OF PHASEOUT.—Section 25D(g) is amended—

(A) in paragraph (2), by striking "before January 1, 2023, 26 percent, and" and inserting "before January 1, 2022, 26 percent,", and

(B) by striking paragraph (3) and by inserting after paragraph (2) the following new paragraphs:

"(3) in the case of property placed in service after December 31, 2021, and before January 1, 2033, 30 percent,

"(4) in the case of property placed in service after December 31, 2032, and before January 1, 2034, 26 percent, and

"(5) in the case of property placed in service after December 31, 2033, and before January 1, 2035, 22 percent.".

(b) RESIDENTIAL CLEAN ENERGY CREDIT FOR BATTERY STORAGE TECHNOLOGY; CERTAIN EXPENDITURES DISALLOWED.—

(1) ALLOWANCE OF CREDIT.—Paragraph (6) of section 25D(a) is amended to read as follows:

"(6) the qualified battery storage technology expenditures,".

(2) DEFINITION OF QUALIFIED BATTERY STORAGE TECHNOLOGY EXPENDITURE.—Paragraph (6) of section 25D(d) is amended to read as follows: 26 USC 25D.

"(6) QUALIFIED BATTERY STORAGE TECHNOLOGY EXPENDITURE.—The term 'qualified battery storage technology expenditure' means an expenditure for battery storage technology which— Definition.

"(A) is installed in connection with a dwelling unit located in the United States and used as a residence by the taxpayer, and

"(B) has a capacity of not less than 3 kilowatt hours.".

(c) CONFORMING AMENDMENTS.—

(1) Section 25D(d)(3) is amended by inserting ", without regard to subparagraph (D) thereof" after "section 48(c)(1)".

(2) The heading for section 25D is amended by striking "**ENERGY EFFICIENT PROPERTY**" and inserting "**CLEAN ENERGY CREDIT**".

(3) The table of sections for subpart A of part IV of subchapter A of chapter 1 is amended by striking the item relating to section 25D and inserting the following: 26 USC 21 prec.

"Sec. 25D. Residential clean energy credit.".

(d) EFFECTIVE DATES.— Applicability. 26 USC 25D note.

(1) IN GENERAL.—Except as provided in paragraph (2), the amendments made by this section shall apply to expenditures made after December 31, 2021.

(2) RESIDENTIAL CLEAN ENERGY CREDIT FOR BATTERY STORAGE TECHNOLOGY; CERTAIN EXPENDITURES DISALLOWED.—The amendments made by subsection (b) shall apply to expenditures made after December 31, 2022.

SEC. 13303. ENERGY EFFICIENT COMMERCIAL BUILDINGS DEDUCTION.

(a) IN GENERAL.—

(1) MAXIMUM AMOUNT OF DEDUCTION.—Subsection (b) of section 179D is amended to read as follows:

"(b) MAXIMUM AMOUNT OF DEDUCTION.—

"(1) IN GENERAL.—The deduction under subsection (a) with respect to any building for any taxable year shall not exceed the excess (if any) of—

"(A) the product of—

"(i) the applicable dollar value, and

"(ii) the square footage of the building, over

"(B) the aggregate amount of the deductions under subsections (a) and (f) with respect to the building for the 3 taxable years immediately preceding such taxable year (or, in the case of any such deduction allowable to a person other than the taxpayer, for any taxable year ending during the 4-taxable-year period ending with such taxable year). Time periods.

"(2) APPLICABLE DOLLAR VALUE.—For purposes of paragraph (1)(A)(i), the applicable dollar value shall be an amount equal to $0.50 increased (but not above $1.00) by $0.02 for each percentage point by which the total annual energy and power costs for the building are certified to be reduced by a percentage greater than 25 percent.

"(3) INCREASED DEDUCTION AMOUNT FOR CERTAIN PROPERTY.—

Applicability.

"(A) IN GENERAL.—In the case of any property which satisfies the requirements of subparagraph (B), paragraph (2) shall be applied by substituting '$2.50' for '$0.50', '$.10' for '$.02', and '$5.00' for '$1.00'.

"(B) PROPERTY REQUIREMENTS.—In the case of any energy efficient commercial building property, energy efficient building retrofit property, or property installed pursuant to a qualified retrofit plan, such property shall meet the requirements of this subparagraph if —

Time period.
Publication.
Guidelines.

"(i) installation of such property begins prior to the date that is 60 days after the Secretary publishes guidance with respect to the requirements of paragraphs (4)(A) and (5), or

"(ii) installation of such property satisfies the requirements of paragraphs (4)(A) and (5).

"(4) PREVAILING WAGE REQUIREMENTS.—

Determination.

"(A) IN GENERAL.—The requirements described in this subparagraph with respect to any property are that the taxpayer shall ensure that any laborers and mechanics employed by the taxpayer or any contractor or subcontractor in the installation of any property shall be paid wages at rates not less than the prevailing rates for construction, alteration, or repair of a similar character in the locality in which such property is located as most recently determined by the Secretary of Labor, in accordance with subchapter IV of chapter 31 of title 40, United States Code.

Applicability.

"(B) CORRECTION AND PENALTY RELATED TO FAILURE TO SATISFY WAGE REQUIREMENTS.—Rules similar to the rules of section 45(b)(7)(B) shall apply.

Applicability.

"(5) APPRENTICESHIP REQUIREMENTS.—Rules similar to the rules of section 45(b)(8) shall apply.

Guidelines.
Determination.
Requirements.
Records.

"(6) REGULATIONS.—The Secretary shall issue such regulations or other guidance as the Secretary determines necessary to carry out the purposes of this subsection, including regulations or other guidance which provides for requirements for recordkeeping or information reporting for purposes of administering the requirements of this subsection.".

26 USC 179D.

(2) MODIFICATION OF EFFICIENCY STANDARD.—Section 179D(c)(1)(D) is amended by striking "50 percent" and inserting "25 percent".

(3) REFERENCE STANDARD.—Section 179D(c)(2) is amended by striking "the most recent" and inserting the following: "the more recent of—

"(A) Standard 90.1-2007 published by the American Society of Heating, Refrigerating, and Air Conditioning Engineers and the Illuminating Engineering Society of North America, or

"(B) the most recent".

(4) FINAL DETERMINATION; EXTENSION OF PERIOD; PLACED IN SERVICE DEADLINE.—Subparagraph (B) of section 179D(c)(2), as amended by paragraph (3), is amended—

(A) by inserting "for which the Department of Energy has issued a final determination and" before "which has been affirmed",

(B) by striking "2 years" and inserting "4 years", and

(C) by striking "that construction of such property begins" and inserting "such property is placed in service".

(5) ELIMINATION OF PARTIAL ALLOWANCE.—

(A) IN GENERAL.—Section 179D(d) is amended— 26 USC 179D.

(i) by striking paragraph (1), and

(ii) by redesignating paragraphs (2) through (6) as paragraphs (1) through (5), respectively.

(B) CONFORMING AMENDMENTS.—

(i) Section 179D(c)(1)(D) is amended—

(I) by striking "subsection (d)(6)" and inserting "subsection (d)(5)", and

(II) by striking "subsection (d)(2)" and inserting "subsection (d)(1)".

(ii) Paragraph (2)(A) of section 179D(d), as redesignated by subparagraph (A), is amended by striking "paragraph (2)" and inserting "paragraph (1)".

(iii) Paragraph (4) of section 179D(d), as redesignated by subparagraph (A), is amended by striking "paragraph (3)(B)(iii)" and inserting "paragraph (2)(B)(iii)".

(iv) Section 179D is amended by striking subsection (f).

(v) Section 179D(h) is amended by striking "or (d)(1)(A)".

(6) ALLOCATION OF DEDUCTION BY CERTAIN TAX-EXEMPT ENTITIES.—Paragraph (3) of section 179D(d), as redesignated by paragraph (5)(A), is amended to read as follows:

"(3) ALLOCATION OF DEDUCTION BY CERTAIN TAX-EXEMPT ENTITIES.—

"(A) IN GENERAL.—In the case of energy efficient commercial building property installed on or in property owned by a specified tax-exempt entity, the Secretary shall promulgate regulations or guidance to allow the allocation of the deduction to the person primarily responsible for designing the property in lieu of the owner of such property. Such person shall be treated as the taxpayer for purposes of this section. Regulations. Guidelines.

"(B) SPECIFIED TAX-EXEMPT ENTITY.—For purposes of this paragraph, the term 'specified tax-exempt entity' means— Definition.

"(i) the United States, any State or political subdivision thereof, any possession of the United States, or any agency or instrumentality of any of the foregoing,

"(ii) an Indian tribal government (as defined in section 30D(g)(9)) or Alaska Native Corporation (as defined in section 3 of the Alaska Native Claims Settlement Act (43 U.S.C. 1602(m)), and

"(iii) any organization exempt from tax imposed by this chapter.".

(7) ALTERNATIVE DEDUCTION FOR ENERGY EFFICIENT BUILDING RETROFIT PROPERTY.—Section 179D, as amended by the preceding provisions of this section, is amended by inserting after subsection (e) the following new subsection:

"(f) ALTERNATIVE DEDUCTION FOR ENERGY EFFICIENT BUILDING RETROFIT PROPERTY.— Definitions.

Determinations.

"(1) IN GENERAL.—In the case of a taxpayer which elects (at such time and in such manner as the Secretary may provide) the application of this subsection with respect to any qualified building, there shall be allowed as a deduction for the taxable year which includes the date of the qualifying final certification with respect to the qualified retrofit plan of such building, an amount equal to the lesser of—

"(A) the excess described in subsection (b) (determined by substituting 'energy use intensity' for 'total annual energy and power costs' in paragraph (2) thereof), or

"(B) the aggregate adjusted basis (determined after taking into account all adjustments with respect to such taxable year other than the reduction under subsection (e)) of energy efficient building retrofit property placed in service by the taxpayer pursuant to such qualified retrofit plan.

Certifications.

"(2) QUALIFIED RETROFIT PLAN.—For purposes of this subsection, the term 'qualified retrofit plan' means a written plan prepared by a qualified professional which specifies modifications to a building which, in the aggregate, are expected to reduce such building's energy use intensity by 25 percent or more in comparison to the baseline energy use intensity of such building. Such plan shall provide for a qualified professional to—

Time period.

"(A) as of any date during the 1-year period ending on the date on which the property installed pursuant to such plan is placed in service, certify the energy use intensity of such building as of such date,

"(B) certify the status of property installed pursuant to such plan as meeting the requirements of subparagraphs (B) and (C) of paragraph (3), and

"(C) as of any date that is more than 1 year after the date on which the property installed pursuant to such plan is placed in service, certify the energy use intensity of such building as of such date.

"(3) ENERGY EFFICIENT BUILDING RETROFIT PROPERTY.—For purposes of this subsection, the term 'energy efficient building retrofit property' means property—

"(A) with respect to which depreciation (or amortization in lieu of depreciation) is allowable,

"(B) which is installed on or in any qualified building,

"(C) which is installed as part of—

"(i) the interior lighting systems,

"(ii) the heating, cooling, ventilation, and hot water systems, or

"(iii) the building envelope, and

Certification.

"(D) which is certified in accordance with paragraph (2)(B) as meeting the requirements of subparagraphs (B) and (C).

"(4) QUALIFIED BUILDING.—For purposes of this subsection, the term 'qualified building' means any building which—

"(A) is located in the United States, and

Time period.

"(B) was originally placed in service not less than 5 years before the establishment of the qualified retrofit plan with respect to such building.

"(5) QUALIFYING FINAL CERTIFICATION.—For purposes of this subsection, the term 'qualifying final certification' means,

with respect to any qualified retrofit plan, the certification described in paragraph (2)(C) if the energy use intensity certified in such certification is not more than 75 percent of the baseline energy use intensity of the building.

"(6) BASELINE ENERGY USE INTENSITY.—

"(A) IN GENERAL.—For purposes of this subsection, the term 'baseline energy use intensity' means the energy use intensity certified under paragraph (2)(A), as adjusted to take into account weather.

"(B) DETERMINATION OF ADJUSTMENT.—For purposes of subparagraph (A), the adjustments described in such subparagraph shall be determined in such manner as the Secretary may provide.

"(7) OTHER DEFINITIONS.—For purposes of this subsection—

"(A) ENERGY USE INTENSITY.—The term 'energy use intensity' means the annualized, measured site energy use intensity determined in accordance with such regulations or other guidance as the Secretary may provide and measured in British thermal units. Determination.

"(B) QUALIFIED PROFESSIONAL.—The term 'qualified professional' means an individual who is a licensed architect or a licensed engineer and meets such other requirements as the Secretary may provide.

"(8) COORDINATION WITH DEDUCTION OTHERWISE ALLOWED UNDER SUBSECTION (a).—

"(A) IN GENERAL.—In the case of any building with respect to which an election is made under paragraph (1), the term 'energy efficient commercial building property' shall not include any energy efficient building retrofit property with respect to which a deduction is allowable under this subsection.

"(B) CERTAIN RULES NOT APPLICABLE.—

"(i) IN GENERAL.—Except as provided in clause (ii), subsection (d) shall not apply for purposes of this subsection.

"(ii) ALLOCATION OF DEDUCTION BY CERTAIN TAX-EXEMPT ENTITIES.—Rules similar to subsection (d)(3) shall apply for purposes of this subsection.". Applicability.

(8) INFLATION ADJUSTMENT.—Section 179D(g) is amended— 26 USC 179D.

(A) by striking "2020" and inserting "2022",

(B) by striking "or subsection (d)(1)(A)", and

(C) by striking "2019" and inserting "2021".

(b) APPLICATION TO REAL ESTATE INVESTMENT TRUST EARNINGS AND PROFITS.—Section 312(k)(3)(B) is amended—

(1) by striking "For purposes of computing the earnings and profits of a corporation" and inserting the following:

"(i) IN GENERAL.—For purposes of computing the earnings and profits of a corporation, except as provided in clause (ii)", and

(2) by adding at the end the following new clause:

"(ii) SPECIAL RULE.—In the case of a corporation that is a real estate investment trust, any amount deductible under section 179D shall be allowed in the year in which the property giving rise to such deduction is placed in service (or, in the case of energy efficient building retrofit property, the year in which the qualifying final certification is made).".

Deadlines.
26 USC 179D.

(c) CONFORMING AMENDMENT.—Paragraph (1) of section 179D(d), as redesignated by subsection (a)(5)(A), is amended by striking "not later than the date that is 2 years before the date that construction of such property begins" and inserting "not later than the date that is 4 years before the date such property is placed in service".

Applicability.
26 USC 179D note.

(d) EFFECTIVE DATE.—

(1) IN GENERAL.—Except as otherwise provided in this subsection, the amendments made by this section shall apply to taxable years beginning after December 31, 2022.

(2) ALTERNATIVE DEDUCTION FOR ENERGY EFFICIENT BUILDING RETROFIT PROPERTY.—Subsection (f) of section 179D of the Internal Revenue Code of 1986 (as amended by this section), and any other provision of such section solely for purposes of applying such subsection, shall apply to property placed in service after December 31, 2022 (in taxable years ending after such date) if such property is placed in service pursuant to qualified retrofit plan (within the meaning of such section) established after such date.

SEC. 13304. EXTENSION, INCREASE, AND MODIFICATIONS OF NEW ENERGY EFFICIENT HOME CREDIT.

(a) EXTENSION OF CREDIT.—Section 45L(g) is amended by striking "December 31, 2021" and inserting "December 31, 2032".

(b) INCREASE IN CREDIT AMOUNTS.—Paragraph (2) of section 45L(a) is amended to read as follows:

Requirements.

"(2) APPLICABLE AMOUNT.—For purposes of paragraph (1), the applicable amount is an amount equal to—

"(A) in the case of a dwelling unit which is eligible to participate in the Energy Star Residential New Construction Program or the Energy Star Manufactured New Homes program—

"(i) which meets the requirements of subsection (c)(1)(A) (and which does not meet the requirements of subsection (c)(1)(B)), $2,500, and

"(ii) which meets the requirements of subsection (c)(1)(B), $5,000, and

"(B) in the case of a dwelling unit which is part of a building eligible to participate in the Energy Star Multifamily New Construction Program—

"(i) which meets the requirements of subsection (c)(1)(A) (and which does not meet the requirements of subsection (c)(1)(B)), $500, and

"(ii) which meets the requirements of subsection (c)(1)(B), $1,000.".

(c) MODIFICATION OF ENERGY SAVING REQUIREMENTS.—Section 45L(c) is amended to read as follows:

Effective dates.
Time periods.

"(c) ENERGY SAVING REQUIREMENTS.—

"(1) IN GENERAL.—

"(A) IN GENERAL.—A dwelling unit meets the requirements of this subparagraph if such dwelling unit meets the requirements of paragraph (2) or (3) (whichever is applicable).

Certification.

"(B) ZERO ENERGY READY HOME PROGRAM.—A dwelling unit meets the requirements of this subparagraph if such dwelling unit is certified as a zero energy ready home

under the zero energy ready home program of the Department of Energy as in effect on January 1, 2023 (or any successor program determined by the Secretary).

"(2) SINGLE-FAMILY HOME REQUIREMENTS.—A dwelling unit meets the requirements of this paragraph if—

"(A) such dwelling unit meets—

"(i)(I) in the case of a dwelling unit acquired before January 1, 2025, the Energy Star Single-Family New Homes National Program Requirements 3.1, or

"(II) in the case of a dwelling unit acquired after December 31, 2024, the Energy Star Single-Family New Homes National Program Requirements 3.2, and

"(ii) the most recent Energy Star Single-Family New Homes Program Requirements applicable to the location of such dwelling unit (as in effect on the latter of January 1, 2023, or January 1 of two calendar years prior to the date the dwelling unit was acquired), or

"(B) such dwelling unit meets the most recent Energy Star Manufactured Home National program requirements as in effect on the latter of January 1, 2023, or January 1 of two calendar years prior to the date such dwelling unit is acquired.

"(3) MULTI-FAMILY HOME REQUIREMENTS.—A dwelling unit meets the requirements of this paragraph if—

"(A) such dwelling unit meets the most recent Energy Star Multifamily New Construction National Program Requirements (as in effect on either January 1, 2023, or January 1 of three calendar years prior to the date the dwelling was acquired, whichever is later), and

"(B) such dwelling unit meets the most recent Energy Star Multifamily New Construction Regional Program Requirements applicable to the location of such dwelling unit (as in effect on either January 1, 2023, or January 1 of three calendar years prior to the date the dwelling was acquired, whichever is later).".

(d) PREVAILING WAGE REQUIREMENT.—Section 45L is amended by redesignating subsection (g) as subsection (h) and by inserting after subsection (f) the following new subsection: 26 USC 45L.

"(g) PREVAILING WAGE REQUIREMENT.—

"(1) IN GENERAL.—In the case of a qualifying residence described in subsection (a)(2)(B) meeting the prevailing wage requirements of paragraph (2)(A), the credit amount allowed with respect to such residence shall be—

"(A) $2,500 in the case of a residence which meets the requirements of subparagraph (A) of subsection (c)(1) (and which does not meet the requirements of subparagraph (B) of such subsection), and

"(B) $5,000 in the case of a residence which meets the requirements of subsection (c)(1)(B).

"(2) PREVAILING WAGE REQUIREMENTS.—

"(A) IN GENERAL.—The requirements described in this subparagraph with respect to any qualified residence are that the taxpayer shall ensure that any laborers and mechanics employed by the taxpayer or any contractor or subcontractor in the construction of such residence shall be paid wages at rates not less than the prevailing rates Determination.

for construction, alteration, or repair of a similar character in the locality in which such residence is located as most recently determined by the Secretary of Labor, in accordance with subchapter IV of chapter 31 of title 40, United States Code.

Applicability.

"(B) CORRECTION AND PENALTY RELATED TO FAILURE TO SATISFY WAGE REQUIREMENTS.—Rules similar to the rules of section 45(b)(7)(B) shall apply.

Determination. Requirements. Records.

"(3) REGULATIONS AND GUIDANCE.—The Secretary shall issue such regulations or other guidance as the Secretary determines necessary to carry out the purposes of this subsection, including regulations or other guidance which provides for requirements for recordkeeping or information reporting for purposes of administering the requirements of this subsection.".

26 USC 45L.

(e) BASIS ADJUSTMENT.—Section 45L(e) is amended by inserting after the first sentence the following: "This subsection shall not apply for purposes of determining the adjusted basis of any building under section 42.".

Applicability. 26 USC 45L note.

(f) EFFECTIVE DATES.—

(1) IN GENERAL.—Except as provided in paragraph (2), the amendments made by this section shall apply to dwelling units acquired after December 31, 2022.

(2) EXTENSION OF CREDIT.—The amendments made by subsection (a) shall apply to dwelling units acquired after December 31, 2021.

PART 4—CLEAN VEHICLES

SEC. 13401. CLEAN VEHICLE CREDIT.

Determinations.

(a) PER VEHICLE DOLLAR LIMITATION.—Section 30D(b) is amended by striking paragraphs (2) and (3) and inserting the following:

"(2) CRITICAL MINERALS.—In the case of a vehicle with respect to which the requirement described in subsection (e)(1)(A) is satisfied, the amount determined under this paragraph is $3,750.

"(3) BATTERY COMPONENTS.—In the case of a vehicle with respect to which the requirement described in subsection (e)(2)(A) is satisfied, the amount determined under this paragraph is $3,750.".

(b) FINAL ASSEMBLY.—Section 30D(d) is amended—

(1) in paragraph (1)—

(A) in subparagraph (E), by striking "and" at the end,

(B) in subparagraph (F)(ii), by striking the period at the end and inserting ", and", and

(C) by adding at the end the following:

"(G) the final assembly of which occurs within North America.",

(2) by adding at the end the following:

Definition.

"(5) FINAL ASSEMBLY.—For purposes of paragraph (1)(G), the term 'final assembly' means the process by which a manufacturer produces a new clean vehicle at, or through the use of, a plant, factory, or other place from which the vehicle is delivered to a dealer or importer with all component parts necessary for the mechanical operation of the vehicle included with the vehicle, whether or not the component parts are permanently installed in or on the vehicle.".

(c) DEFINITION OF NEW CLEAN VEHICLE.—

(1) IN GENERAL.—Section 30D(d), as amended by the preceding provisions of this section, is amended— 26 USC 30D.

(A) in the heading, by striking "QUALIFIED PLUG-IN ELECTRIC DRIVE MOTOR" and inserting "CLEAN",

(B) in paragraph (1)—

(i) in the matter preceding subparagraph (A), by striking "qualified plug-in electric drive motor" and inserting "clean",

(ii) in subparagraph (C), by inserting "qualified" before "manufacturer",

(iii) in subparagraph (F)—

(I) in clause (i), by striking "4" and inserting "7", and

(II) in clause (ii), by striking "and" at the end,

(iv) in subparagraph (G), by striking the period at the end and inserting ", and", and

(v) by adding at the end the following:

"(H) for which the person who sells any vehicle to the taxpayer furnishes a report to the taxpayer and to the Secretary, at such time and in such manner as the Secretary shall provide, containing—

"(i) the name and taxpayer identification number of the taxpayer,

"(ii) the vehicle identification number of the vehicle, unless, in accordance with any applicable rules promulgated by the Secretary of Transportation, the vehicle is not assigned such a number,

"(iii) the battery capacity of the vehicle,

"(iv) verification that original use of the vehicle commences with the taxpayer, and

"(v) the maximum credit under this section allowable to the taxpayer with respect to the vehicle.",

(C) in paragraph (3)—

(i) in the heading, by striking "MANUFACTURER" and inserting "QUALIFIED MANUFACTURER",

(ii) by striking "The term 'manufacturer' has the meaning given such term in" and inserting "The term 'qualified manufacturer' means any manufacturer (within the meaning of the", and

(iii) by inserting ") which enters into a written agreement with the Secretary under which such manufacturer agrees to make periodic written reports to the Secretary (at such times and in such manner as the Secretary may provide) providing vehicle identification numbers and such other information related to each vehicle manufactured by such manufacturer as the Secretary may require" before the period at the end, and

(D) by adding at the end the following:

"(6) NEW QUALIFIED FUEL CELL MOTOR VEHICLE.—For purposes of this section, the term 'new clean vehicle' shall include any new qualified fuel cell motor vehicle (as defined in section 30B(b)(3)) which meets the requirements under subparagraphs (G) and (H) of paragraph (1).".

(2) CONFORMING AMENDMENTS.—Section 30D is amended—

(A) in subsection (a), by striking "new qualified plug-in electric drive motor vehicle" and inserting "new clean vehicle", and

(B) in subsection (b)(1), by striking "new qualified plug-in electric drive motor vehicle" and inserting "new clean vehicle".

(d) ELIMINATION OF LIMITATION ON NUMBER OF VEHICLES ELIGIBLE FOR CREDIT.—Section 30D is amended by striking subsection (e). 26 USC 30D.

(e) CRITICAL MINERAL AND BATTERY COMPONENT REQUIREMENTS.—

(1) IN GENERAL.—Section 30D, as amended by the preceding provisions of this section, is amended by inserting after subsection (d) the following:

"(e) CRITICAL MINERAL AND BATTERY COMPONENT REQUIREMENTS.— Effective dates. Time periods.

"(1) CRITICAL MINERALS REQUIREMENT.—

"(A) IN GENERAL.—The requirement described in this subparagraph with respect to a vehicle is that, with respect to the battery from which the electric motor of such vehicle draws electricity, the percentage of the value of the applicable critical minerals (as defined in section 45X(c)(6)) contained in such battery that were—

"(i) extracted or processed—

"(I) in the United States, or

"(II) in any country with which the United States has a free trade agreement in effect, or

"(ii) recycled in North America,

is equal to or greater than the applicable percentage (as certified by the qualified manufacturer, in such form or manner as prescribed by the Secretary).

"(B) APPLICABLE PERCENTAGE.—For purposes of subparagraph (A), the applicable percentage shall be—

"(i) in the case of a vehicle placed in service after the date on which the proposed guidance described in paragraph (3)(B) is issued by the Secretary and before January 1, 2024, 40 percent,

"(ii) in the case of a vehicle placed in service during calendar year 2024, 50 percent,

"(iii) in the case of a vehicle placed in service during calendar year 2025, 60 percent,

"(iv) in the case of a vehicle placed in service during calendar year 2026, 70 percent, and

"(v) in the case of a vehicle placed in service after December 31, 2026, 80 percent.

"(2) BATTERY COMPONENTS.—

"(A) IN GENERAL.—The requirement described in this subparagraph with respect to a vehicle is that, with respect to the battery from which the electric motor of such vehicle draws electricity, the percentage of the value of the components contained in such battery that were manufactured or assembled in North America is equal to or greater than the applicable percentage (as certified by the qualified manufacturer, in such form or manner as prescribed by the Secretary).

"(B) APPLICABLE PERCENTAGE.—For purposes of subparagraph (A), the applicable percentage shall be—

"(i) in the case of a vehicle placed in service after the date on which the proposed guidance described in paragraph (3)(B) is issued by the Secretary and before January 1, 2024, 50 percent,

"(ii) in the case of a vehicle placed in service during calendar year 2024 or 2025, 60 percent,

"(iii) in the case of a vehicle placed in service during calendar year 2026, 70 percent,

"(iv) in the case of a vehicle placed in service during calendar year 2027, 80 percent,

"(v) in the case of a vehicle placed in service during calendar year 2028, 90 percent,

"(vi) in the case of a vehicle placed in service after December 31, 2028, 100 percent.

"(3) REGULATIONS AND GUIDANCE.—

"(A) IN GENERAL.—The Secretary shall issue such regulations or other guidance as the Secretary determines necessary to carry out the purposes of this subsection, including regulations or other guidance which provides for requirements for recordkeeping or information reporting for purposes of administering the requirements of this subsection. Determination.

"(B) DEADLINE FOR PROPOSED GUIDANCE.—Not later than December 31, 2022, the Secretary shall issue proposed guidance with respect to the requirements under this subsection.".

(2) EXCLUDED ENTITIES.—Section 30D(d), as amended by the preceding provisions of this section, is amended by adding at the end the following: 26 USC 30D.

"(7) EXCLUDED ENTITIES.—For purposes of this section, the term 'new clean vehicle' shall not include— Effective dates.

"(A) any vehicle placed in service after December 31, 2024, with respect to which any of the applicable critical minerals contained in the battery of such vehicle (as described in subsection (e)(1)(A)) were extracted, processed, or recycled by a foreign entity of concern (as defined in section 40207(a)(5) of the Infrastructure Investment and Jobs Act (42 U.S.C. 18741(a)(5))), or

"(B) any vehicle placed in service after December 31, 2023, with respect to which any of the components contained in the battery of such vehicle (as described in subsection (e)(2)(A)) were manufactured or assembled by a foreign entity of concern (as so defined).".

(f) SPECIAL RULES.—Section 30D(f) is amended by adding at the end the following:

"(8) ONE CREDIT PER VEHICLE.—In the case of any vehicle, the credit described in subsection (a) shall only be allowed once with respect to such vehicle, as determined based upon the vehicle identification number of such vehicle.

"(9) VIN REQUIREMENT.—No credit shall be allowed under this section with respect to any vehicle unless the taxpayer includes the vehicle identification number of such vehicle on the return of tax for the taxable year.

"(10) LIMITATION BASED ON MODIFIED ADJUSTED GROSS INCOME.—

"(A) IN GENERAL.—No credit shall be allowed under subsection (a) for any taxable year if—

"(i) the lesser of—

"(I) the modified adjusted gross income of the taxpayer for such taxable year, or

"(II) the modified adjusted gross income of the taxpayer for the preceding taxable year, exceeds

"(ii) the threshold amount.

"(B) THRESHOLD AMOUNT.—For purposes of subparagraph (A)(ii), the threshold amount shall be—

"(i) in the case of a joint return or a surviving spouse (as defined in section 2(a)), $300,000,

"(ii) in the case of a head of household (as defined in section 2(b)), $225,000, and

"(iii) in the case of a taxpayer not described in clause (i) or (ii), $150,000.

Definition.

"(C) MODIFIED ADJUSTED GROSS INCOME.—For purposes of this paragraph, the term 'modified adjusted gross income' means adjusted gross income increased by any amount excluded from gross income under section 911, 931, or 933.

"(11) MANUFACTURER'S SUGGESTED RETAIL PRICE LIMITATION.—

"(A) IN GENERAL.—No credit shall be allowed under subsection (a) for a vehicle with a manufacturer's suggested retail price in excess of the applicable limitation.

"(B) APPLICABLE LIMITATION.—For purposes of subparagraph (A), the applicable limitation for each vehicle classification is as follows:

"(i) VANS.—In the case of a van, $80,000.

"(ii) SPORT UTILITY VEHICLES.—In the case of a sport utility vehicle, $80,000.

"(iii) PICKUP TRUCKS.—In the case of a pickup truck, $80,000.

"(iv) OTHER.—In the case of any other vehicle, $55,000.

Determination.

"(C) REGULATIONS AND GUIDANCE.—For purposes of this paragraph, the Secretary shall prescribe such regulations or other guidance as the Secretary determines necessary for determining vehicle classifications using criteria similar to that employed by the Environmental Protection Agency and the Department of the Energy to determine size and class of vehicles.".

(g) TRANSFER OF CREDIT.—

26 USC 30D.

(1) IN GENERAL.—Section 30D is amended by striking subsection (g) and inserting the following:

"(g) TRANSFER OF CREDIT.—

Determination.

"(1) IN GENERAL.—Subject to such regulations or other guidance as the Secretary determines necessary, if the taxpayer who acquires a new clean vehicle elects the application of this subsection with respect to such vehicle, the credit which would (but for this subsection) be allowed to such taxpayer with respect to such vehicle shall be allowed to the eligible entity specified in such election (and not to such taxpayer).

Definition.

"(2) ELIGIBLE ENTITY.—For purposes of this subsection, the term 'eligible entity' means, with respect to the vehicle for which the credit is allowed under subsection (a), the dealer which sold such vehicle to the taxpayer and has—

"(A) subject to paragraph (4), registered with the Secretary for purposes of this paragraph, at such time, and in such form and manner, as the Secretary may prescribe,

"(B) prior to the election described in paragraph (1) and not later than at the time of such sale, disclosed to the taxpayer purchasing such vehicle—

"(i) the manufacturer's suggested retail price,

"(ii) the value of the credit allowed and any other incentive available for the purchase of such vehicle, and

"(iii) the amount provided by the dealer to such taxpayer as a condition of the election described in paragraph (1),

"(C) not later than at the time of such sale, made payment to such taxpayer (whether in cash or in the form of a partial payment or down payment for the purchase of such vehicle) in an amount equal to the credit otherwise allowable to such taxpayer, and Deadline.

"(D) with respect to any incentive otherwise available for the purchase of a vehicle for which a credit is allowed under this section, including any incentive in the form of a rebate or discount provided by the dealer or manufacturer, ensured that—

"(i) the availability or use of such incentive shall not limit the ability of a taxpayer to make an election described in paragraph (1), and

"(ii) such election shall not limit the value or use of such incentive.

"(3) TIMING.—An election described in paragraph (1) shall be made by the taxpayer not later than the date on which the vehicle for which the credit is allowed under subsection (a) is purchased.

"(4) REVOCATION OF REGISTRATION.—Upon determination by the Secretary that a dealer has failed to comply with the requirements described in paragraph (2), the Secretary may revoke the registration (as described in subparagraph (A) of such paragraph) of such dealer. Determination.

"(5) TAX TREATMENT OF PAYMENTS.—With respect to any payment described in paragraph (2)(C), such payment—

"(A) shall not be includible in the gross income of the taxpayer, and

"(B) with respect to the dealer, shall not be deductible under this title.

"(6) APPLICATION OF CERTAIN OTHER REQUIREMENTS.—In the case of any election under paragraph (1) with respect to any vehicle—

"(A) the requirements of paragraphs (1) and (2) of subsection (f) shall apply to the taxpayer who acquired the vehicle in the same manner as if the credit determined under this section with respect to such vehicle were allowed to such taxpayer,

"(B) paragraph (6) of such subsection shall not apply, and

"(C) the requirement of paragraph (9) of such subsection (f) shall be treated as satisfied if the eligible entity provides the vehicle identification number of such vehicle

to the Secretary in such manner as the Secretary may provide.

"(7) ADVANCE PAYMENT TO REGISTERED DEALERS.—

"(A) IN GENERAL.—The Secretary shall establish a program to make advance payments to any eligible entity in an amount equal to the cumulative amount of the credits allowed under subsection (a) with respect to any vehicles sold by such entity for which an election described in paragraph (1) has been made.

Applicability.

"(B) EXCESSIVE PAYMENTS.—Rules similar to the rules of section 6417(d)(6) shall apply for purposes of this paragraph.

"(C) TREATMENT OF ADVANCE PAYMENTS.—For purposes of section 1324 of title 31, United States Code, the payments under subparagraph (A) shall be treated in the same manner as a refund due from a credit provision referred to in subsection (b)(2) of such section.

Definition.

"(8) DEALER.—For purposes of this subsection, the term 'dealer' means a person licensed by a State, the District of Columbia, the Commonwealth of Puerto Rico, any other territory or possession of the United States, an Indian tribal government, or any Alaska Native Corporation (as defined in section 3 of the Alaska Native Claims Settlement Act (43 U.S.C. 1602(m)) to engage in the sale of vehicles.

Definition.

"(9) INDIAN TRIBAL GOVERNMENT.—For purposes of this subsection, the term 'Indian tribal government' means the recognized governing body of any Indian or Alaska Native tribe, band, nation, pueblo, village, community, component band, or component reservation, individually identified (including parenthetically) in the list published most recently as of the date of enactment of this subsection pursuant to section 104 of the Federally Recognized Indian Tribe List Act of 1994 (25 U.S.C. 5131).

"(10) RECAPTURE.—In the case of any taxpayer who has made an election described in paragraph (1) with respect to a new clean vehicle and received a payment described in paragraph (2)(C) from an eligible entity, if the credit under subsection (a) would otherwise (but for this subsection) not be allowable to such taxpayer pursuant to the application of subsection (f)(10), the tax imposed on such taxpayer under this chapter for the taxable year in which such vehicle was placed in service shall be increased by the amount of the payment received by such taxpayer.".

(2) CONFORMING AMENDMENTS.—Section 30D, as amended by the preceding provisions of this section, is amended—

26 USC 30D.

(A) in subsection (d)(1)(H) of such section—

(i) in clause (iv), by striking "and" at the end,

(ii) in clause (v), by striking the period at the end and inserting ", and", and

(iii) by adding at the end the following:

"(vi) in the case of a taxpayer who makes an election under subsection (g)(1), any amount described in subsection (g)(2)(C) which has been provided to such taxpayer.", and

(B) in subsection (f)—

(i) by striking paragraph (3), and

(ii) in paragraph (8), by inserting ", including any vehicle with respect to which the taxpayer elects the application of subsection (g)" before the period at the end.

(h) TERMINATION.—Section 30D is amended by adding at the end the following: 26 USC 30D.

"(h) TERMINATION.—No credit shall be allowed under this section with respect to any vehicle placed in service after December 31, 2032.".

(i) ADDITIONAL CONFORMING AMENDMENTS.—

(1) The heading of section 30D is amended by striking "**NEW QUALIFIED PLUG-IN ELECTRIC DRIVE MOTOR VEHICLES**" and inserting "**CLEAN VEHICLE CREDIT**".

(2) Section 30B is amended—

(A) in subsection (h)(8), by striking ", except that no benefit shall be recaptured if such property ceases to be eligible for such credit by reason of conversion to a qualified plug-in electric drive motor vehicle", and

(B) by striking subsection (i).

(3) Section 38(b)(30) is amended by striking "qualified plug-in electric drive motor" and inserting "clean".

(4) Section 6213(g)(2), as amended by the preceding provisions of this Act, is amended—

(A) in subparagraph (R), by striking "and" at the end,

(B) in subparagraph (S), by striking the period at the end and inserting ", and", and

(C) by inserting after subparagraph (S) the following:

"(T) an omission of a correct vehicle identification number required under section 30D(f)(9) (relating to credit for new clean vehicles) to be included on a return.".

(5) Section 6501(m) is amended by striking "30D(e)(4)" and inserting "30D(f)(6)".

(6) The table of sections for subpart B of part IV of subchapter A of chapter 1 is amended by striking the item relating to section 30D and inserting after the item relating to section 30C the following item: 26 USC 27 prec.

"Sec. 30D. Clean vehicle credit.".

(j) GROSS-UP OF DIRECT SPENDING.—Beginning in fiscal year 2023 and each fiscal year thereafter, the portion of any credit allowed to an eligible entity (as defined in section 30D(g)(2) of the Internal Revenue Code of 1986) pursuant to an election made under section 30D(g) of the Internal Revenue Code of 1986 that is direct spending shall be increased by 6.0445 percent. Effective dates. Time periods. 26 USC 30D note.

(k) EFFECTIVE DATES.—

(1) IN GENERAL.—Except as provided in paragraphs (2), (3), (4), and (5), the amendments made by this section shall apply to vehicles placed in service after December 31, 2022. Applicability. 26 USC 30D note.

(2) FINAL ASSEMBLY.—The amendments made by subsection (b) shall apply to vehicles sold after the date of enactment of this Act.

(3) PER VEHICLE DOLLAR LIMITATION AND RELATED REQUIREMENTS.—The amendments made by subsections (a) and (e) shall apply to vehicles placed in service after the date on which the proposed guidance described in paragraph (3)(B) of section 30D(e) of the Internal Revenue Code of 1986 (as added by subsection (e)) is issued by the Secretary of the Treasury (or the Secretary's delegate).

(4) TRANSFER OF CREDIT.—The amendments made by subsection (g) shall apply to vehicles placed in service after December 31, 2023.

(5) ELIMINATION OF MANUFACTURER LIMITATION.—The amendment made by subsection (d) shall apply to vehicles sold after December 31, 2022.

Applicability. Effective dates. 26 USC 30D note.

(l) TRANSITION RULE.—Solely for purposes of the application of section 30D of the Internal Revenue Code of 1986, in the case of a taxpayer that—

(1) after December 31, 2021, and before the date of enactment of this Act, purchased, or entered into a written binding contract to purchase, a new qualified plug-in electric drive motor vehicle (as defined in section 30D(d)(1) of the Internal Revenue Code of 1986, as in effect on the day before the date of enactment of this Act), and

(2) placed such vehicle in service on or after the date of enactment of this Act,

such taxpayer may elect (at such time, and in such form and manner, as the Secretary of the Treasury, or the Secretary's delegate, may prescribe) to treat such vehicle as having been placed in service on the day before the date of enactment of this Act.

SEC. 13402. CREDIT FOR PREVIOUSLY-OWNED CLEAN VEHICLES.

(a) IN GENERAL.—Subpart A of part IV of subchapter A of chapter 1 is amended by inserting after section 25D the following new section:

26 USC 25E.

"SEC. 25E. PREVIOUSLY-OWNED CLEAN VEHICLES.

"(a) ALLOWANCE OF CREDIT.—In the case of a qualified buyer who during a taxable year places in service a previously-owned clean vehicle, there shall be allowed as a credit against the tax imposed by this chapter for the taxable year an amount equal to the lesser of—

"(1) $4,000, or

"(2) the amount equal to 30 percent of the sale price with respect to such vehicle.

"(b) LIMITATION BASED ON MODIFIED ADJUSTED GROSS INCOME.—

"(1) IN GENERAL.—No credit shall be allowed under subsection (a) for any taxable year if—

"(A) the lesser of—

"(i) the modified adjusted gross income of the taxpayer for such taxable year, or

"(ii) the modified adjusted gross income of the taxpayer for the preceding taxable year, exceeds

"(B) the threshold amount.

"(2) THRESHOLD AMOUNT.—For purposes of paragraph (1)(B), the threshold amount shall be—

"(A) in the case of a joint return or a surviving spouse (as defined in section 2(a)), $150,000,

"(B) in the case of a head of household (as defined in section 2(b)), $112,500, and

"(C) in the case of a taxpayer not described in subparagraph (A) or (B), $75,000.

Definition.

"(3) MODIFIED ADJUSTED GROSS INCOME.—For purposes of this subsection, the term 'modified adjusted gross income' means adjusted gross income increased by any amount excluded from gross income under section 911, 931, or 933.

"(c) DEFINITIONS.—For purposes of this section—

"(1) PREVIOUSLY-OWNED CLEAN VEHICLE.—The term 'previously-owned clean vehicle' means, with respect to a taxpayer, a motor vehicle—

"(A) the model year of which is at least 2 years earlier than the calendar year in which the taxpayer acquires such vehicle,

"(B) the original use of which commences with a person other than the taxpayer,

"(C) which is acquired by the taxpayer in a qualified sale, and

"(D) which—

"(i) meets the requirements of subparagraphs (C), (D), (E), (F), and (H) (except for clause (iv) thereof) of section 30D(d)(1), or

"(ii) is a motor vehicle which—

"(I) satisfies the requirements under subparagraphs (A) and (B) of section 30B(b)(3), and

"(II) has a gross vehicle weight rating of less than 14,000 pounds.

"(2) QUALIFIED SALE.—The term 'qualified sale' means a sale of a motor vehicle—

"(A) by a dealer (as defined in section 30D(g)(8)),

"(B) for a sale price which does not exceed $25,000, and

"(C) which is the first transfer since the date of the enactment of this section to a qualified buyer other than the person with whom the original use of such vehicle commenced.

"(3) QUALIFIED BUYER.—The term 'qualified buyer' means, with respect to a sale of a motor vehicle, a taxpayer—

"(A) who is an individual,

"(B) who purchases such vehicle for use and not for resale,

"(C) with respect to whom no deduction is allowable with respect to another taxpayer under section 151, and

"(D) who has not been allowed a credit under this section for any sale during the 3-year period ending on the date of the sale of such vehicle.

"(4) MOTOR VEHICLE; CAPACITY.—The terms 'motor vehicle' and 'capacity' have the meaning given such terms in paragraphs (2) and (4) of section 30D(d), respectively.

"(d) VIN NUMBER REQUIREMENT.—No credit shall be allowed under subsection (a) with respect to any vehicle unless the taxpayer includes the vehicle identification number of such vehicle on the return of tax for the taxable year.

"(e) APPLICATION OF CERTAIN RULES.—For purposes of this section, rules similar to the rules of section 30D(f) (without regard to paragraph (10) or (11) thereof) shall apply for purposes of this section.

"(f) TERMINATION.—No credit shall be allowed under this section with respect to any vehicle acquired after December 31, 2032.".

(b) TRANSFER OF CREDIT.—Section 25E, as added by subsection (a), is amended—

(1) by redesignating subsection (f) as subsection (g), and

(2) by inserting after subsection (e) the following:

Applicability.

"(f) TRANSFER OF CREDIT.—Rules similar to the rules of section 30D(g) shall apply.".

(c) CONFORMING AMENDMENTS.—Section 6213(g)(2), as amended by the preceding provisions of this Act, is amended—

(1) in subparagraph (S), by striking "and" at the end,

(2) in subparagraph (T), by striking the period at the end and inserting ", and", and

(3) by inserting after subparagraph (T) the following:

"(U) an omission of a correct vehicle identification number required under section 25E(d) (relating to credit for previously-owned clean vehicles) to be included on a return.".

(d) CLERICAL AMENDMENT.—The table of sections for subpart A of part IV of subchapter A of chapter 1 is amended by inserting after the item relating to section 25D the following new item:

26 USC 21 prec.

"Sec. 25E. Previously-owned clean vehicles.".

Applicability.
26 USC 25E note.

(e) EFFECTIVE DATE.—

(1) IN GENERAL.—Except as provided in paragraph (2), the amendments made by this section shall apply to vehicles acquired after December 31, 2022.

(2) TRANSFER OF CREDIT.—The amendments made by subsection (b) shall apply to vehicles acquired after December 31, 2023.

SEC. 13403. QUALIFIED COMMERCIAL CLEAN VEHICLES.

(a) IN GENERAL.—Subpart D of part IV of subchapter A of chapter 1, as amended by the preceding provisions of this Act, is amended by adding at the end the following new section:

26 USC 45W.

"SEC. 45W. CREDIT FOR QUALIFIED COMMERCIAL CLEAN VEHICLES.

"(a) IN GENERAL.—For purposes of section 38, the qualified commercial clean vehicle credit for any taxable year is an amount equal to the sum of the credit amounts determined under subsection (b) with respect to each qualified commercial clean vehicle placed in service by the taxpayer during the taxable year.

"(b) PER VEHICLE AMOUNT.—

"(1) IN GENERAL.—Subject to paragraph (4), the amount determined under this subsection with respect to any qualified commercial clean vehicle shall be equal to the lesser of—

"(A) 15 percent of the basis of such vehicle (30 percent in the case of a vehicle not powered by a gasoline or diesel internal combustion engine), or

"(B) the incremental cost of such vehicle.

"(2) INCREMENTAL COST.—For purposes of paragraph (1)(B), the incremental cost of any qualified commercial clean vehicle is an amount equal to the excess of the purchase price for such vehicle over such price of a comparable vehicle.

Definition.

"(3) COMPARABLE VEHICLE.—For purposes of this subsection, the term 'comparable vehicle' means, with respect to any qualified commercial clean vehicle, any vehicle which is powered solely by a gasoline or diesel internal combustion engine and which is comparable in size and use to such vehicle.

"(4) LIMITATION.—The amount determined under this subsection with respect to any qualified commercial clean vehicle shall not exceed—

"(A) in the case of a vehicle which has a gross vehicle weight rating of less than 14,000 pounds, $7,500, and

"(B) in the case of a vehicle not described in subparagraph (A), $40,000.

"(c) QUALIFIED COMMERCIAL CLEAN VEHICLE.—For purposes of this section, the term 'qualified commercial clean vehicle' means any vehicle which— Definition.

"(1) meets the requirements of section 30D(d)(1)(C) and is acquired for use or lease by the taxpayer and not for resale,

"(2) either—

"(A) meets the requirements of subparagraph (D) of section 30D(d)(1) and is manufactured primarily for use on public streets, roads, and highways (not including a vehicle operated exclusively on a rail or rails), or

"(B) is mobile machinery, as defined in section 4053(8) (including vehicles that are not designed to perform a function of transporting a load over the public highways),

"(3) either—

"(A) is propelled to a significant extent by an electric motor which draws electricity from a battery which has a capacity of not less than 15 kilowatt hours (or, in the case of a vehicle which has a gross vehicle weight rating of less than 14,000 pounds, 7 kilowatt hours) and is capable of being recharged from an external source of electricity, or

"(B) is a motor vehicle which satisfies the requirements under subparagraphs (A) and (B) of section 30B(b)(3), and

"(4) is of a character subject to the allowance for depreciation.

"(d) SPECIAL RULES.—

"(1) IN GENERAL.—Rules similar to the rules under subsection (f) of section 30D (without regard to paragraph (10) or (11) thereof) shall apply for purposes of this section. Applicability.

"(2) VEHICLES PLACED IN SERVICE BY TAX-EXEMPT ENTITIES.—Subsection (c)(4) shall not apply to any vehicle which is not subject to a lease and which is placed in service by a tax-exempt entity described in clause (i), (ii), or (iv) of section 168(h)(2)(A).

"(3) NO DOUBLE BENEFIT.—No credit shall be allowed under this section with respect to any vehicle for which a credit was allowed under section 30D.

"(e) VIN NUMBER REQUIREMENT.—No credit shall be determined under subsection (a) with respect to any vehicle unless the taxpayer includes the vehicle identification number of such vehicle on the return of tax for the taxable year.

"(f) REGULATIONS AND GUIDANCE.—The Secretary shall issue such regulations or other guidance as the Secretary determines necessary to carry out the purposes of this section, including regulations or other guidance relating to determination of the incremental cost of any qualified commercial clean vehicle. Determination.

"(g) TERMINATION.—No credit shall be determined under this section with respect to any vehicle acquired after December 31, 2032.".

(b) CONFORMING AMENDMENTS.—

(1) Section 38(b), as amended by the preceding provisions of this Act, is amended— 26 USC 38.

(A) in paragraph (35), by striking "plus" at the end,

(B) in paragraph (36), by striking the period at the end and inserting ", plus", and

(C) by adding at the end the following new paragraph:

"(37) the qualified commercial clean vehicle credit determined under section 45W.".

(2) Section 6213(g)(2), as amended by the preceding provisions of this Act, is amended— 26 USC 6213.

(A) in subparagraph (T), by striking "and" at the end,

(B) in subparagraph (U), by striking the period at the end and inserting ", and", and

(C) by inserting after subparagraph (U) the following:

"(V) an omission of a correct vehicle identification number required under section 45W(e) (relating to commercial clean vehicle credit) to be included on a return.".

(3) The table of sections for subpart D of part IV of subchapter A of chapter 1, as amended by the preceding provisions of this Act, is amended by adding at the end the following new item: 26 USC 38 prec.

"Sec. 45W. Qualified commercial clean vehicle credit.".

(c) EFFECTIVE DATE.—The amendments made by this section shall apply to vehicles acquired after December 31, 2022. 26 USC 45W note.

SEC. 13404. ALTERNATIVE FUEL REFUELING PROPERTY CREDIT.

(a) IN GENERAL.—Section 30C(g) is amended by striking "December 31, 2021" and inserting "December 31, 2032".

(b) CREDIT FOR PROPERTY OF A CHARACTER SUBJECT TO DEPRECIATION.—

(1) IN GENERAL.—Section 30C(a) is amended by inserting "(6 percent in the case of property of a character subject to depreciation)" after "30 percent".

(2) MODIFICATION OF CREDIT LIMITATION.—Subsection (b) of section 30C is amended—

(A) in the matter preceding paragraph (1)—

(i) by striking "with respect to all" and inserting "with respect to any single item of", and

(ii) by striking "at a location", and

(B) in paragraph (1), by striking "$30,000 in the case of a property" and inserting "$100,000 in the case of any such item of property".

(3) BIDIRECTIONAL CHARGING EQUIPMENT INCLUDED AS QUALIFIED ALTERNATIVE FUEL VEHICLE REFUELING PROPERTY.—Section 30C(c) is amended to read as follows:

"(c) QUALIFIED ALTERNATIVE FUEL VEHICLE REFUELING PROPERTY.—For purposes of this section—

"(1) IN GENERAL.—The term 'qualified alternative fuel vehicle refueling property' has the same meaning as the term 'qualified clean-fuel vehicle refueling property' would have under section 179A if— Definition.

"(A) paragraph (1) of section 179A(d) did not apply to property installed on property which is used as the principal residence (within the meaning of section 121) of the taxpayer, and

"(B) only the following were treated as clean-burning fuels for purposes of section 179A(d):

"(i) Any fuel at least 85 percent of the volume of which consists of one or more of the following: ethanol, natural gas, compressed natural gas, liquified natural gas, liquefied petroleum gas, or hydrogen.

"(ii) Any mixture—

"(I) which consists of two or more of the following: biodiesel (as defined in section 40A(d)(1)), diesel fuel (as defined in section 4083(a)(3)), or kerosene, and

"(II) at least 20 percent of the volume of which consists of biodiesel (as so defined) determined without regard to any kerosene in such mixture. "(iii) Electricity.

"(2) BIDIRECTIONAL CHARGING EQUIPMENT.—Property shall not fail to be treated as qualified alternative fuel vehicle refueling property solely because such property—

"(A) is capable of charging the battery of a motor vehicle propelled by electricity, and

"(B) allows discharging electricity from such battery to an electric load external to such motor vehicle.".

(c) CERTAIN ELECTRIC CHARGING STATIONS INCLUDED AS QUALIFIED ALTERNATIVE FUEL VEHICLE REFUELING PROPERTY.—Section 30C is amended by redesignating subsections (f) and (g) as subsections (g) and (h), respectively, and by inserting after subsection (e) the following: 26 USC 30C.

"(f) SPECIAL RULE FOR ELECTRIC CHARGING STATIONS FOR CERTAIN VEHICLES WITH 2 OR 3 WHEELS.—For purposes of this section—

"(1) IN GENERAL.—The term 'qualified alternative fuel vehicle refueling property' includes any property described in subsection (c) for the recharging of a motor vehicle described in paragraph (2), but only if such property— Definition.

"(A) meets the requirements of subsection (a)(2), and

"(B) is of a character subject to depreciation.

"(2) MOTOR VEHICLE.—A motor vehicle is described in this paragraph if the motor vehicle—

"(A) is manufactured primarily for use on public streets, roads, or highways (not including a vehicle operated exclusively on a rail or rails),

"(B) has 2 or 3 wheels, and

"(C) is propelled by electricity.".

(d) WAGE AND APPRENTICESHIP REQUIREMENTS.—Section 30C, as amended by this section, is further amended by redesignating subsections (g) and (h) as subsections (h) and (i) and by inserting after subsection (f) the following new subsection:

"(g) WAGE AND APPRENTICESHIP REQUIREMENTS.—

"(1) INCREASED CREDIT AMOUNT.—

"(A) IN GENERAL.—In the case of any qualified alternative fuel vehicle refueling project which satisfies the requirements of subparagraph (C), the amount of the credit determined under subsection (a) for any qualified alternative fuel vehicle refueling property of a character subject to an allowance for depreciation which is part of such project shall be equal to such amount (determined without regard to this sentence) multiplied by 5.

"(B) QUALIFIED ALTERNATIVE FUEL VEHICLE REFUELING PROJECT.—For purposes of this subsection, the term 'qualified alternative fuel vehicle refueling project' means a project consisting of one or more properties that are part of a single project. Definition.

"(C) PROJECT REQUIREMENTS.—A project meets the requirements of this subparagraph if it is one of the following:

Time period. Publication. Guidelines.

"(i) A project the construction of which begins prior to the date that is 60 days after the Secretary publishes guidance with respect to the requirements of paragraphs (2)(A) and (3).

"(ii) A project which satisfies the requirements of paragraphs (2)(A) and (3).

"(2) PREVAILING WAGE REQUIREMENTS.—

"(A) IN GENERAL.—The requirements described in this subparagraph with respect to any qualified alternative fuel vehicle refueling project are that the taxpayer shall ensure that any laborers and mechanics employed by the taxpayer or any contractor or subcontractor in the construction of any qualified alternative fuel vehicle refueling property which is part of such project shall be paid wages at rates not less than the prevailing rates for construction, alteration, or repair of a similar character in the locality in which such project is located as most recently determined by the Secretary of Labor, in accordance with subchapter IV of chapter 31 of title 40, United States Code.

Applicability.

"(B) CORRECTION AND PENALTY RELATED TO FAILURE TO SATISFY WAGE REQUIREMENTS.—Rules similar to the rules of section 45(b)(7)(B) shall apply.

Applicability.

"(3) APPRENTICESHIP REQUIREMENTS.—Rules similar to the rules of section 45(b)(8) shall apply.

Determination. Requirements. Records.

"(4) REGULATIONS AND GUIDANCE.—The Secretary shall issue such regulations or other guidance as the Secretary determines necessary to carry out the purposes of this subsection, including regulations or other guidance which provides for requirements for recordkeeping or information reporting for purposes of administering the requirements of this subsection.".

(e) ELIGIBLE CENSUS TRACTS.—Subsection (c) of section 30C, as amended by subsection (b)(3), is amended by adding at the end the following:

26 USC 30C.

"(3) PROPERTY REQUIRED TO BE LOCATED IN ELIGIBLE CENSUS TRACTS.—

"(A) IN GENERAL.—Property shall not be treated as qualified alternative fuel vehicle refueling property unless such property is placed in service in an eligible census tract.

Definitions.

"(B) ELIGIBLE CENSUS TRACT.—

"(i) IN GENERAL.—For purposes of this paragraph, the term 'eligible census tract' means any population census tract which—

"(I) is described in section 45D(e), or

"(II) is not an urban area.

"(ii) URBAN AREA.—For purposes of clause (i)(II), the term 'urban area' means a census tract (as defined by the Bureau of the Census) which, according to the most recent decennial census, has been designated as an urban area by the Secretary of Commerce.".

Applicability. 26 USC 30C note.

(f) EFFECTIVE DATE.—

(1) IN GENERAL.—Except as provided in paragraph (2), the amendments made by this section shall apply to property placed in service after December 31, 2022.

(2) EXTENSION.—The amendments made by subsection (a) shall apply to property placed in service after December 31, 2021.

PART 5—INVESTMENT IN CLEAN ENERGY MANUFACTURING AND ENERGY SECURITY

SEC. 13501. EXTENSION OF THE ADVANCED ENERGY PROJECT CREDIT.

(a) EXTENSION OF CREDIT.—Section 48C is amended by redesignating subsection (e) as subsection (f) and by inserting after subsection (d) the following new subsection: 26 USC 48C.

"(e) ADDITIONAL ALLOCATIONS.—

"(1) IN GENERAL.—Not later than 180 days after the date of enactment of this subsection, the Secretary shall establish a program to consider and award certifications for qualified investments eligible for credits under this section to qualifying advanced energy project sponsors. Deadline.

"(2) LIMITATION.—The total amount of credits which may be allocated under the program established under paragraph (1) shall not exceed $10,000,000,000, of which not greater than $6,000,000,000 may be allocated to qualified investments which are not located within a census tract which—

"(A) is described in clause (iii) of section 45(b)(11)(B), and

"(B) prior to the date of enactment of this subsection, had no project which received a certification and allocation of credits under subsection (d).

"(3) CERTIFICATIONS.— Time period.

"(A) APPLICATION REQUIREMENT.—Each applicant for certification under this subsection shall submit an application at such time and containing such information as the Secretary may require.

"(B) TIME TO MEET CRITERIA FOR CERTIFICATION.—Each applicant for certification shall have 2 years from the date of acceptance by the Secretary of the application during which to provide to the Secretary evidence that the requirements of the certification have been met. Notification.

"(C) PERIOD OF ISSUANCE.—An applicant which receives a certification shall have 2 years from the date of issuance of the certification in order to place the project in service and to notify the Secretary that such project has been so placed in service, and if such project is not placed in service by that time period, then the certification shall no longer be valid. If any certification is revoked under this subparagraph, the amount of the limitation under paragraph (2) shall be increased by the amount of the credit with respect to such revoked certification.

"(D) LOCATION OF PROJECT.—In the case of an applicant which receives a certification, if the Secretary determines that the project has been placed in service at a location which is materially different than the location specified in the application for such project, the certification shall no longer be valid. Determination.

"(4) CREDIT RATE CONDITIONED UPON WAGE AND APPRENTICESHIP REQUIREMENTS.—

"(A) BASE RATE.—For purposes of allocations under this subsection, the amount of the credit determined under Determination.

subsection (a) shall be determined by substituting '6 percent' for '30 percent'.

"(B) ALTERNATIVE RATE.—In the case of any project which satisfies the requirements of paragraphs (5)(A) and (6), subparagraph (A) shall not apply.

"(5) PREVAILING WAGE REQUIREMENTS.—

"(A) IN GENERAL.—The requirements described in this subparagraph with respect to a project are that the taxpayer shall ensure that any laborers and mechanics employed by the taxpayer or any contractor or subcontractor in the re-equipping, expansion, or establishment of a manufacturing facility shall be paid wages at rates not less than the prevailing rates for construction, alteration, or repair of a similar character in the locality in which such project is located as most recently determined by the Secretary of Labor, in accordance with subchapter IV of chapter 31 of title 40, United States Code.

Applicability.

"(B) CORRECTION AND PENALTY RELATED TO FAILURE TO SATISFY WAGE REQUIREMENTS.—Rules similar to the rules of section 45(b)(7)(B) shall apply.

Applicability.

"(6) APPRENTICESHIP REQUIREMENTS.—Rules similar to the rules of section 45(b)(8) shall apply.

Certification. Public information.

"(7) DISCLOSURE OF ALLOCATIONS.—The Secretary shall, upon making a certification under this subsection, publicly disclose the identity of the applicant and the amount of the credit with respect to such applicant.".

26 USC 48C.

(b) MODIFICATION OF QUALIFYING ADVANCED ENERGY PROJECTS.—Section 48C(c)(1)(A) is amended—

(1) by inserting ", any portion of the qualified investment of which is certified by the Secretary under subsection (e) as eligible for a credit under this section" after "means a project",

(2) in clause (i)—

(A) by striking "a manufacturing facility for the production of" and inserting "an industrial or manufacturing facility for the production or recycling of",

(B) in clause (I), by inserting "water," after "sun,",

(C) in clause (II), by striking "an energy storage system for use with electric or hybrid-electric motor vehicles" and inserting "energy storage systems and components",

(D) in clause (III), by striking "grids to support the transmission of intermittent sources of renewable energy, including storage of such energy" and inserting "grid modernization equipment or components",

(E) in subclause (IV), by striking "and sequester carbon dioxide emissions" and inserting ", remove, use, or sequester carbon oxide emissions",

(F) by striking subclause (V) and inserting the following:

"(V) equipment designed to refine, electrolyze, or blend any fuel, chemical, or product which is—

"(aa) renewable, or

"(bb) low-carbon and low-emission,",

(G) by striking subclause (VI),

(H) by redesignating subclause (VII) as subclause (IX),

(I) by inserting after subclause (V) the following new subclauses:

"(VI) property designed to produce energy conservation technologies (including residential, commercial, and industrial applications),

"(VII) light-, medium-, or heavy-duty electric or fuel cell vehicles, as well as—

"(aa) technologies, components, or materials for such vehicles, and

"(bb) associated charging or refueling infrastructure,

"(VIII) hybrid vehicles with a gross vehicle weight rating of not less than 14,000 pounds, as well as technologies, components, or materials for such vehicles, or", and

(J) in subclause (IX), as so redesignated, by striking "and" at the end, and

(3) by striking clause (ii) and inserting the following:

"(ii) which re-equips an industrial or manufacturing facility with equipment designed to reduce greenhouse gas emissions by at least 20 percent through the installation of—

"(I) low- or zero-carbon process heat systems,

"(II) carbon capture, transport, utilization and storage systems,

"(III) energy efficiency and reduction in waste from industrial processes, or

"(IV) any other industrial technology designed to reduce greenhouse gas emissions, as determined by the Secretary, or

"(iii) which re-equips, expands, or establishes an industrial facility for the processing, refining, or recycling of critical materials (as defined in section 7002(a) of the Energy Act of 2020 (30 U.S.C. 1606(a)).".

(c) CONFORMING AMENDMENT.—Subparagraph (A) of section 48C(c)(2) is amended to read as follows: 26 USC 48C.

"(A) which is necessary for—

"(i) the production or recycling of property described in clause (i) of paragraph (1)(A),

"(ii) re-equipping an industrial or manufacturing facility described in clause (ii) of such paragraph, or

"(iii) re-equipping, expanding, or establishing an industrial facility described in clause (iii) of such paragraph,".

(d) DENIAL OF DOUBLE BENEFIT.—48C(f), as redesignated by this section, is amended by striking "or 48B" and inserting "48B, 48E, 45Q, or 45V".

(e) EFFECTIVE DATE.—The amendments made by this section shall take effect on January 1, 2023. 26 USC 48C note.

SEC. 13502. ADVANCED MANUFACTURING PRODUCTION CREDIT.

(a) IN GENERAL.—Subpart D of part IV of subchapter A of chapter 1, as amended by the preceding provisions of this Act, is amended by adding at the end the following new section:

"SEC. 45X. ADVANCED MANUFACTURING PRODUCTION CREDIT. 26 USC 45X.

"(a) IN GENERAL.—

"(1) ALLOWANCE OF CREDIT.—For purposes of section 38, the advanced manufacturing production credit for any taxable year is an amount equal to the sum of the credit amounts

determined under subsection (b) with respect to each eligible component which is—

"(A) produced by the taxpayer, and

"(B) during the taxable year, sold by such taxpayer to an unrelated person.

"(2) PRODUCTION AND SALE MUST BE IN TRADE OR BUSINESS.—Any eligible component produced and sold by the taxpayer shall be taken into account only if the production and sale described in paragraph (1) is in a trade or business of the taxpayer.

"(3) UNRELATED PERSON.—

"(A) IN GENERAL.—For purposes of this subsection, a taxpayer shall be treated as selling components to an unrelated person if such component is sold to such person by a person related to the taxpayer.

"(B) ELECTION.—

"(i) IN GENERAL.—At the election of the taxpayer (in such form and manner as the Secretary may prescribe), a sale of components by such taxpayer to a related person shall be deemed to have been made to an unrelated person.

"(ii) REQUIREMENT.—As a condition of, and prior to, any election described in clause (i), the Secretary may require such information or registration as the Secretary deems necessary for purposes of preventing duplication, fraud, or any improper or excessive amount determined under paragraph (1).

"(b) CREDIT AMOUNT.—

"(1) IN GENERAL.—Subject to paragraph (3), the amount determined under this subsection with respect to any eligible component, including any eligible component it incorporates, shall be equal to—

"(A) in the case of a thin film photovoltaic cell or a crystalline photovoltaic cell, an amount equal to the product of—

"(i) 4 cents, multiplied by

"(ii) the capacity of such cell (expressed on a per direct current watt basis),

"(B) in the case of a photovoltaic wafer, $12 per square meter,

"(C) in the case of solar grade polysilicon, $3 per kilogram,

"(D) in the case of a polymeric backsheet, 40 cents per square meter,

"(E) in the case of a solar module, an amount equal to the product of—

"(i) 7 cents, multiplied by

"(ii) the capacity of such module (expressed on a per direct current watt basis),

"(F) in the case of a wind energy component—

"(i) if such component is a related offshore wind vessel, an amount equal to 10 percent of the sales price of such vessel, and

"(ii) if such component is not described in clause (i), an amount equal to the product of—

"(I) the applicable amount with respect to such component (as determined under paragraph (2)(A)), multiplied by

"(II) the total rated capacity (expressed on a per watt basis) of the completed wind turbine for which such component is designed,

"(G) in the case of a torque tube, 87 cents per kilogram,

"(H) in the case of a structural fastener, $2.28 per kilogram,

"(I) in the case of an inverter, an amount equal to the product of—

"(i) the applicable amount with respect to such inverter (as determined under paragraph (2)(B)), multiplied by

"(ii) the capacity of such inverter (expressed on a per alternating current watt basis),

"(J) in the case of electrode active materials, an amount equal to 10 percent of the costs incurred by the taxpayer with respect to production of such materials,

"(K) in the case of a battery cell, an amount equal to the product of—

"(i) $35, multiplied by

"(ii) subject to paragraph (4), the capacity of such battery cell (expressed on a kilowatt-hour basis),

"(L) in the case of a battery module, an amount equal to the product of—

"(i) $10 (or, in the case of a battery module which does not use battery cells, $45), multiplied by

"(ii) subject to paragraph (4), the capacity of such battery module (expressed on a kilowatt-hour basis), and

"(M) in the case of any applicable critical mineral, an amount equal to 10 percent of the costs incurred by the taxpayer with respect to production of such mineral.

"(2) APPLICABLE AMOUNTS.—

"(A) WIND ENERGY COMPONENTS.—For purposes of paragraph (1)(F)(ii), the applicable amount with respect to any wind energy component shall be—

"(i) in the case of a blade, 2 cents,

"(ii) in the case of a nacelle, 5 cents,

"(iii) in the case of a tower, 3 cents, and

"(iv) in the case of an offshore wind foundation—

"(I) which uses a fixed platform, 2 cents, or

"(II) which uses a floating platform, 4 cents.

"(B) INVERTERS.—For purposes of paragraph (1)(I), the applicable amount with respect to any inverter shall be—

"(i) in the case of a central inverter, 0.25 cents,

"(ii) in the case of a utility inverter, 1.5 cents,

"(iii) in the case of a commercial inverter, 2 cents,

"(iv) in the case of a residential inverter, 6.5 cents, and

"(v) in the case of a microinverter or a distributed wind inverter, 11 cents.

"(3) PHASE OUT.—

Time periods. Effective date.

"(A) IN GENERAL.—Subject to subparagraph (C), in the case of any eligible component sold after December 31, 2029, the amount determined under this subsection with

respect to such component shall be equal to the product of—

"(i) the amount determined under paragraph (1) with respect to such component, as determined without regard to this paragraph, multiplied by

"(ii) the phase out percentage under subparagraph (B).

"(B) PHASE OUT PERCENTAGE.—The phase out percentage under this subparagraph is equal to—

"(i) in the case of an eligible component sold during calendar year 2030, 75 percent,

"(ii) in the case of an eligible component sold during calendar year 2031, 50 percent,

"(iii) in the case of an eligible component sold during calendar year 2032, 25 percent,

"(iv) in the case of an eligible component sold after December 31, 2032, 0 percent.

Determination.

"(C) EXCEPTION.—For purposes of determining the amount under this subsection with respect to any applicable critical mineral, this paragraph shall not apply.

"(4) LIMITATION ON CAPACITY OF BATTERY CELLS AND BATTERY MODULES.—

"(A) IN GENERAL.—For purposes of subparagraph (K)(ii) or (L)(ii) of paragraph (1), the capacity determined under either subparagraph with respect to a battery cell or battery module shall not exceed a capacity-to-power ratio of 100:1.

Definition.

"(B) CAPACITY-TO-POWER RATIO.—For purposes of this paragraph, the term 'capacity-to-power ratio' means, with respect to a battery cell or battery module, the ratio of the capacity of such cell or module to the maximum discharge amount of such cell or module.

"(c) DEFINITIONS.—For purposes of this section—

"(1) ELIGIBLE COMPONENT.—

"(A) IN GENERAL.—The term 'eligible component' means—

"(i) any solar energy component,

"(ii) any wind energy component,

"(iii) any inverter described in subparagraphs (B) through (G) of paragraph (2),

"(iv) any qualifying battery component, and

"(v) any applicable critical mineral.

"(B) APPLICATION WITH OTHER CREDITS.—The term 'eligible component' shall not include any property which is produced at a facility if the basis of any property which is part of such facility is taken into account for purposes of the credit allowed under section 48C after the date of the enactment of this section.

"(2) INVERTERS.—

"(A) IN GENERAL.—The term 'inverter' means an end product which is suitable to convert direct current electricity from 1 or more solar modules or certified distributed wind energy systems into alternating current electricity.

"(B) CENTRAL INVERTER.—The term 'central inverter' means an inverter which is suitable for large utility-scale systems and has a capacity which is greater than 1,000

kilowatts (expressed on a per alternating current watt basis).

"(C) COMMERCIAL INVERTER.—The term 'commercial inverter' means an inverter which—

"(i) is suitable for commercial or utility-scale applications,

"(ii) has a rated output of 208, 480, 600, or 800 volt three-phase power, and

"(iii) has a capacity which is not less than 20 kilowatts and not greater than 125 kilowatts (expressed on a per alternating current watt basis).

"(D) DISTRIBUTED WIND INVERTER.—

"(i) IN GENERAL.—The term 'distributed wind inverter' means an inverter which—

"(I) is used in a residential or non-residential system which utilizes 1 or more certified distributed wind energy systems, and

"(II) has a rated output of not greater than 150 kilowatts.

"(ii) CERTIFIED DISTRIBUTED WIND ENERGY SYSTEM.—The term 'certified distributed wind energy system' means a wind energy system which is certified by an accredited certification agency to meet Standard 9.1-2009 of the American Wind Energy Association (including any subsequent revisions to or modifications of such Standard which have been approved by the American National Standards Institute).

"(E) MICROINVERTER.—The term 'microinverter' means an inverter which—

"(i) is suitable to connect with one solar module,

"(ii) has a rated output of—

"(I) 120 or 240 volt single-phase power, or

"(II) 208 or 480 volt three-phase power, and

"(iii) has a capacity which is not greater than 650 watts (expressed on a per alternating current watt basis).

"(F) RESIDENTIAL INVERTER.—The term 'residential inverter' means an inverter which—

"(i) is suitable for a residence,

"(ii) has a rated output of 120 or 240 volt single-phase power, and

"(iii) has a capacity which is not greater than 20 kilowatts (expressed on a per alternating current watt basis).

"(G) UTILITY INVERTER.—The term 'utility inverter' means an inverter which—

"(i) is suitable for commercial or utility-scale systems,

"(ii) has a rated output of not less than 600 volt three-phase power, and

"(iii) has a capacity which is greater than 125 kilowatts and not greater than 1000 kilowatts (expressed on a per alternating current watt basis)

"(3) SOLAR ENERGY COMPONENT.—

"(A) IN GENERAL.—The term 'solar energy component' means any of the following:

"(i) Solar modules.

"(ii) Photovoltaic cells.
"(iii) Photovoltaic wafers.
"(iv) Solar grade polysilicon.
"(v) Torque tubes or structural fasteners.
"(vi) Polymeric backsheets.
"(B) ASSOCIATED DEFINITIONS.—
"(i) PHOTOVOLTAIC CELL.—The term 'photovoltaic cell' means the smallest semiconductor element of a solar module which performs the immediate conversion of light into electricity.
"(ii) PHOTOVOLTAIC WAFER.—The term 'photovoltaic wafer' means a thin slice, sheet, or layer of semiconductor material of at least 240 square centimeters—
"(I) produced by a single manufacturer either—
"(aa) directly from molten or evaporated solar grade polysilicon or deposition of solar grade thin film semiconductor photon absorber layer, or
"(bb) through formation of an ingot from molten polysilicon and subsequent slicing, and
"(II) which comprises the substrate or absorber layer of one or more photovoltaic cells.
"(iii) POLYMERIC BACKSHEET.—The term 'polymeric backsheet' means a sheet on the back of a solar module which acts as an electric insulator and protects the inner components of such module from the surrounding environment.
"(iv) SOLAR GRADE POLYSILICON.—The term 'solar grade polysilicon' means silicon which is—
"(I) suitable for use in photovoltaic manufacturing, and
"(II) purified to a minimum purity of 99.999999 percent silicon by mass.
"(v) SOLAR MODULE.—The term 'solar module' means the connection and lamination of photovoltaic cells into an environmentally protected final assembly which is—
"(I) suitable to generate electricity when exposed to sunlight, and
"(II) ready for installation without an additional manufacturing process.
"(vi) SOLAR TRACKER.—The term 'solar tracker' means a mechanical system that moves solar modules according to the position of the sun and to increase energy output.
"(vii) SOLAR TRACKER COMPONENTS.—
"(I) TORQUE TUBE.—The term 'torque tube' means a structural steel support element (including longitudinal purlins) which—
"(aa) is part of a solar tracker,
"(bb) is of any cross-sectional shape,
"(cc) may be assembled from individually manufactured segments,
"(dd) spans longitudinally between foundation posts,

"(ee) supports solar panels and is connected to a mounting attachment for solar panels (with or without separate module interface rails), and

"(ff) is rotated by means of a drive system.

"(II) STRUCTURAL FASTENER.—The term 'structural fastener' means a component which is used—

"(aa) to connect the mechanical and drive system components of a solar tracker to the foundation of such solar tracker,

"(bb) to connect torque tubes to drive assemblies, or

"(cc) to connect segments of torque tubes to one another.

"(4) WIND ENERGY COMPONENT.—

"(A) IN GENERAL.—The term 'wind energy component' means any of the following:

"(i) Blades.

"(ii) Nacelles.

"(iii) Towers.

"(iv) Offshore wind foundations.

"(v) Related offshore wind vessels.

"(B) ASSOCIATED DEFINITIONS.—

"(i) BLADE.—The term 'blade' means an airfoil-shaped blade which is responsible for converting wind energy to low-speed rotational energy.

"(ii) OFFSHORE WIND FOUNDATION.—The term 'offshore wind foundation' means the component (including transition piece) which secures an offshore wind tower and any above-water turbine components to the seafloor using—

"(I) fixed platforms, such as offshore wind monopiles, jackets, or gravity-based foundations, or

"(II) floating platforms and associated mooring systems.

"(iii) NACELLE.—The term 'nacelle' means the assembly of the drivetrain and other tower-top components of a wind turbine (with the exception of the blades and the hub) within their cover housing.

"(iv) RELATED OFFSHORE WIND VESSEL.—The term 'related offshore wind vessel' means any vessel which is purpose-built or retrofitted for purposes of the development, transport, installation, operation, or maintenance of offshore wind energy components.

"(v) TOWER.—The term 'tower' means a tubular or lattice structure which supports the nacelle and rotor of a wind turbine.

"(5) QUALIFYING BATTERY COMPONENT.—

"(A) IN GENERAL.—The term 'qualifying battery component' means any of the following:

"(i) Electrode active materials.

"(ii) Battery cells.

"(iii) Battery modules.

"(B) ASSOCIATED DEFINITIONS.—

"(i) ELECTRODE ACTIVE MATERIAL.—The term 'electrode active material' means cathode materials, anode

materials, anode foils, and electrochemically active materials, including solvents, additives, and electrolyte salts that contribute to the electrochemical processes necessary for energy storage .

"(ii) BATTERY CELL.—The term 'battery cell' means an electrochemical cell—

"(I) comprised of 1 or more positive electrodes and 1 or more negative electrodes,

"(II) with an energy density of not less than 100 watt-hours per liter, and

"(III) capable of storing at least 12 watt-hours of energy.

"(iii) BATTERY MODULE.—The term 'battery module' means a module—

"(I)(aa) in the case of a module using battery cells, with 2 or more battery cells which are configured electrically, in series or parallel, to create voltage or current, as appropriate, to a specified end use, or

"(bb) with no battery cells, and

"(II) with an aggregate capacity of not less than 7 kilowatt-hours (or, in the case of a module for a hydrogen fuel cell vehicle, not less than 1 kilowatt-hour).

"(6) APPLICABLE CRITICAL MINERALS.—The term 'applicable critical mineral' means any of the following:

"(A) ALUMINUM.—Aluminum which is—

"(i) converted from bauxite to a minimum purity of 99 percent alumina by mass, or

"(ii) purified to a minimum purity of 99.9 percent aluminum by mass.

"(B) ANTIMONY.—Antimony which is—

"(i) converted to antimony trisulfide concentrate with a minimum purity of 90 percent antimony trisulfide by mass, or

"(ii) purified to a minimum purity of 99.65 percent antimony by mass.

"(C) BARITE.—Barite which is barium sulfate purified to a minimum purity of 80 percent barite by mass.

"(D) BERYLLIUM.—Beryllium which is—

"(i) converted to copper-beryllium master alloy, or

"(ii) purified to a minimum purity of 99 percent beryllium by mass.

"(E) CERIUM.—Cerium which is—

"(i) converted to cerium oxide which is purified to a minimum purity of 99.9 percent cerium oxide by mass, or

"(ii) purified to a minimum purity of 99 percent cerium by mass.

"(F) CESIUM.—Cesium which is—

"(i) converted to cesium formate or cesium carbonate, or

"(ii) purified to a minimum purity of 99 percent cesium by mass.

"(G) CHROMIUM.—Chromium which is—

"(i) converted to ferrochromium consisting of not less than 60 percent chromium by mass, or

"(ii) purified to a minimum purity of 99 percent chromium by mass.

"(H) COBALT.—Cobalt which is—

"(i) converted to cobalt sulfate, or

"(ii) purified to a minimum purity of 99.6 percent cobalt by mass.

"(I) DYSPROSIUM.—Dysprosium which is—

"(i) converted to not less than 99 percent pure dysprosium iron alloy by mass, or

"(ii) purified to a minimum purity of 99 percent dysprosium by mass.

"(J) EUROPIUM.—Europium which is—

"(i) converted to europium oxide which is purified to a minimum purity of 99.9 percent europium oxide by mass, or

"(ii) purified to a minimum purity of 99 percent by mass.

"(K) FLUORSPAR.—Fluorspar which is—

"(i) converted to fluorspar which is purified to a minimum purity of 97 percent calcium fluoride by mass, or

"(ii) purified to a minimum purity of 99 percent fluorspar by mass.

"(L) GADOLINIUM.—Gadolinium which is—

"(i) converted to gadolinium oxide which is purified to a minimum purity of 99.9 percent gadolinium oxide by mass, or

"(ii) purified to a minimum purity of 99 percent gadolinium by mass.

"(M) GERMANIUM.—Germanium which is—

"(i) converted to germanium tetrachloride, or

"(ii) purified to a minimum purity of 99.99 percent germanium by mass.

"(N) GRAPHITE.—Graphite which is purified to a minimum purity of 99.9 percent graphitic carbon by mass.

"(O) INDIUM.—Indium which is—

"(i) converted to—

"(I) indium tin oxide, or

"(II) indium oxide which is purified to a minimum purity of 99.9 percent indium oxide by mass, or

"(ii) purified to a minimum purity of 99 percent indium by mass.

"(P) LITHIUM.—Lithium which is—

"(i) converted to lithium carbonate or lithium hydroxide, or

"(ii) purified to a minimum purity of 99.9 percent lithium by mass.

"(Q) MANGANESE.—Manganese which is—

"(i) converted to manganese sulphate, or

"(ii) purified to a minimum purity of 99.7 percent manganese by mass.

"(R) NEODYMIUM.—Neodymium which is—

"(i) converted to neodymium-praseodymium oxide which is purified to a minimum purity of 99 percent neodymium-praseodymium oxide by mass,

"(ii) converted to neodymium oxide which is purified to a minimum purity of 99.5 percent neodymium oxide by mass

"(iii) purified to a minimum purity of 99.9 percent neodymium by mass.

"(S) NICKEL.—Nickel which is—

"(i) converted to nickel sulphate, or

"(ii) purified to a minimum purity of 99 percent nickel by mass.

"(T) NIOBIUM.—Niobium which is—

"(i) converted to ferronibium, or

"(ii) purified to a minimum purity of 99 percent niobium by mass.

"(U) TELLURIUM.—Tellurium which is—

"(i) converted to cadmium telluride, or

"(ii) purified to a minimum purity of 99 percent tellurium by mass.

"(V) TIN.—Tin which is purified to low alpha emitting tin which—

"(i) has a purity of greater than 99.99 percent by mass, and

"(ii) possesses an alpha emission rate of not greater than 0.01 counts per hour per centimeter square.

"(W) TUNGSTEN.—Tungsten which is converted to ammonium paratungstate or ferrotungsten.

"(X) VANADIUM.—Vanadium which is converted to ferrovanadium or vanadium pentoxide.

"(Y) YTTRIUM.—Yttrium which is—

"(i) converted to yttrium oxide which is purified to a minimum purity of 99.999 percent yttrium oxide by mass, or

"(ii) purified to a minimum purity of 99.9 percent yttrium by mass.

"(Z) OTHER MINERALS.—Any of the following minerals, provided that such mineral is purified to a minimum purity of 99 percent by mass:

"(i) Arsenic.
"(ii) Bismuth.
"(iii) Erbium.
"(iv) Gallium.
"(v) Hafnium.
"(vi) Holmium.
"(vii) Iridium.
"(viii) Lanthanum.
"(ix) Lutetium.
"(x) Magnesium.
"(xi) Palladium.
"(xii) Platinum.
"(xiii) Praseodymium.
"(xiv) Rhodium.
"(xv) Rubidium.
"(xvi) Ruthenium.
"(xvii) Samarium.
"(xviii) Scandium.
"(xix) Tantalum.
"(xx) Terbium.
"(xxi) Thulium.

"(xxii) Titanium.
"(xxiii) Ytterbium.
"(xxiv) Zinc.
"(xxv) Zirconium.

"(d) SPECIAL RULES.—In this section—

"(1) RELATED PERSONS.—Persons shall be treated as related to each other if such persons would be treated as a single employer under the regulations prescribed under section 52(b).

"(2) ONLY PRODUCTION IN THE UNITED STATES TAKEN INTO ACCOUNT.—Sales shall be taken into account under this section only with respect to eligible components the production of which is within—

"(A) the United States (within the meaning of section 638(1)), or

"(B) a possession of the United States (within the meaning of section 638(2)).

"(3) PASS-THRU IN THE CASE OF ESTATES AND TRUSTS.—Under regulations prescribed by the Secretary, rules similar to the rules of subsection (d) of section 52 shall apply. Regulations. Applicability.

"(4) SALE OF INTEGRATED COMPONENTS.—For purposes of this section, a person shall be treated as having sold an eligible component to an unrelated person if such component is integrated, incorporated, or assembled into another eligible component which is sold to an unrelated person.".

(b) CONFORMING AMENDMENTS.—

(1) Section 38(b) of the Internal Revenue Code of 1986, as amended by the preceding provisions of this Act, is amended— 26 USC 38.

(A) in paragraph (36), by striking "plus" at the end,

(B) in paragraph (37), by striking the period at the end and inserting ", plus", and

(C) by adding at the end the following new paragraph:

"(38) the advanced manufacturing production credit determined under section 45X(a).".

(2) The table of sections for subpart D of part IV of subchapter A of chapter 1, as amended by the preceding provisions of this Act, is amended by adding at the end the following new item: 26 USC 38 prec.

"Sec. 45X. Advanced manufacturing production credit.".

(c) EFFECTIVE DATE.—The amendments made by this section shall apply to components produced and sold after December 31, 2022. 26 USC 45X note.

PART 6—SUPERFUND

SEC. 13601. REINSTATEMENT OF SUPERFUND.

(a) HAZARDOUS SUBSTANCE SUPERFUND FINANCING RATE.—

(1) EXTENSION.—Section 4611 is amended by striking subsection (e).

(2) ADJUSTMENT FOR INFLATION.—

(A) Section 4611(c)(2)(A) is amended by striking "9.7 cents" and inserting "16.4 cents".

(B) Section 4611(c) is amended by adding at the end the following:

"(3) ADJUSTMENT FOR INFLATION.—

Effective date.

"(A) IN GENERAL.—In the case of a year beginning after 2023, the amount in paragraph (2)(A) shall be increased by an amount equal to—

"(i) such amount, multiplied by

"(ii) the cost-of-living adjustment determined under section 1(f)(3) for the calendar year, determined by substituting 'calendar year 2022' for 'calendar year 2016' in subparagraph (A)(ii) thereof.

"(B) ROUNDING.—If any amount as adjusted under subparagraph (A) is not a multiple of $0.01, such amount shall be rounded to the next lowest multiple of $0.01.".

26 USC 9507.

(b) AUTHORITY FOR ADVANCES.—Section 9507(d)(3)(B) is amended by striking "December 31, 1995" and inserting "December 31, 2032".

26 USC 4611 note.

(c) EFFECTIVE DATE.—The amendments made by this section shall take effect on January 1, 2023.

PART 7—INCENTIVES FOR CLEAN ELECTRICITY AND CLEAN TRANSPORTATION

SEC. 13701. CLEAN ELECTRICITY PRODUCTION CREDIT.

(a) IN GENERAL.—Subpart D of part IV of subchapter A of chapter 1, as amended by the preceding provisions of this Act, is amended by adding at the end the following new section:

26 USC 45Y.

"SEC. 45Y. CLEAN ELECTRICITY PRODUCTION CREDIT.

"(a) AMOUNT OF CREDIT.—

"(1) IN GENERAL.—For purposes of section 38, the clean electricity production credit for any taxable year is an amount equal to the product of—

"(A) the kilowatt hours of electricity—

"(i) produced by the taxpayer at a qualified facility, and

"(ii)(I) sold by the taxpayer to an unrelated person during the taxable year, or

"(II) in the case of a qualified facility which is equipped with a metering device which is owned and operated by an unrelated person, sold, consumed, or stored by the taxpayer during the taxable year, multiplied by

"(B) the applicable amount with respect to such qualified facility.

"(2) APPLICABLE AMOUNT.—

"(A) BASE AMOUNT.—Subject to subsection (g)(7), in the case of any qualified facility which is not described in clause (i) or (ii) of subparagraph (B) and does not satisfy the requirements described in clause (iii) of such subparagraph, the applicable amount shall be 0.3 cents.

"(B) ALTERNATIVE AMOUNT.—Subject to subsection (g)(7), in the case of any qualified facility—

"(i) with a maximum net output of less than 1 megawatt (as measured in alternating current),

Time period. Publication. Guidelines.

"(ii) the construction of which begins prior to the date that is 60 days after the Secretary publishes guidance with respect to the requirements of paragraphs (9) and (10) of subsection (g), or

"(iii) which—

"(I) satisfies the requirements under paragraph (9) of subsection (g), and

"(II) with respect to the construction of such facility, satisfies the requirements under paragraph (10) of subsection (g),

the applicable amount shall be 1.5 cents.

"(b) QUALIFIED FACILITY.—

"(1) IN GENERAL.—

"(A) DEFINITION.—Subject to subparagraphs (B), (C), and (D), the term 'qualified facility' means a facility owned by the taxpayer—

"(i) which is used for the generation of electricity,

"(ii) which is placed in service after December 31, 2024, and

"(iii) for which the greenhouse gas emissions rate (as determined under paragraph (2)) is not greater than zero.

"(B) 10-YEAR PRODUCTION CREDIT.—For purposes of this section, a facility shall only be treated as a qualified facility during the 10-year period beginning on the date the facility was originally placed in service.

"(C) EXPANSION OF FACILITY; INCREMENTAL PRODUCTION.—The term 'qualified facility' shall include either of the following in connection with a facility described in subparagraph (A) (without regard to clause (ii) of such subparagraph) which was placed in service before January 1, 2025, but only to the extent of the increased amount of electricity produced at the facility by reason of the following: Definition. Effective dates.

"(i) A new unit which is placed in service after December 31, 2024.

"(ii) Any additions of capacity which are placed in service after December 31, 2024.

"(D) COORDINATION WITH OTHER CREDITS.—The term 'qualified facility' shall not include any facility for which a credit determined under section 45, 45J, 45Q, 45U, 48, 48A, or 48E is allowed under section 38 for the taxable year or any prior taxable year.

"(2) GREENHOUSE GAS EMISSIONS RATE.—

"(A) IN GENERAL.—For purposes of this section, the term 'greenhouse gas emissions rate' means the amount of greenhouse gases emitted into the atmosphere by a facility in the production of electricity, expressed as grams of CO_2e per KWh. Definition.

"(B) FUEL COMBUSTION AND GASIFICATION.—In the case of a facility which produces electricity through combustion or gasification, the greenhouse gas emissions rate for such facility shall be equal to the net rate of greenhouse gases emitted into the atmosphere by such facility (taking into account lifecycle greenhouse gas emissions, as described in section 211(o)(1)(H) of the Clean Air Act (42 U.S.C. 7545(o)(1)(H))) in the production of electricity, expressed as grams of CO_2e per KWh.

"(C) ESTABLISHMENT OF EMISSIONS RATES FOR FACILITIES.—

Deadline.

"(i) PUBLISHING EMISSIONS RATES.—The Secretary shall annually publish a table that sets forth the greenhouse gas emissions rates for types or categories of facilities, which a taxpayer shall use for purposes of this section.

Petition.
Determination.

"(ii) PROVISIONAL EMISSIONS RATE.—In the case of any facility for which an emissions rate has not been established by the Secretary, a taxpayer which owns such facility may file a petition with the Secretary for determination of the emissions rate with respect to such facility.

"(D) CARBON CAPTURE AND SEQUESTRATION EQUIPMENT.—For purposes of this subsection, the amount of greenhouse gases emitted into the atmosphere by a facility in the production of electricity shall not include any qualified carbon dioxide that is captured by the taxpayer and—

"(i) pursuant to any regulations established under paragraph (2) of section 45Q(f), disposed of by the taxpayer in secure geological storage, or

"(ii) utilized by the taxpayer in a manner described in paragraph (5) of such section.

"(c) INFLATION ADJUSTMENT.—

Effective date.

"(1) IN GENERAL.—In the case of a calendar year beginning after 2024, the 0.3 cent amount in paragraph (2)(A) of subsection (a) and the 1.5 cent amount in paragraph (2)(B) of such subsection shall each be adjusted by multiplying such amount by the inflation adjustment factor for the calendar year in which the sale, consumption, or storage of the electricity occurs. If the 0.3 cent amount as increased under this paragraph is not a multiple of 0.05 cent, such amount shall be rounded to the nearest multiple of 0.05 cent. If the 1.5 cent amount as increased under this paragraph is not a multiple of 0.1 cent, such amount shall be rounded to the nearest multiple of 0.1 cent.

Deadline.
Determination.
Federal Register, publication.

"(2) ANNUAL COMPUTATION.—The Secretary shall, not later than April 1 of each calendar year, determine and publish in the Federal Register the inflation adjustment factor for such calendar year in accordance with this subsection.

Definitions.

"(3) INFLATION ADJUSTMENT FACTOR.—The term 'inflation adjustment factor' means, with respect to a calendar year, a fraction the numerator of which is the GDP implicit price deflator for the preceding calendar year and the denominator of which is the GDP implicit price deflator for the calendar year 1992. The term 'GDP implicit price deflator' means the most recent revision of the implicit price deflator for the gross domestic product as computed and published by the Department of Commerce before March 15 of the calendar year.

"(d) CREDIT PHASE-OUT.—

"(1) IN GENERAL.—The amount of the clean electricity production credit under subsection (a) for any qualified facility the construction of which begins during a calendar year described in paragraph (2) shall be equal to the product of—

"(A) the amount of the credit determined under subsection (a) without regard to this subsection, multiplied by

"(B) the phase-out percentage under paragraph (2).

"(2) PHASE-OUT PERCENTAGE.—The phase-out percentage under this paragraph is equal to—

"(A) for a facility the construction of which begins during the first calendar year following the applicable year, 100 percent,

"(B) for a facility the construction of which begins during the second calendar year following the applicable year, 75 percent,

"(C) for a facility the construction of which begins during the third calendar year following the applicable year, 50 percent, and

"(D) for a facility the construction of which begins during any calendar year subsequent to the calendar year described in subparagraph (C), 0 percent.

"(3) APPLICABLE YEAR.—For purposes of this subsection, the term 'applicable year' means the later of— Definition.

"(A) the calendar year in which the Secretary determines that the annual greenhouse gas emissions from the production of electricity in the United States are equal to or less than 25 percent of the annual greenhouse gas emissions from the production of electricity in the United States for calendar year 2022, or Determination.

"(B) 2032.

"(e) DEFINITIONS.—For purposes of this section:

"(1) CO_2e PER KWh.—The term 'CO_2e per KWh' means, with respect to any greenhouse gas, the equivalent carbon dioxide (as determined based on global warming potential) per kilowatt hour of electricity produced.

"(2) GREENHOUSE GAS.—The term 'greenhouse gas' has the same meaning given such term under section 211(o)(1)(G) of the Clean Air Act (42 U.S.C. 7545(o)(1)(G)), as in effect on the date of the enactment of this section.

"(3) QUALIFIED CARBON DIOXIDE.—The term 'qualified carbon dioxide' means carbon dioxide captured from an industrial source which—

"(A) would otherwise be released into the atmosphere as industrial emission of greenhouse gas,

"(B) is measured at the source of capture and verified at the point of disposal or utilization, and

"(C) is captured and disposed or utilized within the United States (within the meaning of section 638(1)) or a possession of the United States (within the meaning of section 638(2)).

"(f) GUIDANCE.—Not later than January 1, 2025, the Secretary shall issue guidance regarding implementation of this section, including calculation of greenhouse gas emission rates for qualified facilities and determination of clean electricity production credits under this section. Deadline. Determination.

"(g) SPECIAL RULES.—

"(1) ONLY PRODUCTION IN THE UNITED STATES TAKEN INTO ACCOUNT.—Consumption, sales, or storage shall be taken into account under this section only with respect to electricity the production of which is within—

"(A) the United States (within the meaning of section 638(1)), or

"(B) a possession of the United States (within the meaning of section 638(2)).

"(2) COMBINED HEAT AND POWER SYSTEM PROPERTY.—

"(A) IN GENERAL.—For purposes of subsection (a)—

"(i) the kilowatt hours of electricity produced by a taxpayer at a qualified facility shall include any production in the form of useful thermal energy by any combined heat and power system property within such facility, and

"(ii) the amount of greenhouse gases emitted into the atmosphere by such facility in the production of such useful thermal energy shall be included for purposes of determining the greenhouse gas emissions rate for such facility.

Definition.

"(B) COMBINED HEAT AND POWER SYSTEM PROPERTY.—For purposes of this paragraph, the term 'combined heat and power system property' has the same meaning given such term by section 48(c)(3) (without regard to subparagraphs (A)(iv), (B), and (D) thereof).

"(C) CONVERSION FROM BTU TO KWH.—

"(i) IN GENERAL.—For purposes of subparagraph (A)(i), the amount of kilowatt hours of electricity produced in the form of useful thermal energy shall be equal to the quotient of—

"(I) the total useful thermal energy produced by the combined heat and power system property within the qualified facility, divided by

"(II) the heat rate for such facility.

Definition.

"(ii) HEAT RATE.—For purposes of this subparagraph, the term 'heat rate' means the amount of energy used by the qualified facility to generate 1 kilowatt hour of electricity, expressed as British thermal units per net kilowatt hour generated.

Regulations.

"(3) PRODUCTION ATTRIBUTABLE TO THE TAXPAYER.—In the case of a qualified facility in which more than 1 person has an ownership interest, except to the extent provided in regulations prescribed by the Secretary, production from the facility shall be allocated among such persons in proportion to their respective ownership interests in the gross sales from such facility.

"(4) RELATED PERSONS.—Persons shall be treated as related to each other if such persons would be treated as a single employer under the regulations prescribed under section 52(b). In the case of a corporation which is a member of an affiliated group of corporations filing a consolidated return, such corporation shall be treated as selling electricity to an unrelated person if such electricity is sold to such a person by another member of such group.

Regulations.
Applicability.

"(5) PASS-THRU IN THE CASE OF ESTATES AND TRUSTS.—Under regulations prescribed by the Secretary, rules similar to the rules of subsection (d) of section 52 shall apply.

"(6) ALLOCATION OF CREDIT TO PATRONS OF AGRICULTURAL COOPERATIVE.—

"(A) ELECTION TO ALLOCATE.—

"(i) IN GENERAL.—In the case of an eligible cooperative organization, any portion of the credit determined under subsection (a) for the taxable year may, at the election of the organization, be apportioned among patrons of the organization on the basis of the amount

of business done by the patrons during the taxable year.

"(ii) FORM AND EFFECT OF ELECTION.—An election under clause (i) for any taxable year shall be made on a timely filed return for such year. Such election, once made, shall be irrevocable for such taxable year. Such election shall not take effect unless the organization designates the apportionment as such in a written notice mailed to its patrons during the payment period described in section 1382(d). Notice.

"(B) TREATMENT OF ORGANIZATIONS AND PATRONS.—The amount of the credit apportioned to any patrons under subparagraph (A)—

"(i) shall not be included in the amount determined under subsection (a) with respect to the organization for the taxable year, and

"(ii) shall be included in the amount determined under subsection (a) for the first taxable year of each patron ending on or after the last day of the payment period (as defined in section 1382(d)) for the taxable year of the organization or, if earlier, for the taxable year of each patron ending on or after the date on which the patron receives notice from the cooperative of the apportionment.

"(C) SPECIAL RULES FOR DECREASE IN CREDITS FOR TAXABLE YEAR.—If the amount of the credit of a cooperative organization determined under subsection (a) for a taxable year is less than the amount of such credit shown on the return of the cooperative organization for such year, an amount equal to the excess of—

"(i) such reduction, over

"(ii) the amount not apportioned to such patrons under subparagraph (A) for the taxable year,

shall be treated as an increase in tax imposed by this chapter on the organization. Such increase shall not be treated as tax imposed by this chapter for purposes of determining the amount of any credit under this chapter.

"(D) ELIGIBLE COOPERATIVE DEFINED.—For purposes of this section, the term 'eligible cooperative' means a cooperative organization described in section 1381(a) which is owned more than 50 percent by agricultural producers or by entities owned by agricultural producers. For this purpose an entity owned by an agricultural producer is one that is more than 50 percent owned by agricultural producers.

"(7) INCREASE IN CREDIT IN ENERGY COMMUNITIES.—In the case of any qualified facility which is located in an energy community (as defined in section 45(b)(11)(B)), for purposes of determining the amount of the credit under subsection (a) with respect to any electricity produced by the taxpayer at such facility during the taxable year, the applicable amount under paragraph (2) of such subsection shall be increased by an amount equal to 10 percent of the amount otherwise in effect under such paragraph. Determination.

"(8) CREDIT REDUCED FOR TAX-EXEMPT BONDS.—Rules similar to the rules of section 45(b)(3) shall apply. Applicability.

Applicability.

"(9) WAGE REQUIREMENTS.—Rules similar to the rules of section 45(b)(7) shall apply.

Applicability.

"(10) APPRENTICESHIP REQUIREMENTS.—Rules similar to the rules of section 45(b)(8) shall apply.

"(11) DOMESTIC CONTENT BONUS CREDIT AMOUNT.—

"(A) IN GENERAL.—In the case of any qualified facility which satisfies the requirement under subparagraph (B)(i), the amount of the credit determined under subsection (a) shall be increased by an amount equal to 10 percent of the amount so determined (as determined without application of paragraph (7)).

"(B) REQUIREMENT.—

Certification.

"(i) IN GENERAL.—The requirement described in this subclause is satisfied with respect to any qualified facility if the taxpayer certifies to the Secretary (at such time, and in such form and manner, as the Secretary may prescribe) that any steel, iron, or manufactured product which is a component of such facility (upon completion of construction) was produced in the United States (as determined under section 661 of title 49, Code of Federal Regulations).

Applicability.

"(ii) STEEL AND IRON.—In the case of steel or iron, clause (i) shall be applied in a manner consistent with section 661.5 of title 49, Code of Federal Regulations.

"(iii) MANUFACTURED PRODUCT.—For purposes of clause (i), the manufactured products which are components of a qualified facility upon completion of construction shall be deemed to have been produced in the United States if not less than the adjusted percentage (as determined under subparagraph (C)) of the total costs of all such manufactured products of such facility are attributable to manufactured products (including components) which are mined, produced, or manufactured in the United States.

Effective dates.

"(C) ADJUSTED PERCENTAGE.—

"(i) IN GENERAL.—Subject to subclause (ii), for purposes of subparagraph (B)(iii), the adjusted percentage shall be—

"(I) in the case of a facility the construction of which begins before January 1, 2025, 40 percent,

"(II) in the case of a facility the construction of which begins after December 31, 2024, and before January 1, 2026, 45 percent,

"(III) in the case of a facility the construction of which begins after December 31, 2025, and before January 1, 2027, 50 percent, and

"(IV) in the case of a facility the construction of which begins after December 31, 2026, 55 percent.

"(ii) OFFSHORE WIND FACILITY.—For purposes of subparagraph (B)(iii), in the case of a qualified facility which is an offshore wind facility, the adjusted percentage shall be—

"(I) in the case of a facility the construction of which begins before January 1, 2025, 20 percent,

"(II) in the case of a facility the construction of which begins after December 31, 2024, and before January 1, 2026, 27.5 percent,

"(III) in the case of a facility the construction of which begins after December 31, 2025, and before January 1, 2027, 35 percent,

"(IV) in the case of a facility the construction of which begins after December 31, 2026, and before January 1, 2028, 45 percent, and

"(V) in the case of a facility the construction of which begins after December 31, 2027, 55 percent.

"(12) PHASEOUT FOR ELECTIVE PAYMENT.—

"(A) IN GENERAL.—In the case of a taxpayer making an election under section 6417 with respect to a credit under this section, the amount of such credit shall be replaced with—

"(i) the value of such credit (determined without regard to this paragraph), multiplied by

"(ii) the applicable percentage.

"(B) 100 PERCENT APPLICABLE PERCENTAGE FOR CERTAIN QUALIFIED FACILITIES.—In the case of any qualified facility—

"(i) which satisfies the requirements under paragraph (11)(B), or

"(ii) with a maximum net output of less than 1 megawatt (as measured in alternating current),

the applicable percentage shall be 100 percent.

"(C) PHASED DOMESTIC CONTENT REQUIREMENT.—Subject to subparagraph (D), in the case of any qualified facility which is not described in subparagraph (B), the applicable percentage shall be— Effective dates. Time periods.

"(i) if construction of such facility began before January 1, 2024, 100 percent,

"(ii) if construction of such facility began in calendar year 2024, 90 percent,

"(iii) if construction of such facility began in calendar year 2025, 85 percent, and

"(iv) if construction of such facility began after December 31, 2025, 0 percent.

"(D) EXCEPTION.—

"(i) IN GENERAL.—For purposes of this paragraph, the Secretary shall provide exceptions to the requirements under this paragraph if—

"(I) the inclusion of steel, iron, or manufactured products which are produced in the United States increases the overall costs of construction of qualified facilities by more than 25 percent, or

"(II) relevant steel, iron, or manufactured products are not produced in the United States in sufficient and reasonably available quantities or of a satisfactory quality.

"(ii) APPLICABLE PERCENTAGE.—In any case in which the Secretary provides an exception pursuant to clause (i), the applicable percentage shall be 100 percent.".

(b) CONFORMING AMENDMENTS.—

(1) Section 38(b), as amended by the preceding provisions of this Act, is amended— 26 USC 38.

(A) in paragraph (37), by striking "plus" at the end,

(B) in paragraph (38), by striking the period at the end and inserting ", plus", and

(C) by adding at the end the following new paragraph:

"(39) the clean electricity production credit determined under section 45Y(a).".

(2) The table of sections for subpart D of part IV of subchapter A of chapter 1, as amended by the preceding provisions of this Act, is amended by adding at the end the following new item: 26 USC 38 prec.

"Sec. 45Y. Clean electricity production credit.".

(c) EFFECTIVE DATE.—The amendments made by this section shall apply to facilities placed in service after December 31, 2024. 26 USC 45Y note.

SEC. 13702. CLEAN ELECTRICITY INVESTMENT CREDIT.

(a) IN GENERAL.—Subpart E of part IV of subchapter A of chapter 1, as amended by section 107(a) of the CHIPS Act of 2022, is amended by inserting after section 48D the following new section:

"SEC. 48E. CLEAN ELECTRICITY INVESTMENT CREDIT. 26 USC 48E.

"(a) INVESTMENT CREDIT FOR QUALIFIED PROPERTY.—

"(1) IN GENERAL.—For purposes of section 46, the clean electricity investment credit for any taxable year is an amount equal to the applicable percentage of the qualified investment for such taxable year with respect to—

"(A) any qualified facility, and

"(B) any energy storage technology.

"(2) APPLICABLE PERCENTAGE.—

"(A) QUALIFIED FACILITIES.—Subject to paragraph (3)—

"(i) BASE RATE.—In the case of any qualified facility which is not described in subclause (I) or (II) of clause (ii) and does not satisfy the requirements described in subclause (III) of such clause, the applicable percentage shall be 6 percent.

"(ii) ALTERNATIVE RATE.—In the case of any qualified facility—

"(I) with a maximum net output of less than 1 megawatt (as measured in alternating current),

"(II) the construction of which begins prior to the date that is 60 days after the Secretary publishes guidance with respect to the requirements of paragraphs (3) and (4) of subsection (d), or Time period. Publication. Guidelines.

"(III) which—

"(aa) satisfies the requirements of subsection (d)(3), and

"(bb) with respect to the construction of such facility, satisfies the requirements of subsection (d)(4),

the applicable percentage shall be 30 percent.

"(B) ENERGY STORAGE TECHNOLOGY.—Subject to paragraph (3)—

"(i) BASE RATE.—In the case of any energy storage technology which is not described in subclause (I) or (II) of clause (ii) and does not satisfy the requirements described in subclause (III) of such clause, the applicable percentage shall be 6 percent.

"(ii) ALTERNATIVE RATE.—In the case of any energy storage technology—

"(I) with a capacity of less than 1 megawatt,

"(II) the construction of which begins prior to the date that is 60 days after the Secretary publishes guidance with respect to the requirements of paragraphs (3) and (4) of subsection (d), or

Time period. Publication. Guidelines.

"(III) which—

"(aa) satisfies the requirements of subsection (d)(3), and

"(bb) with respect to the construction of such property, satisfies the requirements of subsection (d)(4),

the applicable percentage shall be 30 percent.

"(3) INCREASE IN CREDIT RATE IN CERTAIN CASES.—

"(A) ENERGY COMMUNITIES.—

"(i) IN GENERAL.—In the case of any qualified investment with respect to a qualified facility or with respect to energy storage technology which is placed in service within an energy community (as defined in section 45(b)(11)(B)), for purposes of applying paragraph (2) with respect to such property or investment, the applicable percentage shall be increased by the applicable credit rate increase.

"(ii) APPLICABLE CREDIT RATE INCREASE.—For purposes of clause (i), the applicable credit rate increase shall be an amount equal to—

"(I) in the case of any qualified investment with respect to a qualified facility described in paragraph (2)(A)(i) or with respect to energy storage technology described in paragraph (2)(B)(i), 2 percentage points, and

"(II) in the case of any qualified investment with respect to a qualified facility described in paragraph (2)(A)(ii) or with respect to energy storage technology described in paragraph (2)(B)(ii), 10 percentage points.

"(B) DOMESTIC CONTENT.—Rules similar to the rules of section 48(a)(12) shall apply. Applicability.

"(b) QUALIFIED INVESTMENT WITH RESPECT TO A QUALIFIED FACILITY.— Definitions.

"(1) IN GENERAL.—For purposes of subsection (a), the qualified investment with respect to any qualified facility for any taxable year is the sum of—

"(A) the basis of any qualified property placed in service by the taxpayer during such taxable year which is part of a qualified facility, plus

"(B) the amount of any expenditures which are—

"(i) paid or incurred by the taxpayer for qualified interconnection property—

"(I) in connection with a qualified facility which has a maximum net output of not greater than 5 megawatts (as measured in alternating current), and

"(II) placed in service during the taxable year of the taxpayer, and

"(ii) properly chargeable to capital account of the taxpayer.

"(2) QUALIFIED PROPERTY.—For purposes of this section, the term 'qualified property' means property—

"(A) which is—

"(i) tangible personal property, or

"(ii) other tangible property (not including a building or its structural components), but only if such property is used as an integral part of the qualified facility,

"(B) with respect to which depreciation (or amortization in lieu of depreciation) is allowable, and

"(C)(i) the construction, reconstruction, or erection of which is completed by the taxpayer, or

"(ii) which is acquired by the taxpayer if the original use of such property commences with the taxpayer.

"(3) QUALIFIED FACILITY.—

"(A) IN GENERAL.—For purposes of this section, the term 'qualified facility' means a facility—

"(i) which is used for the generation of electricity,

"(ii) which is placed in service after December 31, 2024, and

"(iii) for which the anticipated greenhouse gas emissions rate (as determined under subparagraph (B)(ii)) is not greater than zero.

Applicability.

"(B) ADDITIONAL RULES.—

"(i) EXPANSION OF FACILITY; INCREMENTAL PRODUCTION.—Rules similar to the rules of section 45Y(b)(1)(C) shall apply for purposes of this paragraph.

"(ii) GREENHOUSE GAS EMISSIONS RATE.—Rules similar to the rules of section 45Y(b)(2) shall apply for purposes of this paragraph.

"(C) EXCLUSION.—The term 'qualified facility' shall not include any facility for which—

"(i) a renewable electricity production credit determined under section 45,

"(ii) an advanced nuclear power facility production credit determined under section 45J,

"(iii) a carbon oxide sequestration credit determined under section 45Q,

"(iv) a zero-emission nuclear power production credit determined under section 45U,

"(v) a clean electricity production credit determined under section 45Y,

"(vi) an energy credit determined under section 48, or

"(vii) a qualifying advanced coal project credit under section 48A,

is allowed under section 38 for the taxable year or any prior taxable year.

"(4) QUALIFIED INTERCONNECTION PROPERTY.—For purposes of this paragraph, the term 'qualified interconnection property' has the meaning given such term in section 48(a)(8)(B).

"(5) COORDINATION WITH REHABILITATION CREDIT.—The qualified investment with respect to any qualified facility for any taxable year shall not include that portion of the basis of any property which is attributable to qualified rehabilitation expenditures (as defined in section 47(c)(2)).

"(6) DEFINITIONS.—For purposes of this subsection, the terms 'CO2e per KWh' and 'greenhouse gas emissions rate' have the same meaning given such terms under section 45Y.

"(c) QUALIFIED INVESTMENT WITH RESPECT TO ENERGY STORAGE TECHNOLOGY.—

"(1) QUALIFIED INVESTMENT.—For purposes of subsection (a), the qualified investment with respect to energy storage technology for any taxable year is the basis of any energy storage technology placed in service by the taxpayer during such taxable year.

"(2) ENERGY STORAGE TECHNOLOGY.—For purposes of this section, the term 'energy storage technology' has the meaning given such term in section 48(c)(6) (except that subparagraph (D) of such section shall not apply). Definition.

"(d) SPECIAL RULES.— Applicability.

"(1) CERTAIN PROGRESS EXPENDITURE RULES MADE APPLICABLE.—Rules similar to the rules of subsections (c)(4) and (d) of section 46 (as in effect on the day before the date of the enactment of the Revenue Reconciliation Act of 1990) shall apply for purposes of subsection (a).

"(2) SPECIAL RULE FOR PROPERTY FINANCED BY SUBSIDIZED ENERGY FINANCING OR PRIVATE ACTIVITY BONDS.—Rules similar to the rules of section 45(b)(3) shall apply.

"(3) PREVAILING WAGE REQUIREMENTS.—Rules similar to the rules of section 48(a)(10) shall apply.

"(4) APPRENTICESHIP REQUIREMENTS.—Rules similar to the rules of section 45(b)(8) shall apply.

"(5) DOMESTIC CONTENT REQUIREMENT FOR ELECTIVE PAYMENT.—In the case of a taxpayer making an election under section 6417 with respect to a credit under this section, rules similar to the rules of section 45Y(g)(12) shall apply.

"(e) CREDIT PHASE-OUT.—

"(1) IN GENERAL.—The amount of the clean electricity investment credit under subsection (a) for any qualified investment with respect to any qualified facility or energy storage technology the construction of which begins during a calendar year described in paragraph (2) shall be equal to the product of—

"(A) the amount of the credit determined under subsection (a) without regard to this subsection, multiplied by

"(B) the phase-out percentage under paragraph (2).

"(2) PHASE-OUT PERCENTAGE.—The phase-out percentage under this paragraph is equal to—

"(A) for any qualified investment with respect to any qualified facility or energy storage technology the construction of which begins during the first calendar year following the applicable year, 100 percent,

"(B) for any qualified investment with respect to any qualified facility or energy storage technology the construction of which begins during the second calendar year following the applicable year, 75 percent,

"(C) for any qualified investment with respect to any qualified facility or energy storage technology the construction of which begins during the third calendar year following the applicable year, 50 percent, and

"(D) for any qualified investment with respect to any qualified facility or energy storage technology the construction of which begins during any calendar year subsequent to the calendar year described in subparagraph (C), 0 percent.

Definition. "(3) APPLICABLE YEAR.—For purposes of this subsection, the term 'applicable year' has the same meaning given such term in section 45Y(d)(3).

Definition. "(f) GREENHOUSE GAS.—In this section, the term 'greenhouse gas' has the same meaning given such term under section 45Y(e)(2).

"(g) RECAPTURE OF CREDIT.—For purposes of section 50, if the Secretary determines that the greenhouse gas emissions rate for a qualified facility is greater than 10 grams of CO_2e per KWh, any property for which a credit was allowed under this section with respect to such facility shall cease to be investment credit property in the taxable year in which the determination is made.

Definitions. "(h) SPECIAL RULES FOR CERTAIN FACILITIES PLACED IN SERVICE IN CONNECTION WITH LOW-INCOME COMMUNITIES.—

"(1) IN GENERAL.—In the case of any applicable facility with respect to which the Secretary makes an allocation of environmental justice capacity limitation under paragraph (4)—

"(A) the applicable percentage otherwise determined under subsection (a)(2) with respect to any eligible property which is part of such facility shall be increased by—

"(i) in the case of a facility described in subclause (I) of paragraph (2)(A)(iii) and not described in subclause (II) of such paragraph, 10 percentage points, and

"(ii) in the case of a facility described in subclause (II) of paragraph (2)(A)(iii), 20 percentage points, and

"(B) the increase in the credit determined under subsection (a) by reason of this subsection for any taxable year with respect to all property which is part of such facility shall not exceed the amount which bears the same ratio to the amount of such increase (determined without regard to this subparagraph) as—

"(i) the environmental justice capacity limitation allocated to such facility, bears to

"(ii) the total megawatt nameplate capacity of such facility, as measured in direct current.

"(2) APPLICABLE FACILITY.—For purposes of this subsection—

"(A) IN GENERAL.—The term 'applicable facility' means any qualified facility—

"(i) which is not described in section 45Y(b)(2)(B),

"(ii) which has a maximum net output of less than 5 megawatts (as measured in alternating current), and

"(iii) which—

"(I) is located in a low-income community (as defined in section 45D(e)) or on Indian land (as defined in section 2601(2) of the Energy Policy Act of 1992 (25 U.S.C. 3501(2))), or

"(II) is part of a qualified low-income residential building project or a qualified low-income economic benefit project.

"(B) QUALIFIED LOW-INCOME RESIDENTIAL BUILDING PROJECT.—A facility shall be treated as part of a qualified low-income residential building project if—

"(i) such facility is installed on a residential rental building which participates in a covered housing program (as defined in section 41411(a) of the Violence Against Women Act of 1994 (34 U.S.C. 12491(a)(3)), a housing assistance program administered by the Department of Agriculture under title V of the Housing Act of 1949, a housing program administered by a tribally designated housing entity (as defined in section 4(22) of the Native American Housing Assistance and Self-Determination Act of 1996 (25 U.S.C. 4103(22))) or such other affordable housing programs as the Secretary may provide, and

"(ii) the financial benefits of the electricity produced by such facility are allocated equitably among the occupants of the dwelling units of such building.

"(C) QUALIFIED LOW-INCOME ECONOMIC BENEFIT PROJECT.—A facility shall be treated as part of a qualified low-income economic benefit project if at least 50 percent of the financial benefits of the electricity produced by such facility are provided to households with income of—

"(i) less than 200 percent of the poverty line (as defined in section 36B(d)(3)(A)) applicable to a family of the size involved, or

"(ii) less than 80 percent of area median gross income (as determined under section 142(d)(2)(B)).

"(D) FINANCIAL BENEFIT.—For purposes of subparagraphs (B) and (C), electricity acquired at a below-market rate shall not fail to be taken into account as a financial benefit.

"(3) ELIGIBLE PROPERTY.—For purposes of this subsection, the term 'eligible property' means a qualified investment with respect to any applicable facility.

"(4) ALLOCATIONS.—

"(A) IN GENERAL.—Not later than January 1, 2025, the Secretary shall establish a program to allocate amounts of environmental justice capacity limitation to applicable facilities. In establishing such program and to carry out the purposes of this subsection, the Secretary shall provide procedures to allow for an efficient allocation process, including, when determined appropriate, consideration of multiple projects in a single application if such projects will be placed in service by a single taxpayer. Deadline. Procedures.

"(B) LIMITATION.—The amount of environmental justice capacity limitation allocated by the Secretary under subparagraph (A) during any calendar year shall not exceed the annual capacity limitation with respect to such year.

Time period.

"(C) ANNUAL CAPACITY LIMITATION.—For purposes of this paragraph, the term 'annual capacity limitation' means 1.8 gigawatts of direct current capacity for each calendar year during the period beginning on January 1, 2025, and ending on December 31 of the applicable year (as defined in section 45Y(d)(3)), and zero thereafter.

"(D) CARRYOVER OF UNUSED LIMITATION.—

"(i) IN GENERAL.—If the annual capacity limitation for any calendar year exceeds the aggregate amount allocated for such year under this paragraph, such limitation for the succeeding calendar year shall be increased by the amount of such excess. No amount may be carried under the preceding sentence to any calendar year after the third calendar year following the applicable year (as defined in section 45Y(d)(3)).

"(ii) CARRYOVER FROM SECTION 48 FOR CALENDAR YEAR 2025.—If the annual capacity limitation for calendar year 2024 under section 48(e)(4)(D) exceeds the aggregate amount allocated for such year under such section, such excess amount may be carried over and applied to the annual capacity limitation under this subsection for calendar year 2025. The annual capacity limitation for calendar year 2025 shall be increased by the amount of such excess.

"(E) PLACED IN SERVICE DEADLINE.—

"(i) IN GENERAL.—Paragraph (1) shall not apply with respect to any property which is placed in service after the date that is 4 years after the date of the allocation with respect to the facility of which such property is a part.

"(ii) APPLICATION OF CARRYOVER.—Any amount of environmental justice capacity limitation which expires under clause (i) during any calendar year shall be taken into account as an excess described in subparagraph (D)(i) (or as an increase in such excess) for such calendar year, subject to the limitation imposed by the last sentence of such subparagraph.

Regulations. Guidelines.

"(5) RECAPTURE.—The Secretary shall, by regulations or other guidance, provide for recapturing the benefit of any increase in the credit allowed under subsection (a) by reason of this subsection with respect to any property which ceases to be property eligible for such increase (but which does not cease to be investment credit property within the meaning of section 50(a)). The period and percentage of such recapture shall be determined under rules similar to the rules of section 50(a). To the extent provided by the Secretary, such recapture may not apply with respect to any property if, within 12 months after the date the taxpayer becomes aware (or reasonably should have become aware) of such property ceasing to be property eligible for such increase, the eligibility of such property for such increase is restored. The preceding sentence shall not apply more than once with respect to any facility.

Determination.

Time period.

Deadline.

"(i) GUIDANCE.—Not later than January 1, 2025, the Secretary shall issue guidance regarding implementation of this section.".

(b) CONFORMING AMENDMENTS.—

(1) Section 46, as amended by section 107(d) of the CHIPS Act of 2022, is amended—

26 USC 46.

(A) in paragraph (5), by striking "and" at the end,

(B) in paragraph (6), by striking the period at the end and inserting ", and", and

(C) by adding at the end the following:

"(7) the clean electricity investment credit.".

(2) Section 49(a)(1)(C), as amended by section 107(d) of the CHIPS Act of 2022, is amended— 26 USC 49.

(A) by striking "and" at the end of clause (v),

(B) by striking the period at the end of clause (vi) and inserting a comma, and

(C) by adding at the end the following new clauses:

"(vii) the basis of any qualified property which is part of a qualified facility under section 48E, and

"(viii) the basis of any energy storage technology under section 48E.".

(3) Section 50(a)(2)(E), as amended by section 107(d) of the CHIPS Act of 2022, is amended by striking "or 48D(b)(5)" and inserting "48D(b)(5), or 48E(e)". 26 USC 50.

(4) Section 50(c)(3) is amended by inserting "or clean electricity investment credit" after "In the case of any energy credit".

(5) The table of sections for subpart E of part IV of subchapter A of chapter 1, as amended by section 107(d) of the CHIPS Act of 2022, is amended by inserting after the item relating to section 48D the following new item: 26 USC 46 prec.

"48E. Clean electricity investment credit.".

(c) EFFECTIVE DATE.—The amendments made by this section shall apply to property placed in service after December 31, 2024. 26 USC 48E note.

SEC. 13703. COST RECOVERY FOR QUALIFIED FACILITIES, QUALIFIED PROPERTY, AND ENERGY STORAGE TECHNOLOGY.

(a) IN GENERAL.—Section 168(e)(3)(B) is amended— 26 USC 168.

(1) in clause (vi)(III), by striking "and" at the end,

(2) in clause (vii), by striking the period at the end and inserting ", and", and

(3) by inserting after clause (vii) the following:

"(viii) any qualified facility (as defined in section 45Y(b)(1)(A)), any qualified property (as defined in subsection (b)(2) of section 48E) which is a qualified investment (as defined in subsection (b)(1) of such section), or any energy storage technology (as defined in subsection (c)(2) of such section).".

(b) EFFECTIVE DATE.—The amendments made by this section shall apply to facilities and property placed in service after December 31, 2024. 26 USC 168 note.

SEC. 13704. CLEAN FUEL PRODUCTION CREDIT.

(a) IN GENERAL.—Subpart D of part IV of subchapter A of chapter 1, as amended by the preceding provisions of this Act, is amended by adding at the end the following new section:

"SEC. 45Z. CLEAN FUEL PRODUCTION CREDIT. 26 USC 45Z.

"(a) AMOUNT OF CREDIT.—

"(1) IN GENERAL.—For purposes of section 38, the clean fuel production credit for any taxable year is an amount equal to the product of—

"(A) the applicable amount per gallon (or gallon equivalent) with respect to any transportation fuel which is—

"(i) produced by the taxpayer at a qualified facility, and

"(ii) sold by the taxpayer in a manner described in paragraph (4) during the taxable year, and

"(B) the emissions factor for such fuel (as determined under subsection (b)).

"(2) APPLICABLE AMOUNT.—

"(A) BASE AMOUNT.—In the case of any transportation fuel produced at a qualified facility which does not satisfy the requirements described in subparagraph (B), the applicable amount shall be 20 cents.

"(B) ALTERNATIVE AMOUNT.—In the case of any transportation fuel produced at a qualified facility which satisfies the requirements under paragraphs (6) and (7) of subsection (f), the applicable amount shall be $1.00.

"(3) SPECIAL RATE FOR SUSTAINABLE AVIATION FUEL.—

"(A) IN GENERAL.—In the case of a transportation fuel which is sustainable aviation fuel, paragraph (2) shall be applied—

"(i) in the case of fuel produced at a qualified facility described in paragraph (2)(A), by substituting '35 cents' for '20 cents', and

"(ii) in the case of fuel produced at a qualified facility described in paragraph (2)(B), by substituting '$1.75' for '$1.00'.

Definition.

"(B) SUSTAINABLE AVIATION FUEL.—For purposes of this subparagraph (A), the term 'sustainable aviation fuel' means liquid fuel, the portion of which is not kerosene, which is sold for use in an aircraft and which—

"(i) meets the requirements of—

"(I) ASTM International Standard D7566, or

"(II) the Fischer Tropsch provisions of ASTM International Standard D1655, Annex A1, and

"(ii) is not derived from palm fatty acid distillates or petroleum.

"(4) SALE.—For purposes of paragraph (1), the transportation fuel is sold in a manner described in this paragraph if such fuel is sold by the taxpayer to an unrelated person—

"(A) for use by such person in the production of a fuel mixture,

"(B) for use by such person in a trade or business, or

"(C) who sells such fuel at retail to another person and places such fuel in the fuel tank of such other person.

"(5) ROUNDING.—If any amount determined under paragraph (1) is not a multiple of 1 cent, such amount shall be rounded to the nearest cent.

"(b) EMISSIONS FACTORS.—

Determinations.

"(1) EMISSIONS FACTOR.—

"(A) CALCULATION.—

"(i) IN GENERAL.—The emissions factor of a transportation fuel shall be an amount equal to the quotient of—

"(I) an amount equal to—

"(aa) 50 kilograms of CO_2e per mmBTU, minus

"(bb) the emissions rate for such fuel, divided by

"(II) 50 kilograms of CO_2e per mmBTU.

"(B) ESTABLISHMENT OF EMISSIONS RATE.—

"(i) IN GENERAL.—Subject to clauses (ii) and (iii), the Secretary shall annually publish a table which sets forth the emissions rate for similar types and categories of transportation fuels based on the amount of lifecycle greenhouse gas emissions (as described in section 211(o)(1)(H) of the Clean Air Act (42 U.S.C. 7545(o)(1)(H)), as in effect on the date of the enactment of this section) for such fuels, expressed as kilograms of CO_2e per mmBTU, which a taxpayer shall use for purposes of this section. Publication.

"(ii) NON-AVIATION FUEL.—In the case of any transportation fuel which is not a sustainable aviation fuel, the lifecycle greenhouse gas emissions of such fuel shall be based on the most recent determinations under the Greenhouse gases, Regulated Emissions, and Energy use in Transportation model developed by Argonne National Laboratory, or a successor model (as determined by the Secretary).

"(iii) AVIATION FUEL.—In the case of any transportation fuel which is a sustainable aviation fuel, the lifecycle greenhouse gas emissions of such fuel shall be determined in accordance with—

"(I) the most recent Carbon Offsetting and Reduction Scheme for International Aviation which has been adopted by the International Civil Aviation Organization with the agreement of the United States, or

"(II) any similar methodology which satisfies the criteria under section 211(o)(1)(H) of the Clean Air Act (42 U.S.C. 7545(o)(1)(H)), as in effect on the date of enactment of this section.

"(C) ROUNDING OF EMISSIONS RATE.—

"(i) IN GENERAL.—Subject to clause (ii), the Secretary may round the emissions rates under subparagraph (B) to the nearest multiple of 5 kilograms of CO_2e per mmBTU.

"(ii) EXCEPTION.—In the case of an emissions rate that is between 2.5 kilograms of CO_2e per mmBTU and -2.5 kilograms of CO_2e per mmBTU, the Secretary may round such rate to zero.

"(D) PROVISIONAL EMISSIONS RATE.—In the case of any transportation fuel for which an emissions rate has not been established under subparagraph (B), a taxpayer producing such fuel may file a petition with the Secretary for determination of the emissions rate with respect to such fuel.

"(2) ROUNDING.—If any amount determined under paragraph (1)(A) is not a multiple of 0.1, such amount shall be rounded to the nearest multiple of 0.1.

"(c) INFLATION ADJUSTMENT.—

Effective date.

"(1) IN GENERAL.—In the case of calendar years beginning after 2024, the 20 cent amount in subsection (a)(2)(A), the $1.00 amount in subsection (a)(2)(B), the 35 cent amount in subsection (a)(3)(A)(i), and the $1.75 amount in subsection (a)(3)(A)(ii) shall each be adjusted by multiplying such amount by the inflation adjustment factor for the calendar year in which the sale of the transportation fuel occurs. If any amount as increased under the preceding sentence is not a multiple of 1 cent, such amount shall be rounded to the nearest multiple of 1 cent.

Determination. Publication.

"(2) INFLATION ADJUSTMENT FACTOR.—For purposes of paragraph (1), the inflation adjustment factor shall be the inflation adjustment factor determined and published by the Secretary pursuant to section 45Y(c), determined by substituting 'calendar year 2022' for 'calendar year 1992' in paragraph (3) thereof.

"(d) DEFINITIONS.—In this section:

"(1) mmBTU.—The term 'mmBTU' means 1,000,000 British thermal units.

"(2) CO_2e.—The term 'CO_2e' means, with respect to any greenhouse gas, the equivalent carbon dioxide (as determined based on relative global warming potential).

"(3) GREENHOUSE GAS.—The term 'greenhouse gas' has the same meaning given that term under section 211(o)(1)(G) of the Clean Air Act (42 U.S.C. 7545(o)(1)(G)), as in effect on the date of the enactment of this section.

"(4) QUALIFIED FACILITY.—The term 'qualified facility'—

"(A) means a facility used for the production of transportation fuels, and

"(B) does not include any facility for which one of the following credits is allowed under section 38 for the taxable year:

"(i) The credit for production of clean hydrogen under section 45V.

"(ii) The credit determined under section 46 to the extent that such credit is attributable to the energy credit determined under section 48 with respect to any specified clean hydrogen production facility for which an election is made under subsection (a)(15) of such section.

"(iii) The credit for carbon oxide sequestration under section 45Q.

"(5) TRANSPORTATION FUEL.—

"(A) IN GENERAL.—The term 'transportation fuel' means a fuel which—

"(i) is suitable for use as a fuel in a highway vehicle or aircraft,

"(ii) has an emissions rate which is not greater than 50 kilograms of CO_2e per mmBTU, and

"(iii) is not derived from coprocessing an applicable material (or materials derived from an applicable material) with a feedstock which is not biomass.

"(B) DEFINITIONS.—In this paragraph—

"(i) APPLICABLE MATERIAL.—The term 'applicable material' means—

"(I) monoglycerides, diglycerides, and triglycerides,

"(II) free fatty acids, and

"(III) fatty acid esters.

"(ii) BIOMASS.—The term 'biomass' has the same meaning given such term in section 45K(c)(3).

"(e) GUIDANCE.—Not later than January 1, 2025, the Secretary shall issue guidance regarding implementation of this section, including calculation of emissions factors for transportation fuel, the table described in subsection (b)(1)(B)(i), and the determination of clean fuel production credits under this section. Deadline. Determination.

"(f) SPECIAL RULES.— Applicability.

"(1) ONLY REGISTERED PRODUCTION IN THE UNITED STATES TAKEN INTO ACCOUNT.—

"(A) IN GENERAL.—No clean fuel production credit shall be determined under subsection (a) with respect to any transportation fuel unless—

"(i) the taxpayer—

"(I) is registered as a producer of clean fuel under section 4101 at the time of production, and

"(II) in the case of any transportation fuel which is a sustainable aviation fuel, provides—

"(aa) certification (in such form and manner as the Secretary shall prescribe) from an unrelated party demonstrating compliance with— Certification.

"(AA) any general requirements, supply chain traceability requirements, and information transmission requirements established under the Carbon Offsetting and Reduction Scheme for International Aviation described in subclause (I) of subsection (b)(1)(B)(iii), or

"(BB) in the case of any methodology described in subclause (II) of such subsection, requirements similar to the requirements described in subitem (AA), and

"(bb) such other information with respect to such fuel as the Secretary may require for purposes of carrying out this section, and

"(ii) such fuel is produced in the United States.

"(B) UNITED STATES.—For purposes of this paragraph, the term 'United States' includes any possession of the United States. Definition.

"(2) PRODUCTION ATTRIBUTABLE TO THE TAXPAYER.—In the case of a facility in which more than 1 person has an ownership interest, except to the extent provided in regulations prescribed by the Secretary, production from the facility shall be allocated among such persons in proportion to their respective ownership interests in the gross sales from such facility.

"(3) RELATED PERSONS.—Persons shall be treated as related to each other if such persons would be treated as a single employer under the regulations prescribed under section 52(b). In the case of a corporation which is a member of an affiliated group of corporations filing a consolidated return, such corporation shall be treated as selling fuel to an unrelated person if such fuel is sold to such a person by another member of such group.

"(4) PASS-THRU IN THE CASE OF ESTATES AND TRUSTS.—Under regulations prescribed by the Secretary, rules similar to the rules of subsection (d) of section 52 shall apply.

"(5) ALLOCATION OF CREDIT TO PATRONS OF AGRICULTURAL COOPERATIVE.—Rules similar to the rules of section 45Y(g)(6) shall apply.

"(6) PREVAILING WAGE REQUIREMENTS.—

"(A) IN GENERAL.—Subject to subparagraph (B), rules similar to the rules of section 45(b)(7) shall apply.

"(B) SPECIAL RULE FOR FACILITIES PLACED IN SERVICE BEFORE JANUARY 1, 2025.—For purposes of subparagraph (A), in the case of any qualified facility placed in service before January 1, 2025—

"(i) clause (i) of section 45(b)(7)(A) shall not apply, and

"(ii) clause (ii) of such section shall be applied by substituting 'with respect to any taxable year beginning after December 31, 2024, for which the credit is allowed under this section' for 'with respect to any taxable year, for any portion of such taxable year which is within the period described in subsection (a)(2)(A)(ii)'.

"(7) APPRENTICESHIP REQUIREMENTS.—Rules similar to the rules of section 45(b)(8) shall apply.

"(g) TERMINATION.—This section shall not apply to transportation fuel sold after December 31, 2027.".

(b) CONFORMING AMENDMENTS.—

(1) Section 25C(d)(3), as amended by the preceding provisions of this Act, is amended— 26 USC 25.

(A) in subparagraph (A), by striking "and" at the end,

(B) in subparagraph (B), by striking the period at the end and inserting ", and", and

(C) by adding at the end the following new subparagraph:

"(C) transportation fuel (as defined in section 45Z(d)(5)).".

(2) Section 30C(c)(1)(B), as amended by the preceding provisions of this Act, is amended by adding at the end the following new clause:

"(iv) Any transportation fuel (as defined in section 45Z(d)(5)).".

(3) Section 38(b), as amended by the preceding provisions of this Act, is amended—

(A) in paragraph (38), by striking "plus" at the end,

(B) in paragraph (39), by striking the period at the end and inserting ", plus", and

(C) by adding at the end the following new paragraph:

"(40) the clean fuel production credit determined under section 45Z(a).".

(4) The table of sections for subpart D of part IV of subchapter A of chapter 1, as amended by the preceding provisions of this Act, is amended by adding at the end the following new item: 26 USC 38 prec.

"Sec. 45Z. Clean fuel production credit.".

(5) Section 4101(a)(1), as amended by the preceding provisions of this Act, is amended by inserting "every person producing a fuel eligible for the clean fuel production credit (pursuant to section 45Z)," after "section 6426(k)(3)),". 26 USC 4101.

(c) EFFECTIVE DATE.—The amendments made by this section shall apply to transportation fuel produced after December 31, 2024. 26 USC 45Z note.

PART 8—CREDIT MONETIZATION AND APPROPRIATIONS

SEC. 13801. ELECTIVE PAYMENT FOR ENERGY PROPERTY AND ELECTRICITY PRODUCED FROM CERTAIN RENEWABLE RESOURCES, ETC.

(a) IN GENERAL.—Subchapter B of chapter 65 is amended by inserting after section 6416 the following new section:

"SEC. 6417. ELECTIVE PAYMENT OF APPLICABLE CREDITS. 26 USC 6417.

"(a) IN GENERAL.—In the case of an applicable entity making an election (at such time and in such manner as the Secretary may provide) under this section with respect to any applicable credit determined with respect to such entity, such entity shall be treated as making a payment against the tax imposed by subtitle A (for the taxable year with respect to which such credit was determined) equal to the amount of such credit.

"(b) APPLICABLE CREDIT.—The term 'applicable credit' means each of the following: Definition.

"(1) So much of the credit for alternative fuel vehicle refueling property allowed under section 30C which, pursuant to subsection (d)(1) of such section, is treated as a credit listed in section 38(b).

"(2) So much of the renewable electricity production credit determined under section 45(a) as is attributable to qualified facilities which are originally placed in service after December 31, 2022.

"(3) So much of the credit for carbon oxide sequestration determined under section 45Q(a) as is attributable to carbon capture equipment which is originally placed in service after December 31, 2022.

"(4) The zero-emission nuclear power production credit determined under section 45U(a).

"(5) So much of the credit for production of clean hydrogen determined under section 45V(a) as is attributable to qualified clean hydrogen production facilities which are originally placed in service after December 31, 2012.

"(6) In the case of a tax-exempt entity described in clause (i), (ii), or (iv) of section 168(h)(2)(A), the credit for qualified commercial vehicles determined under section 45W by reason of subsection (d)(3) thereof.

"(7) The credit for advanced manufacturing production under section 45X(a).

"(8) The clean electricity production credit determined under section 45Y(a).

"(9) The clean fuel production credit determined under section 45Z(a).

"(10) The energy credit determined under section 48.

"(11) The qualifying advanced energy project credit determined under section 48C.

"(12) The clean electricity investment credit determined under section 48E.

"(c) APPLICATION TO PARTNERSHIPS AND S CORPORATIONS.—

"(1) IN GENERAL.—In the case of any applicable credit determined with respect to any facility or property held directly by a partnership or S corporation, any election under subsection (a) shall be made by such partnership or S corporation. If such partnership or S corporation makes an election under such subsection (in such manner as the Secretary may provide) with respect to such credit—

"(A) the Secretary shall make a payment to such partnership or S corporation equal to the amount of such credit,

"(B) subsection (e) shall be applied with respect to such credit before determining any partner's distributive share, or shareholder's pro rata share, of such credit,

"(C) any amount with respect to which the election in subsection (a) is made shall be treated as tax exempt income for purposes of sections 705 and 1366, and

"(D) a partner's distributive share of such tax exempt income shall be based on such partner's distributive share of the otherwise applicable credit for each taxable year.

"(2) COORDINATION WITH APPLICATION AT PARTNER OR SHAREHOLDER LEVEL.—In the case of any facility or property held directly by a partnership or S corporation, no election by any partner or shareholder shall be allowed under subsection (a) with respect to any applicable credit determined with respect to such facility or property.

"(3) TREATMENT OF PAYMENTS TO PARTNERSHIPS AND S CORPORATIONS.—For purposes of section 1324 of title 31, United States Code, the payments under paragraph (1)(A) shall be treated in the same manner as a refund due from a credit provision referred to in subsection (b)(2) of such section.

"(d) SPECIAL RULES.—For purposes of this section—

Definition.
Effective dates.

"(1) APPLICABLE ENTITY.—

"(A) IN GENERAL.—The term 'applicable entity' means—

"(i) any organization exempt from the tax imposed by subtitle A,

"(ii) any State or political subdivision thereof,

"(iii) the Tennessee Valley Authority,

"(iv) an Indian tribal government (as defined in section 30D(g)(9)),

"(v) any Alaska Native Corporation (as defined in section 3 of the Alaska Native Claims Settlement Act (43 U.S.C. 1602(m)), or

"(vi) any corporation operating on a cooperative basis which is engaged in furnishing electric energy to persons in rural areas.

"(B) ELECTION WITH RESPECT TO CREDIT FOR PRODUCTION OF CLEAN HYDROGEN.—If a taxpayer other than an entity described in subparagraph (A) makes an election under this subparagraph with respect to any taxable year in which such taxpayer has placed in service a qualified clean hydrogen production facility (as defined in section 45V(c)(3)), such taxpayer shall be treated as an applicable entity for purposes of this section for such taxable year,

but only with respect to the credit described in subsection (b)(5).

"(C) ELECTION WITH RESPECT TO CREDIT FOR CARBON OXIDE SEQUESTRATION.—If a taxpayer other than an entity described in subparagraph (A) makes an election under this subparagraph with respect to any taxable year in which such taxpayer has, after December 31, 2022, placed in service carbon capture equipment at a qualified facility (as defined in section 45Q(d)), such taxpayer shall be treated as an applicable entity for purposes of this section for such taxable year, but only with respect to the credit described in subsection (b)(3).

"(D) ELECTION WITH RESPECT TO ADVANCED MANUFACTURING PRODUCTION CREDIT.—

"(i) IN GENERAL.—If a taxpayer other than an entity described in subparagraph (A) makes an election under this subparagraph with respect to any taxable year in which such taxpayer has, after December 31, 2022, produced eligible components (as defined in section 45X(c)(1)), such taxpayer shall be treated as an applicable entity for purposes of this section for such taxable year, but only with respect to the credit described in subsection (b)(7).

"(ii) LIMITATION.—

"(I) IN GENERAL.—Except as provided in subclause (II), if a taxpayer makes an election under this subparagraph with respect to any taxable year, such taxpayer shall be treated as having made such election for each of the 4 succeeding taxable years ending before January 1, 2033.

"(II) EXCEPTION.—A taxpayer may elect to revoke the application of the election made under this subparagraph to any taxable year described in subclause (I). Any such election, if made, shall apply to the applicable year specified in such election and each subsequent taxable year within the period described in subclause (I). Any election under this subclause may not be subsequently revoked.

"(iii) PROHIBITION ON TRANSFER.—For any taxable year described in clause (ii)(I), no election may be made by the taxpayer under section 6418(a) for such taxable year with respect to eligible components for purposes of the credit described in subsection (b)(7).

"(E) OTHER RULES.—

"(i) IN GENERAL.—An election made under subparagraph (B), (C), or (D) shall be made at such time and in such manner as the Secretary may provide.

"(ii) LIMITATION.—No election may be made under subparagraph (B), (C), or (D) with respect to any taxable year beginning after December 31, 2032. Effective date.

"(2) APPLICATION.—In the case of any applicable entity which makes the election described in subsection (a), any applicable credit shall be determined— Determination.

"(A) without regard to paragraphs (3) and (4)(A)(i) of section 50(b), and

"(B) by treating any property with respect to which such credit is determined as used in a trade or business of the applicable entity.

"(3) ELECTIONS.—

"(A) IN GENERAL.—

"(i) DUE DATE.—Any election under subsection (a) shall be made not later than—

"(I) in the case of any government, or political subdivision, described in paragraph (1) and for which no return is required under section 6011 or 6033(a), such date as is determined appropriate by the Secretary, or

"(II) in any other case, the due date (including extensions of time) for the return of tax for the taxable year for which the election is made, but in no event earlier than 180 days after the date of the enactment of this section.

Applicability.

"(ii) ADDITIONAL RULES.—Any election under subsection (a), once made, shall be irrevocable and shall apply (except as otherwise provided in this paragraph) with respect to any credit for the taxable year for which the election is made.

Applicability.

"(B) RENEWABLE ELECTRICITY PRODUCTION CREDIT.—In the case of the credit described in subsection (b)(2), any election under subsection (a) shall—

"(i) apply separately with respect to each qualified facility,

"(ii) be made for the taxable year in which such qualified facility is originally placed in service, and

"(iii) shall apply to such taxable year and to any subsequent taxable year which is within the period described in subsection (a)(2)(A)(ii) of section 45 with respect to such qualified facility.

"(C) CREDIT FOR CARBON OXIDE SEQUESTRATION.—

Applicability.

"(i) IN GENERAL.—In the case of the credit described in subsection (b)(3), any election under subsection (a) shall—

"(I) apply separately with respect to the carbon capture equipment originally placed in service by the applicable entity during a taxable year, and

Time period.

"(II)(aa) in the case of a taxpayer who makes an election described in paragraph (1)(C), apply to the taxable year in which such equipment is placed in service and the 4 subsequent taxable years with respect to such equipment which end before January 1, 2033, and

"(bb) in any other case, apply to such taxable year and to any subsequent taxable year which is within the period described in paragraph (3)(A) or (4)(A) of section 45Q(a) with respect to such equipment.

"(ii) PROHIBITION ON TRANSFER.—For any taxable year described in clause (i)(II)(aa) with respect to carbon capture equipment, no election may be made by the taxpayer under section 6418(a) for such taxable year with respect to such equipment for purposes of the credit described in subsection (b)(3).

"(iii) REVOCATION OF ELECTION.—In the case of a taxpayer who makes an election described in paragraph (1)(C) with respect to carbon capture equipment, such taxpayer may, at any time during the period described in clause (i)(II)(aa), revoke the application of such election with respect to such equipment for any subsequent taxable years during such period. Any such election, if made, shall apply to the applicable year specified in such election and each subsequent taxable year within the period described in clause (i)(II)(aa). Any election under this subclause may not be subsequently revoked. Applicability.

"(D) CREDIT FOR PRODUCTION OF CLEAN HYDROGEN.— Applicability. Time period.

"(i) IN GENERAL.—In the case of the credit described in subsection (b)(5), any election under subsection (a) shall—

"(I) apply separately with respect to each qualified clean hydrogen production facility,

"(II) be made for the taxable year in which such facility is placed in service (or within the 1-year period subsequent to the date of enactment of this section in the case of facilities placed in service before December 31, 2022), and

"(III)(aa) in the case of a taxpayer who makes an election described in paragraph (1)(B), apply to such taxable year and the 4 subsequent taxable years with respect to such facility which end before January 1, 2033, and

"(bb) in any other case, apply to such taxable year and all subsequent taxable years with respect to such facility.

"(ii) PROHIBITION ON TRANSFER.—For any taxable year described in clause (i)(III)(aa) with respect to a qualified clean hydrogen production facility, no election may be made by the taxpayer under section 6418(a) for such taxable year with respect to such facility for purposes of the credit described in subsection (b)(5).

"(iii) REVOCATION OF ELECTION.—In the case of a taxpayer who makes an election described in paragraph (1)(B) with respect to a qualified clean hydrogen production facility, such taxpayer may, at any time during the period described in clause (i)(III)(aa), revoke the application of such election with respect to such facility for any subsequent taxable years during such period. Any such election, if made, shall apply to the applicable year specified in such election and each subsequent taxable year within the period described in clause (i)(II)(aa). Any election under this subclause may not be subsequently revoked. Applicability.

"(E) CLEAN ELECTRICITY PRODUCTION CREDIT.—In the case of the credit described in subsection (b)(8), any election under subsection (a) shall— Applicability.

"(i) apply separately with respect to each qualified facility,

"(ii) be made for the taxable year in which such facility is placed in service, and

"(iii) shall apply to such taxable year and to any subsequent taxable year which is within the period described in subsection (b)(1)(B) of section 45Y with respect to such facility.

"(4) TIMING.—The payment described in subsection (a) shall be treated as made on—

Claims.

"(A) in the case of any government, or political subdivision, described in paragraph (1) and for which no return is required under section 6011 or 6033(a), the later of the date that a return would be due under section 6033(a) if such government or subdivision were described in that section or the date on which such government or subdivision submits a claim for credit or refund (at such time and in such manner as the Secretary shall provide), and

Determination.

"(B) in any other case, the later of the due date (determined without regard to extensions) of the return of tax for the taxable year or the date on which such return is filed.

"(5) ADDITIONAL INFORMATION.—As a condition of, and prior to, any amount being treated as a payment which is made by an applicable entity under subsection (a), the Secretary may require such information or registration as the Secretary deems necessary for purposes of preventing duplication, fraud, improper payments, or excessive payments under this section.

"(6) EXCESSIVE PAYMENT.—

Determination.

"(A) IN GENERAL.—In the case of any amount treated as a payment which is made by the applicable entity under subsection (a), or the amount of the payment made pursuant to subsection (c), which the Secretary determines constitutes an excessive payment, the tax imposed on such entity by chapter 1 (regardless of whether such entity would otherwise be subject to tax under such chapter) for the taxable year in which such determination is made shall be increased by an amount equal to the sum of—

"(i) the amount of such excessive payment, plus

"(ii) an amount equal to 20 percent of such excessive payment.

"(B) REASONABLE CAUSE.—Subparagraph (A)(ii) shall not apply if the applicable entity demonstrates to the satisfaction of the Secretary that the excessive payment resulted from reasonable cause.

"(C) EXCESSIVE PAYMENT DEFINED.—For purposes of this paragraph, the term 'excessive payment' means, with respect to a facility or property for which an election is made under this section for any taxable year, an amount equal to the excess of—

"(i) the amount treated as a payment which is made by the applicable entity under subsection (a), or the amount of the payment made pursuant to subsection (c), with respect to such facility or property for such taxable year, over

"(ii) the amount of the credit which, without application of this section, would be otherwise allowable (as determined pursuant to paragraph (2) and without regard to section 38(c)) under this title with respect to such facility or property for such taxable year.

"(e) DENIAL OF DOUBLE BENEFIT.—In the case of an applicable entity making an election under this section with respect to an applicable credit, such credit shall be reduced to zero and shall, for any other purposes under this title, be deemed to have been allowed to such entity for such taxable year.

"(f) MIRROR CODE POSSESSIONS.—In the case of any possession of the United States with a mirror code tax system (as defined in section 24(k)), this section shall not be treated as part of the income tax laws of the United States for purposes of determining the income tax law of such possession unless such possession elects to have this section be so treated. Determination.

"(g) BASIS REDUCTION AND RECAPTURE.—Except as otherwise provided in subsection (c)(2)(A), rules similar to the rules of section 50 shall apply for purposes of this section. Applicability.

"(h) REGULATIONS.—The Secretary shall issue such regulations or other guidance as may be necessary to carry out the purposes of this section, including guidance to ensure that the amount of the payment or deemed payment made under this section is commensurate with the amount of the credit that would be otherwise allowable (determined without regard to section 38(c)).". Guidelines.

(b) TRANSFER OF CERTAIN CREDITS.—Subchapter B of chapter 65, as amended by subsection (a), is amended by inserting after section 6417 the following new section:

"SEC. 6418. TRANSFER OF CERTAIN CREDITS. 26 USC 6418.

"(a) IN GENERAL.—In the case of an eligible taxpayer which elects to transfer all (or any portion specified in the election) of an eligible credit determined with respect to such taxpayer for any taxable year to a taxpayer (referred to in this section as the 'transferee taxpayer') which is not related (within the meaning of section 267(b) or 707(b)(1)) to the eligible taxpayer, the transferee taxpayer specified in such election (and not the eligible taxpayer) shall be treated as the taxpayer for purposes of this title with respect to such credit (or such portion thereof).

"(b) TREATMENT OF PAYMENTS MADE IN CONNECTION WITH TRANSFER.—With respect to any amount paid by a transferee taxpayer to an eligible taxpayer as consideration for a transfer described in subsection (a), such consideration—

"(1) shall be required to be paid in cash, Requirement.

"(2) shall not be includible in gross income of the eligible taxpayer, and

"(3) with respect to the transferee taxpayer, shall not be deductible under this title.

"(c) APPLICATION TO PARTNERSHIPS AND S CORPORATIONS.—

"(1) IN GENERAL.—In the case of any eligible credit determined with respect to any facility or property held directly by a partnership or S corporation, if such partnership or S corporation makes an election under subsection (a) (in such manner as the Secretary may provide) with respect to such credit—

"(A) any amount received as consideration for a transfer described in such subsection shall be treated as tax exempt income for purposes of sections 705 and 1366, and

"(B) a partner's distributive share of such tax exempt income shall be based on such partner's distributive share of the otherwise eligible credit for each taxable year.

"(2) COORDINATION WITH APPLICATION AT PARTNER OR SHAREHOLDER LEVEL.—In the case of any facility or property held directly by a partnership or S corporation, no election by any partner or shareholder shall be allowed under subsection (a) with respect to any eligible credit determined with respect to such facility or property.

"(d) TAXABLE YEAR IN WHICH CREDIT TAKEN INTO ACCOUNT.—In the case of any credit (or portion thereof) with respect to which an election is made under subsection (a), such credit shall be taken into account in the first taxable year of the transferee taxpayer ending with, or after, the taxable year of the eligible taxpayer with respect to which the credit was determined.

"(e) LIMITATIONS ON ELECTION.—

Deadline.
Time period.

"(1) TIME FOR ELECTION.—An election under subsection (a) to transfer any portion of an eligible credit shall be made not later than the due date (including extensions of time) for the return of tax for the taxable year for which the credit is determined, but in no event earlier than 180 days after the date of the enactment of this section. Any such election, once made, shall be irrevocable.

"(2) NO ADDITIONAL TRANSFERS.—No election may be made under subsection (a) by a transferee taxpayer with respect to any portion of an eligible credit which has been previously transferred to such taxpayer pursuant to this section.

"(f) DEFINITIONS.—For purposes of this section—

"(1) ELIGIBLE CREDIT.—

"(A) IN GENERAL.—The term 'eligible credit' means each of the following:

"(i) So much of the credit for alternative fuel vehicle refueling property allowed under section 30C which, pursuant to subsection (d)(1) of such section, is treated as a credit listed in section 38(b).

"(ii) The renewable electricity production credit determined under section 45(a).

"(iii) The credit for carbon oxide sequestration determined under section 45Q(a).

"(iv) The zero-emission nuclear power production credit determined under section 45U(a).

"(v) The clean hydrogen production credit determined under section 45V(a).

"(vi) The advanced manufacturing production credit determined under section 45X(a).

"(vii) The clean electricity production credit determined under section 45Y(a).

"(viii) The clean fuel production credit determined under section 45Z(a).

"(ix) The energy credit determined under section 48.

"(x) The qualifying advanced energy project credit determined under section 48C.

"(xi) The clean electricity investment credit determined under section 48E.

"(B) ELECTION FOR CERTAIN CREDITS.—In the case of any eligible credit described in clause (ii), (iii), (v), or (vii) of subparagraph (A), an election under subsection (a) shall be made—

"(i) separately with respect to each facility for which such credit is determined, and

"(ii) for each taxable year during the 10-year period beginning on the date such facility was originally placed in service (or, in the case of the credit described in clause (iii), for each year during the 12-year period beginning on the date the carbon capture equipment was originally placed in service at such facility). Time periods. Effective dates.

"(C) EXCEPTION FOR BUSINESS CREDIT CARRYFORWARDS OR CARRYBACKS.—The term 'eligible credit' shall not include any business credit carryforward or business credit carryback determined under section 39.

"(2) ELIGIBLE TAXPAYER.—The term 'eligible taxpayer' means any taxpayer which is not described in section 6417(d)(1)(A).

"(g) SPECIAL RULES.—For purposes of this section—

"(1) ADDITIONAL INFORMATION.—As a condition of, and prior to, any transfer of any portion of an eligible credit pursuant to subsection (a), the Secretary may require such information (including, in such form or manner as is determined appropriate by the Secretary, such information returns) or registration as the Secretary deems necessary for purposes of preventing duplication, fraud, improper payments, or excessive payments under this section. Determination.

"(2) EXCESSIVE CREDIT TRANSFER.—

"(A) IN GENERAL.—In the case of any portion of an eligible credit which is transferred to a transferee taxpayer pursuant to subsection (a) which the Secretary determines constitutes an excessive credit transfer, the tax imposed on the transferee taxpayer by chapter 1 (regardless of whether such entity would otherwise be subject to tax under such chapter) for the taxable year in which such determination is made shall be increased by an amount equal to the sum of— Determination.

"(i) the amount of such excessive credit transfer, plus

"(ii) an amount equal to 20 percent of such excessive credit transfer.

"(B) REASONABLE CAUSE.—Subparagraph (A)(ii) shall not apply if the transferee taxpayer demonstrates to the satisfaction of the Secretary that the excessive credit transfer resulted from reasonable cause.

"(C) EXCESSIVE CREDIT TRANSFER DEFINED.—For purposes of this paragraph, the term 'excessive credit transfer' means, with respect to a facility or property for which an election is made under subsection (a) for any taxable year, an amount equal to the excess of— Definition.

"(i) the amount of the eligible credit claimed by the transferee taxpayer with respect to such facility or property for such taxable year, over

"(ii) the amount of such credit which, without application of this section, would be otherwise allowable under this title with respect to such facility or property for such taxable year.

"(3) BASIS REDUCTION; NOTIFICATION OF RECAPTURE.—In the case of any election under subsection (a) with respect to

any portion of an eligible credit described in clauses (ix) through (xi) of subsection (f)(1)(A)—

Applicability.

"(A) subsection (c) of section 50 shall apply to the applicable investment credit property (as defined in subsection (a)(5) of such section) as if such eligible credit was allowed to the eligible taxpayer, and

Notices.

"(B) if, during any taxable year, the applicable investment credit property (as defined in subsection (a)(5) of section 50) is disposed of, or otherwise ceases to be investment credit property with respect to the eligible taxpayer, before the close of the recapture period (as described in subsection (a)(1) of such section)—

"(i) such eligible taxpayer shall provide notice of such occurrence to the transferee taxpayer (in such form and manner as the Secretary shall prescribe), and

"(ii) the transferee taxpayer shall provide notice of the recapture amount (as defined in subsection (c)(2) of such section), if any, to the eligible taxpayer (in such form and manner as the Secretary shall prescribe).

"(4) PROHIBITION ON ELECTION OR TRANSFER WITH RESPECT TO PROGRESS EXPENDITURES.—This section shall not apply with respect to any amount of an eligible credit which is allowed pursuant to rules similar to the rules of subsections (c)(4) and (d) of section 46 (as in effect on the day before the date of the enactment of the Revenue Reconciliation Act of 1990).

Guidelines.

"(h) REGULATIONS.—The Secretary shall issue such regulations or other guidance as may be necessary to carry out the purposes of this section, including regulations or other guidance providing rules for determining a partner's distributive share of the tax exempt income described in subsection (c)(1).".

26 USC 50.

(c) REAL ESTATE INVESTMENT TRUSTS.—Section 50(d) is amended by adding at the end the following: "In the case of a real estate investment trust making an election under section 6418, paragraphs (1)(B) and (2)(B) of the section 46(e) referred to in paragraph (1) of this subsection shall not apply to any investment credit property of such real estate investment trust to which such election applies.".

(d) 3-YEAR CARRYBACK FOR APPLICABLE CREDITS.—Section 39(a) is amended by adding at the end the following:

"(4) 3-YEAR CARRYBACK FOR APPLICABLE CREDITS.—Notwithstanding subsection (d), in the case of any applicable credit (as defined in section 6417(b))—

"(A) this section shall be applied separately from the business credit (other than the applicable credit),

"(B) paragraph (1) shall be applied by substituting 'each of the 3 taxable years' for 'the taxable year' in subparagraph (A) thereof, and

"(C) paragraph (2) shall be applied—

"(i) by substituting '23 taxable years' for '21 taxable years' in subparagraph (A) thereof, and

"(ii) by substituting '22 taxable years' for '20 taxable years' in subparagraph (B) thereof.".

(e) CLERICAL AMENDMENT.—The table of sections for subchapter B of chapter 65 is amended by inserting after the item relating to section 6416 the following new items: 26 USC 6411 prec.

"Sec. 6417. Elective payment of applicable credits.
"Sec. 6418. Transfer of certain credits.".

(f) GROSS-UP OF DIRECT SPENDING.—Beginning in fiscal year 2023 and each fiscal year thereafter, the portion of any payment made to a taxpayer pursuant to an election under section 6417 of the Internal Revenue Code of 1986, or any amount treated as a payment which is made by the taxpayer under subsection (a) of such section, that is direct spending shall be increased by 6.0445 percent. Effective date. Time periods. 26 USC 6417 note.

(g) EFFECTIVE DATE.—The amendments made by this section shall apply to taxable years beginning after December 31, 2022. 26 USC 6417 note.

SEC. 13802. APPROPRIATIONS. Effective date.

Immediately upon the enactment of this Act, in addition to amounts otherwise available, there are appropriated for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $500,000,000 to remain available until September 30, 2031, for necessary expenses for the Internal Revenue Service to carry out this subtitle (and the amendments made by this subtitle), which shall supplement and not supplant any other appropriations that may be available for this purpose.

PART 9—OTHER PROVISIONS

SEC. 13901. PERMANENT EXTENSION OF TAX RATE TO FUND BLACK LUNG DISABILITY TRUST FUND.

(a) IN GENERAL.—Section 4121 is amended by striking subsection (e). 26 USC 4121.

(b) EFFECTIVE DATE.—The amendment made by this section shall apply to sales in calendar quarters beginning after the date which is 1 day after the date of enactment of this Act. 26 USC 4121 note.

SEC. 13902. INCREASE IN RESEARCH CREDIT AGAINST PAYROLL TAX FOR SMALL BUSINESSES.

(a) IN GENERAL.—Clause (i) of section 41(h)(4)(B) is amended—

(1) by striking "AMOUNT.—The amount" and inserting "AMOUNT.—

"(I) IN GENERAL.—The amount", and

(2) by adding at the end the following new subclause:

"(II) INCREASE.—In the case of taxable years beginning after December 31, 2022, the amount in subclause (I) shall be increased by $250,000.". Effective date.

(b) ALLOWANCE OF CREDIT.—

(1) IN GENERAL.—Paragraph (1) of section 3111(f) is amended—

(A) by striking "for a taxable year, there shall be allowed" and inserting "for a taxable year—

"(A) there shall be allowed",

(B) by striking "equal to the" and inserting "equal to so much of the",

(C) by striking the period at the end and inserting "as does not exceed the limitation of subclause (I) of section 41(h)(4)(B)(i) (applied without regard to subclause (II) thereof), and", and

(D) by adding at the end the following new subparagraph:

"(B) there shall be allowed as a credit against the tax imposed by subsection (b) for the first calendar quarter which begins after the date on which the taxpayer files the return specified in section 41(h)(4)(A)(ii) an amount equal to so much of the payroll tax credit portion determined under section 41(h)(2) as is not allowed as a credit under subparagraph (A).".

26 USC 3111.

(2) LIMITATION.—Paragraph (2) of section 3111(f) is amended—

(A) by striking "paragraph (1)" and inserting "paragraph (1)(A)", and

(B) by inserting ", and the credit allowed by paragraph (1)(B) shall not exceed the tax imposed by subsection (b) for any calendar quarter," after "calendar quarter".

(3) CARRYOVER.—Paragraph (3) of section 3111(f) is amended by striking "the credit" and inserting "any credit".

(4) DEDUCTION ALLOWED.—Paragraph (4) of section 3111(f) is amended—

(A) by striking "credit" and inserting "credits", and

(B) by striking "subsection (a)" and inserting "subsection (a) or (b)".

(c) AGGREGATION RULES.—Clause (ii) of section 41(h)(5)(B) is amended by striking "the $250,000 amount" and inserting "each of the $250,000 amounts".

26 USC 41 note.

(d) EFFECTIVE DATE.—The amendments made by this section shall apply to taxable years beginning after December 31, 2022.

SEC. 13903. REINSTATEMENT OF LIMITATION RULES FOR DEDUCTION FOR STATE AND LOCAL, ETC., TAXES; EXTENSION OF LIMITATION ON EXCESS BUSINESS LOSSES OF NONCORPORATE TAXPAYERS.

(a) REINSTATEMENT OF LIMITATION RULES FOR DEDUCTION FOR STATE AND LOCAL, ETC., TAXES.—

(1) IN GENERAL.—Section 164(b)(6), as amended by section 13904, is further amended—

(A) in the heading, by striking "2026" and inserting "2025", and

(B) by striking "2027" and inserting "2026".

26 USC 164 note.

(2) EFFECTIVE DATE.—The amendments made by this subsection shall apply to taxable years beginning after December 31, 2022.

(b) EXTENSION OF LIMITATION ON EXCESS BUSINESS LOSSES OF NONCORPORATE TAXPAYERS.—

(1) IN GENERAL.—Section 461(l)(1) is amended by striking "January 1, 2027" each place it appears and inserting "January 1, 2029".

26 USC 461 note.

(2) EFFECTIVE DATE.—The amendments made by this subsection shall apply to taxable years beginning after December 31, 2026.

SEC. 13904. REMOVAL OF HARMFUL SMALL BUSINESS TAXES; EXTENSION OF LIMITATION ON DEDUCTION FOR STATE AND LOCAL, ETC., TAXES.

(a) REMOVAL OF HARMFUL SMALL BUSINESS TAXES.—Subparagraph (D) of section 59(k)(1), as added by section 10101, is amended to read as follows:

"(D) SPECIAL RULES FOR DETERMINING APPLICABLE CORPORATION STATUS.—Solely for purposes of determining whether a corporation is an applicable corporation under this paragraph, all adjusted financial statement income of persons treated as a single employer with such corporation under subsection (a) or (b) of section 52 shall be treated as adjusted financial statement income of such corporation, and adjusted financial statement income of such corporation shall be determined without regard to paragraphs (2)(D)(i) and (11) of section 56A(c).".

(b) EXTENSION OF LIMITATION ON DEDUCTION FOR STATE AND LOCAL, ETC., TAXES.—

(1) IN GENERAL.—Section 164(b)(6) is amended—

(A) in the heading, by striking "2025" and inserting "2026", and

(B) by striking "2026" and inserting "2027".

(2) EFFECTIVE DATE.—The amendments made by this subsection shall apply to taxable years beginning after December 31, 2022. 26 USC 164 note.

TITLE II—COMMITTEE ON AGRICULTURE, NUTRITION, AND FORESTRY

Subtitle A—General Provisions

SEC. 20001. DEFINITION OF SECRETARY. 7 USC 6936 note.

In this title, the term "Secretary" means the Secretary of Agriculture.

Subtitle B—Conservation

SEC. 21001. ADDITIONAL AGRICULTURAL CONSERVATION INVESTMENTS.

(a) APPROPRIATIONS.—In addition to amounts otherwise available (and subject to subsection (b)), there are appropriated to the Secretary, out of any money in the Treasury not otherwise appropriated, to remain available until September 30, 2031 (subject to the condition that no such funds may be disbursed after September 30, 2031)— Time periods.

(1) to carry out, using the facilities and authorities of the Commodity Credit Corporation, the environmental quality incentives program under subchapter A of chapter 4 of subtitle D of title XII of the Food Security Act of 1985 (16 U.S.C. 3839aa through 3839aa–8)—

(A)(i) $250,000,000 for fiscal year 2023;

(ii) $1,750,000,000 for fiscal year 2024;

(iii) $3,000,000,000 for fiscal year 2025; and

(iv) $3,450,000,000 for fiscal year 2026; and

(B) subject to the conditions on the use of the funds that—

(i) section 1240B(f)(1) of the Food Security Act of 1985 (16 U.S.C. 3839aa–2(f)(1)) shall not apply;

Applicability.

(ii) section 1240H(c)(2) of the Food Security Act of 1985 (16 U.S.C. 3839aa–8(c)(2)) shall be applied—

(I) by substituting "$50,000,000" for "$25,000,000"; and

(II) with the Secretary prioritizing proposals that utilize diet and feed management to reduce enteric methane emissions from ruminants; and

Determination.

(iii) the funds shall be available for 1 or more agricultural conservation practices or enhancements that the Secretary determines directly improve soil carbon, reduce nitrogen losses, or reduce, capture, avoid, or sequester carbon dioxide, methane, or nitrous oxide emissions, associated with agricultural production;

(2) to carry out, using the facilities and authorities of the Commodity Credit Corporation, the conservation stewardship program under subchapter B of that chapter (16 U.S.C. 3839aa–21 through 3839aa–25)—

(A)(i) $250,000,000 for fiscal year 2023;

(ii) $500,000,000 for fiscal year 2024;

(iii) $1,000,000,000 for fiscal year 2025; and

(iv) $1,500,000,000 for fiscal year 2026; and

(B) subject to the condition on the use of the funds that the funds shall only be available for 1 or more agricultural conservation practices, enhancements, or bundles that the Secretary determines directly improve soil carbon, reduce nitrogen losses, or reduce, capture, avoid, or sequester carbon dioxide, methane, or nitrous oxide emissions, associated with agricultural production;

(3) to carry out, using the facilities and authorities of the Commodity Credit Corporation, the agricultural conservation easement program under subtitle H of title XII of that Act (16 U.S.C. 3865 through 3865d) for easements or interests in land that will most reduce, capture, avoid, or sequester carbon dioxide, methane, or nitrous oxide emissions associated with land eligible for the program—

(A) $100,000,000 for fiscal year 2023;

(B) $200,000,000 for fiscal year 2024;

(C) $500,000,000 for fiscal year 2025; and

(D) $600,000,000 for fiscal year 2026; and

(4) to carry out, using the facilities and authorities of the Commodity Credit Corporation, the regional conservation partnership program under subtitle I of title XII of that Act (16 U.S.C. 3871 through 3871f)—

(A)(i) $250,000,000 for fiscal year 2023;

(ii) $800,000,000 for fiscal year 2024;

(iii) $1,500,000,000 for fiscal year 2025; and

(iv) $2,400,000,000 for fiscal year 2026; and

(B) subject to the conditions on the use of the funds that—

(i) section 1271C(d)(2)(B) of the Food Security Act of 1985 (16 U.S.C. 3871c(d)(2)(B)) shall not apply; and

(ii) the Secretary shall prioritize partnership agreements under section 1271C(d) of the Food Security Act of 1985 (16 U.S.C. 3871c(d)) that support the implementation of conservation projects that assist agricultural producers and nonindustrial private

forestland owners in directly improving soil carbon, reducing nitrogen losses, or reducing, capturing, avoiding, or sequestering carbon dioxide, methane, or nitrous oxide emissions, associated with agricultural production.

(b) CONDITIONS.—The funds made available under subsection (a) are subject to the conditions that the Secretary shall not—

(1) enter into any agreement—

(A) that is for a term extending beyond September 30, 2031; or

(B) under which any payment could be outlaid or funds disbursed after September 30, 2031; or Time period.

(2) use any other funds available to the Secretary to satisfy obligations initially made under this section.

(c) CONFORMING AMENDMENTS.—

(1) Section 1240B of the Food Security Act of 1985 (16 U.S.C. 3839aa–2) is amended—

(A) in subsection (a), by striking "2023" and inserting "2031"; and

(B) in subsection (f)(2)(B)—

(i) in the subparagraph heading, by striking "2023" and inserting "2031"; and

(ii) by striking "2023" and inserting "2031".

(2) Section 1240H of the Food Security Act of 1985 (16 U.S.C. 3839aa–8) is amended by striking "2023" each place it appears and inserting "2031".

(3) Section 1240J(a) of the Food Security Act of 1985 (16 U.S.C. 3839aa–22(a)) is amended, in the matter preceding paragraph (1), by striking "2023" and inserting "2031".

(4) Section 1240L(h)(2)(A) of the Food Security Act of 1985 (16 U.S.C. 3839aa–24(h)(2)(A)) is amended by striking "2023" and inserting "2031".

(5) Section 1241 of the Food Security Act of 1985 (16 U.S.C. 3841) is amended—

(A) in subsection (a)—

(i) in the matter preceding paragraph (1), by striking "2023" and inserting "2031";

(ii) in paragraph (2)(F), by striking "2023" and inserting "2031"; and

(iii) in paragraph (3), by striking "fiscal year 2023" each place it appears and inserting "each of fiscal years 2023 through 2031";

(B) in subsection (b), by striking "2023" and inserting "2031"; and

(C) in subsection (h)—

(i) in paragraph (1)(B), in the subparagraph heading, by striking "2023" and inserting "2031"; and

(ii) by striking "2023" each place it appears and inserting "2031".

(6) Section 1244(n)(3)(A) of the Food Security Act of 1985 (16 U.S.C. 3844(n)(3)(A)) is amended by striking "2023" and inserting "2031".

(7) Section 1271D(a) of the Food Security Act of 1985 (16 U.S.C. 3871d(a)) is amended by striking "2023" and inserting "2031".

7 USC 6936 note.

SEC. 21002. CONSERVATION TECHNICAL ASSISTANCE.

(a) APPROPRIATIONS.—In addition to amounts otherwise available (and subject to subsection (b)), there are appropriated to the Secretary for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, to remain available until September 30, 2031 (subject to the condition that no such funds may be disbursed after September 30, 2031)—

(1) $1,000,000,000 to provide conservation technical assistance through the Natural Resources Conservation Service; and

(2) $300,000,000 to carry out a program to quantify carbon sequestration and carbon dioxide, methane, and nitrous oxide emissions, through which the Natural Resources Conservation Service shall collect field-based data to assess the carbon sequestration and reduction in carbon dioxide, methane, and nitrous oxide emissions outcomes associated with activities carried out pursuant to this section and use the data to monitor and track those carbon sequestration and emissions trends through the Greenhouse Gas Inventory and Assessment Program of the Department of Agriculture.

(b) CONDITIONS.—The funds made available under this section are subject to the conditions that the Secretary shall not—

Time periods.

(1) enter into any agreement—

(A) that is for a term extending beyond September 30, 2031; or

(B) under which any payment could be outlaid or funds disbursed after September 30, 2031;

(2) use any other funds available to the Secretary to satisfy obligations initially made under this section; or

(3) interpret this section to authorize funds of the Commodity Credit Corporation for activities under this section if such funds are not expressly authorized or currently expended for such purposes.

(c) ADMINISTRATIVE COSTS.—In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $100,000,000, to remain available until September 30, 2028, for administrative costs of the agencies and offices of the Department of Agriculture for costs related to implementing this section.

Subtitle C—Rural Development and Agricultural Credit

SEC. 22001. ADDITIONAL FUNDING FOR ELECTRIC LOANS FOR RENEWABLE ENERGY.

Section 9003 of the Farm Security and Rural Investment Act of 2002 (7 U.S.C. 8103) is amended by adding at the end the following:

"(h) ADDITIONAL FUNDING FOR ELECTRIC LOANS FOR RENEWABLE ENERGY.—

"(1) APPROPRIATIONS.—Notwithstanding subsections (a) through (e), and (g), in addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $1,000,000,000, to remain available until September 30, 2031,

for the cost of loans under section 317 of the Rural Electrification Act of 1936 (7 U.S.C. 940g), including for projects that store electricity that support the types of eligible projects under that section, which shall be forgiven in an amount that is not greater than 50 percent of the loan based on how the borrower and the project meets the terms and conditions for loan forgiveness consistent with the purposes of that section established by the Secretary, except as provided in paragraph (3).

"(2) LIMITATION.—The Secretary shall not enter into any loan agreement pursuant this subsection that could result in disbursements after September 30, 2031. Time period.

"(3) EXCEPTION.—The Secretary shall establish criteria for waiving the 50 percent limitation described in paragraph (1).". Criteria. Waiver.

SEC. 22002. RURAL ENERGY FOR AMERICA PROGRAM.

(a) APPROPRIATION.—In addition to amounts otherwise available, there is appropriated to the Secretary, out of any money in the Treasury not otherwise appropriated, for eligible projects under section 9007 of the Farm Security and Rural Investment Act of 2002 (7 U.S.C. 8107), and notwithstanding section 9007(c)(3)(A) of that Act, the amount of a grant shall not exceed 50 percent of the cost of the activity carried out using the grant funds—

(1) $820,250,000 for fiscal year 2022, to remain available until September 30, 2031; and

(2) $180,276,500 for each of fiscal years 2023 through 2027, to remain available until September 30, 2031.

(b) UNDERUTILIZED RENEWABLE ENERGY TECHNOLOGIES.—In addition to amounts otherwise available, there is appropriated to the Secretary, out of any money in the Treasury not otherwise appropriated, to provide grants and loans guaranteed by the Secretary (including the costs of such loans) under the program described in subsection (a) relating to underutilized renewable energy technologies, and to provide technical assistance for applying to the program described in subsection (a), including for underutilized renewable energy technologies, notwithstanding section 9007(c)(3)(A) of the Farm Security and Rural Investment Act of 2002 (7 U.S.C. 8107(c)(3)(A)), the amount of a grant shall not exceed 50 percent of the cost of the activity carried out using the grant funds, and to the extent the following amounts remain available at the end of each fiscal year, the Secretary shall use such amounts in accordance with subsection (a)—

(1) $144,750,000 for fiscal year 2022, to remain available until September 30, 2031; and

(2) $31,813,500 for each of fiscal years 2023 through 2027, to remain available until September 30, 2031.

(c) LIMITATION.—The Secretary shall not enter into, pursuant to this section— Time period.

(1) any loan agreement that may result in a disbursement after September 30, 2031; or

(2) any grant agreement that may result in any outlay after September 30, 2031.

SEC. 22003. BIOFUEL INFRASTRUCTURE AND AGRICULTURE PRODUCT MARKET EXPANSION.

Section 9003 of the Farm Security and Rural Investment Act of 2002 (7 U.S.C. 8103) (as amended by section 22001) is amended by adding at the end the following:

"(i) BIOFUEL INFRASTRUCTURE AND AGRICULTURE PRODUCT MARKET EXPANSION.—

"(1) APPROPRIATION.—Notwithstanding subsections (a) through (e) and subsection (g), in addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $500,000,000, to remain available until September 30, 2031, to carry out this subsection.

Grants.

"(2) USE OF FUNDS.—The Secretary shall use the amounts made available by paragraph (1) to provide grants, for which the Federal share shall be not more than 75 percent of the total cost of carrying out a project for which the grant is provided, on a competitive basis, to increase the sale and use of agricultural commodity-based fuels through infrastructure improvements for blending, storing, supplying, or distributing biofuels, except for transportation infrastructure not on location where such biofuels are blended, stored, supplied, or distributed—

Determination.

"(A) by installing, retrofitting, or otherwise upgrading fuel dispensers or pumps and related equipment, storage tank system components, and other infrastructure required at a location related to dispensing certain biofuel blends to ensure the increased sales of fuels with high levels of commodity-based ethanol and biodiesel that are at or greater than the levels required in the Notice of Funding Availability for the Higher Blends Infrastructure Incentive Program for Fiscal Year 2020, published in the Federal Register (85 Fed. Reg. 26656), as determined by the Secretary; and

"(B) by building and retrofitting home heating oil distribution centers or equivalent entities and distribution systems for ethanol and biodiesel blends.".

SEC. 22004. USDA ASSISTANCE FOR RURAL ELECTRIC COOPERATIVES.

Section 9003 of the Farm Security and Rural Investment Act of 2002 (7 U.S.C. 8103) (as amended by section 22003) is amended by adding at the end the following:

"(j) USDA ASSISTANCE FOR RURAL ELECTRIC COOPERATIVES.—

"(1) APPROPRIATION.—Notwithstanding subsections (a) through (e) and (g), in addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $9,700,000,000, to remain available until September 30, 2031, for the long-term resiliency, reliability, and affordability of rural electric systems by providing to an eligible entity (defined as an electric cooperative described in section 501(c)(12) or 1381(a)(2) of the Internal Revenue Code of 1986 and is or has been a Rural Utilities Service electric loan borrower pursuant to the Rural Electrification Act of 1936 or serving a predominantly rural area or a wholly or jointly owned subsidiary of such electric cooperative) loans, modifications of loans,

the cost of loans and modifications, and other financial assistance to achieve the greatest reduction in carbon dioxide, methane, and nitrous oxide emissions associated with rural electric systems through the purchase of renewable energy, renewable energy systems, zero-emission systems, and carbon capture and storage systems, to deploy such systems, or to make energy efficiency improvements to electric generation and transmission systems of the eligible entity after the date of enactment of this subsection.

"(2) LIMITATION.—No eligible entity may receive an amount equal to more than 10 percent of the total amount made available by this subsection.

"(3) REQUIREMENT.—The amount of a grant under this subsection shall be not more than 25 percent of the total project costs of the eligible entity carrying out a project using a grant under this subsection.

"(4) PROHIBITION.—Nothing in this subsection shall be interpreted to authorize funds of the Commodity Credit Corporation for activities under this subsection if such funds are not expressly authorized or currently expended for such purposes.

"(5) DISBURSEMENTS.—The Secretary shall not enter into, pursuant to this subsection— Time period.

"(A) any loan agreement that may result in a disbursement after September 30, 2031; or

"(B) any grant agreement that may result in any outlay after September 30, 2031.".

SEC. 22005. ADDITIONAL USDA RURAL DEVELOPMENT ADMINISTRATIVE FUNDS.

In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $100,000,000, to remain available until September 30, 2031, for administrative costs and salaries and expenses for the Rural Development mission area and administrative costs of the agencies and offices of the Department for costs related to implementing this subtitle.

SEC. 22006. FARM LOAN IMMEDIATE RELIEF FOR BORROWERS WITH AT-RISK AGRICULTURAL OPERATIONS.

In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2022, out of amounts in the Treasury not otherwise appropriated, $3,100,000,000, to remain available until September 30, 2031, to provide payments to, for the cost of loans or loan modifications for, or to carry out section 331(b)(4) of the Consolidated Farm and Rural Development Act (7 U.S.C. 1981(b)(4)) with respect to distressed borrowers of direct or guaranteed loans administered by the Farm Service Agency under subtitle A, B, or C of that Act (7 U.S.C. 1922 through 1970). In carrying out this section, the Secretary shall provide relief to those borrowers whose agricultural operations are at financial risk as expeditiously as possible, as determined by the Secretary. Determination.

SEC. 22007. USDA ASSISTANCE AND SUPPORT FOR UNDERSERVED FARMERS, RANCHERS, AND FORESTERS.

Section 1006 of the American Rescue Plan Act of 2021 (7 U.S.C. 2279 note; Public Law 117–2) is amended to read as follows:

"SEC. 1006. USDA ASSISTANCE AND SUPPORT FOR UNDERSERVED FARMERS, RANCHERS, FORESTERS.

"(a) TECHNICAL AND OTHER ASSISTANCE.—In addition to amounts otherwise available, there is appropriated to the Secretary of Agriculture for fiscal year 2022, to remain available until September 30, 2031, out of any money in the Treasury not otherwise appropriated, $125,000,000 to provide outreach, mediation, financial training, capacity building training, cooperative development and agricultural credit training and support, and other technical assistance on issues concerning food, agriculture, agricultural credit, agricultural extension, rural development, or nutrition to underserved farmers, ranchers, or forest landowners, including veterans, limited resource producers, beginning farmers and ranchers, and farmers, ranchers, and forest landowners living in high poverty areas.

"(b) LAND LOSS ASSISTANCE.—In addition to amounts otherwise available, there is appropriated to the Secretary of Agriculture for fiscal year 2022, to remain available until September 30, 2031, out of any money in the Treasury not otherwise appropriated, $250,000,000 to provide grants and loans to eligible entities, as determined by the Secretary, to improve land access (including heirs' property and fractionated land issues) for underserved farmers, ranchers, and forest landowners, including veterans, limited resource producers, beginning farmers and ranchers, and farmers, ranchers, and forest landowners living in high poverty areas.

"(c) EQUITY COMMISSIONS.—In addition to amounts otherwise available, there is appropriated to the Secretary of Agriculture for fiscal year 2022, to remain available until September 30, 2031, out of any money in the Treasury not otherwise appropriated, $10,000,000 to fund the activities of one or more equity commissions that will address racial equity issues within the Department of Agriculture and the programs of the Department of Agriculture.

"(d) RESEARCH, EDUCATION, AND EXTENSION.—In addition to amounts otherwise available, there is appropriated to the Secretary of Agriculture for fiscal year 2022, to remain available until September 30, 2031, out of any money in the Treasury not otherwise appropriated, $250,000,000 to support and supplement agricultural research, education, and extension, as well as scholarships and programs that provide internships and pathways to agricultural sector or Federal employment, for 1890 Institutions (as defined in section 2 of the Agricultural, Research, Extension, and Education Reform Act of 1998 (7 U.S.C. 7601)), 1994 Institutions (as defined in section 532 of the Equity in Educational Land-Grant Status Act of 1994 (7 U.S.C. 301 note; Public Law 103–382)), Alaska Native serving institutions and Native Hawaiian serving institutions eligible to receive grants under subsections (a) and (b), respectively, of section 1419B of the National Agricultural Research, Extension, and Teaching Policy Act of 1977 (7 U.S.C. 3156), Hispanic-serving institutions eligible to receive grants under section 1455 of the National Agricultural Research, Extension, and Teaching Policy Act of 1977 (7 U.S.C. 3241), and the insular area institutions of higher education located in the territories of the United States, as referred to in section 1489 of the National Agricultural Research, Extension, and Teaching Policy Act of 1977 (7 U.S.C. 3361).

Time period.

"(e) DISCRIMINATION FINANCIAL ASSISTANCE.—In addition to amounts otherwise available, there is appropriated to the Secretary

of Agriculture for fiscal year 2022, to remain available until September 30, 2031, out of any money in the Treasury not otherwise appropriated, $2,200,000,000 for a program to provide financial assistance, including the cost of any financial assistance, to farmers, ranchers, or forest landowners determined to have experienced discrimination prior to January 1, 2021, in Department of Agriculture farm lending programs, under which the amount of financial assistance provided to a recipient may be not more than $500,000, as determined to be appropriate based on any consequences experienced from the discrimination, which program shall be administered through 1 or more qualified nongovernmental entities selected by the Secretary subject to standards set and enforced by the Secretary.

"(f) ADMINISTRATIVE COSTS.—In addition to amounts otherwise available, there is appropriated to the Secretary of Agriculture for fiscal year 2022, to remain available until September 30, 2031, out of any money in the Treasury not otherwise appropriated, $24,000,000 for administrative costs, including training employees, of the agencies and offices of the Department of Agriculture to carry out this section.

"(g) LIMITATION.—The funds made available under this section are subject to the condition that the Secretary shall not—

"(1) enter into any agreement under which any payment could be outlaid or funds disbursed after September 30, 2031; or Time period.

"(2) use any other funds available to the Secretary to satisfy obligations initially made under this section.".

SEC. 22008. REPEAL OF FARM LOAN ASSISTANCE.

Section 1005 of the American Rescue Plan Act of 2021 (7 U.S.C. 1921 note; Public Law 117–2) is repealed.

Subtitle D—Forestry

SEC. 23001. NATIONAL FOREST SYSTEM RESTORATION AND FUELS REDUCTION PROJECTS.

(a) APPROPRIATIONS.—In addition to amounts otherwise available, there are appropriated to the Secretary for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, to remain available until September 30, 2031—

(1) $1,800,000,000 for hazardous fuels reduction projects on National Forest System land within the wildland-urban interface;

(2) $200,000,000 for vegetation management projects on National Forest System land carried out in accordance with a plan developed under section 303(d)(1) or 304(a)(3) of the Healthy Forests Restoration Act of 2003 (16 U.S.C. 6542(d)(1) or 6543(a)(3));

(3) $100,000,000 to provide for environmental reviews by the Chief of the Forest Service in satisfying the obligations of the Chief of the Forest Service under the National Environmental Policy Act of 1969 (42 U.S.C. 4321 through 4370m–12); and

(4) $50,000,000 for the protection of old-growth forests on National Forest System land and to complete an inventory of old-growth forests and mature forests within the National Forest System.

(b) RESTRICTIONS.—None of the funds made available by paragraph (1) or (2) of subsection (a) may be used for any activity—

(1) conducted in a wilderness area or wilderness study area;

(2) that includes the construction of a permanent road or motorized trail;

Deadline.

(3) that includes the construction of a temporary road, except in the case of a temporary road that is decommissioned by the Secretary not later than 3 years after the earlier of—

(A) the date on which the temporary road is no longer needed; and

(B) the date on which the project for which the temporary road was constructed is completed;

(4) inconsistent with the applicable land management plan;

(5) inconsistent with the prohibitions of the rule of the Forest Service entitled "Special Areas; Roadless Area Conservation" (66 Fed. Reg. 3244 (January 12, 2001)), as modified by subparts C and D of part 294 of title 36, Code of Federal Regulations; or

(6) carried out on any land that is not National Forest System land, including other forested land on Federal, State, Tribal, or private land.

(c) LIMITATIONS.—Nothing in this section shall be interpreted to authorize funds of the Commodity Credit Corporation for activities under this section if such funds are not expressly authorized or currently expended for such purposes.

(d) COST-SHARING WAIVER.—

(1) IN GENERAL.—The non-Federal cost-share requirement of a project described in paragraph (2) may be waived at the discretion of the Secretary.

(2) PROJECT DESCRIBED.—A project referred to in paragraph (1) is a project that—

(A) is carried out using funds made available under this section;

Requirement.
Contracts.

(B) requires a partnership agreement, including a cooperative agreement or mutual interest agreement; and

(C) is subject to a non-Federal cost-share requirement.

(e) DEFINITIONS.—In this section:

(1) DECOMMISSION.—The term "decommission" means, with respect to a road—

(A) reestablishing native vegetation on the road;

(B) restoring any natural drainage, watershed function, or other ecological processes that were disrupted or adversely impacted by the road by removing or hydrologically disconnecting the road prism and reestablishing stable slope contours; and

(C) effectively blocking the road to vehicular traffic, where feasible.

(2) ECOLOGICAL INTEGRITY.—The term "ecological integrity" has the meaning given the term in section 219.19 of title 36, Code of Federal Regulations (as in effect on the date of enactment of this Act).

(3) HAZARDOUS FUELS REDUCTION PROJECT.—The term "hazardous fuels reduction project" means an activity, including the use of prescribed fire, to protect structures and communities from wildfire that is carried out on National Forest System land.

(4) RESTORATION.—The term "restoration" has the meaning given the term in section 219.19 of title 36, Code of Federal Regulations (as in effect on the date of enactment of this Act).

(5) VEGETATION MANAGEMENT PROJECT.—The term "vegetation management project" means an activity carried out on National Forest System land to enhance the ecological integrity and achieve the restoration of a forest ecosystem through the removal of vegetation, the use of prescribed fire, the restoration of aquatic habitat, or the decommissioning of an unauthorized, temporary, or system road.

(6) WILDLAND-URBAN INTERFACE.—The term "wildland-urban interface" has the meaning given the term in section 101 of the Healthy Forests Restoration Act of 2003 (16 U.S.C. 6511).

SEC. 23002. COMPETITIVE GRANTS FOR NON-FEDERAL FOREST LANDOWNERS.

(a) APPROPRIATIONS.—In addition to amounts otherwise available, there are appropriated to the Secretary for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, to remain available until September 30, 2031—

(1) $150,000,000 for the competitive grant program under section 13A of the Cooperative Forestry Assistance Act of 1978 (16 U.S.C. 2109a) for providing through that program a cost share to carry out climate mitigation or forest resilience practices in the case of underserved forest landowners, subject to the condition that subsection (h) of that section shall not apply;

(2) $150,000,000 for the competitive grant program under section 13A of the Cooperative Forestry Assistance Act of 1978 (16 U.S.C. 2109a) for providing through that program grants to support the participation of underserved forest landowners in emerging private markets for climate mitigation or forest resilience, subject to the condition that subsection (h) of that section shall not apply;

(3) $100,000,000 for the competitive grant program under section 13A of the Cooperative Forestry Assistance Act of 1978 (16 U.S.C. 2109a) for providing through that program grants to support the participation of forest landowners who own less than 2,500 acres of forest land in emerging private markets for climate mitigation or forest resilience, subject to the condition that subsection (h) of that section shall not apply;

(4) $50,000,000 for the competitive grant program under section 13A of the Cooperative Forestry Assistance Act of 1978 (16 U.S.C. 2109a) to provide grants to states and other eligible entities to provide payments to owners of private forest land for implementation of forestry practices on private forest land, that are determined by the Secretary, based on the best available science, to provide measurable increases in carbon sequestration and storage beyond customary practices on comparable land, subject to the conditions that—

(A) those payments shall not preclude landowners from participation in other public and private sector financial incentive programs; and

(B) subsection (h) of that section shall not apply; and

(5) $100,000,000 to provide grants under the wood innovation grant program under section 8643 of the Agriculture Improvement Act of 2018 (7 U.S.C. 7655d), including for the construction of new facilities that advance the purposes of the program and for the hauling of material removed to reduce hazardous fuels to locations where that material can be utilized, subject to the conditions that—

(A) the amount of such a grant shall be not more than $5,000,000; and

(B) notwithstanding subsection (d) of that section, a recipient of such a grant shall provide funds equal to not less than 50 percent of the amount received under the grant, to be derived from non-Federal sources.

Waiver.
Contracts.

(b) COST-SHARING REQUIREMENT.—Any partnership agreements, including cooperative agreements and mutual interest agreements, using funds made available under this section shall be subject to a non-Federal cost-share requirement of not less than 20 percent of the project cost, which may be waived at the discretion of the Secretary.

(c) LIMITATIONS.—Nothing in this section shall be interpreted to authorize funds of the Commodity Credit Corporation for activities under this section if such funds are not expressly authorized or currently expended for such purposes.

SEC. 23003. STATE AND PRIVATE FORESTRY CONSERVATION PROGRAMS.

(a) APPROPRIATIONS.—In addition to amounts otherwise available, there are appropriated to the Secretary for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, to remain available until September 30, 2031—

(1) $700,000,000 to provide competitive grants to States through the Forest Legacy Program established under section 7 of the Cooperative Forestry Assistance Act of 1978 (16 U.S.C. 2103c) for projects for the acquisition of land and interests in land; and

(2) $1,500,000,000 to provide multiyear, programmatic, competitive grants to a State agency, a local governmental entity, an agency or governmental entity of the District of Columbia, an agency or governmental entity of an insular area (as defined in section 1404 of the National Agricultural Research, Extension, and Teaching Policy Act of 1977 (7 U.S.C. 3103)), an Indian Tribe, or a nonprofit organization through the Urban and Community Forestry Assistance program established under section 9(c) of the Cooperative Forestry Assistance Act of 1978 (16 U.S.C. 2105(c)) for tree planting and related activities.

(b) WAIVER.—Any non-Federal cost-share requirement otherwise applicable to projects carried out under this section may be waived at the discretion of the Secretary.

SEC. 23004. LIMITATION.

The funds made available under this subtitle are subject to the condition that the Secretary shall not—

Time periods.

(1) enter into any agreement—

(A) that is for a term extending beyond September 30, 2031; or

(B) under which any payment could be outlaid or funds disbursed after September 30, 2031; or

(2) use any other funds available to the Secretary to satisfy obligations initially made under this subtitle.

SEC. 23005. ADMINISTRATIVE COSTS.

In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $100,000,000 to remain available until September 30, 2031, for administrative costs of the agencies and offices of the Department of Agriculture for costs related to implementing this subtitle.

TITLE III—COMMITTEE ON BANKING, HOUSING, AND URBAN AFFAIRS

SEC. 30001. ENHANCED USE OF DEFENSE PRODUCTION ACT OF 1950.

In addition to amounts otherwise available, there is appropriated for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $500,000,000, to remain available until September 30, 2024, to carry out the Defense Production Act of 1950 (50 U.S.C. 4501 et seq.).

SEC. 30002. IMPROVING ENERGY EFFICIENCY OR WATER EFFICIENCY OR CLIMATE RESILIENCE OF AFFORDABLE HOUSING.

(a) APPROPRIATION.—In addition to amounts otherwise available, there is appropriated to the Secretary of Housing and Urban Development (in this section referred to as the "Secretary") for fiscal year 2022, out of any money in the Treasury not otherwise appropriated—

(1) $837,500,000, to remain available until September 30, 2028, for the cost of providing direct loans, the costs of modifying such loans, and for grants, as provided for and subject to terms and conditions in subsection (b), including to subsidize gross obligations for the principal amount of such loans, not to exceed $4,000,000,000, to fund projects that improve energy or water efficiency, enhance indoor air quality or sustainability, implement the use of zero-emission electricity generation, low-emission building materials or processes, energy storage, or building electrification strategies, or address climate resilience, of an eligible property;

(2) $60,000,000, to remain available until September 30, 2030, for the costs to the Secretary for information technology, research and evaluation, and administering and overseeing the implementation of this section;

(3) $60,000,000, to remain available until September 30, 2029, for expenses of contracts or cooperative agreements administered by the Secretary; and

(4) $42,500,000, to remain available until September 30, 2028, for energy and water benchmarking of properties eligible to receive grants or loans under this section, regardless of whether they actually received such grants or loans, along with associated data analysis and evaluation at the property and portfolio level, and the development of information technology systems necessary for the collection, evaluation, and analysis of such data.

(b) LOAN AND GRANT TERMS AND CONDITIONS.—Amounts made available under this section shall be for direct loans, grants, and

direct loans that can be converted to grants to eligible recipients that agree to an extended period of affordability for the property.

(c) DEFINITIONS.—As used in this section—

(1) the term "eligible recipient" means any owner or sponsor of an eligible property; and

(2) the term "eligible property" means a property assisted pursuant to—

(A) section 202 of the Housing Act of 1959 (12 U.S.C. 1701q);

(B) section 202 of the Housing Act of 1959 (former 12 U.S.C. 1701q), as such section existed before the enactment of the Cranston-Gonzalez National Affordable Housing Act;

(C) section 811 of the Cranston-Gonzalez National Affordable Housing Act (42 U.S.C. 8013);

(D) section 8(b) of the United States Housing Act of 1937 (42 U.S.C. 1437f(b));

(E) section 236 of the National Housing Act (12 U.S.C. 1715z–1); or

(F) a Housing Assistance Payments contract for Project-Based Rental Assistance in fiscal year 2021.

(d) WAIVER.—The Secretary may waive or specify alternative requirements for any provision of subsection (c) or (bb) of section 8 of the United States Housing Act of 1937 (42 U.S.C. 1437f(c), 1437f(bb)) upon a finding that the waiver or alternative requirement is necessary to facilitate the use of amounts made available under this section.

Notice.
Requirements.
Determination.
Effective date.

(e) IMPLEMENTATION.—The Secretary shall have the authority to establish by notice any requirements that the Secretary determines are necessary for timely and effective implementation of the program and expenditure of funds appropriated, which requirements shall take effect upon issuance.

TITLE IV—COMMITTEE ON COMMERCE, SCIENCE, AND TRANSPORTATION

SEC. 40001. INVESTING IN COASTAL COMMUNITIES AND CLIMATE RESILIENCE.

(a) IN GENERAL.—In addition to amounts otherwise available, there is appropriated to the National Oceanic and Atmospheric Administration for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $2,600,000,000, to remain available until September 30, 2026, to provide funding through direct expenditure, contracts, grants, cooperative agreements, or technical assistance to coastal states (as defined in paragraph (4) of section 304 of the Coastal Zone Management Act of 1972 (16 U.S.C. 1453(4))), the District of Columbia, Tribal Governments, nonprofit organizations, local governments, and institutions of higher education (as defined in subsection (a) of section 101 of the Higher Education Act of 1965 (20 U.S.C. 1001(a))), for the conservation, restoration, and protection of coastal and marine habitats, resources, Pacific salmon and other marine fisheries, to enable coastal communities to prepare for extreme storms and other changing climate conditions, and for projects that support natural resources that sustain coastal and marine resource dependent

communities, marine fishery and marine mammal stock assessments, and for related administrative expenses.

(b) TRIBAL GOVERNMENT DEFINED.—In this section, the term "Tribal Government" means the recognized governing body of any Indian or Alaska Native tribe, band, nation, pueblo, village, community, component band, or component reservation, individually identified (including parenthetically) in the list published most recently as of the date of enactment of this subsection pursuant to section 104 of the Federally Recognized Indian Tribe List Act of 1994 (25 U.S.C. 5131).

SEC. 40002. FACILITIES OF THE NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION AND NATIONAL MARINE SANCTUARIES.

(a) NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION FACILITIES.—In addition to amounts otherwise available, there is appropriated to the National Oceanic and Atmospheric Administration for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $150,000,000, to remain available until September 30, 2026, for the construction of new facilities, facilities in need of replacement, piers, marine operations facilities, and fisheries laboratories.

(b) NATIONAL MARINE SANCTUARIES FACILITIES.—In addition to amounts otherwise available, there is appropriated to the National Oceanic and Atmospheric Administration for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $50,000,000, to remain available until September 30, 2026, for the construction of facilities to support the National Marine Sanctuary System established under subsection (c) of section 301 of the National Marine Sanctuaries Act (16 U.S.C. 1431(c)).

SEC. 40003. NOAA EFFICIENT AND EFFECTIVE REVIEWS.

In addition to amounts otherwise available, there is appropriated to the National Oceanic and Atmospheric Administration for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $20,000,000, to remain available until September 30, 2026, to conduct more efficient, accurate, and timely reviews for planning, permitting and approval processes through the hiring and training of personnel, and the purchase of technical and scientific services and new equipment, and to improve agency transparency, accountability, and public engagement.

SEC. 40004. OCEANIC AND ATMOSPHERIC RESEARCH AND FORECASTING FOR WEATHER AND CLIMATE.

(a) FORECASTING AND RESEARCH.—In addition to amounts otherwise available, there is appropriated to the National Oceanic and Atmospheric Administration for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $150,000,000, to remain available until September 30, 2026, to accelerate advances and improvements in research, observation systems, modeling, forecasting, assessments, and dissemination of information to the public as it pertains to ocean and atmospheric processes related to weather, coasts, oceans, and climate, and to carry out section 102(a) of the Weather Research and Forecasting Innovation Act of 2017 (15 U.S.C. 8512(a)), and for related administrative expenses.

(b) RESEARCH GRANTS AND SCIENCE INFORMATION, PRODUCTS, AND SERVICES.—In addition to amounts otherwise available, there

are appropriated to the National Oceanic and Atmospheric Administration for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, to remain available until September 30, 2026, $50,000,000 for competitive grants to fund climate research as it relates to weather, ocean, coastal, and atmospheric processes and conditions, and impacts to marine species and coastal habitat, and for related administrative expenses.

SEC. 40005. COMPUTING CAPACITY AND RESEARCH FOR WEATHER, OCEANS, AND CLIMATE.

In addition to amounts otherwise available, there is appropriated to the National Oceanic and Atmospheric Administration for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $190,000,000, to remain available until September 30, 2026, for the procurement of additional high-performance computing, data processing capacity, data management, and storage assets, to carry out section 204(a)(2) of the High-Performance Computing Act of 1991 (15 U.S.C. 5524(a)(2)), and for transaction agreements authorized under section 301(d)(1)(A) of the Weather Research and Forecasting Innovation Act of 2017 (15 U.S.C. 8531(d)(1)(A)), and for related administrative expenses.

SEC. 40006. ACQUISITION OF HURRICANE FORECASTING AIRCRAFT.

In addition to amounts otherwise available, there is appropriated to the National Oceanic and Atmospheric Administration for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $100,000,000, to remain available until September 30, 2026, for the acquisition of hurricane hunter aircraft under section 413(a) of the Weather Research and Forecasting Innovation Act of 2017 (15 U.S.C. 8549(a)).

49 USC 44504 note.

SEC. 40007. ALTERNATIVE FUEL AND LOW-EMISSION AVIATION TECHNOLOGY PROGRAM.

(a) APPROPRIATION AND ESTABLISHMENT.—For purposes of establishing a competitive grant program for eligible entities to carry out projects located in the United States that produce, transport, blend, or store sustainable aviation fuel, or develop, demonstrate, or apply low-emission aviation technologies, in addition to amounts otherwise available, there are appropriated to the Secretary for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, to remain available until September 30, 2026—

(1) $244,530,000 for projects relating to the production, transportation, blending, or storage of sustainable aviation fuel;

(2) $46,530,000 for projects relating to low-emission aviation technologies; and

(3) $5,940,000 to fund the award of grants under this section, and oversight of the program, by the Secretary.

(b) CONSIDERATIONS.—In carrying out subsection (a), the Secretary shall consider, with respect to a proposed project—

(1) the capacity for the eligible entity to increase the domestic production and deployment of sustainable aviation fuel or the use of low-emission aviation technologies among the United States commercial aviation and aerospace industry;

(2) the projected greenhouse gas emissions from such project, including emissions resulting from the development of the project, and the potential the project has to reduce

or displace, on a lifecycle basis, United States greenhouse gas emissions associated with air travel;

(3) the capacity to create new jobs and develop supply chain partnerships in the United States;

(4) for projects related to the production of sustainable aviation fuel, the projected lifecycle greenhouse gas emissions benefits from the proposed project, which shall include feedstock and fuel production and potential direct and indirect greenhouse gas emissions (including resulting from changes in land use); and

(5) the benefits of ensuring a diversity of feedstocks for sustainable aviation fuel, including the use of waste carbon oxides and direct air capture.

(c) COST SHARE.—The Federal share of the cost of a project carried out using grant funds under subsection (a) shall be 75 percent of the total proposed cost of the project, except that such Federal share shall increase to 90 percent of the total proposed cost of the project if the eligible entity is a small hub airport or nonhub airport, as such terms are defined in section 47102 of title 49, United States Code.

(d) FUEL EMISSIONS REDUCTION TEST.—For purposes of clause (ii) of subsection (e)(7)(E), the Secretary shall, not later than 2 years after the date of enactment of this section, adopt at least 1 methodology for testing lifecycle greenhouse gas emissions that meets the requirements of such clause. Deadline.

(e) DEFINITIONS.—In this section:

(1) ELIGIBLE ENTITY.—The term "eligible entity" means—

(A) a State or local government, including the District of Columbia, other than an airport sponsor;

(B) an air carrier;

(C) an airport sponsor;

(D) an accredited institution of higher education;

(E) a research institution;

(F) a person or entity engaged in the production, transportation, blending, or storage of sustainable aviation fuel in the United States or feedstocks in the United States that could be used to produce sustainable aviation fuel;

(G) a person or entity engaged in the development, demonstration, or application of low-emission aviation technologies; or

(H) nonprofit entities or nonprofit consortia with experience in sustainable aviation fuels, low-emission aviation technologies, or other clean transportation research programs.

(2) FEEDSTOCK.—The term "feedstock" means sources of hydrogen and carbon not originating from unrefined or refined petrochemicals.

(3) INDUCED LAND-USE CHANGE VALUES.—The term "induced land-use change values" means the greenhouse gas emissions resulting from the conversion of land to the production of feedstocks and from the conversion of other land due to the displacement of crops or animals for which the original land was previously used.

(4) LIFECYCLE GREENHOUSE GAS EMISSIONS.—The term "lifecycle greenhouse gas emissions" means the combined greenhouse gas emissions from feedstock production, collection of

feedstock, transportation of feedstock to fuel production facilities, conversion of feedstock to fuel, transportation and distribution of fuel, and fuel combustion in an aircraft engine, as well as from induced land-use change values.

(5) LOW-EMISSION AVIATION TECHNOLOGIES.—The term "low-emission aviation technologies" means technologies, produced in the United States, that significantly—

(A) improve aircraft fuel efficiency;

(B) increase utilization of sustainable aviation fuel; or

(C) reduce greenhouse gas emissions produced during operation of civil aircraft.

(6) SECRETARY.—The term "Secretary" means the Secretary of Transportation.

(7) SUSTAINABLE AVIATION FUEL.—The term "sustainable aviation fuel" means liquid fuel, produced in the United States, that—

(A) consists of synthesized hydrocarbons;

(B) meets the requirements of—

(i) ASTM International Standard D7566; or

(ii) the co-processing provisions of ASTM International Standard D1655, Annex A1 (or such successor standard);

(C) is derived from biomass (in a similar manner as such term is defined in section 45K(c)(3) of the Internal Revenue Code of 1986), waste streams, renewable energy sources, or gaseous carbon oxides;

(D) is not derived from palm fatty acid distillates; and

Determinations.

(E) achieves at least a 50 percent lifecycle greenhouse gas emissions reduction in comparison with petroleum-based jet fuel, as determined by a test that shows—

(i) the fuel production pathway achieves at least a 50 percent reduction of the aggregate attributional core lifecycle emissions and the induced land-use change values under a lifecycle methodology for sustainable aviation fuels similar to that adopted by the International Civil Aviation Organization with the agreement of the United States; or

(ii) the fuel production pathway achieves at least a 50 percent reduction of the aggregate attributional core lifecycle greenhouse gas emissions values and the induced land-use change values under another methodology that the Secretary determines is—

(I) reflective of the latest scientific understanding of lifecycle greenhouse gas emissions; and

(II) as stringent as the requirement under clause (i).

TITLE V—COMMITTEE ON ENERGY AND NATURAL RESOURCES

Subtitle A—Energy

PART 1—GENERAL PROVISIONS

SEC. 50111. DEFINITIONS. 42 USC 17113b note.

In this subtitle:

(1) GREENHOUSE GAS.—The term "greenhouse gas" has the meaning given the term in section 1610(a) of the Energy Policy Act of 1992 (42 U.S.C. 13389(a)).

(2) SECRETARY.—The term "Secretary" means the Secretary of Energy.

(3) STATE.—The term "State" means a State, the District of Columbia, and a United States Insular Area (as that term is defined in section 50211).

(4) STATE ENERGY OFFICE.—The term "State energy office" has the meaning given the term in section 124(a) of the Energy Policy Act of 2005 (42 U.S.C. 15821(a)).

(5) STATE ENERGY PROGRAM.—The term "State Energy Program" means the State Energy Program established pursuant to part D of title III of the Energy Policy and Conservation Act (42 U.S.C. 6321 through 6326).

PART 2—RESIDENTIAL EFFICIENCY AND ELECTRIFICATION REBATES

SEC. 50121. HOME ENERGY PERFORMANCE-BASED, WHOLE-HOUSE REBATES. 42 USC 18795.

(a) APPROPRIATION.—

(1) IN GENERAL.—In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $4,300,000,000, to remain available through September 30, 2031, to carry out a program to award grants to State energy offices to develop and implement a HOMES rebate program.

(2) ALLOCATION OF FUNDS.—

(A) IN GENERAL.—The Secretary shall reserve funds made available under paragraph (1) for each State energy office—

(i) in accordance with the allocation formula for the State Energy Program in effect on January 1, 2022; and Effective date.

(ii) to be distributed to a State energy office if the application of the State energy office under subsection (b) is approved.

(B) ADDITIONAL FUNDS.—Not earlier than 2 years after the date of enactment of this Act, any money reserved under subparagraph (A) but not distributed under clause (ii) of that subparagraph shall be redistributed to the State energy offices operating a HOMES rebate program using a grant received under this section in proportion to the Deadline.

amount distributed to those State energy offices under subparagraph (A)(ii).

(3) ADMINISTRATIVE EXPENSES.—Of the funds made available under paragraph (1), the Secretary shall use not more than 3 percent for—

(A) administrative purposes; and

(B) providing technical assistance relating to activities carried out under this section.

Grants.
Plan.

(b) APPLICATION.—A State energy office seeking a grant under this section shall submit to the Secretary an application that includes a plan to implement a HOMES rebate program, including a plan—

Procedures.
Determination.

(1) to use procedures, as approved by the Secretary, for determining the reductions in home energy use resulting from the implementation of a home energy efficiency retrofit that are calibrated to historical energy usage for a home consistent with BPI 2400, for purposes of modeled performance home rebates;

(2) to use open-source advanced measurement and verification software, as approved by the Secretary, for determining and documenting the monthly and hourly (if available) weather-normalized energy use of a home before and after the implementation of a home energy efficiency retrofit, for purposes of measured performance home rebates;

(3) to value savings based on time, location, or greenhouse gas emissions;

Certification.

(4) for quality monitoring to ensure that each home energy efficiency retrofit for which a rebate is provided is documented in a certificate that—

(A) is provided by the contractor and certified by a third party to the homeowner; and

(B) details the work performed, the equipment and materials installed, and the projected energy savings or energy generation to support accurate valuation of the retrofit;

(5) to provide a contractor performing a home energy efficiency retrofit or an aggregator who has the right to claim a rebate $200 for each home located in a disadvantaged community that receives a home energy efficiency retrofit for which a rebate is provided under the program; and

(6) to ensure that a homeowner or aggregator does not receive a rebate for the same upgrade through both a HOMES rebate program and any other Federal grant or rebate program, pursuant to subsection (c)(7).

(c) HOMES REBATE PROGRAM.—

Effective date.
Deadline.

(1) IN GENERAL.—A HOMES rebate program carried out by a State energy office receiving a grant pursuant to this section shall provide rebates to homeowners and aggregators for whole-house energy saving retrofits begun on or after the date of enactment of this Act and completed by not later than September 30, 2031.

(2) AMOUNT OF REBATE.—Subject to paragraph (3), under a HOMES rebate program, the amount of a rebate shall not exceed—

(A) for individuals and aggregators carrying out energy efficiency upgrades of single-family homes—

(i) in the case of a retrofit that achieves modeled energy system savings of not less than 20 percent but less than 35 percent, the lesser of—

(I) $2,000; and

(II) 50 percent of the project cost;

(ii) in the case of a retrofit that achieves modeled energy system savings of not less than 35 percent, the lesser of—

(I) $4,000; and

(II) 50 percent of the project cost; and

(iii) for measured energy savings, in the case of a home or portfolio of homes that achieves energy savings of not less than 15 percent—

(I) a payment rate per kilowatt hour saved, or kilowatt hour-equivalent saved, equal to $2,000 for a 20 percent reduction of energy use for the average home in the State; or

(II) 50 percent of the project cost;

(B) for multifamily building owners and aggregators carrying out energy efficiency upgrades of multifamily buildings—

(i) in the case of a retrofit that achieves modeled energy system savings of not less than 20 percent but less than 35 percent, $2,000 per dwelling unit, with a maximum of $200,000 per multifamily building;

(ii) in the case of a retrofit that achieves modeled energy system savings of not less than 35 percent, $4,000 per dwelling unit, with a maximum of $400,000 per multifamily building; or

(iii) for measured energy savings, in the case of a multifamily building or portfolio of multifamily buildings that achieves energy savings of not less than 15 percent—

(I) a payment rate per kilowatt hour saved, or kilowatt hour-equivalent saved, equal to $2,000 for a 20 percent reduction of energy use per dwelling unit for the average multifamily building in the State; or

(II) 50 percent of the project cost; and

(C) for individuals and aggregators carrying out energy efficiency upgrades of a single-family home occupied by a low- or moderate-income household or a multifamily building not less than 50 percent of the dwelling units of which are occupied by low- or moderate-income households—

(i) in the case of a retrofit that achieves modeled energy system savings of not less than 20 percent but less than 35 percent, the lesser of—

(I) $4,000 per single-family home or dwelling unit; and

(II) 80 percent of the project cost;

(ii) in the case of a retrofit that achieves modeled energy system savings of not less than 35 percent, the lesser of—

(I) $8,000 per single-family home or dwelling unit; and

(II) 80 percent of the project cost; and

(iii) for measured energy savings, in the case of a single-family home, multifamily building, or portfolio of single-family homes or multifamily buildings that achieves energy savings of not less than 15 percent—

(I) a payment rate per kilowatt hour saved, or kilowatt hour-equivalent saved, equal to $4,000 for a 20 percent reduction of energy use per single-family home or dwelling unit, as applicable, for the average single-family home or multifamily building in the State; or

(II) 80 percent of the project cost.

(3) REBATES TO LOW- OR MODERATE-INCOME HOUSEHOLDS.—On approval from the Secretary, notwithstanding paragraph (2), a State energy office carrying out a HOMES rebate program using a grant awarded pursuant to this section may increase rebate amounts for low- or moderate-income households.

(4) USE OF FUNDS.—A State energy office that receives a grant pursuant to this section may use not more than 20 percent of the grant amount for planning, administration, or technical assistance related to a HOMES rebate program.

Publication.

(5) DATA ACCESS GUIDELINES.—The Secretary shall develop and publish guidelines for States relating to residential electric and natural gas energy data sharing.

(6) EXEMPTION.—Activities carried out by a State energy office using a grant awarded pursuant to this section shall not be subject to the expenditure prohibitions and limitations described in section 420.18 of title 10, Code of Federal Regulations.

(7) PROHIBITION ON COMBINING REBATES.—A rebate provided by a State energy office under a HOMES rebate program may not be combined with any other Federal grant or rebate, including a rebate provided under a high-efficiency electric home rebate program (as defined in section 50122(d)), for the same single upgrade.

(d) DEFINITIONS.—In this section:

(1) DISADVANTAGED COMMUNITY.—The term "disadvantaged community" means a community that the Secretary determines, based on appropriate data, indices, and screening tools, is economically, socially, or environmentally disadvantaged.

(2) HOMES REBATE PROGRAM.—The term "HOMES rebate program" means a Home Owner Managing Energy Savings rebate program established by a State energy office as part of an approved State energy conservation plan under the State Energy Program.

(3) LOW- OR MODERATE-INCOME HOUSEHOLD.—The term "low- or moderate-income household" means an individual or family the total annual income of which is less than 80 percent of the median income of the area in which the individual or family resides, as reported by the Department of Housing and Urban Development, including an individual or family that has demonstrated eligibility for another Federal program with income restrictions equal to or below 80 percent of area median income.

42 USC 18795a.

SEC. 50122. HIGH-EFFICIENCY ELECTRIC HOME REBATE PROGRAM.

(a) APPROPRIATIONS.—

(1) FUNDS TO STATE ENERGY OFFICES AND INDIAN TRIBES.—In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, to carry out a program—

(A) to award grants to State energy offices to develop and implement a high-efficiency electric home rebate program in accordance with subsection (c), $4,275,000,000, to remain available through September 30, 2031; and

(B) to award grants to Indian Tribes to develop and implement a high-efficiency electric home rebate program in accordance with subsection (c), $225,000,000, to remain available through September 30, 2031.

(2) ALLOCATION OF FUNDS.—

(A) STATE ENERGY OFFICES.—The Secretary shall reserve funds made available under paragraph (1)(A) for each State energy office—

(i) in accordance with the allocation formula for the State Energy Program in effect on January 1, 2022; and Effective date.

(ii) to be distributed to a State energy office if the application of the State energy office under subsection (b) is approved.

(B) INDIAN TRIBES.—The Secretary shall reserve funds made available under paragraph (1)(B)—

(i) in a manner determined appropriate by the Secretary; and

(ii) to be distributed to an Indian Tribe if the application of the Indian Tribe under subsection (b) is approved.

(C) ADDITIONAL FUNDS.—Not earlier than 2 years after the date of enactment of this Act, any money reserved under— Deadline.

(i) subparagraph (A) but not distributed under clause (ii) of that subparagraph shall be redistributed to the State energy offices operating a high-efficiency electric home rebate program in proportion to the amount distributed to those State energy offices under that clause; and

(ii) subparagraph (B) but not distributed under clause (ii) of that subparagraph shall be redistributed to the Indian Tribes operating a high-efficiency electric home rebate program in proportion to the amount distributed to those Indian Tribes under that clause.

(3) ADMINISTRATIVE EXPENSES.—Of the funds made available under paragraph (1), the Secretary shall use not more than 3 percent for—

(A) administrative purposes; and

(B) providing technical assistance relating to activities carried out under this section.

(b) APPLICATION.—A State energy office or Indian Tribe seeking a grant under the program shall submit to the Secretary an application that includes a plan to implement a high-efficiency electric home rebate program, including— Plans.

(1) a plan to verify the income eligibility of eligible entities seeking a rebate for a qualified electrification project; Verification.

(2) a plan to allow rebates for qualified electrification projects at the point of sale in a manner that ensures that the income eligibility of an eligible entity seeking a rebate may be verified at the point of sale;

(3) a plan to ensure that an eligible entity does not receive a rebate for the same qualified electrification project through both a high-efficiency electric home rebate program and any other Federal grant or rebate program, pursuant to subsection (c)(8); and

(4) any additional information that the Secretary may require.

(c) HIGH-EFFICIENCY ELECTRIC HOME REBATE PROGRAM.—

Grants.

(1) IN GENERAL.—Under the program, the Secretary shall award grants to State energy offices and Indian Tribes to establish a high-efficiency electric home rebate program under which rebates shall be provided to eligible entities for qualified electrification projects.

(2) GUIDELINES.—The Secretary shall prescribe guidelines for high-efficiency electric home rebate programs, including guidelines for providing point of sale rebates in a manner consistent with the income eligibility requirements under this section.

(3) AMOUNT OF REBATE.—

(A) APPLIANCE UPGRADES.—The amount of a rebate provided under a high-efficiency electric home rebate program for the purchase of an appliance under a qualified electrification project shall be—

(i) not more than $1,750 for a heat pump water heater;

(ii) not more than $8,000 for a heat pump for space heating or cooling; and

(iii) not more than $840 for—

(I) an electric stove, cooktop, range, or oven; or

(II) an electric heat pump clothes dryer.

(B) NONAPPLIANCE UPGRADES.—The amount of a rebate provided under a high-efficiency electric home rebate program for the purchase of a nonappliance upgrade under a qualified electrification project shall be—

(i) not more than $4,000 for an electric load service center upgrade;

(ii) not more than $1,600 for insulation, air sealing, and ventilation; and

(iii) not more than $2,500 for electric wiring.

(C) MAXIMUM REBATE.—An eligible entity receiving multiple rebates under this section may receive not more than a total of $14,000 in rebates.

(4) LIMITATIONS.—A rebate provided using funding under this section shall not exceed—

(A) in the case of an eligible entity described in subsection (d)(1)(A)—

(i) 50 percent of the cost of the qualified electrification project for a household the annual income of which is not less than 80 percent and not greater than 150 percent of the area median income; and

(ii) 100 percent of the cost of the qualified electrification project for a household the annual income

of which is less than 80 percent of the area median income;

(B) in the case of an eligible entity described in subsection (d)(1)(B)—

(i) 50 percent of the cost of the qualified electrification project for a multifamily building not less than 50 percent of the residents of which are households the annual income of which is not less than 80 percent and not greater than 150 percent of the area median income; and

(ii) 100 percent of the cost of the qualified electrification project for a multifamily building not less than 50 percent of the residents of which are households the annual income of which is less than 80 percent of the area median income; or

(C) in the case of an eligible entity described in subsection (d)(1)(C)—

(i) 50 percent of the cost of the qualified electrification project for a household—

(I) on behalf of which the eligible entity is working; and

(II) the annual income of which is not less than 80 percent and not greater than 150 percent of the area median income; and

(ii) 100 percent of the cost of the qualified electrification project for a household—

(I) on behalf of which the eligible entity is working; and

(II) the annual income of which is less than 80 percent of the area median income.

(5) AMOUNT FOR INSTALLATION OF UPGRADES.—

(A) IN GENERAL.—In the case of an eligible entity described in subsection (d)(1)(C) that receives a rebate under the program and performs the installation of the applicable qualified electrification project, a State energy office or Indian Tribe shall provide to that eligible entity, in addition to the rebate, an amount that—

(i) does not exceed $500; and

(ii) is commensurate with the scale of the upgrades installed as part of the qualified electrification project, as determined by the Secretary. Determination.

(B) TREATMENT.—An amount received under subparagraph (A) by an eligible entity described in that subparagraph shall not be subject to the requirement under paragraph (6).

(6) REQUIREMENT.—An eligible entity described in subparagraph (C) of subsection (d)(1) shall discount the amount of a rebate received for a qualified electrification project from any amount charged by that eligible entity to the eligible entity described in subparagraph (A) or (B) of that subsection on behalf of which the qualified electrification project is carried out.

(7) EXEMPTION.—Activities carried out by a State energy office using a grant provided under the program shall not be subject to the expenditure prohibitions and limitations described in section 420.18 of title 10, Code of Federal Regulations.

(8) PROHIBITION ON COMBINING REBATES.—A rebate provided by a State energy office or Indian Tribe under a high-efficiency electric home rebate program may not be combined with any other Federal grant or rebate, including a rebate provided under a HOMES rebate program (as defined in section 50121(d)), for the same qualified electrification project.

(9) ADMINISTRATIVE COSTS.—A State energy office or Indian Tribe that receives a grant under the program shall use not more than 20 percent of the grant amount for planning, administration, or technical assistance relating to a high-efficiency electric home rebate program.

(d) DEFINITIONS.—In this section:

(1) ELIGIBLE ENTITY.—The term "eligible entity" means—

(A) a low- or moderate-income household;

(B) an individual or entity that owns a multifamily building not less than 50 percent of the residents of which are low- or moderate-income households; and

Determination.

(C) a governmental, commercial, or nonprofit entity, as determined by the Secretary, carrying out a qualified electrification project on behalf of an entity described in subparagraph (A) or (B).

(2) HIGH-EFFICIENCY ELECTRIC HOME REBATE PROGRAM.—The term "high-efficiency electric home rebate program" means a rebate program carried out by a State energy office or Indian Tribe pursuant to subsection (c) using a grant received under the program.

(3) INDIAN TRIBE.—The term "Indian Tribe" has the meaning given the term in section 4 of the Indian Self-Determination and Education Assistance Act (25 U.S.C. 5304).

(4) LOW- OR MODERATE-INCOME HOUSEHOLD.—The term "low- or moderate-income household" means an individual or family the total annual income of which is less than 150 percent of the median income of the area in which the individual or family resides, as reported by the Department of Housing and Urban Development, including an individual or family that has demonstrated eligibility for another Federal program with income restrictions equal to or below 150 percent of area median income.

(5) PROGRAM.—The term "program" means the program carried out by the Secretary under subsection (a)(1).

(6) QUALIFIED ELECTRIFICATION PROJECT.—

(A) IN GENERAL.—The term "qualified electrification project" means a project that—

(i) includes the purchase and installation of—

(I) an electric heat pump water heater;

(II) an electric heat pump for space heating and cooling;

(III) an electric stove, cooktop, range, or oven;

(IV) an electric heat pump clothes dryer;

(V) an electric load service center;

(VI) insulation;

(VII) air sealing and materials to improve ventilation; or

(VIII) electric wiring;

(ii) with respect to any appliance described in clause (i), the purchase of which is carried out—

(I) as part of new construction;

(II) to replace a nonelectric appliance; or

(III) as a first-time purchase with respect to that appliance; and

(iii) is carried out at, or relating to, a single-family home or multifamily building, as applicable and defined by the Secretary.

(B) EXCLUSIONS.—The term "qualified electrification project" does not include any project with respect to which the appliance, system, equipment, infrastructure, component, or other item described in subclauses (I) through (VIII) of subparagraph (A)(i) is not certified under the Energy Star program established by section 324A of the Energy Policy and Conservation Act (42 U.S.C. 6294a), if applicable.

SEC. 50123. STATE-BASED HOME ENERGY EFFICIENCY CONTRACTOR TRAINING GRANTS.

42 USC 18795b.

(a) APPROPRIATION.—In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $200,000,000, to remain available through September 30, 2031, to carry out a program to provide financial assistance to States to develop and implement a State program described in section 362(d)(13) of the Energy Policy and Conservation Act (42 U.S.C. 6322(d)(13)), which shall provide training and education to contractors involved in the installation of home energy efficiency and electrification improvements, including improvements eligible for rebates under a HOMES rebate program (as defined in section 50121(d)) or a high-efficiency electric home rebate program (as defined in section 50122(d)), as part of an approved State energy conservation plan under the State Energy Program.

(b) USE OF FUNDS.—A State may use amounts received under subsection (a)—

(1) to reduce the cost of training contractor employees;

(2) to provide testing and certification of contractors trained and educated under a State program developed and implemented pursuant to subsection (a); and

(3) to partner with nonprofit organizations to develop and implement a State program pursuant to subsection (a).

(c) ADMINISTRATIVE EXPENSES.—Of the amounts received by a State under subsection (a), a State shall use not more than 10 percent for administrative expenses associated with developing and implementing a State program pursuant to that subsection.

PART 3—BUILDING EFFICIENCY AND RESILIENCE

SEC. 50131. ASSISTANCE FOR LATEST AND ZERO BUILDING ENERGY CODE ADOPTION.

(a) APPROPRIATION.—In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2022, out of any money in the Treasury not otherwise appropriated—

(1) $330,000,000, to remain available through September 30, 2029, to carry out activities under part D of title III of the Energy Policy and Conservation Act (42 U.S.C. 6321 through 6326) in accordance with subsection (b); and

(2) $670,000,000, to remain available through September 30, 2029, to carry out activities under part D of title III of the Energy Policy and Conservation Act (42 U.S.C. 6321 through 6326) in accordance with subsection (c).

Grants.

(b) LATEST BUILDING ENERGY CODE.—The Secretary shall use funds made available under subsection (a)(1) for grants to assist States, and units of local government that have authority to adopt building codes—

(1) to adopt—

(A) a building energy code (or codes) for residential buildings that meets or exceeds the 2021 International Energy Conservation Code, or achieves equivalent or greater energy savings;

(B) a building energy code (or codes) for commercial buildings that meets or exceeds the ANSI/ASHRAE/IES Standard 90.1–2019, or achieves equivalent or greater energy savings; or

(C) any combination of building energy codes described in subparagraph (A) or (B); and

Plan.

(2) to implement a plan for the jurisdiction to achieve full compliance with any building energy code adopted under paragraph (1) in new and renovated residential or commercial buildings, as applicable, which plan shall include active training and enforcement programs and measurement of the rate of compliance each year.

Grants.

(c) ZERO ENERGY CODE.—The Secretary shall use funds made available under subsection (a)(2) for grants to assist States, and units of local government that have authority to adopt building codes—

(1) to adopt a building energy code (or codes) for residential and commercial buildings that meets or exceeds the zero energy provisions in the 2021 International Energy Conservation Code or an equivalent stretch code; and

Plan.

(2) to implement a plan for the jurisdiction to achieve full compliance with any building energy code adopted under paragraph (1) in new and renovated residential and commercial buildings, which plan shall include active training and enforcement programs and measurement of the rate of compliance each year.

(d) STATE MATCH.—The State cost share requirement under the item relating to "Department of Energy—Energy Conservation" in title II of the Department of the Interior and Related Agencies Appropriations Act, 1985 (42 U.S.C. 6323a; 98 Stat. 1861), shall not apply to assistance provided under this section.

(e) ADMINISTRATIVE COSTS.—Of the amounts made available under this section, the Secretary shall reserve not more than 5 percent for administrative costs necessary to carry out this section.

PART 4—DOE LOAN AND GRANT PROGRAMS

SEC. 50141. FUNDING FOR DEPARTMENT OF ENERGY LOAN PROGRAMS OFFICE.

(a) COMMITMENT AUTHORITY.—In addition to commitment authority otherwise available and previously provided, the Secretary may make commitments to guarantee loans for eligible projects under section 1703 of the Energy Policy Act of 2005 (42 U.S.C.

16513), up to a total principal amount of $40,000,000,000, to remain available through September 30, 2026.

(b) APPROPRIATION.—In addition to amounts otherwise available and previously provided, there is appropriated to the Secretary for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $3,600,000,000, to remain available through September 30, 2026, for the costs of guarantees made under section 1703 of the Energy Policy Act of 2005 (42 U.S.C. 16513), using the loan guarantee authority provided under subsection (a) of this section.

(c) ADMINISTRATIVE EXPENSES.—Of the amount made available under subsection (b), the Secretary shall reserve not more than 3 percent for administrative expenses to carry out title XVII of the Energy Policy Act of 2005 and for carrying out section 1702(h)(3) of such Act (42 U.S.C. 16512(h)(3)).

(d) LIMITATIONS.—

President. Compliance.

(1) CERTIFICATION.—None of the amounts made available under this section for loan guarantees shall be available for any project unless the President has certified in advance in writing that the loan guarantee and the project comply with the provisions under this section.

(2) DENIAL OF DOUBLE BENEFIT.—Except as provided in paragraph (3), none of the amounts made available under this section for loan guarantees shall be available for commitments to guarantee loans for any projects under which funds, personnel, or property (tangible or intangible) of any Federal agency, instrumentality, personnel, or affiliated entity are expected to be used (directly or indirectly) through acquisitions, contracts, demonstrations, exchanges, grants, incentives, leases, procurements, sales, other transaction authority, or other arrangements to support the project or to obtain goods or services from the project.

(3) EXCEPTION.—Paragraph (2) shall not preclude the use of the loan guarantee authority provided under this section for commitments to guarantee loans for—

(A) projects benefitting from otherwise allowable Federal tax benefits;

(B) projects benefitting from being located on Federal land pursuant to a lease or right-of-way agreement for which all consideration for all uses is—

(i) paid exclusively in cash;

(ii) deposited in the Treasury as offsetting receipts; and

(iii) equal to the fair market value;

(C) projects benefitting from the Federal insurance program under section 170 of the Atomic Energy Act of 1954 (42 U.S.C. 2210); or

(D) electric generation projects using transmission facilities owned or operated by a Federal Power Marketing Administration or the Tennessee Valley Authority that have been authorized, approved, and financed independent of the project receiving the guarantee.

(e) GUARANTEE.—Section 1701(4)(A) of the Energy Policy Act of 2005 (42 U.S.C. 16511(4)(A)) is amended by inserting ", except that a loan guarantee may guarantee any debt obligation of a non-Federal borrower to any Eligible Lender (as defined in section

609.2 of title 10, Code of Federal Regulations)" before the period at the end.

(f) SOURCE OF PAYMENTS.—Section 1702(b) of the Energy Policy Act of 2005 (42 U.S.C. 16512(b)(2)) is amended by adding at the end the following:

"(3) SOURCE OF PAYMENTS.—The source of a payment received from a borrower under subparagraph (A) or (B) of paragraph (2) may not be a loan or other debt obligation that is made or guaranteed by the Federal Government.".

SEC. 50142. ADVANCED TECHNOLOGY VEHICLE MANUFACTURING.

(a) APPROPRIATION.—In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $3,000,000,000, to remain available through September 30, 2028, for the costs of providing direct loans under section 136(d) of the Energy Independence and Security Act of 2007 (42 U.S.C. 17013(d)): *Provided*, That funds appropriated by this section may be used for the costs of providing direct loans for reequipping, expanding, or establishing a manufacturing facility in the United States to produce, or for engineering integration performed in the United States of, advanced technology vehicles described in subparagraph (C), (D), (E), or (F) of section 136(a)(1) of such Act (42 U.S.C. 17013(a)(1)) only if such advanced technology vehicles emit, under any possible operational mode or condition, low or zero exhaust emissions of greenhouse gases.

(b) ADMINISTRATIVE COSTS.—The Secretary shall reserve not more than $25,000,000 of amounts made available under subsection (a) for administrative costs of providing loans as described in subsection (a).

(c) ELIMINATION OF LOAN PROGRAM CAP.—Section 136(d)(1) of the Energy Independence and Security Act of 2007 (42 U.S.C. 17013(d)(1)) is amended by striking "a total of not more than $25,000,000,000 in".

SEC. 50143. DOMESTIC MANUFACTURING CONVERSION GRANTS.

(a) APPROPRIATION.—In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $2,000,000,000, to remain available through September 30, 2031, to provide grants for domestic production of efficient hybrid, plug-in electric hybrid, plug-in electric drive, and hydrogen fuel cell electric vehicles, in accordance with section 712 of the Energy Policy Act of 2005 (42 U.S.C. 16062).

Requirement.

(b) COST SHARE.—The Secretary shall require a recipient of a grant provided under subsection (a) to provide not less than 50 percent of the cost of the project carried out using the grant.

(c) ADMINISTRATIVE COSTS.—The Secretary shall reserve not more than 3 percent of amounts made available under subsection (a) for administrative costs of making grants described in such subsection (a) pursuant to section 712 of the Energy Policy Act of 2005 (42 U.S.C. 16062).

SEC. 50144. ENERGY INFRASTRUCTURE REINVESTMENT FINANCING.

(a) APPROPRIATION.—In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $5,000,000,000, to remain available through September 30, 2026,

to carry out activities under section 1706 of the Energy Policy Act of 2005.

(b) COMMITMENT AUTHORITY.—The Secretary may make, through September 30, 2026, commitments to guarantee loans for projects under section 1706 of the Energy Policy Act of 2005 the total principal amount of which is not greater than $250,000,000,000, subject to the limitations that apply to loan guarantees under section 50141(d). Time period. Applicability.

(c) ENERGY INFRASTRUCTURE REINVESTMENT FINANCING.—Title XVII of the Energy Policy Act of 2005 is amended by inserting after section 1705 (42 U.S.C. 16516) the following:

"SEC. 1706. ENERGY INFRASTRUCTURE REINVESTMENT FINANCING. 42 USC 16517.

"(a) IN GENERAL.—Notwithstanding section 1703, the Secretary may make guarantees, including refinancing, under this section only for projects that—

"(1) retool, repower, repurpose, or replace energy infrastructure that has ceased operations; or

"(2) enable operating energy infrastructure to avoid, reduce, utilize, or sequester air pollutants or anthropogenic emissions of greenhouse gases.

"(b) INCLUSION.—A project under subsection (a) may include the remediation of environmental damage associated with energy infrastructure.

"(c) REQUIREMENT.—A project under subsection (a)(1) that involves electricity generation through the use of fossil fuels shall be required to have controls or technologies to avoid, reduce, utilize, or sequester air pollutants and anthropogenic emissions of greenhouse gases.

"(d) APPLICATION.—To apply for a guarantee under this section, an applicant shall submit to the Secretary an application at such time, in such manner, and containing such information as the Secretary may require, including—

"(1) a detailed plan describing the proposed project; Plan.

"(2) an analysis of how the proposed project will engage with and affect associated communities; and Analysis.

"(3) in the case of an applicant that is an electric utility, an assurance that the electric utility shall pass on any financial benefit from the guarantee made under this section to the customers of, or associated communities served by, the electric utility.

"(e) TERM.—Notwithstanding section 1702(f), the term of an obligation shall require full repayment over a period not to exceed 30 years. Requirement. Time period.

"(f) DEFINITION OF ENERGY INFRASTRUCTURE.—In this section, the term 'energy infrastructure' means a facility, and associated equipment, used for—

"(1) the generation or transmission of electric energy; or

"(2) the production, processing, and delivery of fossil fuels, fuels derived from petroleum, or petrochemical feedstocks.".

(d) CONFORMING AMENDMENT.—Section 1702(o)(3) of the Energy Policy Act of 2005 (42 U.S.C. 16512(o)(3)) is amended by inserting "and projects described in section 1706(a)" before the period at the end.

SEC. 50145. TRIBAL ENERGY LOAN GUARANTEE PROGRAM.

(a) APPROPRIATION.—In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2022,

out of any money in the Treasury not otherwise appropriated, $75,000,000, to remain available through September 30, 2028, to carry out section 2602(c) of the Energy Policy Act of 1992 (25 U.S.C. 3502(c)), subject to the limitations that apply to loan guarantees under section 50141(d).

(b) DEPARTMENT OF ENERGY TRIBAL ENERGY LOAN GUARANTEE PROGRAM.—Section 2602(c) of the Energy Policy Act of 1992 (25 U.S.C. 3502(c)) is amended—

(1) in paragraph (1), by striking ") for an amount equal to not more than 90 percent of" and inserting ", except that a loan guarantee may guarantee any debt obligation of a non-Federal borrower to any Eligible Lender (as defined in section 609.2 of title 10, Code of Federal Regulations)) for"; and

(2) in paragraph (4), by striking "$2,000,000,000" and inserting "$20,000,000,000".

PART 5—ELECTRIC TRANSMISSION

42 USC 18715.

SEC. 50151. TRANSMISSION FACILITY FINANCING.

(a) APPROPRIATION.—In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $2,000,000,000, to remain available through September 30, 2030, to carry out this section: *Provided*, That the Secretary shall not enter into any loan agreement pursuant to this section that could result in disbursements after September 30, 2031.

Determination.

(b) USE OF FUNDS.—The Secretary shall use the amounts made available by subsection (a) to carry out a program to pay the costs of direct loans to non-Federal borrowers, subject to the limitations that apply to loan guarantees under section 50141(d) and under such terms and conditions as the Secretary determines to be appropriate, for the construction or modification of electric transmission facilities designated by the Secretary to be necessary in the national interest under section 216(a) of the Federal Power Act (16 U.S.C. 824p(a)).

(c) LOANS.—A direct loan provided under this section—

(1) shall have a term that does not exceed the lesser of—

(A) 90 percent of the projected useful life, in years, of the eligible transmission facility; and

(B) 30 years;

(2) shall not exceed 80 percent of the project costs; and

(3) shall, on first issuance, be subject to the condition that the direct loan is not subordinate to other financing.

Determination.

(d) INTEREST RATES.—A direct loan provided under this section shall bear interest at a rate determined by the Secretary, taking into consideration market yields on outstanding marketable obligations of the United States of comparable maturities as of the date on which the direct loan is made.

(e) DEFINITION OF DIRECT LOAN.—In this section, the term "direct loan" has the meaning given the term in section 502 of the Federal Credit Reform Act of 1990 (2 U.S.C. 661a).

42 USC 18715a.

SEC. 50152. GRANTS TO FACILITATE THE SITING OF INTERSTATE ELECTRICITY TRANSMISSION LINES.

(a) APPROPRIATION.—In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2022, out of any money in the Treasury not otherwise appropriated,

$760,000,000, to remain available through September 30, 2029, for making grants in accordance with this section and for administrative expenses associated with carrying out this section.

(b) USE OF FUNDS.—

(1) IN GENERAL.—The Secretary may make a grant under this section to a siting authority for, with respect to a covered transmission project, any of the following activities:

(A) Studies and analyses of the impacts of the covered transmission project.

(B) Examination of up to 3 alternate siting corridors within which the covered transmission project feasibly could be sited.

(C) Participation by the siting authority in regulatory proceedings or negotiations in another jurisdiction, or under the auspices of a Transmission Organization (as defined in section 3 of the Federal Power Act (16 U.S.C. 796)) that is also considering the siting or permitting of the covered transmission project.

(D) Participation by the siting authority in regulatory proceedings at the Federal Energy Regulatory Commission or a State regulatory commission for determining applicable rates and cost allocation for the covered transmission project.

(E) Other measures and actions that may improve the chances of, and shorten the time required for, approval by the siting authority of the application relating to the siting or permitting of the covered transmission project, as the Secretary determines appropriate.

(2) ECONOMIC DEVELOPMENT.—The Secretary may make a grant under this section to a siting authority, or other State, local, or Tribal governmental entity, for economic development activities for communities that may be affected by the construction and operation of a covered transmission project, provided that the Secretary shall not enter into any grant agreement pursuant to this section that could result in any outlays after September 30, 2031.

(c) CONDITIONS.—

(1) FINAL DECISION ON APPLICATION.—In order to receive a grant for an activity described in subsection (b)(1), the Secretary shall require a siting authority to agree, in writing, to reach a final decision on the application relating to the siting or permitting of the applicable covered transmission project not later than 2 years after the date on which such grant is provided, unless the Secretary authorizes an extension for good cause. Requirement. Deadline.

(2) FEDERAL SHARE.—The Federal share of the cost of an activity described in subparagraph (C) or (D) of subsection (b)(1) shall not exceed 50 percent.

(3) ECONOMIC DEVELOPMENT.—The Secretary may only disburse grant funds for economic development activities under subsection (b)(2)— Disbursement.

(A) to a siting authority upon approval by the siting authority of the applicable covered transmission project; and

(B) to any other State, local, or Tribal governmental entity upon commencement of construction of the applicable

covered transmission project in the area under the jurisdiction of the entity.

Deadline.

(d) RETURNING FUNDS.—If a siting authority that receives a grant for an activity described in subsection (b)(1) fails to use all grant funds within 2 years of receipt, the siting authority shall return to the Secretary any such unused funds.

(e) DEFINITIONS.—In this section:

(1) COVERED TRANSMISSION PROJECT.—The term "covered transmission project" means a high-voltage interstate or offshore electricity transmission line—

(A) that is proposed to be constructed and to operate—

(i) at a minimum of 275 kilovolts of either alternating-current or direct-current electric energy by an entity; or

(ii) offshore and at a minimum of 200 kilovolts of either alternating-current or direct-current electric energy by an entity; and

(B) for which such entity has applied, or informed a siting authority of such entity's intent to apply, for regulatory approval.

(2) SITING AUTHORITY.—The term "siting authority" means a State, local, or Tribal governmental entity with authority to make a final determination regarding the siting, permitting, or regulatory status of a covered transmission project that is proposed to be located in an area under the jurisdiction of the entity.

42 USC 18715b.

SEC. 50153. INTERREGIONAL AND OFFSHORE WIND ELECTRICITY TRANSMISSION PLANNING, MODELING, AND ANALYSIS.

(a) APPROPRIATION.—In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $100,000,000, to remain available through September 30, 2031, to carry out this section.

(b) USE OF FUNDS.—The Secretary shall use amounts made available under subsection (a)—

(1) to pay expenses associated with convening relevant stakeholders to address the development of interregional electricity transmission and transmission of electricity that is generated by offshore wind; and

Determination.

(2) to conduct planning, modeling, and analysis regarding interregional electricity transmission and transmission of electricity that is generated by offshore wind, taking into account the local, regional, and national economic, reliability, resilience, security, public policy, and environmental benefits of interregional electricity transmission and transmission of electricity that is generated by offshore wind, including planning, modeling, and analysis, as the Secretary determines appropriate, pertaining to—

(A) clean energy integration into the electric grid, including the identification of renewable energy zones;

(B) the effects of changes in weather due to climate change on the reliability and resilience of the electric grid;

(C) cost allocation methodologies that facilitate the expansion of the bulk power system;

(D) the benefits of coordination between generator interconnection processes and transmission planning processes;

(E) the effect of increased electrification on the electric grid;

(F) power flow modeling;

(G) the benefits of increased interconnections or interties between or among the Western Interconnection, the Eastern Interconnection, the Electric Reliability Council of Texas, and other interconnections, as applicable;

(H) the cooptimization of transmission and generation, including variable energy resources, energy storage, and demand-side management;

(I) the opportunities for use of nontransmission alternatives, energy storage, and grid-enhancing technologies;

(J) economic development opportunities for communities arising from development of interregional electricity transmission and transmission of electricity that is generated by offshore wind;

(K) evaluation of existing rights-of-way and the need for additional transmission corridors; and

(L) a planned national transmission grid, which would include a networked transmission system to optimize the existing grid for interconnection of offshore wind farms.

PART 6—INDUSTRIAL

SEC. 50161. ADVANCED INDUSTRIAL FACILITIES DEPLOYMENT PROGRAM. 42 USC 17113a.

(a) OFFICE OF CLEAN ENERGY DEMONSTRATIONS.—In addition to amounts otherwise available, there is appropriated to the Secretary, acting through the Office of Clean Energy Demonstrations, for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $5,812,000,000, to remain available through September 30, 2026, to carry out this section.

(b) FINANCIAL ASSISTANCE.—The Secretary shall use funds appropriated by subsection (a) to provide financial assistance, on a competitive basis, to eligible entities to carry out projects for—

(1) the purchase and installation, or implementation, of advanced industrial technology at an eligible facility;

(2) retrofits, upgrades to, or operational improvements at an eligible facility to install or implement advanced industrial technology; or

(3) engineering studies and other work needed to prepare an eligible facility for activities described in paragraph (1) or (2).

(c) APPLICATION.—To be eligible to receive financial assistance under subsection (b), an eligible entity shall submit to the Secretary an application at such time, in such manner, and containing such information as the Secretary may require, including the expected greenhouse gas emissions reductions to be achieved by carrying out the project.

(d) PRIORITY.—In providing financial assistance under subsection (b), the Secretary shall give priority consideration to projects on the basis of, as determined by the Secretary— Determination.

(1) the expected greenhouse gas emissions reductions to be achieved by carrying out the project;

(2) the extent to which the project would provide the greatest benefit for the greatest number of people within the area in which the eligible facility is located; and

(3) whether the eligible entity participates or would participate in a partnership with purchasers of the output of the eligible facility.

Requirement.

(e) COST SHARE.—The Secretary shall require an eligible entity to provide not less than 50 percent of the cost of a project carried out pursuant to this section.

(f) ADMINISTRATIVE COSTS.—The Secretary shall reserve not more than $300,000,000 of amounts made available under subsection (a) for administrative costs of carrying out this section.

(g) DEFINITIONS.—In this section:

Determination.

(1) ADVANCED INDUSTRIAL TECHNOLOGY.—The term "advanced industrial technology" means a technology directly involved in an industrial process, as described in any of paragraphs (1) through (6) of section 454(c) of the Energy Independence and Security Act of 2007 (42 U.S.C. 17113(c)), and designed to accelerate greenhouse gas emissions reduction progress to net-zero at an eligible facility, as determined by the Secretary.

(2) ELIGIBLE ENTITY.—The term "eligible entity" means the owner or operator of an eligible facility.

(3) ELIGIBLE FACILITY.—The term "eligible facility" means a domestic, non-Federal, nonpower industrial or manufacturing facility engaged in energy-intensive industrial processes, including production processes for iron, steel, steel mill products, aluminum, cement, concrete, glass, pulp, paper, industrial ceramics, chemicals, and other energy intensive industrial processes, as determined by the Secretary.

(4) FINANCIAL ASSISTANCE.—The term "financial assistance" means a grant, rebate, direct loan, or cooperative agreement.

PART 7—OTHER ENERGY MATTERS

SEC. 50171. DEPARTMENT OF ENERGY OVERSIGHT.

In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $20,000,000, to remain available through September 30, 2031, for oversight by the Department of Energy Office of Inspector General of the Department of Energy activities for which funding is appropriated in this subtitle.

SEC. 50172. NATIONAL LABORATORY INFRASTRUCTURE.

(a) OFFICE OF SCIENCE.—In addition to amounts otherwise available, there is appropriated to the Secretary, acting through the Director of the Office of Science, for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, to remain available through September 30, 2027—

(1) $133,240,000 to carry out activities for science laboratory infrastructure projects;

(2) $303,656,000 to carry out activities for high energy physics construction and major items of equipment projects;

(3) $280,000,000 to carry out activities for fusion energy science construction and major items of equipment projects;

(4) $217,000,000 to carry out activities for nuclear physics construction and major items of equipment projects;

(5) $163,791,000 to carry out activities for advanced scientific computing research facilities;

(6) $294,500,000 to carry out activities for basic energy sciences projects; and

(7) $157,813,000 to carry out activities for isotope research and development facilities.

(b) OFFICE OF FOSSIL ENERGY AND CARBON MANAGEMENT.—In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $150,000,000, to remain available through September 30, 2027, to carry out activities for infrastructure and general plant projects carried out by the Office of Fossil Energy and Carbon Management.

(c) OFFICE OF NUCLEAR ENERGY.—In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $150,000,000, to remain available through September 30, 2027, to carry out activities for infrastructure and general plant projects carried out by the Office of Nuclear Energy.

(d) OFFICE OF ENERGY EFFICIENCY AND RENEWABLE ENERGY.—In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $150,000,000, to remain available through September 30, 2027, to carry out activities for infrastructure and general plant projects carried out by the Office of Energy Efficiency and Renewable Energy.

SEC. 50173. AVAILABILITY OF HIGH-ASSAY LOW-ENRICHED URANIUM.

(a) APPROPRIATIONS.—In addition to amounts otherwise available, there is appropriated to the Secretary of for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, to remain available through September 30, 2026—

(1) $100,000,000 to carry out the program elements described in subparagraphs (A) through (C) of section 2001(a)(2) of the Energy Act of 2020 (42 U.S.C. 16281(a)(2));

(2) $500,000,000 to carry out the program elements described in subparagraphs (D) through (H) of that section; and

(3) $100,000,000 to carry out activities to support the availability of high-assay low-enriched uranium for civilian domestic research, development, demonstration, and commercial use under section 2001 of the Energy Act of 2020 (42 U.S.C. 16281).

(b) COMPETITIVE PROCEDURES.—To the maximum extent practicable, the Department of Energy shall, in a manner consistent with section 989 of the Energy Policy Act of 2005 (42 U.S.C. 16353), use a competitive, merit-based review process in carrying out research, development, demonstration, and deployment activities under section 2001 of the Energy Act of 2020 (42 U.S.C. 16281).

(c) ADMINISTRATIVE EXPENSES.—The Secretary may use not more than 3 percent of the amounts appropriated by subsection (a) for administrative purposes.

Subtitle B—Natural Resources

PART 1—GENERAL PROVISIONS

43 USC 3006 note.

SEC. 50211. DEFINITIONS.

In this subtitle:

(1) SECRETARY.—The term "Secretary" means the Secretary of the Interior.

(2) UNITED STATES INSULAR AREAS.—The term "United States Insular Areas" means American Samoa, the Commonwealth of the Northern Mariana Islands, Guam, the Commonwealth of Puerto Rico, and the United States Virgin Islands.

PART 2—PUBLIC LANDS

SEC. 50221. NATIONAL PARKS AND PUBLIC LANDS CONSERVATION AND RESILIENCE.

In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $250,000,000, to remain available through September 30, 2031, to carry out projects for the conservation, protection, and resiliency of lands and resources administered by the National Park Service and Bureau of Land Management. None of the funds provided under this section shall be subject to cost-share or matching requirements.

SEC. 50222. NATIONAL PARKS AND PUBLIC LANDS CONSERVATION AND ECOSYSTEM RESTORATION.

In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $250,000,000, to remain available through September 30, 2031, to carry out conservation, ecosystem and habitat restoration projects on lands administered by the National Park Service and Bureau of Land Management. None of the funds provided under this section shall be subject to cost-share or matching requirements.

SEC. 50223. NATIONAL PARK SERVICE EMPLOYEES.

In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $500,000,000, to remain available through September 30, 2030, to hire employees to serve in units of the National Park System or national historic or national scenic trails administered by the National Park Service.

SEC. 50224. NATIONAL PARK SYSTEM DEFERRED MAINTENANCE.

In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $200,000,000, to remain available through September 30, 2026, to carry out priority deferred maintenance projects, through direct expenditures or transfers, within the boundaries of the National Park System.

PART 3—DROUGHT RESPONSE AND PREPAREDNESS

SEC. 50231. BUREAU OF RECLAMATION DOMESTIC WATER SUPPLY PROJECTS.

In addition to amounts otherwise available, there is appropriated to the Secretary, acting through the Commissioner of Reclamation, for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $550,000,000, to remain available through September 30, 2031, for grants, contracts, or financial assistance agreements for disadvantaged communities (identified according to criteria adopted by the Commissioner of Reclamation) in a manner as determined by the Commissioner of Reclamation for up to 100 percent of the cost of the planning, design, or construction of water projects the primary purpose of which is to provide domestic water supplies to communities or households that do not have reliable access to domestic water supplies in a State or territory described in the first section of the Act of June 17, 1902 (43 U.S.C. 391; 32 Stat. 388, chapter 1093).

SEC. 50232. CANAL IMPROVEMENT PROJECTS.

In addition to amounts otherwise available, there is appropriated to the Secretary, acting through the Commissioner of Reclamation, for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $25,000,000, to remain available through September 30, 2031, for the design, study, and implementation of projects (including pilot and demonstration projects) to cover water conveyance facilities with solar panels to generate renewable energy in a manner as determined by the Secretary or for other solar projects associated with Bureau of Reclamation projects that increase water efficiency and assist in implementation of clean energy goals.

SEC. 50233. DROUGHT MITIGATION IN THE RECLAMATION STATES.

(a) DEFINITION OF RECLAMATION STATE.—In this section, the term "Reclamation State" means a State or territory described in the first section of the Act of June 17, 1902 (32 Stat. 388, chapter 1093; 43 U.S.C. 391).

(b) APPROPRIATION.—In addition to amounts otherwise available, there is appropriated to the Secretary (acting through the Commissioner of Reclamation), for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $4,000,000,000, to remain available through September 30, 2026, for grants, contracts, or financial assistance agreements, in accordance with the reclamation laws, to or with public entities and Indian Tribes, that provide for the conduct of the following activities to mitigate the impacts of drought in the Reclamation States, with priority given to the Colorado River Basin and other basins experiencing comparable levels of long-term drought, to be implemented in compliance with applicable environmental law:

(1) Compensation for a temporary or multiyear voluntary reduction in diversion of water or consumptive water use.

(2) Voluntary system conservation projects that achieve verifiable reductions in use of or demand for water supplies or provide environmental benefits in the Lower Basin or Upper Basin of the Colorado River.

(3) Ecosystem and habitat restoration projects to address issues directly caused by drought in a river basin or inland water body.

(c) REPORT.—Not later than 1 year after the date of enactment of this Act, and each year thereafter, the Secretary shall submit to Congress a report that describes any expenditures under this section.

PART 4—INSULAR AFFAIRS

SEC. 50241. OFFICE OF INSULAR AFFAIRS CLIMATE CHANGE TECHNICAL ASSISTANCE.

(a) IN GENERAL.—In addition to amounts otherwise available, there is appropriated to the Secretary, acting through the Office of Insular Affairs, for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $15,000,000, to remain available through September 30, 2026, to provide technical assistance for climate change planning, mitigation, adaptation, and resilience to United States Insular Areas.

(b) ADMINISTRATIVE EXPENSES.—In addition to amounts otherwise available, there is appropriated to the Secretary, acting through the Office of Insular Affairs, for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $900,000, to remain available through September 30, 2026, for necessary administrative expenses associated with carrying out this section.

PART 5—OFFSHORE WIND

SEC. 50251. LEASING ON THE OUTER CONTINENTAL SHELF.

(a) LEASING AUTHORIZED.—The Secretary may grant leases, easements, and rights-of-way pursuant to section 8(p)(1)(C) of the Outer Continental Shelf Lands Act (43 U.S.C. 1337(p)(1)(C)) in an area withdrawn by—

(1) the Presidential memorandum entitled "Memorandum on the Withdrawal of Certain Areas of the United States Outer Continental Shelf from Leasing Disposition" and dated September 8, 2020; or

(2) the Presidential memorandum entitled "Presidential Determination on the Withdrawal of Certain Areas of the United States Outer Continental Shelf from Leasing Disposition" and dated September 25, 2020.

(b) OFFSHORE WIND FOR THE TERRITORIES.—

(1) APPLICATION OF OUTER CONTINENTAL SHELF LANDS ACT WITH RESPECT TO TERRITORIES OF THE UNITED STATES.—

(A) IN GENERAL.—Section 2 of the Outer Continental Shelf Lands Act (43 U.S.C. 1331) is amended—

(i) in subsection (a)—

(I) by striking "means all" and inserting the following: "means—

"(1) all"; and

(II) in paragraph (1) (as so designated), by striking "control;" and inserting the following: "control or within the exclusive economic zone of the United States and adjacent to any territory of the United States; and"; and

(III) by adding at the end following:

"(2) does not include any area conveyed by Congress to a territorial government for administration;";

(ii) in subsection (p), by striking "and" after the semicolon at the end;

(iii) in subsection (q), by striking the period at the end and inserting "; and"; and

(iv) by adding at the end the following:

"(r) The term 'State' means—

"(1) each of the several States;

"(2) the Commonwealth of Puerto Rico;

"(3) Guam;

"(4) American Samoa;

"(5) the United States Virgin Islands; and

"(6) the Commonwealth of the Northern Mariana Islands.".

(B) EXCLUSIONS.—Section 18 of the Outer Continental Shelf Lands Act (43 U.S.C. 1344) is amended by adding at the end the following:

"(i) APPLICATION.—This section shall not apply to the scheduling of any lease sale in an area of the outer Continental Shelf that is adjacent to the Commonwealth of Puerto Rico, Guam, American Samoa, the United States Virgin Islands, or the Commonwealth of the Northern Mariana Islands.".

(2) WIND LEASE SALES FOR AREAS OF THE OUTER CONTINENTAL SHELF.—The Outer Continental Shelf Lands Act (43 U.S.C. 1331 et seq.) is amended by adding at the end the following:

"SEC. 33. WIND LEASE SALES FOR AREAS OF THE OUTER CONTINENTAL SHELF OFFSHORE OF TERRITORIES OF THE UNITED STATES. 43 USC 1356c.

"(a) WIND LEASE SALES OFF COASTS OF TERRITORIES OF THE UNITED STATES.—

"(1) CALL FOR INFORMATION AND NOMINATIONS.—

"(A) IN GENERAL.—The Secretary shall issue calls for information and nominations for proposed wind lease sales for areas of the outer Continental Shelf described in paragraph (2) that are determined to be feasible.

"(B) INITIAL CALL.—Not later than September 30, 2025, the Secretary shall issue an initial call for information and nominations under this paragraph. Deadline.

"(2) CONDITIONAL WIND LEASE SALES.—The Secretary may conduct wind lease sales in each area within the exclusive economic zone of the United States adjacent to the Commonwealth of Puerto Rico, Guam, American Samoa, the United States Virgin Islands, or the Commonwealth of the Northern Mariana Islands that meets each of the following criteria:

"(A) The Secretary has concluded that a wind lease sale in the area is feasible.

"(B) The Secretary has determined that there is sufficient interest in leasing the area. Determination.

"(C) The Secretary has consulted with the Governor of the territory regarding the suitability of the area for wind energy development.".

PART 6—FOSSIL FUEL RESOURCES

Time period. Effective date.

SEC. 50261. OFFSHORE OIL AND GAS ROYALTY RATE.

Section 8(a)(1) of the Outer Continental Shelf Lands Act (43 U.S.C. 1337(a)(1)) is amended—

(1) in each of subparagraphs (A) and (C), by striking "not less than 12½ per centum" each place it appears and inserting "not less than 16⅔ percent, but not more than 18¾ percent, during the 10-year period beginning on the date of enactment of the Act titled 'An Act to provide for reconciliation pursuant to title II of S. Con. Res. 14', and not less than 16⅔ percent thereafter,";

(2) in subparagraph (F), by striking "no less than 12½ per centum" and inserting "not less than 16⅔ percent, but not more than 18¾ percent, during the 10-year period beginning on the date of enactment of the Act titled 'An Act to provide for reconciliation pursuant to title II of S. Con. Res. 14', and not less than 16⅔ percent thereafter,"; and

(3) in subparagraph (H), by striking "no less than 12 and ½ per centum" and inserting "not less than 16⅔ percent, but not more than 18¾ percent, during the 10-year period beginning on the date of enactment of the Act titled 'An Act to provide for reconciliation pursuant to title II of S. Con. Res. 14', and not less than 16⅔ percent thereafter,".

Time periods. Effective dates.

SEC. 50262. MINERAL LEASING ACT MODERNIZATION.

(a) ONSHORE OIL AND GAS ROYALTY RATES.—

(1) LEASE OF OIL AND GAS LAND.—Section 17 of the Mineral Leasing Act (30 U.S.C. 226) is amended—

(A) in subsection (b)(1)(A), in the fifth sentence—

(i) by striking "12.5" and inserting "16⅔"; and

(ii) by inserting "or, in the case of a lease issued during the 10-year period beginning on the date of enactment of the Act titled 'An Act to provide for reconciliation pursuant to title II of S. Con. Res. 14', 16⅔ percent in amount or value of the production removed or sold from the lease" before the period at the end; and

(B) by striking "12½ per centum" each place it appears and inserting "16⅔ percent".

(2) CONDITIONS FOR REINSTATEMENT.—Section 31(e)(3) of the Mineral Leasing Act (30 U.S.C. 188(e)(3)) is amended by striking "16⅔" each place it appears and inserting "20".

(b) OIL AND GAS MINIMUM BID.—Section 17(b) of the Mineral Leasing Act (30 U.S.C. 226(b)) is amended—

(1) in paragraph (1)(B), in the first sentence, by striking "$2 per acre for a period of 2 years from the date of enactment of the Federal Onshore Oil and Gas Leasing Reform Act of 1987." and inserting "$10 per acre during the 10-year period beginning on the date of enactment of the Act titled 'An Act to provide for reconciliation pursuant to title II of S. Con. Res. 14'."; and

(2) in paragraph (2)(C), by striking "$2 per acre" and inserting "$10 per acre".

(c) FOSSIL FUEL RENTAL RATES.—

(1) ANNUAL RENTALS.—Section 17(d) of the Mineral Leasing Act (30 U.S.C. 226(d)) is amended, in the first sentence, by

striking "$1.50 per acre" and all that follows through the period at the end and inserting "$3 per acre per year during the 2-year period beginning on the date the lease begins for new leases, and after the end of that 2-year period, $5 per acre per year for the following 6-year period, and not less than $15 per acre per year thereafter, or, in the case of a lease issued during the 10-year period beginning on the date of enactment of the Act titled 'An Act to provide for reconciliation pursuant to title II of S. Con. Res. 14', $3 per acre per year during the 2-year period beginning on the date the lease begins, and after the end of that 2-year period, $5 per acre per year for the following 6-year period, and $15 per acre per year thereafter.".

(2) RENTALS IN REINSTATED LEASES.—Section 31(e)(2) of the Mineral Leasing Act (30 U.S.C. 188(e)(2)) is amended by striking "$10" and inserting "$20".

(d) EXPRESSION OF INTEREST FEE.—Section 17 of the Mineral Leasing Act (30 U.S.C. 226) is amended by adding at the end the following:

"(q) FEE FOR EXPRESSION OF INTEREST.—

"(1) IN GENERAL.—The Secretary shall assess a nonrefundable fee against any person that, in accordance with procedures established by the Secretary to carry out this subsection, submits an expression of interest in leasing land available for disposition under this section for exploration for, and development of, oil or gas. Assessment.

"(2) AMOUNT OF FEE.—

"(A) IN GENERAL.—Subject to subparagraph (B), the fee assessed under paragraph (1) shall be $5 per acre of the area covered by the applicable expression of interest.

"(B) ADJUSTMENT OF FEE.—The Secretary shall, by regulation, not less frequently than every 4 years, adjust the amount of the fee under subparagraph (A) to reflect the change in inflation.". Regulation.

(e) ELIMINATION OF NONCOMPETITIVE LEASING.—

(1) IN GENERAL.—Section 17 of the Mineral Leasing Act (30 U.S.C. 226) is amended—

(A) in subsection (b)—

(i) in paragraph (1)(A)—

(I) in the first sentence, by striking "paragraphs (2) and (3) of this subsection" and inserting "paragraph (2)"; and

(II) by striking the last sentence; and

(ii) by striking paragraph (3);

(B) by striking subsection (c) and inserting the following:

"(c) ADDITIONAL ROUNDS OF COMPETITIVE BIDDING.—Land made available for leasing under subsection (b)(1) for which no bid is accepted or received, or the land for which a lease terminates, expires, is cancelled, or is relinquished, may be made available by the Secretary of the Interior for a new round of competitive bidding under that subsection."; and

(C) by striking subsection (e) and inserting the following:

"(e) TERM OF LEASE.—

"(1) IN GENERAL.—Any lease issued under this section, including a lease for tar sand areas, shall be for a primary term of 10 years.

"(2) CONTINUATION OF LEASE.—A lease described in paragraph (1) shall continue after the primary term of the lease for any period during which oil or gas is produced in paying quantities.

"(3) ADDITIONAL EXTENSIONS.—Any lease issued under this section for land on which, or for which under an approved cooperative or unit plan of development or operation, actual drilling operations were commenced and diligently prosecuted prior to the end of the primary term of the lease shall be extended for 2 years and for any period thereafter during which oil or gas is produced in paying quantities.".

(2) CONFORMING AMENDMENTS.—Section 31 of the Mineral Leasing Act (30 U.S.C. 188) is amended—

(A) in subsection (d)(1), in the first sentence, by striking "or section 17(c) of this Act";

(B) in subsection (e)—

(i) in paragraph (2)—

(I) by striking "either"; and

(II) by striking "or the inclusion" and all that follows through ", all"; and

(ii) in paragraph (3)—

(I) in subparagraph (A), by adding "and" after the semicolon;

(II) by striking subparagraph (B); and

(III) by striking "(3)(A) payment" and inserting the following:

"(3) payment";

(C) in subsection (g)—

(i) in paragraph (1), by striking "as a competitive" and all that follows through "of this Act" and inserting "in the same manner as the original lease issued pursuant to section 17";

(ii) by striking paragraph (2);

(iii) by redesignating paragraphs (3) and (4) as paragraphs (2) and (3), respectively; and

(iv) in paragraph (2) (as so redesignated), by striking "applicable to leases issued under subsection 17(c) of this Act (30 U.S.C. 226(c)) except," and inserting "except";

(D) in subsection (h), by striking "subsections (d) and (f) of this section" and inserting "subsection (d)";

(E) in subsection (i), by striking "(i)(1) In acting" and all that follows through "of this section" in paragraph (2) and inserting the following:

"(i) ROYALTY REDUCTION IN REINSTATED LEASES.—In acting on a petition for reinstatement pursuant to subsection (d)";

(F) by striking subsection (f); and

(G) by redesignating subsections (g) through (j) as subsections (f) through (i), respectively.

30 USC 1727.

SEC. 50263. ROYALTIES ON ALL EXTRACTED METHANE.

(a) IN GENERAL.—For all leases issued after the date of enactment of this Act, except as provided in subsection (b), royalties

paid for gas produced from Federal land and on the outer Continental Shelf shall be assessed on all gas produced, including all gas that is consumed or lost by venting, flaring, or negligent releases through any equipment during upstream operations.

(b) EXCEPTION.—Subsection (a) shall not apply with respect to—

(1) gas vented or flared for not longer than 48 hours in an emergency situation that poses a danger to human health, safety, or the environment; Time period.

(2) gas used or consumed within the area of the lease, unit, or communitized area for the benefit of the lease, unit, or communitized area; or

(3) gas that is unavoidably lost.

SEC. 50264. LEASE SALES UNDER THE 2017–2022 OUTER CONTINENTAL SHELF LEASING PROGRAM. Deadlines.

(a) DEFINITIONS.—In this section:

(1) LEASE SALE 257.—The term "Lease Sale 257" means the lease sale numbered 257 that was approved in the Record of Decision described in the notice of availability of a record of decision issued on August 31, 2021, entitled "Gulf of Mexico, Outer Continental Shelf (OCS), Oil and Gas Lease Sale 257" (86 Fed. Reg. 50160 (September 7, 2021)), and is the subject of the final notice of sale entitled "Gulf of Mexico Outer Continental Shelf Oil and Gas Lease Sale 257" (86 Fed. Reg. 54728 (October 4, 2021)).

(2) LEASE SALE 258.—The term "Lease Sale 258" means the lease sale numbered 258 described in the 2017–2022 Outer Continental Shelf Oil and Gas Leasing Proposed Final Program published on November 18, 2016, and approved by the Secretary in the Record of Decision issued on January 17, 2017, described in the notice of availability entitled "Record of Decision for the 2017–2022 Outer Continental Shelf Oil and Gas Leasing Program Final Programmatic Environmental Impact Statement; MMAA104000" (82 Fed. Reg. 6643 (January 19, 2017)).

(3) LEASE SALE 259.—The term "Lease Sale 259" means the lease sale numbered 259 described in the 2017–2022 Outer Continental Shelf Oil and Gas Leasing Proposed Final Program published on November 18, 2016, and approved by the Secretary in the Record of Decision issued on January 17, 2017, described in the notice of availability entitled "Record of Decision for the 2017–2022 Outer Continental Shelf Oil and Gas Leasing Program Final Programmatic Environmental Impact Statement; MMAA104000" (82 Fed. Reg. 6643 (January 19, 2017)).

(4) LEASE SALE 261.—The term "Lease Sale 261" means the lease sale numbered 261 described in the 2017–2022 Outer Continental Shelf Oil and Gas Leasing Proposed Final Program published on November 18, 2016, and approved by the Secretary in the Record of Decision issued on January 17, 2017, described in the notice of availability entitled "Record of Decision for the 2017–2022 Outer Continental Shelf Oil and Gas Leasing Program Final Programmatic Environmental Impact Statement; MMAA104000" (82 Fed. Reg. 6643 (January 19, 2017)).

(b) LEASE SALE 257 REINSTATEMENT.—

(1) ACCEPTANCE OF BIDS.—Not later 30 days after the date of enactment of this Act, the Secretary shall, without modification or delay—

(A) accept the highest valid bid for each tract or bidding unit of Lease Sale 257 for which a valid bid was received on November 17, 2021; and

(B) provide the appropriate lease form to the winning bidder to execute and return.

(2) LEASE ISSUANCE.—On receipt of an executed lease form under paragraph (1)(B) and payment of the rental for the first year, the balance of the bonus bid (unless deferred), and any required bond or security from the high bidder, the Secretary shall promptly issue to the high bidder a fully executed lease, in accordance with—

(A) the regulations in effect on the date of Lease Sale 257; and

(B) the terms and conditions of the final notice of sale entitled "Gulf of Mexico Outer Continental Shelf Oil and Gas Lease Sale 257" (86 Fed. Reg. 54728 (October 4, 2021)).

(c) REQUIREMENT FOR LEASE SALE 258.—Notwithstanding the expiration of the 2017–2022 leasing program, not later than December 31, 2022, the Secretary shall conduct Lease Sale 258 in accordance with the Record of Decision approved by the Secretary on January 17, 2017, described in the notice of availability entitled "Record of Decision for the 2017–2022 Outer Continental Shelf Oil and Gas Leasing Program Final Programmatic Environmental Impact Statement; MMAA104000" issued on January 17, 2017 (82 Fed. Reg. 6643 (January 19, 2017)).

(d) REQUIREMENT FOR LEASE SALE 259.—Notwithstanding the expiration of the 2017–2022 leasing program, not later than March 31, 2023, the Secretary shall conduct Lease Sale 259 in accordance with the Record of Decision approved by the Secretary on January 17, 2017, described in the notice of availability entitled "Record of Decision for the 2017–2022 Outer Continental Shelf Oil and Gas Leasing Program Final Programmatic Environmental Impact Statement; MMAA104000" issued on January 17, 2017 (82 Fed. Reg. 6643 (January 19, 2017)).

(e) REQUIREMENT FOR LEASE SALE 261.—Notwithstanding the expiration of the 2017–2022 leasing program, not later than September 30, 2023, the Secretary shall conduct Lease Sale 261 in accordance with the Record of Decision approved by the Secretary on January 17, 2017, described in the notice of availability entitled "Record of Decision for the 2017–2022 Outer Continental Shelf Oil and Gas Leasing Program Final Programmatic Environmental Impact Statement; MMAA104000" issued on January 17, 2017 (82 Fed. Reg. 6643 (January 19, 2017)).

43 USC 3006.

SEC. 50265. ENSURING ENERGY SECURITY.

(a) DEFINITIONS.—In this section:

(1) FEDERAL LAND.—The term "Federal land" means public lands (as defined in section 103 of the Federal Land Policy and Management Act of 1976 (43 U.S.C. 1702)).

(2) OFFSHORE LEASE SALE.—The term "offshore lease sale" means an oil and gas lease sale—

(A) that is held by the Secretary in accordance with the Outer Continental Shelf Lands Act (43 U.S.C. 1331 et seq.); and

(B) that, if any acceptable bids have been received for any tract offered in the lease sale, results in the issuance of a lease.

(3) ONSHORE LEASE SALE.—The term "onshore lease sale" means a quarterly oil and gas lease sale—

(A) that is held by the Secretary in accordance with section 17 of the Mineral Leasing Act (30 U.S.C. 226); and

(B) that, if any acceptable bids have been received for any parcel offered in the lease sale, results in the issuance of a lease.

(b) LIMITATION ON ISSUANCE OF CERTAIN LEASES OR RIGHTS-OF-WAY.—During the 10-year period beginning on the date of enactment of this Act— Time periods. Effective dates.

(1) the Secretary may not issue a right-of-way for wind or solar energy development on Federal land unless—

(A) an onshore lease sale has been held during the 120-day period ending on the date of the issuance of the right-of-way for wind or solar energy development; and

(B) the sum total of acres offered for lease in onshore lease sales during the 1-year period ending on the date of the issuance of the right-of-way for wind or solar energy development is not less than the lesser of—

(i) 2,000,000 acres; and

(ii) 50 percent of the acreage for which expressions of interest have been submitted for lease sales during that period; and

(2) the Secretary may not issue a lease for offshore wind development under section 8(p)(1)(C) of the Outer Continental Shelf Lands Act (43 U.S.C. 1337(p)(1)(C)) unless—

(A) an offshore lease sale has been held during the 1-year period ending on the date of the issuance of the lease for offshore wind development; and

(B) the sum total of acres offered for lease in offshore lease sales during the 1-year period ending on the date of the issuance of the lease for offshore wind development is not less than 60,000,000 acres.

(c) SAVINGS.—Except as expressly provided in paragraphs (1) and (2) of subsection (b), nothing in this section supersedes, amends, or modifies existing law.

PART 7—UNITED STATES GEOLOGICAL SURVEY

SEC. 50271. UNITED STATES GEOLOGICAL SURVEY 3D ELEVATION PROGRAM.

In addition to amounts otherwise available, there is appropriated to the Secretary, acting through the Director of the United States Geological Survey, for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $23,500,000, to remain available through September 30, 2031, to produce, collect, disseminate, and use 3D elevation data.

PART 8—OTHER NATURAL RESOURCES MATTERS

SEC. 50281. DEPARTMENT OF THE INTERIOR OVERSIGHT.

In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $10,000,000, to remain available through September 30, 2031, for oversight by the Department of the Interior Office of Inspector General of the Department of the Interior activities for which funding is appropriated in this subtitle.

Subtitle C—Environmental Reviews

SEC. 50301. DEPARTMENT OF ENERGY.

In addition to amounts otherwise available, there is appropriated to the Secretary of Energy for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $115,000,000, to remain available through September 30, 2031, to provide for the hiring and training of personnel, the development of programmatic environmental documents, the procurement of technical or scientific services for environmental reviews, the development of environmental data or information systems, stakeholder and community engagement, and the purchase of new equipment for environmental analysis to facilitate timely and efficient environmental reviews and authorizations.

SEC. 50302. FEDERAL ENERGY REGULATORY COMMISSION.

(a) IN GENERAL.—In addition to amounts otherwise available, there is appropriated to the Federal Energy Regulatory Commission for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $100,000,000, to remain available through September 30, 2031, to provide for the hiring and training of personnel, the development of programmatic environmental documents, the procurement of technical or scientific services for environmental reviews, the development of environmental data or information systems, stakeholder and community engagement, and the purchase of new equipment for environmental analysis to facilitate timely and efficient environmental reviews and authorizations.

(b) FEES AND CHARGES.—Section 3401(a) of the Omnibus Budget Reconciliation Act of 1986 (42 U.S.C. 7178(a)) shall not apply to the costs incurred by the Federal Energy Regulatory Commission in carrying out this section.

SEC. 50303. DEPARTMENT OF THE INTERIOR.

In addition to amounts otherwise available, there is appropriated to the Secretary of the Interior for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $150,000,000, to remain available through September 30, 2026, to provide for the hiring and training of personnel, the development of programmatic environmental documents, the procurement of technical or scientific services for environmental reviews, the development of environmental data or information systems, stakeholder and community engagement, and the purchase of new equipment for environmental analysis to facilitate timely and efficient environmental reviews and authorizations by the National Park

Service, the Bureau of Land Management, the Bureau of Ocean Energy Management, the Bureau of Reclamation, the Bureau of Safety and Environmental Enforcement, and the Office of Surface Mining Reclamation and Enforcement.

TITLE VI—COMMITTEE ON ENVIRONMENT AND PUBLIC WORKS

Subtitle A—Air Pollution

SEC. 60101. CLEAN HEAVY-DUTY VEHICLES.

The Clean Air Act is amended by inserting after section 131 of such Act (42 U.S.C. 7431) the following:

"SEC. 132. CLEAN HEAVY-DUTY VEHICLES. 42 USC 7432.

"(a) APPROPRIATIONS.—

"(1) IN GENERAL.—In addition to amounts otherwise available, there is appropriated to the Administrator for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $600,000,000, to remain available until September 30, 2031, to carry out this section.

"(2) NONATTAINMENT AREAS.—In addition to amounts otherwise available, there is appropriated to the Administrator for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $400,000,000, to remain available until September 30, 2031, to make awards under this section to eligible recipients and to eligible contractors that propose to replace eligible vehicles to serve 1 or more communities located in an air quality area designated pursuant to section 107 as nonattainment for any air pollutant.

"(3) RESERVATION.—Of the funds appropriated by paragraph (1), the Administrator shall reserve 3 percent for administrative costs necessary to carry out this section.

"(b) PROGRAM.—Beginning not later than 180 days after the date of enactment of this section, the Administrator shall implement a program to make awards of grants and rebates to eligible recipients, and to make awards of contracts to eligible contractors for providing rebates, for up to 100 percent of costs for— Deadline. Grants. Rebates.

"(1) the incremental costs of replacing an eligible vehicle that is not a zero-emission vehicle with a zero-emission vehicle, as determined by the Administrator based on the market value of the vehicles; Determination.

"(2) purchasing, installing, operating, and maintaining infrastructure needed to charge, fuel, or maintain zero-emission vehicles;

"(3) workforce development and training to support the maintenance, charging, fueling, and operation of zero-emission vehicles; and

"(4) planning and technical activities to support the adoption and deployment of zero-emission vehicles.

"(c) APPLICATIONS.—To seek an award under this section, an eligible recipient or eligible contractor shall submit to the Administrator an application at such time, in such manner, and containing such information as the Administrator shall prescribe.

"(d) DEFINITIONS.—For purposes of this section:

"(1) ELIGIBLE CONTRACTOR.—The term 'eligible contractor' means a contractor that has the capacity—

"(A) to sell, lease, license, or contract for service zero-emission vehicles, or charging or other equipment needed to charge, fuel, or maintain zero-emission vehicles, to individuals or entities that own, lease, license, or contract for service an eligible vehicle; or

"(B) to arrange financing for such a sale, lease, license, or contract for service.

"(2) ELIGIBLE RECIPIENT.—The term 'eligible recipient' means—

"(A) a State;

"(B) a municipality;

"(C) an Indian tribe; or

"(D) a nonprofit school transportation association.

"(3) ELIGIBLE VEHICLE.—The term 'eligible vehicle' means a Class 6 or Class 7 heavy-duty vehicle as defined in section 1037.801 of title 40, Code of Federal Regulations (as in effect on the date of enactment of this section).

"(4) GREENHOUSE GAS.—The term 'greenhouse gas' means the air pollutants carbon dioxide, hydrofluorocarbons, methane, nitrous oxide, perfluorocarbons, and sulfur hexafluoride.

"(5) ZERO-EMISSION VEHICLE.—The term 'zero-emission vehicle' means a vehicle that has a drivetrain that produces, under any possible operational mode or condition, zero exhaust emissions of—

"(A) any air pollutant that is listed pursuant to section 108(a) (or any precursor to such an air pollutant); and

"(B) any greenhouse gas.".

SEC. 60102. GRANTS TO REDUCE AIR POLLUTION AT PORTS.

The Clean Air Act is amended by inserting after section 132 of such Act, as added by section 60101 of this Act, the following:

42 USC 7433.

"SEC. 133. GRANTS TO REDUCE AIR POLLUTION AT PORTS.

"(a) APPROPRIATIONS.—

"(1) GENERAL ASSISTANCE.—In addition to amounts otherwise available, there is appropriated to the Administrator for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $2,250,000,000, to remain available until September 30, 2027, to award rebates and grants to eligible recipients on a competitive basis—

"(A) to purchase or install zero-emission port equipment or technology for use at, or to directly serve, one or more ports;

"(B) to conduct any relevant planning or permitting in connection with the purchase or installation of such zero-emission port equipment or technology; and

"(C) to develop qualified climate action plans.

"(2) NONATTAINMENT AREAS.—In addition to amounts otherwise available, there is appropriated to the Administrator for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $750,000,000, to remain available until September 30, 2027, to award rebates and grants to eligible recipients to carry out activities described in paragraph (1) with respect to ports located in air quality areas designated pursuant to section 107 as nonattainment for an air pollutant.

"(b) LIMITATION.—Funds awarded under this section shall not be used by any recipient or subrecipient to purchase or install zero-emission port equipment or technology that will not be located at, or directly serve, the one or more ports involved.

"(c) ADMINISTRATION OF FUNDS.—Of the funds made available by this section, the Administrator shall reserve 2 percent for administrative costs necessary to carry out this section.

"(d) DEFINITIONS.—In this section:

"(1) ELIGIBLE RECIPIENT.—The term 'eligible recipient' means—

"(A) a port authority;

"(B) a State, regional, local, or Tribal agency that has jurisdiction over a port authority or a port;

"(C) an air pollution control agency; or

"(D) a private entity that—

"(i) applies for a grant under this section in partnership with an entity described in any of subparagraphs (A) through (C); and

"(ii) owns, operates, or uses the facilities, cargo-handling equipment, transportation equipment, or related technology of a port.

"(2) GREENHOUSE GAS.—The term 'greenhouse gas' means the air pollutants carbon dioxide, hydrofluorocarbons, methane, nitrous oxide, perfluorocarbons, and sulfur hexafluoride.

"(3) QUALIFIED CLIMATE ACTION PLAN.—The term 'qualified climate action plan' means a detailed and strategic plan that—

"(A) establishes goals, implementation strategies, and accounting and inventory practices to reduce emissions at one or more ports of—

"(i) greenhouse gases;

"(ii) an air pollutant that is listed pursuant to section 108(a) (or any precursor to such an air pollutant); and

"(iii) hazardous air pollutants;

"(B) includes a strategy to collaborate with, communicate with, and address potential effects on low-income and disadvantaged near-port communities and other stakeholders that may be affected by implementation of the plan; and

"(C) describes how an eligible recipient has implemented or will implement measures to increase the resilience of the one or more ports involved.

"(4) ZERO-EMISSION PORT EQUIPMENT OR TECHNOLOGY.—The term 'zero-emission port equipment or technology' means human-operated equipment or human-maintained technology that—

"(A) produces zero emissions of any air pollutant that is listed pursuant to section 108(a) (or any precursor to such an air pollutant) and any greenhouse gas other than water vapor; or

"(B) captures 100 percent of the emissions described in subparagraph (A) that are produced by an ocean-going vessel at berth.".

SEC. 60103. GREENHOUSE GAS REDUCTION FUND.

The Clean Air Act is amended by inserting after section 133 of such Act, as added by section 60102 of this Act, the following:

42 USC 7434.

"SEC. 134. GREENHOUSE GAS REDUCTION FUND.

Deadlines.

"(a) APPROPRIATIONS.—

"(1) ZERO-EMISSION TECHNOLOGIES.—In addition to amounts otherwise available, there is appropriated to the Administrator for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $7,000,000,000, to remain available until September 30, 2024, to make grants, on a competitive basis and beginning not later than 180 calendar days after the date of enactment of this section, to States, municipalities, Tribal governments, and eligible recipients for the purposes of providing grants, loans, or other forms of financial assistance, as well as technical assistance, to enable low-income and disadvantaged communities to deploy or benefit from zero-emission technologies, including distributed technologies on residential rooftops, and to carry out other greenhouse gas emission reduction activities, as determined appropriate by the Administrator in accordance with this section.

"(2) GENERAL ASSISTANCE.—In addition to amounts otherwise available, there is appropriated to the Administrator for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $11,970,000,000, to remain available until September 30, 2024, to make grants, on a competitive basis and beginning not later than 180 calendar days after the date of enactment of this section, to eligible recipients for the purposes of providing financial assistance and technical assistance in accordance with subsection (b).

"(3) LOW-INCOME AND DISADVANTAGED COMMUNITIES.—In addition to amounts otherwise available, there is appropriated to the Administrator for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $8,000,000,000, to remain available until September 30, 2024, to make grants, on a competitive basis and beginning not later than 180 calendar days after the date of enactment of this section, to eligible recipients for the purposes of providing financial assistance and technical assistance in low-income and disadvantaged communities in accordance with subsection (b).

"(4) ADMINISTRATIVE COSTS.—In addition to amounts otherwise available, there is appropriated to the Administrator for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $30,000,000, to remain available until September 30, 2031, for the administrative costs necessary to carry out activities under this section.

"(b) USE OF FUNDS.—An eligible recipient that receives a grant pursuant to subsection (a) shall use the grant in accordance with the following:

"(1) DIRECT INVESTMENT.—The eligible recipient shall—

"(A) provide financial assistance to qualified projects at the national, regional, State, and local levels;

"(B) prioritize investment in qualified projects that would otherwise lack access to financing; and

"(C) retain, manage, recycle, and monetize all repayments and other revenue received from fees, interest, repaid loans, and all other types of financial assistance provided using grant funds under this section to ensure continued operability.

"(2) INDIRECT INVESTMENT.—The eligible recipient shall provide funding and technical assistance to establish new or

support existing public, quasi-public, not-for-profit, or nonprofit entities that provide financial assistance to qualified projects at the State, local, territorial, or Tribal level or in the District of Columbia, including community- and low-income-focused lenders and capital providers.

"(c) DEFINITIONS.—In this section:

"(1) ELIGIBLE RECIPIENT.—The term 'eligible recipient' means a nonprofit organization that—

"(A) is designed to provide capital, leverage private capital, and provide other forms of financial assistance for the rapid deployment of low- and zero-emission products, technologies, and services;

"(B) does not take deposits other than deposits from repayments and other revenue received from financial assistance provided using grant funds under this section;

"(C) is funded by public or charitable contributions; and

"(D) invests in or finances projects alone or in conjunction with other investors.

"(2) GREENHOUSE GAS.—The term 'greenhouse gas' means the air pollutants carbon dioxide, hydrofluorocarbons, methane, nitrous oxide, perfluorocarbons, and sulfur hexafluoride.

"(3) QUALIFIED PROJECT.—The term 'qualified project' includes any project, activity, or technology that—

"(A) reduces or avoids greenhouse gas emissions and other forms of air pollution in partnership with, and by leveraging investment from, the private sector; or

"(B) assists communities in the efforts of those communities to reduce or avoid greenhouse gas emissions and other forms of air pollution.

"(4) ZERO-EMISSION TECHNOLOGY.—The term 'zero-emission technology' means any technology that produces zero emissions of—

"(A) any air pollutant that is listed pursuant to section 108(a) (or any precursor to such an air pollutant); and

"(B) any greenhouse gas.".

SEC. 60104. DIESEL EMISSIONS REDUCTIONS.

(a) GOODS MOVEMENT.—In addition to amounts otherwise available, there is appropriated to the Administrator of the Environmental Protection Agency for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $60,000,000, to remain available until September 30, 2031, for grants, rebates, and loans under section 792 of the Energy Policy Act of 2005 (42 U.S.C. 16132) to identify and reduce diesel emissions resulting from goods movement facilities, and vehicles servicing goods movement facilities, in low-income and disadvantaged communities to address the health impacts of such emissions on such communities.

(b) ADMINISTRATIVE COSTS.—The Administrator of the Environmental Protection Agency shall reserve 2 percent of the amounts made available under this section for the administrative costs necessary to carry out activities pursuant to this section.

SEC. 60105. FUNDING TO ADDRESS AIR POLLUTION.

(a) FENCELINE AIR MONITORING AND SCREENING AIR MONITORING.—In addition to amounts otherwise available, there is appropriated to the Administrator of the Environmental Protection Agency for fiscal year 2022, out of any money in the Treasury

not otherwise appropriated, $117,500,000, to remain available until September 30, 2031, for grants and other activities authorized under subsections (a) through (c) of section 103 and section 105 of the Clean Air Act (42 U.S.C. 7403(a)–(c), 7405) to deploy, integrate, support, and maintain fenceline air monitoring, screening air monitoring, national air toxics trend stations, and other air toxics and community monitoring.

(b) MULTIPOLLUTANT MONITORING STATIONS.—In addition to amounts otherwise available, there is appropriated to the Administrator of the Environmental Protection Agency for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $50,000,000, to remain available until September 30, 2031, for grants and other activities authorized under subsections (a) through (c) of section 103 and section 105 of the Clean Air Act (42 U.S.C. 7403(a)–(c), 7405)—

(1) to expand the national ambient air quality monitoring network with new multipollutant monitoring stations; and

(2) to replace, repair, operate, and maintain existing monitors.

(c) AIR QUALITY SENSORS IN LOW-INCOME AND DISADVANTAGED COMMUNITIES.—In addition to amounts otherwise available, there is appropriated to the Administrator of the Environmental Protection Agency for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $3,000,000, to remain available until September 30, 2031, for grants and other activities authorized under subsections (a) through (c) of section 103 and section 105 of the Clean Air Act (42 U.S.C. 7403(a)–(c), 7405) to deploy, integrate, and operate air quality sensors in low-income and disadvantaged communities.

(d) EMISSIONS FROM WOOD HEATERS.—In addition to amounts otherwise available, there is appropriated to the Administrator of the Environmental Protection Agency for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $15,000,000, to remain available until September 30, 2031, for grants and other activities authorized under subsections (a) through (c) of section 103 and section 105 of the Clean Air Act (42 U.S.C. 7403(a)–(c), 7405) for testing and other agency activities to address emissions from wood heaters.

(e) METHANE MONITORING.—In addition to amounts otherwise available, there is appropriated to the Administrator of the Environmental Protection Agency for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $20,000,000, to remain available until September 30, 2031, for grants and other activities authorized under subsections (a) through (c) of section 103 and section 105 of the Clean Air Act (42 U.S.C. 7403(a)–(c), 7405) for monitoring emissions of methane.

(f) CLEAN AIR ACT GRANTS.—In addition to amounts otherwise available, there is appropriated to the Administrator of the Environmental Protection Agency for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $25,000,000, to remain available until September 30, 2031, for grants and other activities authorized under subsections (a) through (c) of section 103 and section 105 of the Clean Air Act (42 U.S.C. 7403(a)–(c), 7405).

(g) GREENHOUSE GAS AND ZERO-EMISSION STANDARDS FOR MOBILE SOURCES.—In addition to amounts otherwise available, there is appropriated to the Administrator of the Environmental Protection Agency for fiscal year 2022, out of any money in the

Treasury not otherwise appropriated, $5,000,000, to remain available until September 30, 2031, to provide grants to States to adopt and implement greenhouse gas and zero-emission standards for mobile sources pursuant to section 177 of the Clean Air Act (42 U.S.C. 7507).

(h) DEFINITION OF GREENHOUSE GAS.—In this section, the term "greenhouse gas" means the air pollutants carbon dioxide, hydrofluorocarbons, methane, nitrous oxide, perfluorocarbons, and sulfur hexafluoride.

SEC. 60106. FUNDING TO ADDRESS AIR POLLUTION AT SCHOOLS.

(a) IN GENERAL.—In addition to amounts otherwise available, there is appropriated to the Administrator of the Environmental Protection Agency for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $37,500,000, to remain available until September 30, 2031, for grants and other activities to monitor and reduce greenhouse gas emissions and other air pollutants at schools in low-income and disadvantaged communities under subsections (a) through (c) of section 103 of the Clean Air Act (42 U.S.C. 7403(a)–(c)) and section 105 of that Act (42 U.S.C. 7405).

(b) TECHNICAL ASSISTANCE.—In addition to amounts otherwise available, there is appropriated to the Administrator of the Environmental Protection Agency for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $12,500,000, to remain available until September 30, 2031, for providing technical assistance to schools in low-income and disadvantaged communities under subsections (a) through (c) of section 103 of the Clean Air Act (42 U.S.C. 7403(a)–(c)) and section 105 of that Act (42 U.S.C. 7405)—

(1) to address environmental issues;

(2) to develop school environmental quality plans that include standards for school building, design, construction, and renovation; and

(3) to identify and mitigate ongoing air pollution hazards.

(c) DEFINITION OF GREENHOUSE GAS.—In this section, the term "greenhouse gas" means the air pollutants carbon dioxide, hydrofluorocarbons, methane, nitrous oxide, perfluorocarbons, and sulfur hexafluoride.

SEC. 60107. LOW EMISSIONS ELECTRICITY PROGRAM.

The Clean Air Act is amended by inserting after section 134 of such Act, as added by section 60103 of this Act, the following:

"SEC. 135. LOW EMISSIONS ELECTRICITY PROGRAM. 42 USC 7435.

"(a) APPROPRIATION.—In addition to amounts otherwise available, there is appropriated to the Administrator for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, to remain available until September 30, 2031—

"(1) $17,000,000 for consumer-related education and partnerships with respect to reductions in greenhouse gas emissions that result from domestic electricity generation and use;

"(2) $17,000,000 for education, technical assistance, and partnerships within low-income and disadvantaged communities with respect to reductions in greenhouse gas emissions that result from domestic electricity generation and use;

"(3) $17,000,000 for industry-related outreach, technical assistance, and partnerships with respect to reductions in

greenhouse gas emissions that result from domestic electricity generation and use;

"(4) $17,000,000 for outreach and technical assistance to, and partnerships with, State, Tribal, and local governments with respect to reductions in greenhouse gas emissions that result from domestic electricity generation and use;

Assessment. Deadline.

"(5) $1,000,000 to assess, not later than 1 year after the date of enactment of this section, the reductions in greenhouse gas emissions that result from changes in domestic electricity generation and use that are anticipated to occur on an annual basis through fiscal year 2031; and

"(6) $18,000,000 to ensure that reductions in greenhouse gas emissions are achieved through use of the existing authorities of this Act, incorporating the assessment under paragraph (5).

"(b) ADMINISTRATION OF FUNDS.—Of the amounts made available under subsection (a), the Administrator shall reserve 2 percent for the administrative costs necessary to carry out activities pursuant to that subsection.

"(c) DEFINITION OF GREENHOUSE GAS.—In this section, the term 'greenhouse gas' means the air pollutants carbon dioxide, hydrofluorocarbons, methane, nitrous oxide, perfluorocarbons, and sulfur hexafluoride.".

SEC. 60108. FUNDING FOR SECTION 211(O) OF THE CLEAN AIR ACT.

(a) TEST AND PROTOCOL DEVELOPMENT.—In addition to amounts otherwise available, there is appropriated to the Administrator of the Environmental Protection Agency for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $5,000,000, to remain available until September 30, 2031, to carry out section 211(o) of the Clean Air Act (42 U.S.C. 7545(o)) with respect to—

(1) the development and establishment of tests and protocols regarding the environmental and public health effects of a fuel or fuel additive;

(2) internal and extramural data collection and analyses to regularly update applicable regulations, guidance, and procedures for determining lifecycle greenhouse gas emissions of a fuel; and

(3) the review, analysis, and evaluation of the impacts of all transportation fuels, including fuel lifecycle implications, on the general public and on low-income and disadvantaged communities.

(b) INVESTMENTS IN ADVANCED BIOFUELS.—In addition to amounts otherwise available, there is appropriated to the Administrator of the Environmental Protection Agency for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $10,000,000, to remain available until September 30, 2031, for new grants to industry and other related activities under section 211(o) of the Clean Air Act (42 U.S.C. 7545(o)) to support investments in advanced biofuels.

(c) DEFINITION OF GREENHOUSE GAS.—In this section, the term "greenhouse gas" means the air pollutants carbon dioxide, hydrofluorocarbons, methane, nitrous oxide, perfluorocarbons, and sulfur hexafluoride.

SEC. 60109. FUNDING FOR IMPLEMENTATION OF THE AMERICAN INNOVATION AND MANUFACTURING ACT.

(a) APPROPRIATIONS.—

(1) IN GENERAL.—In addition to amounts otherwise available, there is appropriated to the Administrator of the Environmental Protection Agency for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $20,000,000, to remain available until September 30, 2026, to carry out subsections (a) through (i) and subsection (k) of section 103 of division S of Public Law 116–260 (42 U.S.C. 7675).

(2) IMPLEMENTATION AND COMPLIANCE TOOLS.—In addition to amounts otherwise available, there is appropriated to the Administrator of the Environmental Protection Agency for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $3,500,000, to remain available until September 30, 2026, to deploy new implementation and compliance tools to carry out subsections (a) through (i) and subsection (k) of section 103 of division S of Public Law 116–260 (42 U.S.C. 7675).

(3) COMPETITIVE GRANTS.—In addition to amounts otherwise available, there is appropriated to the Administrator of the Environmental Protection Agency for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $15,000,000, to remain available until September 30, 2026, for competitive grants for reclaim and innovative destruction technologies under subsections (a) through (i) and subsection (k) of section 103 of division S of Public Law 116–260 (42 U.S.C. 7675).

(b) ADMINISTRATION OF FUNDS.—Of the funds made available pursuant to subsection (a)(3), the Administrator of the Environmental Protection Agency shall reserve 5 percent for administrative costs necessary to carry out activities pursuant to such subsection.

SEC. 60110. FUNDING FOR ENFORCEMENT TECHNOLOGY AND PUBLIC INFORMATION.

(a) COMPLIANCE MONITORING.—In addition to amounts otherwise available, there is appropriated to the Administrator of the Environmental Protection Agency for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $18,000,000, to remain available until September 30, 2031, to update the Integrated Compliance Information System of the Environmental Protection Agency and any associated systems, necessary information technology infrastructure, or public access software tools to ensure access to compliance data and related information.

(b) COMMUNICATIONS WITH ICIS.—In addition to amounts otherwise available, there is appropriated to the Administrator of the Environmental Protection Agency for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $3,000,000, to remain available until September 30, 2031, for grants to States, Indian tribes, and air pollution control agencies (as such terms are defined in section 302 of the Clean Air Act (42 U.S.C. 7602)) to update their systems to ensure communication with the Integrated Compliance Information System of the Environmental Protection Agency and any associated systems.

(c) INSPECTION SOFTWARE.—In addition to amounts otherwise available, there is appropriated to the Administrator of the Environmental Protection Agency for fiscal year 2022, out of any money

in the Treasury not otherwise appropriated, $4,000,000, to remain available until September 30, 2031—

(1) to acquire or update inspection software for use by the Environmental Protection Agency, States, Indian tribes, and air pollution control agencies (as such terms are defined in section 302 of the Clean Air Act (42 U.S.C. 7602)); or

(2) to acquire necessary devices on which to run such inspection software.

SEC. 60111. GREENHOUSE GAS CORPORATE REPORTING.

(a) IN GENERAL.—In addition to amounts otherwise available, there is appropriated to the Administrator of the Environmental Protection Agency for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $5,000,000, to remain available until September 30, 2031, for the Environmental Protection Agency to support—

(1) enhanced standardization and transparency of corporate climate action commitments and plans to reduce greenhouse gas emissions;

(2) enhanced transparency regarding progress toward meeting such commitments and implementing such plans; and

(3) progress toward meeting such commitments and implementing such plans.

(b) DEFINITION OF GREENHOUSE GAS.—In this section, the term "greenhouse gas" means the air pollutants carbon dioxide, hydrofluorocarbons, methane, nitrous oxide, perfluorocarbons, and sulfur hexafluoride.

42 USC 4321 note.

SEC. 60112. ENVIRONMENTAL PRODUCT DECLARATION ASSISTANCE.

(a) IN GENERAL.—In addition to amounts otherwise available, there is appropriated to the Administrator of the Environmental Protection Agency for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $250,000,000, to remain available until September 30, 2031, to develop and carry out a program to support the development, enhanced standardization and transparency, and reporting criteria for environmental product declarations that include measurements of the embodied greenhouse gas emissions of the material or product associated with all relevant stages of production, use, and disposal, and conform with international standards, for construction materials and products by—

(1) providing grants to businesses that manufacture construction materials and products for developing and verifying environmental product declarations, and to States, Indian Tribes, and nonprofit organizations that will support such businesses;

(2) providing technical assistance to businesses that manufacture construction materials and products in developing and verifying environmental product declarations, and to States, Indian Tribes, and nonprofit organizations that will support such businesses; and

(3) carrying out other activities that assist in measuring, reporting, and steadily reducing the quantity of embodied carbon of construction materials and products.

(b) ADMINISTRATIVE COSTS.—Of the amounts made available under this section, the Administrator of the Environmental Protection Agency shall reserve 5 percent for administrative costs necessary to carry out this section.

(c) DEFINITIONS.—In this section:

(1) GREENHOUSE GAS.—The term "greenhouse gas" means the air pollutants carbon dioxide, hydrofluorocarbons, methane, nitrous oxide, perfluorocarbons, and sulfur hexafluoride.

(2) STATE.—The term "State" has the meaning given to that term in section 302(d) of the Clean Air Act (42 U.S.C. 7602(d)).

SEC. 60113. METHANE EMISSIONS REDUCTION PROGRAM.

The Clean Air Act is amended by inserting after section 135 of such Act, as added by section 60107 of this Act, the following:

"SEC. 136. METHANE EMISSIONS AND WASTE REDUCTION INCENTIVE PROGRAM FOR PETROLEUM AND NATURAL GAS SYSTEMS. 42 USC 7436.

"(a) INCENTIVES FOR METHANE MITIGATION AND MONITORING.—In addition to amounts otherwise available, there is appropriated to the Administrator for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $850,000,000, to remain available until September 30, 2028—

"(1) for grants, rebates, contracts, loans, and other activities of the Environmental Protection Agency for the purposes of providing financial and technical assistance to owners and operators of applicable facilities to prepare and submit greenhouse gas reports under subpart W of part 98 of title 40, Code of Federal Regulations;

"(2) for grants, rebates, contracts, loans, and other activities of the Environmental Protection Agency authorized under subsections (a) through (c) of section 103 for methane emissions monitoring;

"(3) for grants, rebates, contracts, loans, and other activities of the Environmental Protection Agency for the purposes of providing financial and technical assistance to reduce methane and other greenhouse gas emissions from petroleum and natural gas systems, mitigate legacy air pollution from petroleum and natural gas systems, and provide funding for—

"(A) improving climate resiliency of communities and petroleum and natural gas systems;

"(B) improving and deploying industrial equipment and processes that reduce methane and other greenhouse gas emissions and waste;

"(C) supporting innovation in reducing methane and other greenhouse gas emissions and waste from petroleum and natural gas systems;

"(D) permanently shutting in and plugging wells on non-Federal land;

"(E) mitigating health effects of methane and other greenhouse gas emissions, and legacy air pollution from petroleum and natural gas systems in low-income and disadvantaged communities; and

"(F) supporting environmental restoration; and

"(4) to cover all direct and indirect costs required to administer this section, prepare inventories, gather empirical data, and track emissions.

"(b) INCENTIVES FOR METHANE MITIGATION FROM CONVENTIONAL WELLS.—In addition to amounts otherwise available, there is appropriated to the Administrator for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $700,000,000, to remain available until September 30, 2028, for

activities described in paragraphs (1) through (4) of subsection (a) at marginal conventional wells.

"(c) WASTE EMISSIONS CHARGE.—The Administrator shall impose and collect a charge on methane emissions that exceed an applicable waste emissions threshold under subsection (f) from an owner or operator of an applicable facility that reports more than 25,000 metric tons of carbon dioxide equivalent of greenhouse gases emitted per year pursuant to subpart W of part 98 of title 40, Code of Federal Regulations, regardless of the reporting threshold under that subpart.

Definition.

"(d) APPLICABLE FACILITY.—For purposes of this section, the term 'applicable facility' means a facility within the following industry segments, as defined in subpart W of part 98 of title 40, Code of Federal Regulations:

"(1) Offshore petroleum and natural gas production.

"(2) Onshore petroleum and natural gas production.

"(3) Onshore natural gas processing.

"(4) Onshore natural gas transmission compression.

"(5) Underground natural gas storage.

"(6) Liquefied natural gas storage.

"(7) Liquefied natural gas import and export equipment.

"(8) Onshore petroleum and natural gas gathering and boosting.

"(9) Onshore natural gas transmission pipeline.

Time periods.

"(e) CHARGE AMOUNT.—The amount of a charge under subsection (c) for an applicable facility shall be equal to the product obtained by multiplying—

"(1) the number of metric tons of methane emissions reported pursuant to subpart W of part 98 of title 40, Code of Federal Regulations, for the applicable facility that exceed the applicable annual waste emissions threshold listed in subsection (f) during the previous reporting period; and

"(2)(A) $900 for emissions reported for calendar year 2024;

"(B) $1,200 for emissions reported for calendar year 2025; or

"(C) $1,500 for emissions reported for calendar year 2026 and each year thereafter.

Fees.

"(f) WASTE EMISSIONS THRESHOLD.—

"(1) PETROLEUM AND NATURAL GAS PRODUCTION.—With respect to imposing and collecting the charge under subsection (c) for an applicable facility in an industry segment listed in paragraph (1) or (2) of subsection (d), the Administrator shall impose and collect the charge on the reported metric tons of methane emissions from such facility that exceed—

"(A) 0.20 percent of the natural gas sent to sale from such facility; or

"(B) 10 metric tons of methane per million barrels of oil sent to sale from such facility, if such facility sent no natural gas to sale.

"(2) NONPRODUCTION PETROLEUM AND NATURAL GAS SYSTEMS.—With respect to imposing and collecting the charge under subsection (c) for an applicable facility in an industry segment listed in paragraph (3), (6), (7), or (8) of subsection (d), the Administrator shall impose and collect the charge on the reported metric tons of methane emissions that exceed 0.05 percent of the natural gas sent to sale from or through such facility.

"(3) NATURAL GAS TRANSMISSION.—With respect to imposing and collecting the charge under subsection (c) for an applicable facility in an industry segment listed in paragraph (4), (5), or (9) of subsection (d), the Administrator shall impose and collect the charge on the reported metric tons of methane emissions that exceed 0.11 percent of the natural gas sent to sale from or through such facility.

"(4) COMMON OWNERSHIP OR CONTROL.—In calculating the total emissions charge obligation for facilities under common ownership or control, the Administrator shall allow for the netting of emissions by reducing the total obligation to account for facility emissions levels that are below the applicable thresholds within and across all applicable segments identified in subsection (d).

"(5) EXEMPTION.—Charges shall not be imposed pursuant to paragraph (1) on emissions that exceed the waste emissions threshold specified in such paragraph if such emissions are caused by unreasonable delay, as determined by the Administrator, in environmental permitting of gathering or transmission infrastructure necessary for offtake of increased volume as a result of methane emissions mitigation implementation. Determination.

"(6) EXEMPTION FOR REGULATORY COMPLIANCE.— Determination.

"(A) IN GENERAL.—Charges shall not be imposed pursuant to subsection (c) on an applicable facility that is subject to and in compliance with methane emissions requirements pursuant to subsections (b) and (d) of section 111 upon a determination by the Administrator that—

"(i) methane emissions standards and plans pursuant to subsections (b) and (d) of section 111 have been approved and are in effect in all States with respect to the applicable facilities; and

"(ii) compliance with the requirements described in clause (i) will result in equivalent or greater emissions reductions as would be achieved by the proposed rule of the Administrator entitled 'Standards of Performance for New, Reconstructed, and Modified Sources and Emissions Guidelines for Existing Sources: Oil and Natural Gas Sector Climate Review' (86 Fed. Reg. 63110 (November 15, 2021)), if such rule had been finalized and implemented.

"(B) RESUMPTION OF CHARGE.—If the conditions in clause (i) or (ii) of subparagraph (A) cease to apply after the Administrator has made the determination in that subparagraph, the applicable facility will again be subject to the charge under subsection (c) beginning in the first calendar year in which the conditions in either clause (i) or (ii) of that subparagraph are no longer met. Time period.

"(7) PLUGGED WELLS.—Charges shall not be imposed with respect to the emissions rate from any well that has been permanently shut-in and plugged in the previous year in accordance with all applicable closure requirements, as determined by the Administrator. Determination.

"(g) PERIOD.—The charge under subsection (c) shall be imposed and collected beginning with respect to emissions reported for calendar year 2024 and for each year thereafter.

"(h) REPORTING.—Not later than 2 years after the date of enactment of this section, the Administrator shall revise the requirements of subpart W of part 98 of title 40, Code of Federal Regulations, to ensure the reporting under such subpart, and calculation of charges under subsections (e) and (f) of this section, are based on empirical data, including data collected pursuant to subsection (a)(4), accurately reflect the total methane emissions and waste emissions from the applicable facilities, and allow owners and operators of applicable facilities to submit empirical emissions data, in a manner to be prescribed by the Administrator, to demonstrate the extent to which a charge under subsection (c) is owed.

"(i) DEFINITION OF GREENHOUSE GAS.—In this section, the term 'greenhouse gas' means the air pollutants carbon dioxide, hydrofluorocarbons, methane, nitrous oxide, perfluorocarbons, and sulfur hexafluoride.".

SEC. 60114. CLIMATE POLLUTION REDUCTION GRANTS.

The Clean Air Act is amended by inserting after section 136 of such Act, as added by section 60113 of this Act, the following:

42 USC 7437.

"SEC. 137. GREENHOUSE GAS AIR POLLUTION PLANS AND IMPLEMENTATION GRANTS.

"(a) APPROPRIATIONS.—

"(1) GREENHOUSE GAS AIR POLLUTION PLANNING GRANTS.—In addition to amounts otherwise available, there is appropriated to the Administrator for fiscal year 2022, out of any amounts in the Treasury not otherwise appropriated, $250,000,000, to remain available until September 30, 2031, to carry out subsection (b).

"(2) GREENHOUSE GAS AIR POLLUTION IMPLEMENTATION GRANTS.—In addition to amounts otherwise available, there is appropriated to the Administrator for fiscal year 2022, out of any amounts in the Treasury not otherwise appropriated, $4,750,000,000, to remain available until September 30, 2026, to carry out subsection (c).

"(3) ADMINISTRATIVE COSTS.—Of the funds made available under paragraph (2), the Administrator shall reserve 3 percent for administrative costs necessary to carry out this section, to provide technical assistance to eligible entities, to develop a plan that could be used as a model by grantees in developing a plan under subsection (b), and to model the effects of plans described in this section.

"(b) GREENHOUSE GAS AIR POLLUTION PLANNING GRANTS.—The Administrator shall make a grant to at least one eligible entity in each State for the costs of developing a plan for the reduction of greenhouse gas air pollution to be submitted with an application for a grant under subsection (c). Each such plan shall include programs, policies, measures, and projects that will achieve or facilitate the reduction of greenhouse gas air pollution. Not later than 270 days after the date of enactment of this section, the Administrator shall publish a funding opportunity announcement for grants under this subsection.

Deadline. Publication.

"(c) GREENHOUSE GAS AIR POLLUTION REDUCTION IMPLEMENTATION GRANTS.—

"(1) IN GENERAL.—The Administrator shall competitively award grants to eligible entities to implement plans developed under subsection (b).

"(2) APPLICATION.—To apply for a grant under this subsection, an eligible entity shall submit to the Administrator an application at such time, in such manner, and containing such information as the Administrator shall require, which such application shall include information regarding the degree to which greenhouse gas air pollution is projected to be reduced in total and with respect to low-income and disadvantaged communities.

"(3) TERMS AND CONDITIONS.—The Administrator shall make funds available to a grantee under this subsection in such amounts, upon such a schedule, and subject to such conditions based on its performance in implementing its plan submitted under this section and in achieving projected greenhouse gas air pollution reduction, as determined by the Administrator. Determination.

"(d) DEFINITIONS.—In this section:

"(1) ELIGIBLE ENTITY.—The term 'eligible entity' means—

"(A) a State;

"(B) an air pollution control agency;

"(C) a municipality;

"(D) an Indian tribe; and

"(E) a group of one or more entities listed in subparagraphs (A) through (D).

"(2) GREENHOUSE GAS.—The term 'greenhouse gas' means the air pollutants carbon dioxide, hydrofluorocarbons, methane, nitrous oxide, perfluorocarbons, and sulfur hexafluoride.".

SEC. 60115. ENVIRONMENTAL PROTECTION AGENCY EFFICIENT, ACCURATE, AND TIMELY REVIEWS.

In addition to amounts otherwise available, there is appropriated to the Environmental Protection Agency for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $40,000,000, to remain available until September 30, 2026, to provide for the development of efficient, accurate, and timely reviews for permitting and approval processes through the hiring and training of personnel, the development of programmatic documents, the procurement of technical or scientific services for reviews, the development of environmental data or information systems, stakeholder and community engagement, the purchase of new equipment for environmental analysis, and the development of geographic information systems and other analysis tools, techniques, and guidance to improve agency transparency, accountability, and public engagement.

SEC. 60116. LOW-EMBODIED CARBON LABELING FOR CONSTRUCTION MATERIALS. 42 USC 4321 note.

(a) IN GENERAL.—In addition to amounts otherwise available, there is appropriated to the Administrator of the Environmental Protection Agency for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $100,000,000, to remain available until September 30, 2026, for necessary administrative costs of the Administrator of the Environmental Protection Agency to carry out this section and to develop and carry out a program, in consultation with the Administrator of the Federal Highway Administration for construction materials used in transportation projects and the Administrator of General Services for construction materials used for Federal buildings, to identify and label construction materials and products that have substantially lower levels of embodied greenhouse gas emissions associated with all relevant Consultation.

stages of production, use, and disposal, as compared to estimated industry averages of similar materials or products, as determined by the Administrator of the Environmental Protection Agency, based on—

(1) environmental product declarations; or

Determinations.

(2) determinations by State agencies, as verified by the Administrator of the Environmental Protection Agency.

(b) DEFINITION OF GREENHOUSE GAS.—In this section, the term "greenhouse gas" means the air pollutants carbon dioxide, hydrofluorocarbons, methane, nitrous oxide, perfluorocarbons, and sulfur hexafluoride.

Subtitle B—Hazardous Materials

SEC. 60201. ENVIRONMENTAL AND CLIMATE JUSTICE BLOCK GRANTS.

The Clean Air Act is amended by inserting after section 137, as added by subtitle A of this title, the following:

42 USC 7438.

"SEC. 138. ENVIRONMENTAL AND CLIMATE JUSTICE BLOCK GRANTS.

"(a) APPROPRIATION.—In addition to amounts otherwise available, there is appropriated to the Administrator for fiscal year 2022, out of any money in the Treasury not otherwise appropriated—

"(1) $2,800,000,000 to remain available until September 30, 2026, to award grants for the activities described in subsection (b); and

"(2) $200,000,000 to remain available until September 30, 2026, to provide technical assistance to eligible entities related to grants awarded under this section.

"(b) GRANTS.—

"(1) IN GENERAL.—The Administrator shall use amounts made available under subsection (a)(1) to award grants for periods of up to 3 years to eligible entities to carry out activities described in paragraph (2) that benefit disadvantaged communities, as defined by the Administrator.

"(2) ELIGIBLE ACTIVITIES.—An eligible entity may use a grant awarded under this subsection for—

"(A) community-led air and other pollution monitoring, prevention, and remediation, and investments in low- and zero-emission and resilient technologies and related infrastructure and workforce development that help reduce greenhouse gas emissions and other air pollutants;

"(B) mitigating climate and health risks from urban heat islands, extreme heat, wood heater emissions, and wildfire events;

"(C) climate resiliency and adaptation;

"(D) reducing indoor toxics and indoor air pollution; or

"(E) facilitating engagement of disadvantaged communities in State and Federal advisory groups, workshops, rulemakings, and other public processes.

Definition.

"(3) ELIGIBLE ENTITIES.—In this subsection, the term 'eligible entity' means—

"(A) a partnership between—

"(i) an Indian tribe, a local government, or an institution of higher education; and

"(ii) a community-based nonprofit organization;

"(B) a community-based nonprofit organization; or

"(C) a partnership of community-based nonprofit organizations.

"(c) ADMINISTRATIVE COSTS.—The Administrator shall reserve 7 percent of the amounts made available under subsection (a) for administrative costs to carry out this section.

"(d) DEFINITION OF GREENHOUSE GAS.—In this section, the term 'greenhouse gas' means the air pollutants carbon dioxide, hydrofluorocarbons, methane, nitrous oxide, perfluorocarbons, and sulfur hexafluoride.".

Subtitle C—United States Fish and Wildlife Service

SEC. 60301. ENDANGERED SPECIES ACT RECOVERY PLANS.

In addition to amounts otherwise available, there is appropriated to the United States Fish and Wildlife Service for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $125,000,000, to remain available until expended, for the purposes of developing and implementing recovery plans under paragraphs (1), (3), and (4) of subsection (f) of section 4 of the Endangered Species Act of 1973 (16 U.S.C. 1533(f)).

SEC. 60302. FUNDING FOR THE UNITED STATES FISH AND WILDLIFE SERVICE TO ADDRESS WEATHER EVENTS.

(a) IN GENERAL.—In addition to amounts otherwise available, there is appropriated to the United States Fish and Wildlife Service for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $121,250,000, to remain available until September 30, 2026, to make direct expenditures, award grants, and enter into contracts and cooperative agreements for the purposes of rebuilding and restoring units of the National Wildlife Refuge System and State wildlife management areas by—

(1) addressing the threat of invasive species;

(2) increasing the resiliency and capacity of habitats and infrastructure to withstand weather events; and

(3) reducing the amount of damage caused by weather events.

(b) ADMINISTRATIVE COSTS.—In addition to amounts otherwise available, there is appropriated to the United States Fish and Wildlife Service for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $3,750,000, to remain available until September 30, 2026, for necessary administrative expenses associated with carrying out this section.

Subtitle D—Council on Environmental Quality

SEC. 60401. ENVIRONMENTAL AND CLIMATE DATA COLLECTION.

In addition to amounts otherwise available, there is appropriated to the Chair of the Council on Environmental Quality for fiscal year 2022, out of any money in the Treasury not otherwise

appropriated, $32,500,000, to remain available until September 30, 2026—

(1) to support data collection efforts relating to—

(A) disproportionate negative environmental harms and climate impacts; and

(B) cumulative impacts of pollution and temperature rise;

(2) to establish, expand, and maintain efforts to track disproportionate burdens and cumulative impacts and provide academic and workforce support for analytics and informatics infrastructure and data collection systems; and

(3) to support efforts to ensure that any mapping or screening tool is accessible to community-based organizations and community members.

SEC. 60402. COUNCIL ON ENVIRONMENTAL QUALITY EFFICIENT AND EFFECTIVE ENVIRONMENTAL REVIEWS.

In addition to amounts otherwise available, there is appropriated to the Chair of the Council on Environmental Quality for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $30,000,000, to remain available until September 30, 2026, to carry out the Council on Environmental Quality's functions and for the purposes of training personnel, developing programmatic environmental documents, and developing tools, guidance, and techniques to improve stakeholder and community engagement.

Subtitle E—Transportation and Infrastructure

SEC. 60501. NEIGHBORHOOD ACCESS AND EQUITY GRANT PROGRAM.

(a) IN GENERAL.—Chapter 1 of title 23, United States Code, is amended by adding at the end the following:

23 USC 177.

"§ 177. Neighborhood access and equity grant program

"(a) IN GENERAL.—In addition to amounts otherwise available, there is appropriated for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $1,893,000,000, to remain available until September 30, 2026, to the Administrator of the Federal Highway Administration for competitive grants to eligible entities described in subsection (b)—

"(1) to improve walkability, safety, and affordable transportation access through projects that are context-sensitive—

"(A) to remove, remediate, or reuse a facility described in subsection (c)(1);

"(B) to replace a facility described in subsection (c)(1) with a facility that is at-grade or lower speed;

"(C) to retrofit or cap a facility described in subsection (c)(1);

"(D) to build or improve complete streets, multiuse trails, regional greenways, or active transportation networks and spines; or

"(E) to provide affordable access to essential destinations, public spaces, or transportation links and hubs;

"(2) to mitigate or remediate negative impacts on the human or natural environment resulting from a facility

described in subsection (c)(2) in a disadvantaged or underserved community through—

"(A) noise barriers to reduce impacts resulting from a facility described in subsection (c)(2);

"(B) technologies, infrastructure, and activities to reduce surface transportation-related greenhouse gas emissions and other air pollution;

"(C) natural infrastructure, pervious, permeable, or porous pavement, or protective features to reduce or manage stormwater run-off resulting from a facility described in subsection (c)(2);

"(D) infrastructure and natural features to reduce or mitigate urban heat island hot spots in the transportation right-of-way or on surface transportation facilities; or

"(E) safety improvements for vulnerable road users; and

"(3) for planning and capacity building activities in disadvantaged or underserved communities to—

"(A) identify, monitor, or assess local and ambient air quality, emissions of transportation greenhouse gases, hot spot areas of extreme heat or elevated air pollution, gaps in tree canopy coverage, or flood prone transportation infrastructure; Assessment.

"(B) assess transportation equity or pollution impacts and develop local anti-displacement policies and community benefit agreements; Assessment.

"(C) conduct predevelopment activities for projects eligible under this subsection;

"(D) expand public participation in transportation planning by individuals and organizations in disadvantaged or underserved communities; or

"(E) administer or obtain technical assistance related to activities described in this subsection.

"(b) ELIGIBLE ENTITIES DESCRIBED.—An eligible entity referred to in subsection (a) is—

"(1) a State;

"(2) a unit of local government;

"(3) a political subdivision of a State;

"(4) an entity described in section 207(m)(1)(E);

"(5) a territory of the United States;

"(6) a special purpose district or public authority with a transportation function;

"(7) a metropolitan planning organization (as defined in section 134(b)(2)); or

"(8) with respect to a grant described in subsection (a)(3), in addition to an eligible entity described in paragraphs (1) through (7), a nonprofit organization or institution of higher education that has entered into a partnership with an eligible entity described in paragraphs (1) through (7).

"(c) FACILITY DESCRIBED.—A facility referred to in subsection (a) is—

"(1) a surface transportation facility for which high speeds, grade separation, or other design factors create an obstacle to connectivity within a community; or

"(2) a surface transportation facility which is a source of air pollution, noise, stormwater, or other burden to a disadvantaged or underserved community.

"(d) INVESTMENT IN ECONOMICALLY DISADVANTAGED COMMUNITIES.—

"(1) IN GENERAL.—In addition to amounts otherwise available, there is appropriated for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $1,262,000,000, to remain available until September 30, 2026, to the Administrator of the Federal Highway Administration to provide grants for projects in communities described in paragraph (2) for the same purposes and administered in the same manner as described in subsection (a).

"(2) COMMUNITIES DESCRIBED.—A community referred to in paragraph (1) is a community that—

"(A) is economically disadvantaged, underserved, or located in an area of persistent poverty;

"(B) has entered or will enter into a community benefits agreement with representatives of the community;

"(C) has an anti-displacement policy, a community land trust, or a community advisory board in effect; or

"(D) has demonstrated a plan for employing local residents in the area impacted by the activity or project proposed under this section.

"(e) ADMINISTRATION.—

"(1) IN GENERAL.—A project carried out under subsection (a) or (d) shall be treated as a project on a Federal-aid highway.

"(2) COMPLIANCE WITH EXISTING REQUIREMENTS.—Funds made available for a grant under this section and administered by or through a State department of transportation shall be expended in compliance with the U.S. Department of Transportation's Disadvantaged Business Enterprise Program.

"(f) COST SHARE.—The Federal share of the cost of an activity carried out using a grant awarded under this section shall be not more than 80 percent, except that the Federal share of the cost of a project in a disadvantaged or underserved community may be up to 100 percent.

"(g) TECHNICAL ASSISTANCE.—In addition to amounts otherwise available, there is appropriated for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $50,000,000, to remain available until September 30, 2026, to the Administrator of the Federal Highway Administration for—

"(1) guidance, technical assistance, templates, training, or tools to facilitate efficient and effective contracting, design, and project delivery by units of local government;

"(2) subgrants to units of local government to build capacity of such units of local government to assume responsibilities to deliver surface transportation projects; and

"(3) operations and administration of the Federal Highway Administration.

"(h) LIMITATIONS.—Amounts made available under this section shall not—

"(1) be subject to any restriction or limitation on the total amount of funds available for implementation or execution of programs authorized for Federal-aid highways; and

"(2) be used for a project for additional through travel lanes for single-occupant passenger vehicles.".

(b) CLERICAL AMENDMENT.—The analysis for chapter 1 of title 23, United States Code, is amended by adding at the end the following: 23 USC 101 prec.

"177. Neighborhood access and equity grant program.".

SEC. 60502. ASSISTANCE FOR FEDERAL BUILDINGS.

In addition to amounts otherwise available, there is appropriated for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $250,000,000, to remain available until September 30, 2031, to be deposited in the Federal Buildings Fund established under section 592 of title 40, United States Code, for measures necessary to convert facilities of the Administrator of General Services to high-performance green buildings (as defined in section 401 of the Energy Independence and Security Act of 2007 (42 U.S.C. 17061)).

SEC. 60503. USE OF LOW-CARBON MATERIALS.

(a) APPROPRIATION.—In addition to amounts otherwise available, there is appropriated for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $2,150,000,000, to remain available until September 30, 2026, to be deposited in the Federal Buildings Fund established under section 592 of title 40, United States Code, to acquire and install materials and products for use in the construction or alteration of buildings under the jurisdiction, custody, and control of the General Services Administration that have substantially lower levels of embodied greenhouse gas emissions associated with all relevant stages of production, use, and disposal as compared to estimated industry averages of similar materials or products, as determined by the Administrator of the Environmental Protection Agency. Determination.

(b) DEFINITION OF GREENHOUSE GAS.—In this section, the term "greenhouse gas" means the air pollutants carbon dioxide, hydrofluorocarbons, methane, nitrous oxide, perfluorocarbons, and sulfur hexafluoride.

SEC. 60504. GENERAL SERVICES ADMINISTRATION EMERGING TECHNOLOGIES.

In addition to amounts otherwise available, there is appropriated to the Administrator of General Services for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $975,000,000, to remain available until September 30, 2026, to be deposited in the Federal Buildings Fund established under section 592 of title 40, United States Code, for emerging and sustainable technologies, and related sustainability and environmental programs.

SEC. 60505. ENVIRONMENTAL REVIEW IMPLEMENTATION FUNDS.

(a) IN GENERAL.—Chapter 1 of title 23, United States Code, is further amended by adding at the end the following:

"§ 178. Environmental review implementation funds 23 USC 178.

"(a) ESTABLISHMENT.—In addition to amounts otherwise available, for fiscal year 2022, there is appropriated to the Administrator, out of any money in the Treasury not otherwise appropriated, $100,000,000, to remain available until September 30, 2026, for the purpose of facilitating the development and review of documents for the environmental review process for proposed projects through—

"(1) the provision of guidance, technical assistance, templates, training, or tools to facilitate an efficient and effective environmental review process for surface transportation projects and any administrative expenses of the Federal Highway Administration to conduct activities described in this section; and

"(2) providing funds made available under this subsection to eligible entities—

"(A) to build capacity of such eligible entities to conduct environmental review processes;

"(B) to facilitate the environmental review process for proposed projects by—

"(i) defining the scope or study areas;

"(ii) identifying impacts, mitigation measures, and reasonable alternatives;

"(iii) preparing planning and environmental studies and other documents prior to and during the environmental review process, for potential use in the environmental review process in accordance with applicable statutes and regulations;

"(iv) conducting public engagement activities; and

"(v) carrying out permitting or other activities, as the Administrator determines to be appropriate, to support the timely completion of an environmental review process required for a proposed project; and

"(C) for administrative expenses of the eligible entity to conduct any of the activities described in subparagraphs (A) and (B).

"(b) COST SHARE.—

"(1) IN GENERAL.—The Federal share of the cost of an activity carried out under this section by an eligible entity shall be not more than 80 percent.

"(2) SOURCE OF FUNDS.—The non-Federal share of the cost of an activity carried out under this section by an eligible entity may be satisfied using funds made available to the eligible entity under any other Federal, State, or local grant program.

"(c) DEFINITIONS.—In this section:

"(1) ADMINISTRATOR.—The term 'Administrator' means the Administrator of the Federal Highway Administration.

"(2) ELIGIBLE ENTITY.—The term 'eligible entity' means—

"(A) a State;

"(B) a unit of local government;

"(C) a political subdivision of a State;

"(D) a territory of the United States;

"(E) an entity described in section 207(m)(1)(E);

"(F) a recipient of funds under section 203; or

"(G) a metropolitan planning organization (as defined in section 134(b)(2)).

"(3) ENVIRONMENTAL REVIEW PROCESS.—The term 'environmental review process' has the meaning given the term in section 139(a)(5).

"(4) PROPOSED PROJECT.—The term 'proposed project' means a surface transportation project for which an environmental review process is required.".

(b) CLERICAL AMENDMENT.—The analysis for chapter 1 of title 23, United States Code, is further amended by adding at the end the following: 23 USC 101 prec.

"178. Environmental review implementation funds.".

SEC. 60506. LOW-CARBON TRANSPORTATION MATERIALS GRANTS.

(a) IN GENERAL.—Chapter 1 of title 23, United States Code, is further amended by adding at the end the following:

"§ 179. Low-carbon transportation materials grants 23 USC 179.

"(a) FEDERAL HIGHWAY ADMINISTRATION APPROPRIATION.—In addition to amounts otherwise available, there is appropriated for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $2,000,000,000, to remain available until September 30, 2026, to the Administrator to reimburse or provide incentives to eligible recipients for the use, in projects, of construction materials and products that have substantially lower levels of embodied greenhouse gas emissions associated with all relevant stages of production, use, and disposal as compared to estimated industry averages of similar materials or products, as determined by the Administrator of the Environmental Protection Agency, and for the operations and administration of the Federal Highway Administration to carry out this section.

"(b) REIMBURSEMENT OF INCREMENTAL COSTS; INCENTIVES.—

"(1) IN GENERAL.—The Administrator shall, subject to the availability of funds, either reimburse or provide incentives to eligible recipients that use low-embodied carbon construction materials and products on a project funded under this title.

"(2) REIMBURSEMENT AND INCENTIVE AMOUNTS.—

"(A) INCREMENTAL AMOUNT.—The amount of reimbursement under paragraph (1) shall be equal to the incrementally higher cost of using such materials relative to the cost of using traditional materials, as determined by the eligible recipient and verified by the Administrator. Determination. Verification.

"(B) INCENTIVE AMOUNT.—The amount of an incentive under paragraph (1) shall be equal to 2 percent of the cost of using low-embodied carbon construction materials and products on a project funded under this title.

"(3) FEDERAL SHARE.—If a reimbursement or incentive is provided under paragraph (1), the total Federal share payable for the project for which the reimbursement or incentive is provided shall be up to 100 percent.

"(4) LIMITATIONS.—

"(A) IN GENERAL.—The Administrator shall only provide a reimbursement or incentive under paragraph (1) for a project on a—

"(i) Federal-aid highway;

"(ii) tribal transportation facility;

"(iii) Federal lands transportation facility; or

"(iv) Federal lands access transportation facility.

"(B) OTHER RESTRICTIONS.—Amounts made available under this section shall not be subject to any restriction or limitation on the total amount of funds available for implementation or execution of programs authorized for Federal-aid highways.

"(C) SINGLE OCCUPANT PASSENGER VEHICLES.—Funds made available under this section shall not be used for

projects that result in additional through travel lanes for single occupant passenger vehicles.

Review. "(5) MATERIALS IDENTIFICATION.—The Administrator shall review the low-embodied carbon construction materials and products identified by the Administrator of the Environmental Protection Agency and shall identify low-embodied carbon construction materials and products—

"(A) appropriate for use in projects eligible under this title; and

"(B) eligible for reimbursement or incentives under this section.

"(c) DEFINITIONS.—In this section:

"(1) ADMINISTRATOR.—The term 'Administrator' means the Administrator of the Federal Highway Administration.

"(2) ELIGIBLE RECIPIENT.—The term 'eligible recipient' means—

"(A) a State;

"(B) a unit of local government;

"(C) a political subdivision of a State;

"(D) a territory of the United States;

"(E) an entity described in section 207(m)(1)(E);

"(F) a recipient of funds under section 203;

"(G) a metropolitan planning organization (as defined in section 134(b)(2)); or

"(H) a special purpose district or public authority with a transportation function.

"(3) GREENHOUSE GAS.—The term 'greenhouse gas' means the air pollutants carbon dioxide, hydrofluorocarbons, methane, nitrous oxide, perfluorocarbons, and sulfur hexafluoride.".

(b) CLERICAL AMENDMENT.—The analysis for chapter 1 of title 23, United States Code, is further amended by adding at the end the following:

23 USC 101 prec.

"179. Low-carbon transportation materials grants.".

TITLE VII—COMMITTEE ON HOMELAND SECURITY AND GOVERNMENTAL AFFAIRS

SEC. 70001. DHS OFFICE OF CHIEF READINESS SUPPORT OFFICER.

In addition to the amounts otherwise available, there is appropriated to the Secretary of Homeland Security for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $500,000,000, to remain available until September 30, 2028, for the Office of the Chief Readiness Support Officer to carry out sustainability and environmental programs.

SEC. 70002. UNITED STATES POSTAL SERVICE CLEAN FLEETS.

In addition to amounts otherwise available, there is appropriated to the United States Postal Service for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, the following amounts, to be deposited into the Postal Service Fund established under section 2003 of title 39, United States Code:

(1) $1,290,000,000, to remain available through September 30, 2031, for the purchase of zero-emission delivery vehicles.

(2) $1,710,000,000, to remain available through September 30, 2031, for the purchase, design, and installation of the requisite infrastructure to support zero-emission delivery vehicles at facilities that the United States Postal Service owns or leases from non-Federal entities.

SEC. 70003. UNITED STATES POSTAL SERVICE OFFICE OF INSPECTOR GENERAL.

In addition to amounts otherwise available, there is appropriated to the Office of Inspector General of the United States Postal Service for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $15,000,000, to remain available through September 30, 2031, to support oversight of United States Postal Service activities implemented pursuant to this Act.

SEC. 70004. GOVERNMENT ACCOUNTABILITY OFFICE OVERSIGHT.

In addition to amounts otherwise available, there is appropriated to the Comptroller General of the United States for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $25,000,000, to remain available until September 30, 2031, for necessary expenses of the Government Accountability Office to support the oversight of—

(1) the distribution and use of funds appropriated under this Act; and

(2) whether the economic, social, and environmental impacts of the funds described in paragraph (1) are equitable.

SEC. 70005. OFFICE OF MANAGEMENT AND BUDGET OVERSIGHT.

In addition to amounts otherwise available, there are appropriated to the Director of the Office of Management and Budget for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $25,000,000, to remain available until September 30, 2026, for necessary expenses to—

(1) oversee the implementation of this Act; and

(2) track labor, equity, and environmental standards and performance.

SEC. 70006. FEMA BUILDING MATERIALS PROGRAM.

Through September 30, 2026, the Administrator of the Federal Emergency Management Agency may provide financial assistance under sections 203(h), 404(a), and 406(b) of the Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C. 5133(h), 42 U.S.C. 5170c(a), 42 U.S.C. 5172(b)) for— Time period.

(1) costs associated with low-carbon materials; and

(2) incentives that encourage low-carbon and net-zero energy projects.

SEC. 70007. FEDERAL PERMITTING IMPROVEMENT STEERING COUNCIL ENVIRONMENTAL REVIEW IMPROVEMENT FUND MANDATORY FUNDING.

In addition to amounts otherwise available, there is appropriated to the Federal Permitting Improvement Steering Council Environmental Review Improvement Fund, out of any money in the Treasury not otherwise appropriated, $350,000,000 for fiscal year 2023, to remain available through September 30, 2031.

TITLE VIII—COMMITTEE ON INDIAN AFFAIRS

SEC. 80001. TRIBAL CLIMATE RESILIENCE.

(a) TRIBAL CLIMATE RESILIENCE AND ADAPTATION.—In addition to amounts otherwise available, there is appropriated to the Director of the Bureau of Indian Affairs for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $220,000,000, to remain available until September 30, 2031, for Tribal climate resilience and adaptation programs.

(b) BUREAU OF INDIAN AFFAIRS FISH HATCHERIES.—In addition to amounts otherwise available, there is appropriated to the Director of the Bureau of Indian Affairs for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $10,000,000, to remain available until September 30, 2031, for fish hatchery operations and maintenance programs of the Bureau of Indian Affairs.

(c) ADMINISTRATION.—In addition to amounts otherwise available, there is appropriated to the Director of the Bureau of Indian Affairs for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $5,000,000, to remain available until September 30, 2031, for the administrative costs of carrying out this section.

(d) COST-SHARING AND MATCHING REQUIREMENTS.—None of the funds provided by this section shall be subject to cost-sharing or matching requirements.

(e) SMALL AND NEEDY PROGRAM.—Amounts made available under this section shall be excluded from the calculation of funds received by those Tribal governments that participate in the "Small and Needy" program.

(f) DISTRIBUTION; USE OF FUNDS.—Amounts made available under this section that are distributed to Indian Tribes and Tribal organizations for services pursuant to a self-determination contract (as defined in subsection (j) of section 4 of the Indian Self-Determination and Education Assistance Act (25 U.S.C. 5304(j))) or a self-governance compact entered into pursuant to subsection (a) of section 404 of the Indian Self-Determination and Education Assistance Act (25 U.S.C. 5364(a))—

(1) shall be distributed on a 1-time basis;

(2) shall not be part of the amount required by subsections (a) through (b) of section 106 of the Indian Self-Determination and Education Assistance Act (25 U.S.C. 5325(a)–(b)); and

(3) shall only be used for the purposes identified under the applicable subsection.

SEC. 80002. NATIVE HAWAIIAN CLIMATE RESILIENCE.

(a) NATIVE HAWAIIAN CLIMATE RESILIENCE AND ADAPTATION.—In addition to amounts otherwise available, there is appropriated to the Senior Program Director of the Office of Native Hawaiian Relations for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $23,500,000, to remain available until September 30, 2031, to carry out, through financial assistance, technical assistance, direct expenditure, grants, contracts, or cooperative agreements, climate resilience and adaptation activities that serve the Native Hawaiian Community.

(b) ADMINISTRATION.—In addition to amounts otherwise available, there is appropriated to the Senior Program Director of the Office of Native Hawaiian Relations for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $1,500,000, to remain available until September 30, 2031, for the administrative costs of carrying out this section.

(c) COST-SHARING AND MATCHING REQUIREMENTS.—None of the funds provided by this section shall be subject to cost-sharing or matching requirements.

SEC. 80003. TRIBAL ELECTRIFICATION PROGRAM.

(a) TRIBAL ELECTRIFICATION PROGRAM.—In addition to amounts otherwise available, there is appropriated to the Director of the Bureau of Indian Affairs for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $145,500,000, to remain available until September 30, 2031, for—

(1) the provision of electricity to unelectrified Tribal homes through zero-emissions energy systems;

(2) transitioning electrified Tribal homes to zero-emissions energy systems; and

(3) associated home repairs and retrofitting necessary to install the zero-emissions energy systems authorized under paragraphs (1) and (2).

(b) ADMINISTRATION.—In addition to amounts otherwise available, there is appropriated to the Director of the Bureau of Indian Affairs for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $4,500,000, to remain available until September 30, 2031, for the administrative costs of carrying out this section.

(c) COST-SHARING AND MATCHING REQUIREMENTS.—None of the funds provided by this section shall be subject to cost-sharing or matching requirements.

(d) SMALL AND NEEDY PROGRAM.—Amounts made available under this section shall be excluded from the calculation of funds received by those Tribal governments that participate in the "Small and Needy" program.

(e) DISTRIBUTION; USE OF FUNDS.—Amounts made available under this section that are distributed to Indian Tribes and Tribal organizations for services pursuant to a self-determination contract (as defined in subsection (j) of section 4 of the Indian Self-Determination and Education Assistance Act (25 U.S.C. 5304(j))) or a self-governance compact entered into pursuant to subsection (a) of section 404 of the Indian Self-Determination and Education Assistance Act (25 U.S.C. 5364(a))—

(1) shall be distributed on a 1-time basis;

(2) shall not be part of the amount required by subsections (a) through (b) of section 106 of the Indian Self-Determination and Education Assistance Act (25 U.S.C. 5325(a)–(b)); and

(3) shall only be used for the purposes identified under the applicable subsection.

SEC. 80004. EMERGENCY DROUGHT RELIEF FOR TRIBES.

(a) EMERGENCY DROUGHT RELIEF FOR TRIBES.—In addition to amounts otherwise available, there is appropriated to the Commissioner of the Bureau of Reclamation for fiscal year 2022, out of any money in the Treasury not otherwise appropriated, $12,500,000, to remain available until September 30, 2026, for near-term drought relief actions to mitigate drought impacts for Indian Tribes that

are impacted by the operation of a Bureau of Reclamation water project, including through direct financial assistance to address drinking water shortages and to mitigate the loss of Tribal trust resources.

(b) COST-SHARING AND MATCHING REQUIREMENTS.—None of the funds provided by this section shall be subject to cost-sharing or matching requirements.

Approved August 16, 2022.

LEGISLATIVE HISTORY—H.R. 5376:

HOUSE REPORTS: No. 117–130 (Comm. on the Budget).
CONGRESSIONAL RECORD:
Vol. 167 (2021): Nov. 18, 19, considered and passed House.
Vol. 168 (2022): Aug. 6, considered and passed Senate, amended.
Aug. 12, House concurred in Senate amendment.
DAILY COMPILATION OF PRESIDENTIAL DOCUMENTS (2022):
Aug. 16, Presidential remarks.

Administrator's Foreword

After a 23-year hiatus, I am reintroducing the Administrator's Foreword as part of the *Annual Energy Outlook* (AEO). The Foreword affords me an opportunity to provide context and outline future directions for one of our flagship products.

The U.S. energy system is rapidly changing. In recent years, technology innovation has accelerated the deployment of renewable energy, expanded markets for electric vehicles, and established record-high levels of petroleum and natural gas production. Heightened geopolitical risks have also influenced the energy system. And this year, recent federal legislation authorizes historic levels of investment in clean energy technology.

Ideally, we would model these dynamics to produce precise numerical forecasts that demonstrate how energy prices, technology deployment, and emissions will shift over time. Unfortunately, such precise forecasts are not possible. The 30-year decision landscape we model is too complex and uncertain. Thus, our objective must be to identify robust insights rather than precise numbers—think ranges and trends, not predictions and point estimates.

The AEO includes a series of projections—which we refer to as *cases*—each with different input assumptions that represent alternative views of how uncertainty may be resolved in the future. The Reference case represents our best guess under nominal conditions, which presumes no new policy or laws over the modeled time horizon. It's best to think of the Reference case as the experimental control: a baseline against which we can judge the other cases. Although the Reference case serves as an important benchmark, judgments about energy futures should never be based on a single projection. The AEO side cases represent plausible variations in key input assumptions that tend to drive the largest changes in projected outputs from the Reference case. This year's AEO narrative focuses on the full set of modeled cases in order to derive insights about our collective energy future.

Among the uncertainties we must confront, the timing, structure, and targets associated with yet-to-be-developed policy are the most uncertain. We only consider current laws and regulations across all modeled cases in this AEO. For some readers, this approach may be unsatisfying because policy rarely remains static for long periods. But this AEO should be considered part of an iterative policymaking process rather than apart from it; it gives decision-makers an opportunity to peer into a future without new policy. If the projected outcomes are undesirable from their viewpoint, they can effect change.

Changes to This Year's Edition

This year's edition of the *Annual Energy Outlook* includes three enhancements that improve the characterization of future uncertainty and provide more technical details on the model results.

Combination cases

Although the AEO core side cases address key uncertainties, each case represents a one-factor change to the Reference case. But, real energy markets often surprise us in more ways than one, particularly over the decades-long timeframes modeled in the AEO. In this year's edition, we include cases that combine assumptions from our macroeconomic and zero-carbon technology cost cases. These new cases reflect a combination of demand-side changes (macroeconomic growth affecting energy demand) and supply-side changes (renewables costs affecting generating capacity deployment) to expand the range of projections in the *Annual Energy Outlook*.

Visualizing uncertainty

Running a set of cases is not enough: how we present and discuss them within the report affects the insights that our readers draw from the analysis. Although the Reference case is an important benchmark, each case represents a possible alternative. So, in each of the figures in this report, you will see shaded areas that represent the range of results obtained across the modeled cases. Uncertainty can be characterized in many other ways beyond the analysis of multiple cases. One way, presented in the discussion section, uses deviations between realized and projected values drawn from previous AEO editions to derive a cone of uncertainty for future energy-related CO_2 emissions. Looking ahead, you should expect to see more innovation in how we treat uncertainty.

Technical notes

The narrative tends to focus on model-based results. We recognize that some readers want a deeper technical explanation around key issues. Although we describe our modeling approach elsewhere, how the model formulation and input assumptions influence the results is not always clear. To better explain key results, we included a series of technical notes in the narrative that focus on heat pump deployment, cost projections for renewables, electric vehicle deployment, and crude oil trade.

Future Work

At EIA, we are also pursuing broader changes to our long-term modeling efforts. I would like to highlight three such efforts.

Open-source code

One of our priorities at EIA is to make our data and model-based analysis as transparent and accessible as possible. We are working to make the National Energy Modeling System (NEMS) publicly available in GitHub under a permissive, open-source license, and we hope to complete this effort later this year. Making our models open source allows users to examine, reuse, and redistribute our code under clear legal guidelines. Giving you this kind of access is important to the learning and discovery process associated with energy modeling.

Expanded scenario range

Building on the combination cases in this year's AEO, we are expanding our capability to model a wider range of future scenarios using NEMS. In particular, decision makers need objective and rigorous assessments of net zero emissions pathways to inform ongoing policy discussions. We are working to incorporate novel fuel and technology pathways into NEMS and to appropriately treat uncertainty around technologies with limited commercial deployment.

A next-generation, open-source modeling framework

Although regularly updated, we have been using NEMS to produce the AEO since 1994—a span of nearly three decades that has born witness to significant changes in the real energy system, energy modeling methods, and software development practices. Moving forward, we need a flexible, next-generation modeling framework that can rapidly assess the cost, emissions, reliability, security, and community-level impacts associated with a number of contemporary energy issues. Some of these issues include pathways to a net-zero energy system, supply chain risks, rapid technology innovation, and shifting trade patterns. This modeling system will also be open source to promote transparency and encourage innovation within the modeling community. We've begun discussing this new framework, and I look forward to sharing our progress throughout my tenure as EIA Administrator.

In Closing

I'd like to thank our long-term modelers for their willingness to take on new directions and their tremendous effort to produce this year's AEO. I am very excited by the future work outlined above, and I feel privileged to help lead such a talented team of energy modelers.

Executive Summary

Our *Annual Energy Outlook* 2023 (AEO2023) explores long-term energy trends in the United States. Since last year's AEO, much has changed, most notably the passage of the Inflation Reduction Act (IRA), Public Law 117–169, which altered the policy landscape we use to develop our projections.

We project that U.S. energy-related CO_2 emissions drop 25% to 38% below the 2005 level by 2030. For reference, the United States' *nationally determined contribution* (NDC), submitted as part of the Paris Agreement, calls for a target of 50% to 52% of net greenhouse gas emissions below the 2005 level by 2030.[1] We only consider energy-related CO_2 emissions, which does not cover the full NDC scope. Total energy-related CO_2 emissions in 2050 declined by 17% in this year's Reference case compared with last year's. Some of the primary factors that contributed to the change in our base case include the IRA, updates to technology costs and performance across the energy system, and changes in the macroeconomic outlook. All AEO2023 cases assume current laws and regulations, and compared with last year's AEO, there is a significant shift toward lower future emissions. The IRA represents a complex piece of legislation, and we could not model all provisions given model structure and uncertainty over select implementation details. The appendix includes a detailed accounting of IRA provisions and how we addressed them. To further explore possible emissions reductions, we also derive a cone of uncertainty based on an empirical analysis of our past projections and find that the energy-related CO_2 emissions reduction can be as high as 45% below 2005 levels in 2030.

Energy-related CO_2 emissions fall across all AEO2023 cases because of increased electrification, higher equipment efficiencies, and more zero-carbon electricity generation.

Overall, our lower projected U.S. energy-related CO_2 emissions is driven by increased electrification, equipment efficiency, and renewable technologies for electricity generation. However, emissions reductions are limited by longer-term growth in U.S. transportation and industrial activity. As a result, these projected emissions reductions are most sensitive to our assumptions regarding economic growth and the cost of zero-carbon generation technology.

[1] The *nationally determined contribution* (NDC) is a formal submission to the United Nations Framework Convention on Climate Change. The United States submitted, "To achieve an economy-wide target of reducing its net greenhouse gas emissions by 50-52 percent below 2005 levels in 2030."

In AEO2023, we see stable growth in U.S. electric power demand through 2050 in all cases we considered because of increasing electrification and ongoing economic growth. The combination of declining capital costs and government subsidies, including IRA initiatives, drive rising renewable technologies for electricity generation, such as solar and wind. Once built and when the resource is available, wind and solar are the least cost resources to operate to meet electricity demand because they have zero fuel costs. Over time, the combined investment and operating cost advantage increases the share of zero-carbon electricity generation. As a result, in AEO2023, we see renewable generating capacity growing in all regions of the United States in all cases. Across all cases, compared with 2022, solar generating capacity grows by about 325% to 1019% by 2050, and wind generating capacity grows by about 138% to 235%. We see growth in installed battery capacity in all cases to support this growth in renewables. Across the span of AEO cases, relative to 2022, natural gas generating capacity ranges from an increase of between 20% to 87% through 2050.

Renewable generating capacity grows in all regions of the United States in all AEO2023 cases, supported by growth in installed battery capacity.

Technological advancements and electrification drive projected decreases in demand-side energy intensity.

Not only is the U.S. electric power sector's composition changing, but we see increased electrification in the end-use sectors. We project more heat pumps and electric vehicles, as well as electric arc furnaces increasingly deployed in the iron and steel industry. In the residential and commercial sectors, higher equipment efficiencies and stricter building codes extend ongoing declines in energy intensity. Despite the growth in adopting heat pumps, natural gas-fired heating equipment, including furnaces and boilers, continue to account for the largest share of energy consumption for space heating in U.S. residential and commercial buildings across all cases through 2050. In the transportation sector, light-duty vehicle energy demand declines through 2045 as more electric vehicles are deployed and stricter Corporate Average Fuel Economy (CAFE) standards largely offset the continued growth in travel demand. The energy demand then increases as rising travel overcomes increasing efficiency. Across all cases, light-duty vehicle energy demand decreases by 3% to 28% in 2050 relative to 2022.

High international demand leads to continued growth in U.S. production, and combined with relatively little growth in domestic consumption, allows the United States to remain a net exporter of petroleum products and natural gas through 2050 in all AEO2023 cases.

Despite no significant change in domestic petroleum and other liquids consumption through 2040 across most AEO2023 cases, we expect U.S. production to remain historically high as exports of finished products grow in response to growing international demand. Despite the shift toward renewable sources and batteries in electricity generation, domestic natural gas consumption remains relatively stable—ending recent growth in most cases. Natural gas production, however, in some cases continues to grow in response to international demand for liquefied natural gas, supported by associated natural gas produced along with crude oil. Given the combination of relatively little growth in domestic consumption and continued growth in production, we project that the United States will remain a net exporter of petroleum products and natural gas through 2050 in all AEO2023 cases.

Introduction

The *Annual Energy Outlook* 2023 (AEO2023) explores long-term energy trends in the United States. Since we released the last AEO in early 2022, passage of the Inflation Reduction Act (IRA), Public Law 117–169, altered the policy landscape we use to develop our projections. The Appendix in this report explains our assumptions around IRA implementation and how we implemented the IRA in our AEO2023 cases. We are also releasing a separate *Issues in Focus* paper that explores how these assumptions affect our model-based projections. We have seen significant national and international short-term market volatility associated with economic growth as the world reemerges from the COVID-19 pandemic and political instability associated with Russia's full-scale invasion of Ukraine. We continuously monitor such developments and consider how they may affect our long-term projections.

AEO2023 includes a Reference case and 12 side cases that explore key areas of uncertainty about how energy markets will develop. We retooled our graphs to emphasize the range of results, denoted by shaded areas, across the full suite of modeled cases. We derive our key analytical insights by assessing the results across cases and examining how overall trends may vary under different assumptions. This year, we've added a discussion section focused on sources of uncertainty in the AEO2023 projections. We also now derive a cone of uncertainty associated with future energy-related CO_2 emissions using deviations between past projections and realized values.

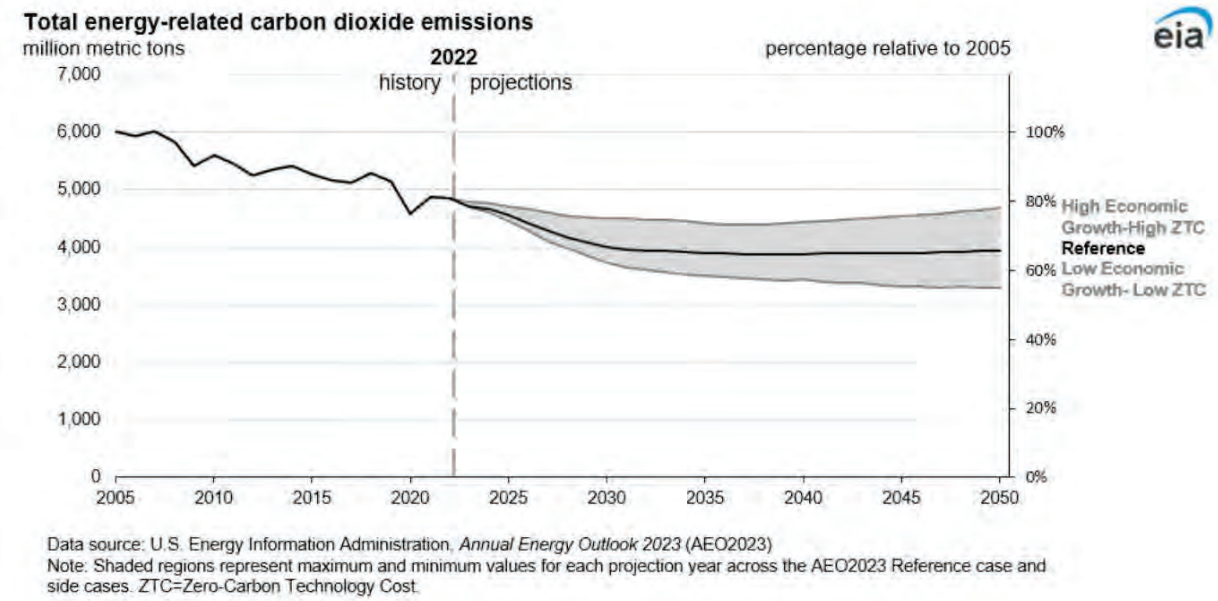
By 2030, energy-related CO_2 emissions fall 25% to 38% below 2005 levels, depending on case assumptions

Under the Paris Agreement, the United States set a goal to reduce economy-wide greenhouse gas emissions by 50% to 52% of 2005 levels by 2030. We only consider energy-related CO_2 emissions, which does not cover the full NDC scope. We project lower U.S. energy-related CO_2 emissions in 2030 relative to 2005 in the AEO2023 Reference case and all side cases (Figure 1). CO_2 emissions are most sensitive to economic growth and assumptions related to the cost of zero-carbon generation technology. Combinations of these two sets of assumptions form the upper and lower bounds of projected CO_2 emissions. Emissions decrease by 25% in 2030 relative to 2005 under the combined high economic growth and high zero-carbon technology cost assumptions and by as much as 38% under low economic growth and low zero-carbon technology cost assumptions. Both of these cases hinge on specific assumptions regarding the relationship between economic growth and zero-carbon technology development.[2] In the High Economic Growth case, emissions fall initially and then begin to increase

[2] The purpose of the combination cases was to explore a wider range of outcomes. We did not explicitly consider the correlation or interaction between zero-carbon technology costs and economic growth. The High Economic Growth and High Zero-Carbon Technology Cost case assume this higher growth rate takes place without declining zero-carbon technology costs. Similarly, slower economic growth accompanies declining technology costs in the Low Economic Growth and Low Zero-Carbon Technology Cost case.

again in 2040 as industrial activity and travel (measured in vehicle miles traveled) increase, surpassing emissions reductions from the electric power sector.

Figure 1.



Data source: U.S. Energy Information Administration, *Annual Energy Outlook 2023* (AEO2023)
Note: Shaded regions represent maximum and minimum values for each projection year across the AEO2023 Reference case and side cases. ZTC=Zero-Carbon Technology Cost.

The largest variations in projected U.S. CO_2 emissions across cases occur in the electric power, transportation, and industrial sectors. Although economic growth assumptions affect consumption and, in turn, projected CO_2 emissions in all sectors, different case-specific assumptions affect sectors differently. For example, emissions from the electric power sector are particularly responsive to assumptions about the cost of zero-carbon technologies, and transportation sector emissions are sensitive to assumptions about fossil fuel supply and cost, particularly oil and petroleum products.

1

The Electricity Mix in the United States Shifts from Fossil Fuels to Renewables

In this section, we discuss renewables displacing fossil fuels in the electric power sector.

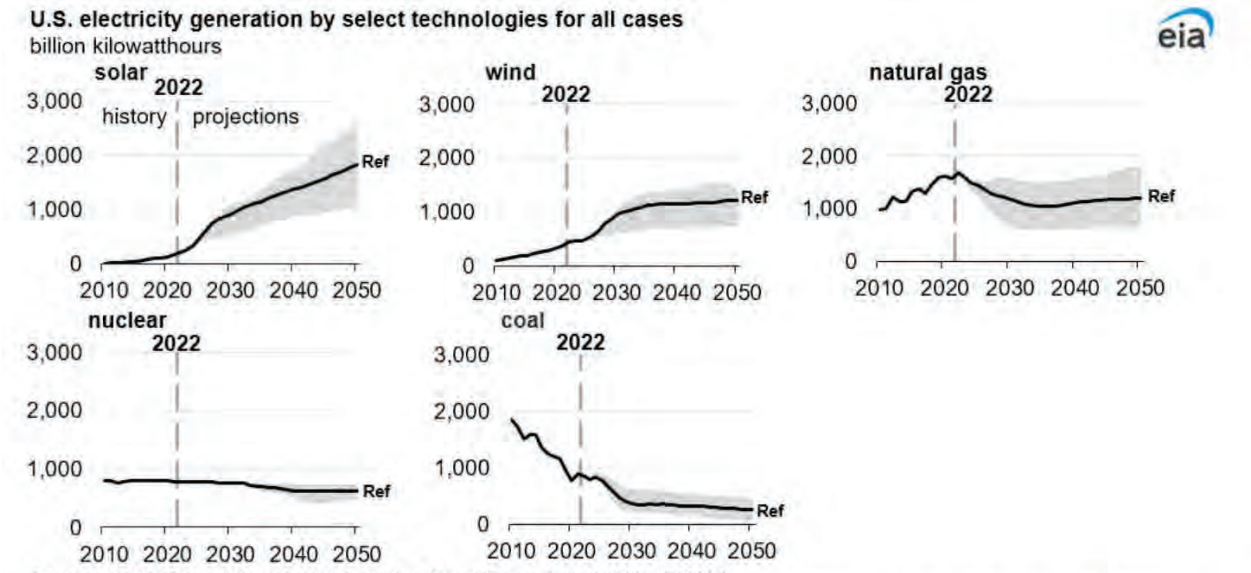
Renewables displace fossil fuels in the electric power sector due to declining renewable technology costs and rising subsidies for renewable power

Economic growth paired with increasing electrification in end-use sectors results in stable growth in U.S. electric power demand through 2050 in all cases. Declining capital costs for solar panels, wind turbines, and battery storage, as well as government subsidies such as those included in the IRA, result in renewables becoming increasingly cost effective compared with the alternatives when building new power capacity.

Power demand is increasingly met by renewables throughout the projection period.

Renewables are increasingly meeting power demand throughout the projection period (Figure 2). Natural gas, coal, and nuclear generation shares decline. Renewable power outcompetes nuclear power, even in the Low Zero-Carbon Technology Cost (ZTC) case, which evaluates the impact of more aggressive cost declines for nuclear and renewables than the Reference case. Most natural gas-fired generation comes from combined-cycled power plants as opposed to simple-cycle combustion turbines. Uncertainty in natural gas prices across cases leads to various projections for combined-cycle units in the short term, but in the long term, natural gas demand from the electric power sector stabilizes across all cases.

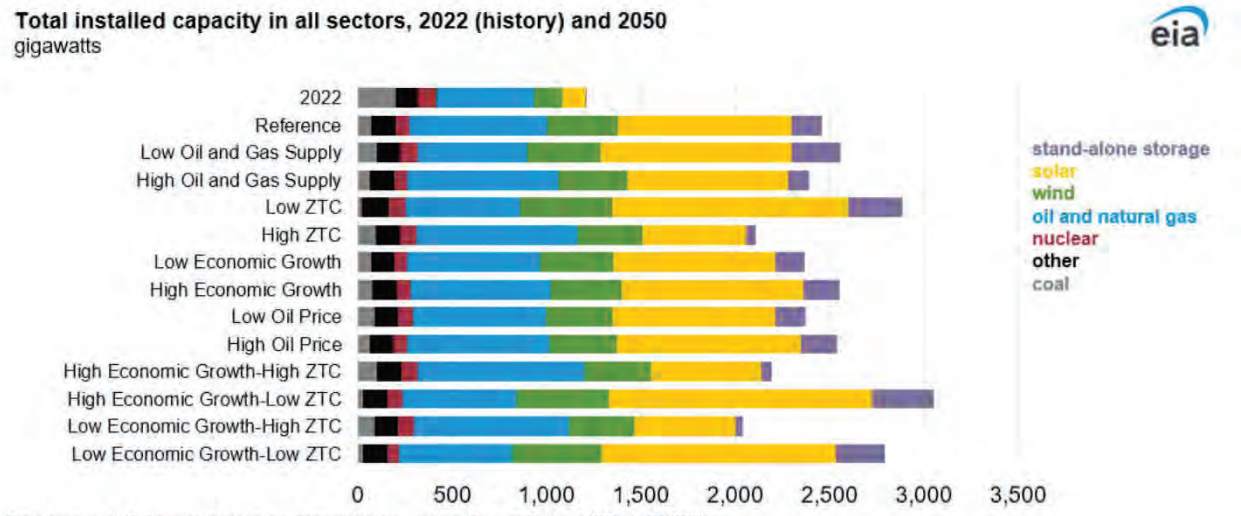
Figure 2.



Data source: U.S. Energy Information Administration, *Annual Energy Outlook 2023* (AEO2023)
Note: Shaded regions represent maximum and minimum values for each projection year across the AEO2023 Reference case and side cases. Ref=Reference case.

In order to meet increasing demand for electric power throughout the projection, total installed power capacity close to doubles across most cases, even in the Low Economic Growth case (Figure 3). Cases with a higher share of renewables in the generation mix have higher total grid capacity due to the inherently lower capacity factors of solar and wind compared with coal, nuclear, and combined-cycle plants.

Figure 3.

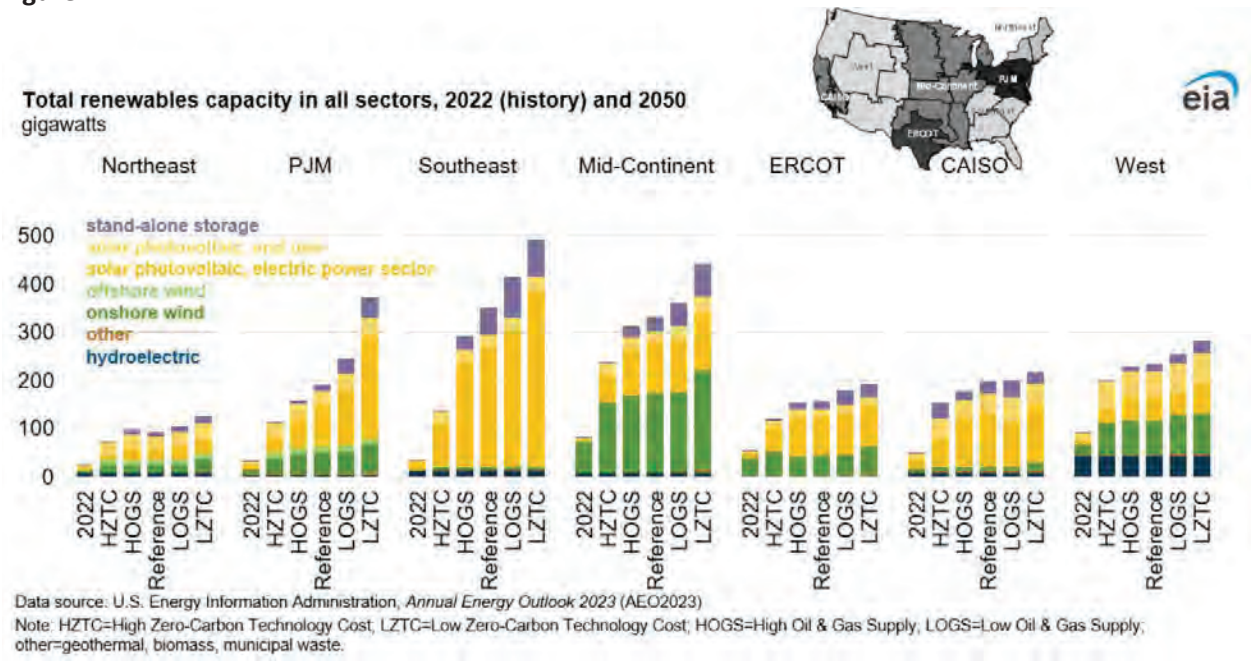


Data source: U.S. Energy Information Administration, *Annual Energy Outlook 2023* (AEO2023)
Note: ZTC=Zero-Carbon Technology Cost; other=geothermal, biomass, municipal waste, fuel cells, hydroelectric, pumped hydro storage.

We project that renewable power capacity will increase in all regions of the United States in all AEO2023 cases, although regional resource availability results in varying renewable resource mixes across regions (Figure 4). Across all cases, between 40%-60% of the renewable power capacity in the Mid-Continent region in 2050 comes from wind, and the Southeast and the region managed by the California

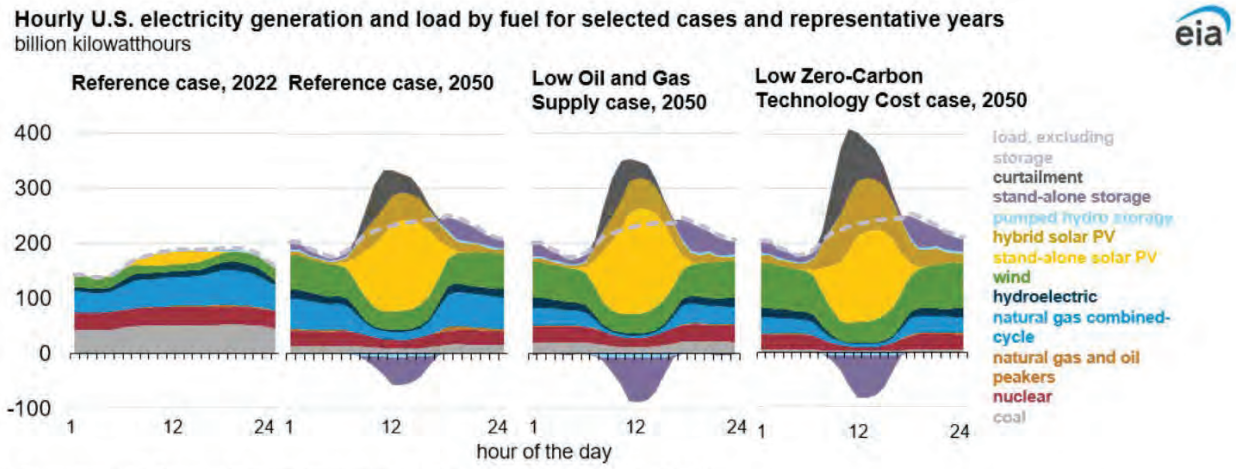
Independent System Operator (CAISO) have large shares of solar and a small amount of wind power capacity in all cases.

Figure 4.



Once built and when the resource is available, wind and solar generation outcompete other technologies for system dispatch because they have zero fuel costs. Across all AEO2023 cases, some renewable generation is left unused and curtailed, typically midday when solar generation can exceed demand in some regions and seasons. Battery capacity is built in all cases to store and dispatch some of this otherwise unused generation in later hours, decreasing reliance on fossil fuel capacity, such as natural gas-fired peaking units or load-following combined-cycle units (Figure 5). Battery storage is also used to replace natural gas-fired capacity to provide reserve capacity. In the Reference case in 2050, 160 gigawatts (GW) of standalone battery storage capacity will be deployed, and deployment varies between 40 GW and 260 GW in the other cases.

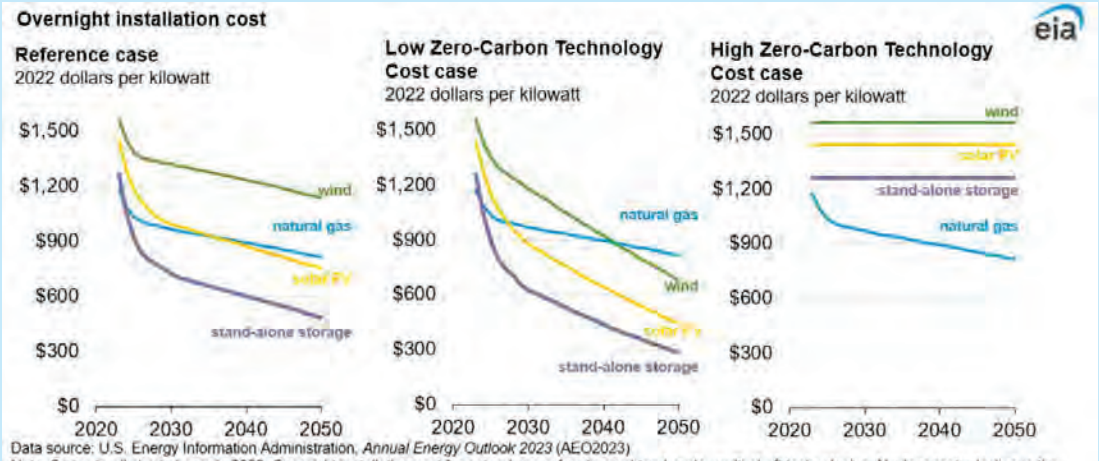
Figure 5.



Data source: U.S. Energy Information Administration, *Annual Energy Outlook 2023* (AEO2023)
Note: Negative generation represents charging of energy storage technologies such as pumped hydro storage and battery storage. Hourly dispatch estimates are illustrative and are developed to determine curtailment and storage operations; final dispatch estimates are developed separately and may differ from total utilization as this figure shows. Standalone solar photovoltaic (PV) includes both utility-scale and end-use PV electricity generation.

Technical Note 1: Renewable costs and deployment

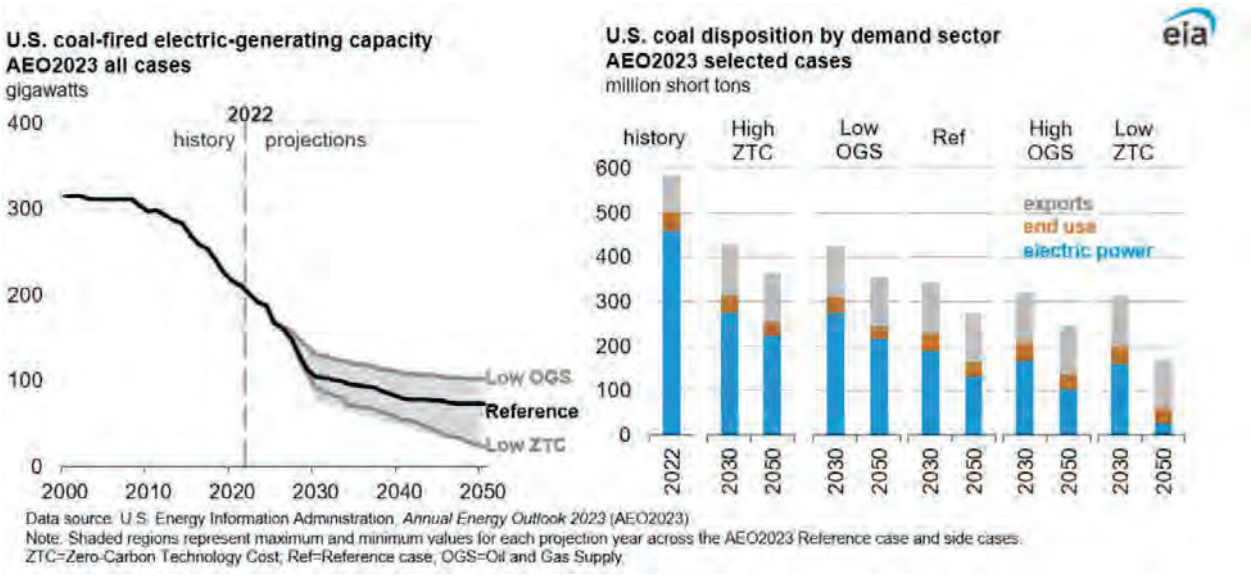
Continued decline of renewable technology costs relative to natural gas-fired generating technologies contributes to the change in generation mix in our projection period. In addition to recent policies that also favor renewables in the generation mix, we use learning factors to represent learning by doing, which reduces capital costs. Learning factors are calculated independently for each of the major design components of the technology, and they increase based on how much new capacity is deployed. For details on renewable costs in the ZTC cases, please see the Appendix. New, untested components decrease at a more rapid initial rate than mature components or conventional designs. More details can be found in the NEMS Electricity Market Module documentation.



Data source: U.S. Energy Information Administration, *Annual Energy Outlook 2023* (AEO2023)
Note: Series in all charts begin in 2023. Overnight installation cost for natural gas refers to combined-cycle, multi-shaft technologies. Nuclear costs decline in the Reference and Low Zero-Carbon Technology cases, but they are not shown given the large differences in absolute cost compared with renewables. In the Reference case, nuclear begins at $7,900 per kilowatt (kW) and declines to $5,000/kW in 2050. In the Low Zero-Carbon Technology case, the cost of nuclear declines to $3,000/kW in 2050. Solar PV=stand-alone solar photovoltaic

As a result of renewables growth, we project that U.S. coal-fired generation capacity will decline sharply by 2030 to about 50% of current levels (about 200 GW) with a more gradual decline thereafter. We project between 23 GW and 103 GW of coal-fired capacity operating in 2050 (Figure 6). The IRA provides additional incentives to wind and solar power generation, which accelerates the near-term decline of electric power sector coal-fired generating capacity and hastens the timeline for retirement in the U.S. coal fleet.

Figure 6.

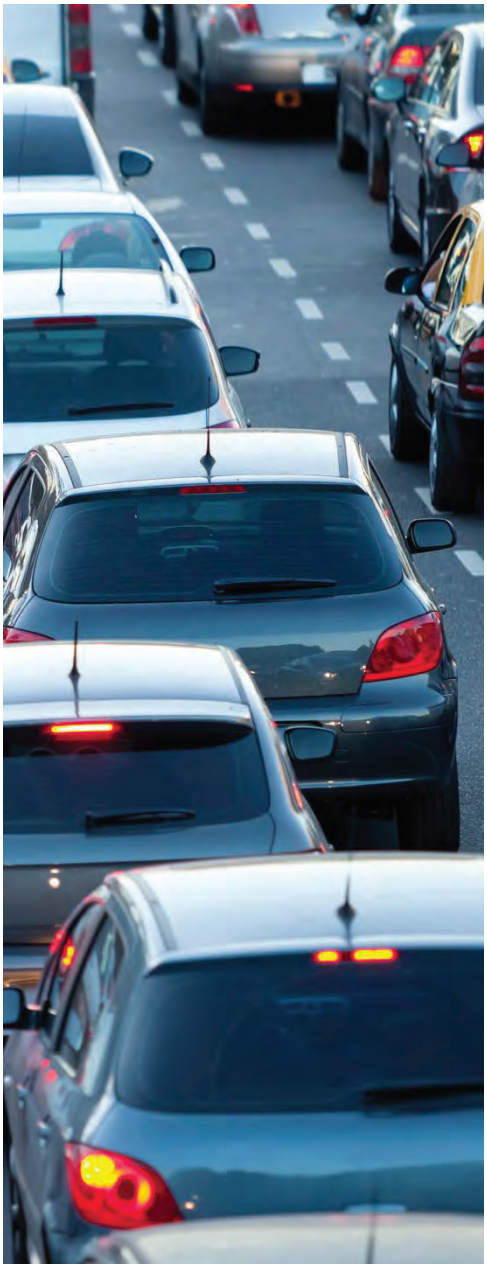


Coal consumption in the U.S. electric power sector in the Reference case drops to 189 million short tons (MMst) in 2030 and to 131 MMst in 2050 from 458 MMst in 2022. Coal disposition, which includes exports and consumption by the electric power sector and other end-use sectors, declines to a low of 170 MMst in 2050 in the Low ZTC case. In a high natural gas price environment, such as in the Low Oil and Gas Supply case, coal disposition could remain as high as 350 MMst in 2050. In all cases, annual coal exports average about 110 MMst in 2050, and end-use coal demand averages about 36 MMst. The ratio of coal exports to domestic coal consumption generally increases through the projection period in all cases. The majority of domestically produced coal is exported by 2050 in the Low ZTC case, 45% is exported in the High Oil and Gas supply case, which are the two cases that have the least coal demand from the electric power sector. Even in cases with more aggressive retirement of coal-fired power plants, such as the Low ZTC case, some of the relatively newer and more efficient coal power plants remain online across the United States because they can provide cheap dispatchable power to the grid.

The electric power sector is also decreasing its reliance on natural gas in favor of renewables, which we will discuss in Section 3.

2

Technological Advancements and Electrification Decrease Demand-Side Energy Intensity



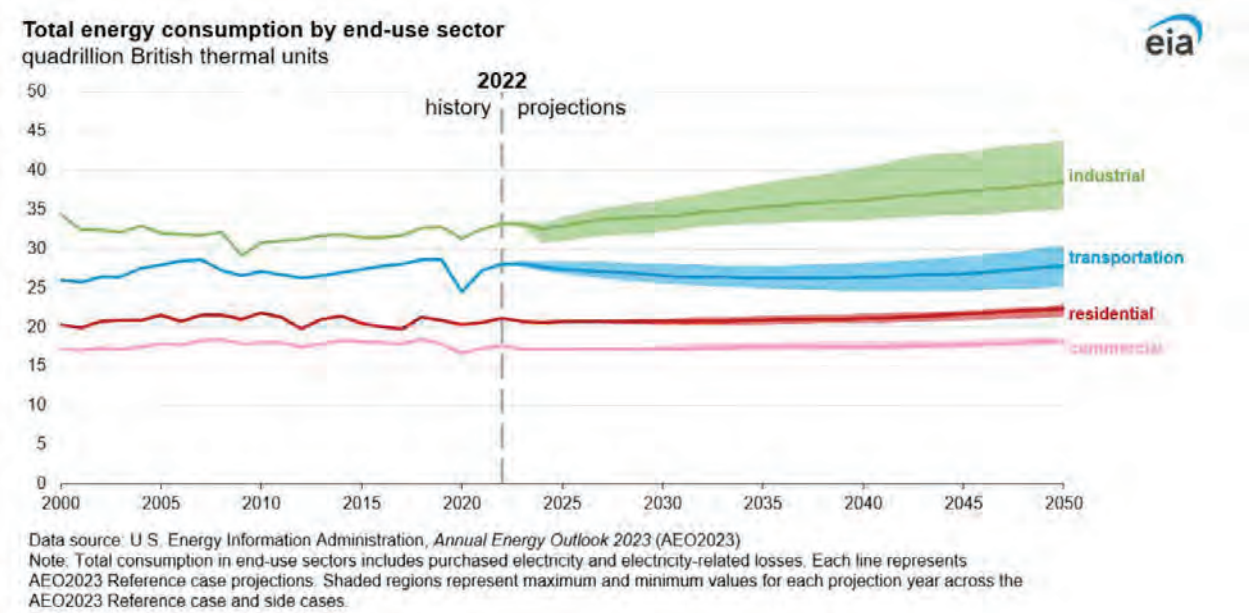
Moderate growth in U.S. energy consumption is the result of economic growth, population growth, and increased travel offsetting continued energy efficiency improvements. Demand-side energy intensity—the measure of energy consumed per household or per square foot of commercial floorspace—decreases as a result of changes in technology, policy, consumer behavior, demographics, and fuel mix. In this section, we quantify the decreases in CO_2 emissions intensity and demand-side energy intensity, and we discuss equipment changes in the buildings sector, electrification in iron and steel production, and technological advancements and government standards in the transportation sector.

U.S. energy consumption increases through 2050, and electricity plays an increasingly large role

U.S. energy consumption increases in many end-use sectors across all AEO2023 cases. Total energy consumption, including electricity use and electricity-related losses, increases by as much as 15% from 2022 to 2050 across the AEO2023 Reference case and side cases (Figure 7). The largest increases, in percentage terms, are in the industrial sector where energy consumption increases as much as 32% and in the transportation sector where energy consumption increases as much as 8%. Energy consumption in the residential and commercial sectors are the least sensitive to changes in assumptions across cases.

Total energy consumption, including electricity use and electricity-related losses, increases by as much as 15% from 2022 to 2050 across the AEO2023 Reference case and side cases.

Figure 7.



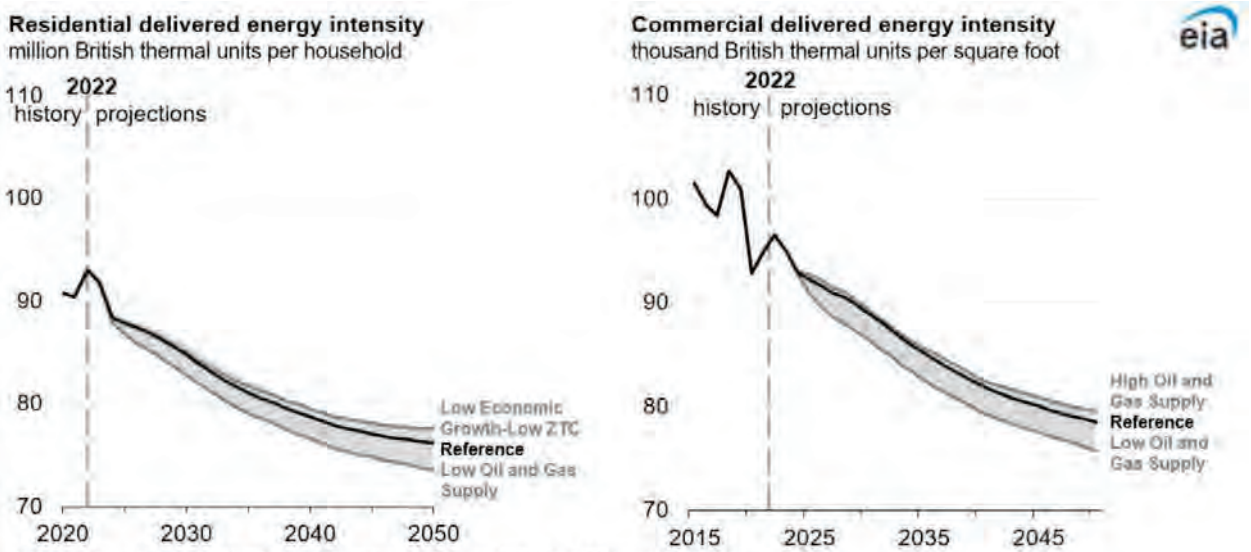
Data source: U.S. Energy Information Administration, *Annual Energy Outlook 2023* (AEO2023)
Note: Total consumption in end-use sectors includes purchased electricity and electricity-related losses. Each line represents AEO2023 Reference case projections. Shaded regions represent maximum and minimum values for each projection year across the AEO2023 Reference case and side cases.

In addition to macroeconomic growth assumptions, which affect energy consumption in all sectors, many sectors are also highly responsive to zero-carbon technology cost assumptions. Increasing energy consumption, improving end-use and electric power sector technology and efficiency, and declining costs for zero-carbon generation technologies, which, in turn, leads to cheaper electricity, all lead to increased electrification in the end-use sectors. The share of electricity in the residential and transportation sectors increase the most as demand for space cooling increases and electric vehicles gain a larger market share. The residential sector purchased 5.1 quadrillion British thermal units (quads) of electricity in 2022, and residential consumption of purchased electricity increases between about 14% and 22% from 2022 to 2050 across all cases, reaching between 5.9 and 6.3 quads. Electricity purchased for transportation reaches between about 0.6 quads and 1.3 quads in 2050, from 0.1 quads of purchased electricity in 2022, an increase of between 892% and 2,038% across all cases. Electricity purchased in the industrial sector is most influenced by economic growth assumptions, increasing by about 3%, from 3.5 quads in 2022 to about 3.6 quads in 2050 in low economic growth cases and by about 36% to 38%, to about 4.7 quads, in high economic growth cases.

Greater heating equipment efficiency reduces fossil fuel use in buildings

Despite modest growth in total energy consumption in the residential and commercial sectors, due to a growing number of households and expanding commercial floorspace, average energy intensity declines through 2050 across all cases (Figure 7 and Figure 8). Building envelope efficiency improves as states and localities adopt newer building energy codes and some existing households and commercial spaces receive additional insulation, air sealing, and other weatherization upgrades.

Figure 8.



Data source: U.S. Energy Information Administration, *Annual Energy Outlook 2023* (AEO2023)
Note: Shaded regions represent maximum and minimum values for each projection year across the AEO2023 Reference case and side cases.
ZTC=Zero-Carbon Technology Cost.

An established trend toward warmer winters and population shifts toward warmer and drier areas of the United States reduce energy consumption for space heating in all cases. At the same time, the established trend toward warmer summers leads to increasing electricity consumption for space cooling.

Technical Note 2: Modeling growth in residential heat pump installations

Our projections of residential heat pumps, like all major end-use equipment, begin with the census division-level stocks from our 2015 Residential Energy Consumption Survey (RECS). We use data from the most recent U.S. Census Bureau's Survey of Construction to further align recent space heating equipment shares in newly built housing units. Equipment purchase decisions account for federal and non-federal subsidies that further reduce installed costs of high-efficiency equipment such as air- and ground-source heat pumps or high-efficiency natural gas furnaces. These subsidies include national tax credits extended by the Inflation Reduction Act (IRA) and utility rebates to end users at the census-division level. Technology performance and energy prices are considered as well. Some provisions of the IRA—such as those targeting low-income households—are not explicitly included in our modeling. Refer to the Appendix for additional details.

Natural gas-fired heating equipment, including furnaces and boilers, continue to account for the largest share of energy consumption for space heating in U.S. residential and commercial buildings across all cases throughout the projection period. Over time, older heating equipment is replaced by newer, more efficient equipment that meets updated federal minimum energy efficiency standards.

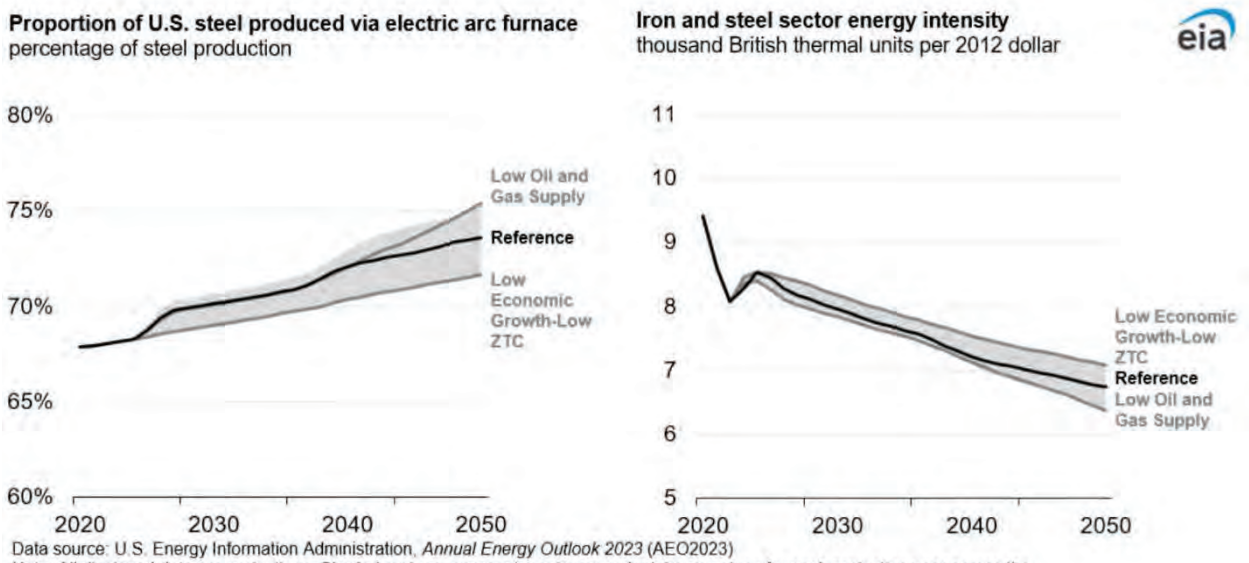
Federal and non-federal subsidies both encourage homes and businesses to adopt high-efficiency natural gas and electric equipment, including heat pumps. Electric heat pumps, including ground-source heat pumps, gain market share over the projection period, increasing from 11% of households in 2022 to between 14% and 15% of households in 2050 across all cases; however, their growth is limited by:

- A large existing market share for non-heat pump equipment that lasts a long time
- The high cost of purchasing and switching technologies, including electrical upgrades to accommodate electric heating and cooling and new ductwork when replacing boilers
- The higher price of electricity versus natural gas per million British thermal units, despite heat pump efficiency that may be multiple times higher than fossil fuel-fired equipment
- Reduced overall demand for space heating as building efficiency improves and heating degree days decrease

Electricity increasingly powers production in the iron and steel industry, decreasing energy intensity and CO_2 emissions

Steel production is an energy-intensive industry, but the choice of production technology significantly affects its energy and emission intensity. U.S. manufacturers continue to transition away from the combustion-powered, integrated steel mill process to steel produced by electric-arc furnaces, which have a lower energy intensity and make up about 68% of U.S. steel produced in 2022. Over the projection period, the share of U.S. steel produced by the electric-arc furnace process increases by 4% to 7% across the range of cases (Figure 9). The energy intensity of U.S. steel production continues to fall across all cases, declining between 12% and 21% across all cases (Figure 9). In 2018, steel production accounted for 1.3% of U.S. energy demand, and we project total energy demand for iron and steel production to fall relative to total U.S. energy demand, after peaking in 2027.

Figure 9.

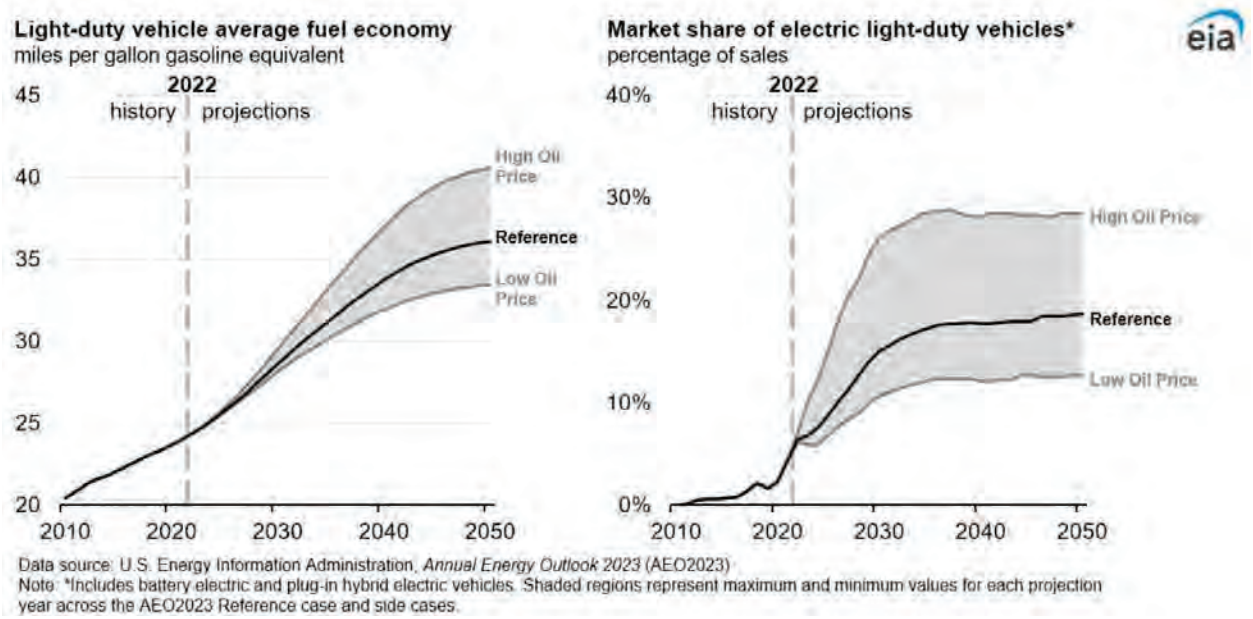


Data source: U.S. Energy Information Administration, *Annual Energy Outlook 2023* (AEO2023)
Note: All displayed data are projections. Shaded regions represent maximum and minimum values for each projection year across the AEO2023 Reference case and side cases. ZTC=Zero-Carbon Technology Cost.

Technological advancements, including electrification, for light-duty vehicles reduce energy intensity and fossil fuel use

In the transportation sector, light-duty vehicle (LDV) fuel economy increases due to rising Corporate Average Fuel Economy (CAFE) standards and electric vehicle (EV) sales. In addition to required fuel economy increases, consumer purchase decisions are also influenced by fuel prices. Consumer interest in EVs, which are significantly more efficient than internal combustion engine vehicles, and the impact EV adoption has on average light-duty vehicle fuel economy are sensitive to the price of gasoline (Figure 10).

Figure 10.



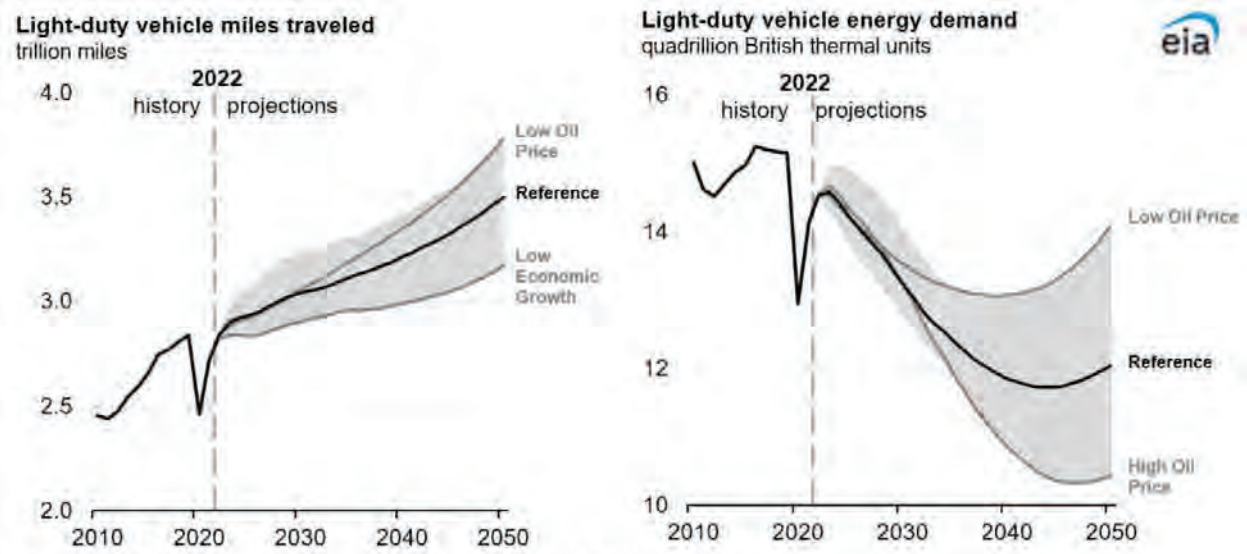
Data source: U.S. Energy Information Administration, *Annual Energy Outlook 2023* (AEO2023)
Note: *Includes battery electric and plug-in hybrid electric vehicles. Shaded regions represent maximum and minimum values for each projection year across the AEO2023 Reference case and side cases.

The updated CAFE standard, which applies to model years 2024 through 2026, significantly increases average new vehicle fuel economy requirements. By 2026, the updated CAFE standard is 28% higher than the Safer Affordable Fuel-Efficient (SAFE) standard for new vehicles it replaced, resulting in an increase from 37 miles per gallon (mpg) to 47 mpg by 2026. In addition to improved conventional vehicle fuel efficiency, EV sales increase through 2050, increasing EVs on the road. The CAFE standard, which offers credits to EV manufacturers, and decreasing battery prices help drive this increase in EV sales.

U.S. passenger vehicle-miles traveled increases steadily with population and income throughout the projection period, growing between 12% and 33% across all cases. In the Reference case, 23% more vehicle miles are traveled in 2050 than in 2022 (Figure 11). We project LDV energy consumption to fall through the early 2040s as a result of fuel economy improvements but then to rise due to increasing vehicle miles traveled for the remainder of the projection period (Figure 11).

We project LDV energy consumption to fall through the early 2040s as a result of fuel economy improvements but then to rise due to increasing vehicle miles traveled for the remainder of the projection period.

Figure 11.



Data source: U.S. Energy Information Administration, *Annual Energy Outlook 2023* (AEO2023)
Note: Shaded regions represent maximum and minimum values for each projection year across the AEO2023 Reference case and side cases. Right hand chart includes delivered energy, specifically energy consumed on board the vehicle; it does not include losses between car and charger.

Technical Note 3: Electric vehicle (EV) deployments

Projected declines in EV vehicle component costs, along with federal and state policies that provide incentives for EV purchases or require minimum sales, drive EV sales growth in our model projection. We derive cost declines for EV powertrain components and batteries by using learning rates based on cumulative production, resulting in increased projected driving range and a continual decline in EV prices over the projection period. We derive EV sales shares at the census-division level using a consumer choice model based on preference data and calibrated to align with historical sales data. In addition to other vehicle attributes, our consumer choice model captures the impact of vehicle price, cost to drive, access to refueling, and the effect that availability of vehicle propulsion options has on consumer purchase decisions. All of these factors contribute to the attractiveness of EVs to consumers and increases EV deployment relative to internal combustion engine vehicles. We assume Corporate Average Fuel Economy standards result in technological improvements and increased EV adoption because of declining cost and favorable fuel economy credits. The clean vehicle credit in the 2022 Inflation Reduction Act, which varies from $3,750 to $7,500 per vehicle, drives additional EV sales. Our Transportation Demand Model also ensures legally enforceable state minimum EV sales requirements are met in each census division and EV prices adjust to account for tax credits at purchase. In addition, other factors, such as a rising number of charging stations, affect our EV sales projections. We base our model projections on these data, assumptions, and current enforceable laws and regulations and do not assume that state and federal stated goals for EV sales are met. These details are available in our model documentation.

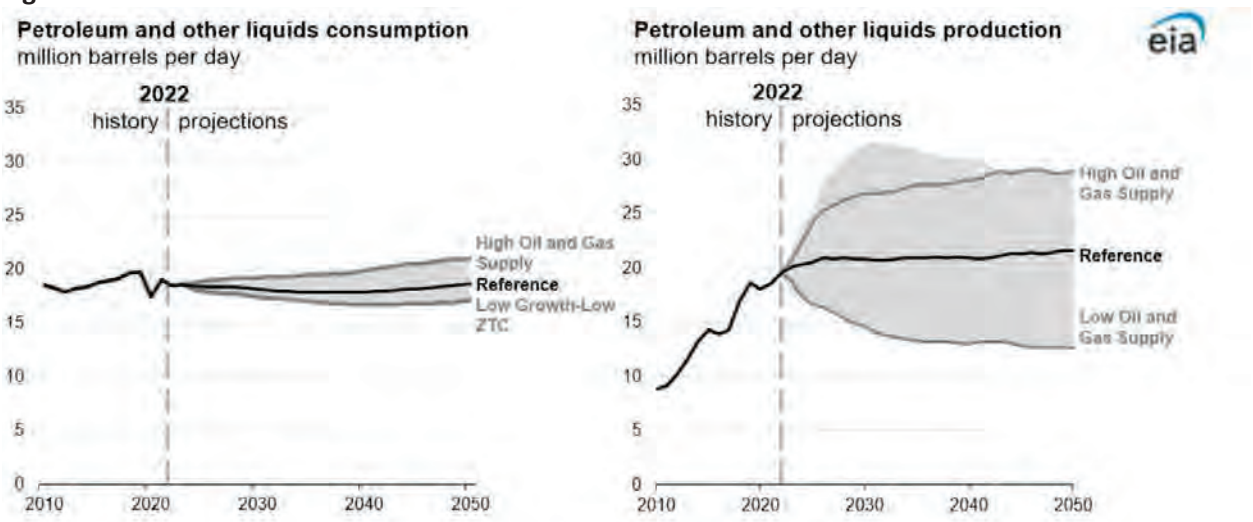
3

International Demand for Petroleum and Natural Gas Drives U.S. Production, While Domestic Consumption Either Grows Slowly or Decreases

Although U.S. consumption of petroleum products remains relatively flat, international demand supports U.S. exports of petroleum and other liquids (Figure 12). The dynamics of international trade affect domestic production of natural gas and of petroleum and other liquids.

International demand drives petroleum and other liquids production

Figure 12.



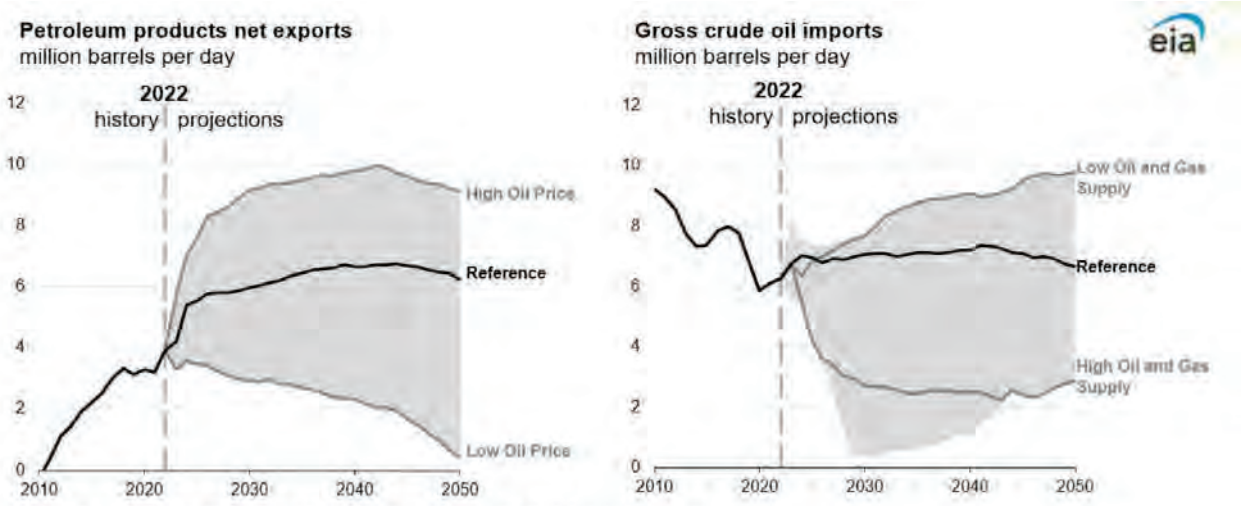
Data source: U.S. Energy Information Administration, *Annual Energy Outlook 2023* (AEO2023)
Note: Biofuels are not included in *petroleum and other liquids* production or consumption. Shaded regions represent maximum and minimum values for each projection year across the AEO2023 Reference case and side cases. ZTC=Zero-Carbon Technology Cost

In all cases, we project that the United States will remain a net exporter of petroleum products through 2050.

Although domestic consumption of petroleum and other liquids does not increase through 2040 across most cases, U.S. petroleum and other liquids production remains high because of increased exports of finished products in response to growing international demand (Figure 13). In all cases, we project that the United States will remain a net exporter of petroleum products through 2050. In the High Oil Price case, increased production leads to the most exports among all cases over the projection period. The Low Oil Price case shows the opposite: decreased production along with the lowest export volumes.

Crude oil imports remain relatively flat in the Reference case but vary widely in the side cases (Figure 13); the Low Oil and Gas Supply case leads to the greatest level of imports throughout the forecast period while the High Oil and Gas Supply case leads to the lowest imports (Figure 13). This wide range in imports is mainly due to the tradeoff between domestic production and imports. In the Low Oil and Gas Supply case, crude oil imports increase significantly, partially to account for falling domestic crude oil production. The opposite occurs in the High Oil and Gas Supply case, in which increased domestic production balances lower crude oil imports.

Figure 13.



Data source: U.S. Energy Information Administration, *Annual Energy Outlook 2023* (AEO2023)
Note: Shaded regions represent maximum and minimum values for each projection year across the AEO2023 Reference case and side cases.

In the High Oil Price case, U.S. crude oil imports initially decline but begin to increase starting in 2030 because of changing trends in domestic crude oil production. In the early years, domestic crude oil production increases rapidly due to high prices. However, crude oil production begins to fall after 2030 because wells are drilled increasingly close to one another, resulting in well productivity declines. As wells are drilled closer together, they produce less crude oil and eventually become unprofitable, at which point new drilling stops. Crude oil imports decline early in the High Oil Price case as crude oil production increases; imports increase after 2030 as well productivity and crude oil production declines.

Because international demand for finished petroleum products keeps exports high, U.S. refinery runs remain strong as the U.S. refinery sector remains competitive in the global market through 2050. Refinery capacity remains relatively constant through 2050, and refinery capacity utilization remains high, at around 90% or higher, under favorable economic conditions.

Technical Note 4: Crude oil trade dynamics

Crude oil is a global commodity, and the United States participates in the global market as both an importer and exporter of crude oil and its associated products. Because of logistical, regulatory, and quality considerations, both exporting and importing petroleum often makes economic sense. For example, a refiner in the Gulf Coast may find it more profitable to export motor gasoline to Mexico rather than shipping it to the East Coast because cheaper gasoline imports from Europe may be available to the East Coast.

The chemical makeup of the imported or exported product also affects crude oil trade. The type of crude oil—light or heavy, low-sulfur (sweet) or high-sulfur (sour)—helps determine the processes that refine it into a petroleum product such as distillate fuel oil or propane. In short, the United States imports different types of crude oil to optimize production across its various refineries.

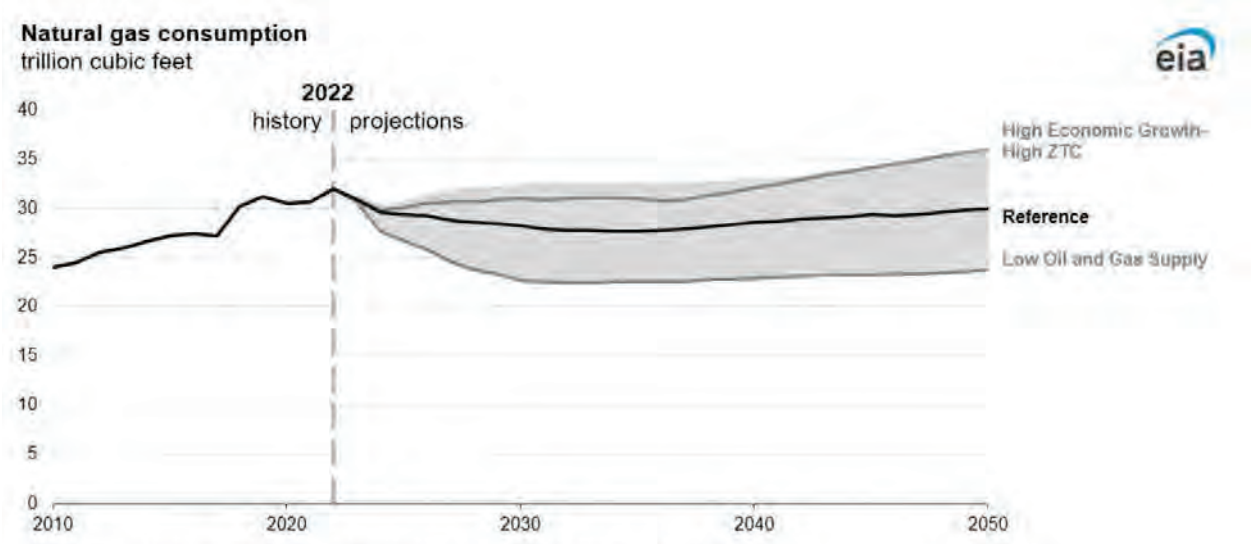
The World Oil Price path is an exogenous assumption to the model and affects domestic crude oil production and international trade. For each year of the projection period, NEMS computes the Brent crude oil price, provides a supply curve of world crude oil-like liquids, and provides supply curves for each foreign crude oil type considered. NEMS also provides, for each year of the projection period, exogenous supply and demand curves for U.S. import and export of petroleum products.

In response to Russia's full-scale invasion of Ukraine in early 2022, the United States banned petroleum imports from Russia. AEO2023 projections reflect this policy change. However, we assume that equivalent imports from other countries substitute for U.S. crude oil imports (especially unfinished oil imports) from Russia, minimizing effects on domestic markets.

Natural gas consumption in end-use sectors is variable

In the United States, electrification is displacing combustion fuels in the demand sectors. As electricity generation shifts to using more renewable and battery sources, domestic natural gas consumption for electricity generation is likely to decrease by 2050 relative to 2022, which contrasts with relatively stable growth over the past decade (Figure 14).

Figure 14.



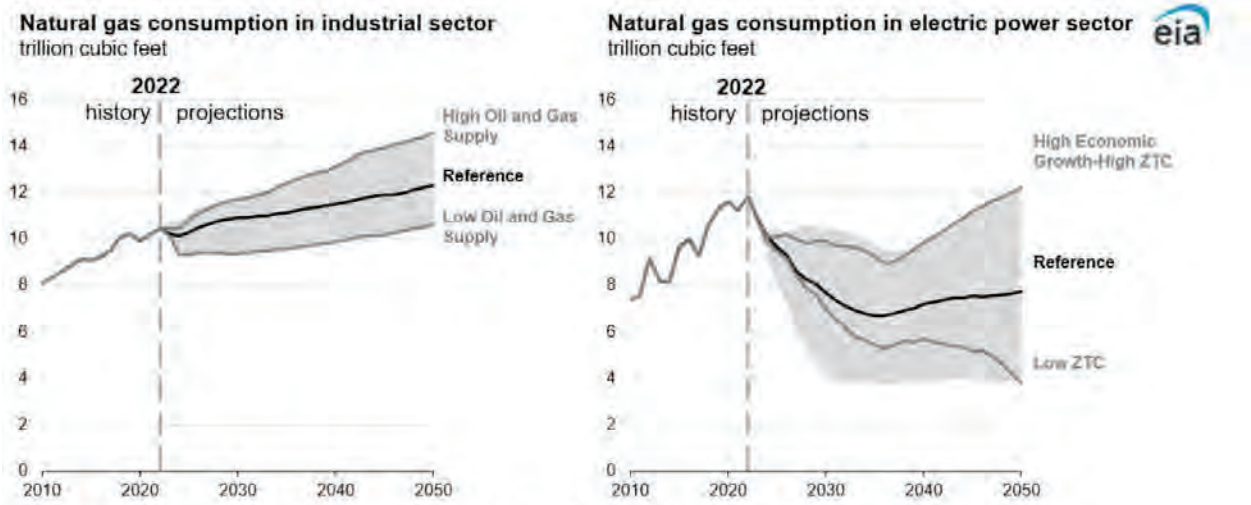
Data source: U.S. Energy Information Administration, *Annual Energy Outlook 2023* (AEO2023)
Note: Shaded regions represent maximum and minimum values for each projection year across the AEO2023 Reference case and side cases. ZTC=Zero-Carbon Technology Cost

More natural gas is consumed in the industrial or electric power sectors than in any other sectors of the U.S. economy. Projected consumption in both sectors is very sensitive to changes in our side case assumptions, particularly in the Oil and Gas Supply cases (Figure 15). These cases, which result in the most and the least natural gas consumption in the industrial sector, vary widely due to differences in resource extraction assumptions. By 2050, natural gas consumption in the industrial sector diverges from the Reference case by 14% in the Low Oil and Gas Supply case and 18% in the High Oil and Gas Supply case.

In the electric power sector, our projections for natural gas consumption generally fall but range widely, with consumption in 2050 diverging from the Reference case by over 50% in the bounding cases (Figure 15). Natural gas consumption remains below the peak in 2022, at nearly 12 trillion cubic feet, through 2050 across all side cases except the High Economic Growth and High ZTC case. In the Low ZTC case, lower costs for renewables makes natural gas less competitive, resulting in a larger decrease in natural gas consumption compared with the Reference case. In the High Economic Growth and High ZTC case, increased economic activity drives increased end-use demand, which results in more natural gas consumption. Higher costs for renewables make natural gas a more competitive option in that case, further increasing natural gas consumption in the electric power sector.

In the electric power sector, our projections for natural gas consumption generally fall but range widely, with consumption in 2050 diverging from the Reference case by over 50% in the bounding cases.

Figure 15.

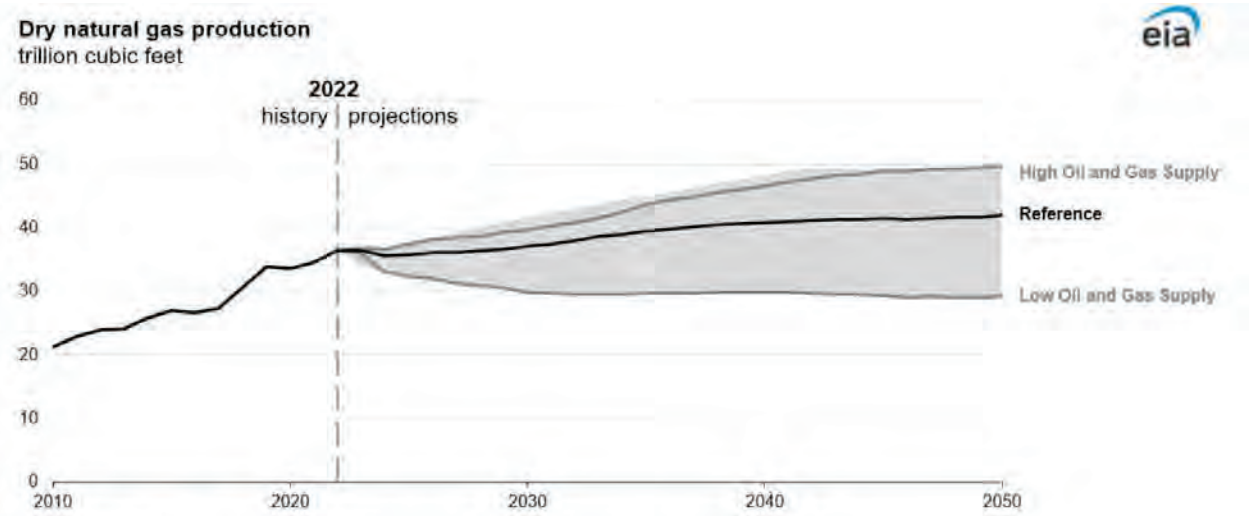


Data source: U.S. Energy Information Administration, *Annual Energy Outlook 2023* (AEO2023)
Note: Shaded regions represent maximum and minimum values for each projection year across the AEO2023 Reference case and side cases. ZTC=Zero-Carbon Technology Cost.

Under favorable economic, supply, and oil price assumptions, U.S. natural gas production continues to grow

In the Reference case, U.S. natural gas production increases by 15% from 2022 to 2050, and consumption decreases by 6% from its peak in 2022 (Figure 16). Across all cases, domestic production outpaces domestic consumption; production increases across all side cases except in the Low Oil and Gas Supply case and the Low Oil Price case.

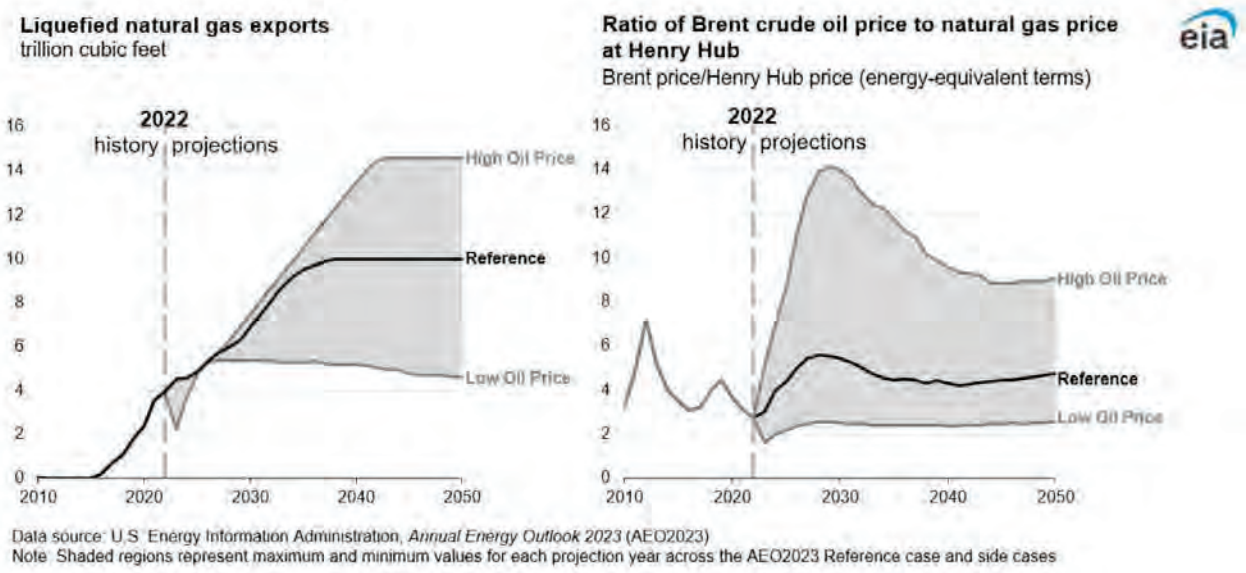
Figure 16.



Data source: U.S. Energy Information Administration, *Annual Energy Outlook 2023* (AEO2023)
Note: Shaded regions represent maximum and minimum values for each projection year across the AEO2023 Reference case and side cases.

In some cases, exports to satisfy growing international demand for natural gas encourage growth in domestic natural gas production. A significant portion of production growth is due to liquefied natural gas (LNG) export demand, which drives the overall increase in natural gas exports (Figure 17).

Figure 17.

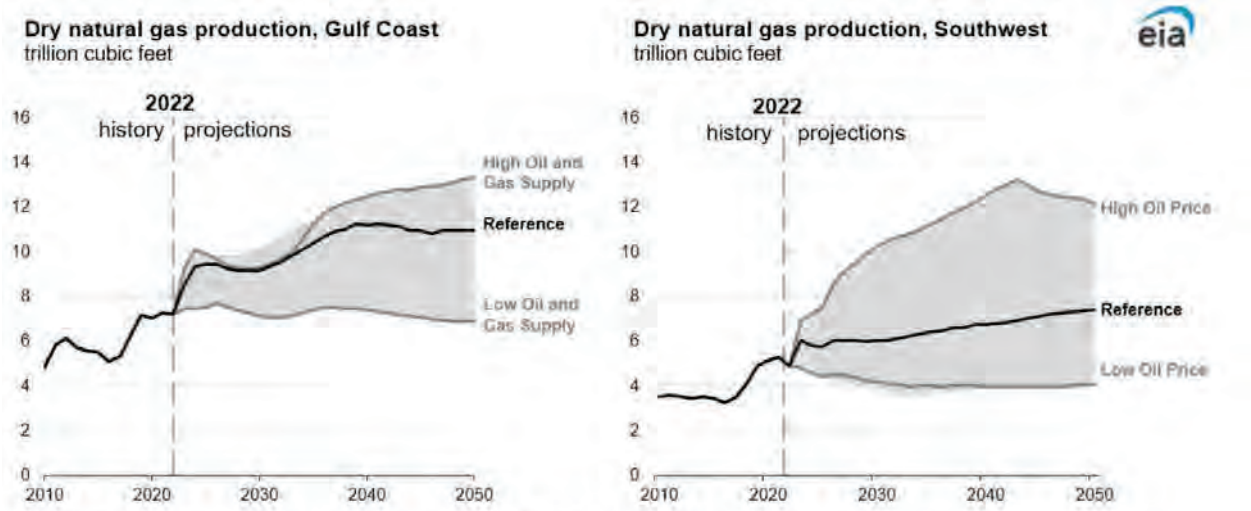


Data source: U.S. Energy Information Administration, *Annual Energy Outlook 2023* (AEO2023)
Note: Shaded regions represent maximum and minimum values for each projection year across the AEO2023 Reference case and side cases

Historically, most LNG was traded under long-term, oil price-linked contracts because a global LNG price benchmark did not exist and because oil could substitute for natural gas in industry and for power generation, which was especially common in Asia. These factors supported highly correlated international natural gas and oil prices. With growth in more market based-LNG, the strength of the relationship between international natural gas prices and oil prices has eroded. However, we expect that future oil prices will still affect additional LNG export capacity and overall export levels. When the Brent price is high relative to the U.S. Henry Hub price, like in the High Oil Price case, building more LNG export capacity and exporting LNG are more economical than when the Brent price is lower relative to Henry Hub. In the Low Oil Price case, the Brent price is lower, and the Henry Hub price is higher, which curtails LNG exports to below current volumes in the near term and causes LNG capacity to be underutilized near the end of the projection period.

International demand for LNG exports results in rising natural gas production, favoring areas that have better access to terminals. In AEO2023, dry natural gas production grows in the Southwest, which has easy pipeline transport to the Gulf Coast, where LNG is exported. Production in the Gulf Coast also generally increases across the projection period, due to its proximity to LNG export terminals, in all cases except the Low Oil and Gas Supply case (Figure 18).

Figure 18.



Data source: U.S. Energy Information Administration, *Annual Energy Outlook 2023* (AEO2023)
Note: Shaded regions represent maximum and minimum values for each projection year across the AEO2023 Reference case and side cases.

Associated natural gas is a major source of natural gas production

In AEO2023, shale gas and associated dissolved natural gas from oil formations are the primary sources of long-term growth of domestic natural gas production through 2050. Increased production wells in the Permian Basin (Southwest region) is the primary driver behind associated dissolved natural gas growth. Increases in shale gas production mainly comes from the Texas-Louisiana Salt Basin (Gulf Coast Region) and the Appalachian Basin (East Region).

In the High Oil Price case and High Oil and Gas Supply case, oil production growth leads to increased associated dissolved natural gas and shale production (Figure 19). The opposite occurs in the Low Oil Price case and Low Oil and Gas Supply case.

Figure 19.

Discussion

Sources of uncertainty

Energy market projections are inherently uncertain because many of the events that will shape future energy markets—including developments in policy, technology, demographics, and resources—are not known. To illustrate the role of uncertainty, AEO2023 includes a baseline Reference case and several side cases that systematically vary important underlying assumptions. Many sources of uncertainty exist beyond the ones we test explicitly, including new policy, unforeseen geopolitical events, and rapid technology innovation, particularly around technologies that are in the earliest stages of development.

Policy

Our key assumptions in the Reference case provide a baseline for exploring long-term trends, based on current laws and regulations as of November 2022. These assumptions include provisions of the IRA; however, we were unable to model all provisions, as indicated in the appendix. Any future legislation would further affect technology trajectories and emissions pathways. We publish the current laws and regulations considered in the AEO2023 on the AEO website.

Geopolitical events

We account for current events that affect the energy markets with the information available at the time we prepare this publication. However, we cannot foresee future events such as wars, supply disruptions, pandemics, or other such issues that could having lasting impacts on the U.S. energy system.

Rapid technology innovation

The technologies considered in the AEO2023 include only well-documented trends in energy innovation. Additional breakthroughs not considered here might occur. Examples of the kind of breakthrough we don't consider include early-developmental-stage technologies such as hydrogen, enhanced geothermal, and fusion, as well as other technologies currently unknown or not well characterized.

Quantifying uncertainty using statistical errors from past projections

The sources of uncertainty described above, among others, result in observed values that are different than our projected values. To explore some key uncertainties, we include a number of side cases that incorporate plausible alternatives to assumptions in the Reference case. We can also develop a sense of future uncertainty by calculating the differences (or *statistical errors*[3]) between realized values and our Reference case projections from previous AEO editions. Given constantly evolving modeling techniques and a dynamic energy landscape replete with non-linear relationships, statistical errors from past projections will not necessarily provide an accurate basis for estimating uncertainty in current projections. Nevertheless, using statistical errors from past projections implicitly captures real world factors that were difficult to anticipate in past AEO editions.

[3] Here we use "error" in a statistical sense to denote the difference between projected and real-world values. Because our Reference case is not intended to serve as a forecast, deviations from reality should not be interpreted as errors.

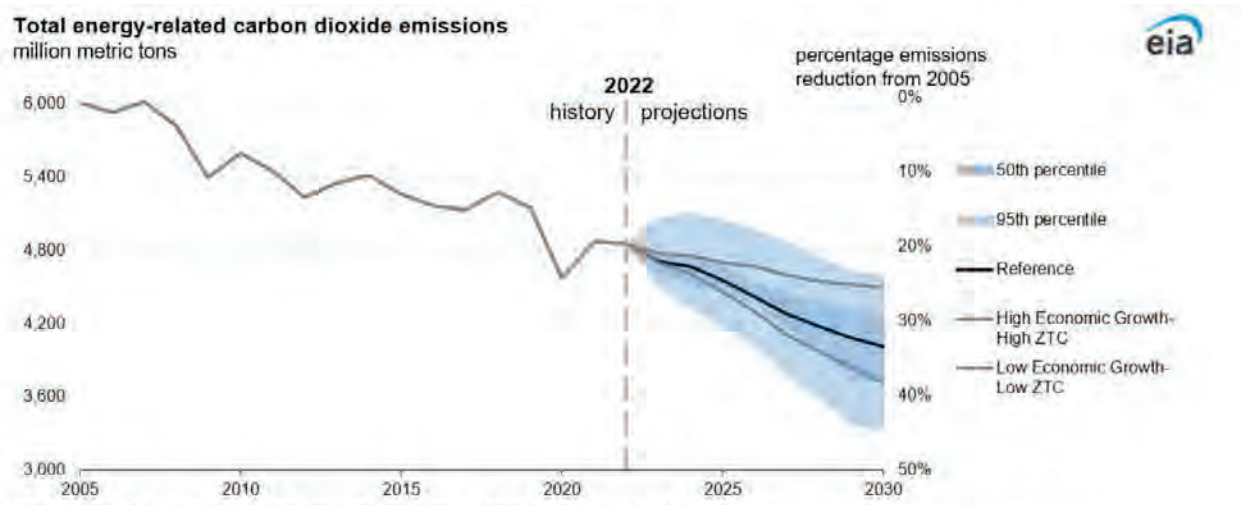
In the 2022 edition of our *Annual Energy Outlook Retrospective Review* (AEO Retrospective), we quantified the statistical errors associated with past Reference cases over several key output metrics and projection timeframes, ranging from 1 to 15 years. Building on the work from the AEO Retrospective and following the NP2 method (a methodology detailed in a 2017 paper by researchers Lynn H. Kaack, Jay Apt, M. Granger Morgan, and Patrick McSharry), we can use statistical errors from past projections to develop a *cone of uncertainty*—similar to those used by the National Oceanic and Atmospheric Administration (NOAA) to produce hurricane path cones—which we can apply to the AEO2023 projections. Employing statistical errors from past projections along with side case projections can help us better assess the possible range of uncertainty in the AEO results.

For example, we can use the statistical errors from past AEO Reference case projections to project future uncertainty in U.S. energy-related CO_2 emissions produced by the AEO2023 Reference case until 2030 (Figure 20). Figure 20 includes two uncertainty cones for total energy-related CO_2 emissions, representing statistical error estimations where the narrower and wider cones capture 50% and 95% of the historical projection errors around the Reference case, respectively. Our Reference case projection has a wide range of future uncertainty in total energy-related CO_2 emissions, which in some instances goes beyond the bounds explored in our most extreme side cases.

Because the AEO Reference case includes only laws and regulations current at the time it is developed, past Reference case projections of total energy-related CO_2 emissions tend to be higher than actual because they don't include subsequent public policies that further reduce emissions. The uncertainty cones capture these over-projected statistical errors in total energy-related CO_2 emissions and show the possibility for lower emissions compared with our most extreme side case with the lowest total energy-related CO_2 emissions. We see the possibility of total energy-related CO_2 emissions increasing in the short term before falling in the long term, both in our High Economic Growth and High Zero-Carbon Technology Cost case and the upper 95th percentile of statistical errors from past projections.

We will continue to explore our use of this technique, as well as other ways to quantify uncertainty, in future analyses.

Figure 20.



Data source: U.S. Energy Information Administration, *Annual Energy Outlook 2023* (AEO2023)
Note: Cone of uncertainty associated with total energy-related CO_2 emissions using empirical projection intervals. Historical values and AEO2023 Reference case are displayed as solid black line. The projection error density forecast by blue shaded areas. The different shades correspond to the 50th and 95th percentiles. AEO2023 envelope side cases are in solid grey lines. ZTC=Zero-Carbon Technology Cost.

Appendix

Case Descriptions

AEO2023 Reference Case

In the AEO2023 Reference case, we assess how U.S. and world energy markets would operate through 2050 under current laws and regulations as of November 2022 under evolutionary technological growth assumptions. Our key assumptions in the Reference case provide a baseline, or experimental control, for exploring long-term trends. An overview of the laws and regulations included in AEO2023 is available on the AEO website. This Appendix addresses the Inflation Reduction Act and how we incorporated it into the Reference case and side cases.

High and Low Oil Price cases

Global market balances, primarily international supply and demand factors, will drive future crude oil prices. To account for these factors, oil prices are an exogenous assumption in our analysis. In the AEO2023 High Oil Price case, the price of Brent crude oil, in 2022 dollars, reaches $190 per barrel (b) by 2050, compared with $101/b in the Reference case and $51/b in the Low Oil Price case.

High and Low Oil and Gas Supply cases

Compared with the Reference case, the High Oil and Gas Supply case assumes that the estimated ultimate recovery per well for tight oil, tight gas, or shale gas in the United States is 50% higher. Similarly, this case assumes that undiscovered resources in Alaska and the offshore Lower 48 states are 50% greater than assumed in the Reference case. Technological improvement rates that reduce costs and increase productivity of oil and natural gas production in the United States are also 50% higher than assumed in the Reference case. Conversely, the Low Oil and Gas Supply case assumes that the estimated ultimate recovery per well for tight oil, tight gas, or shale gas in the United States; the undiscovered resources in Alaska and the offshore Lower 48 states; and rates of technological improvement are all 50% lower than assumed in the Reference case.

High and Low Zero-Carbon Technology Cost cases

The High Zero-Carbon Technology Cost case and the Low Zero-Carbon Technology Cost case examine the sensitivities around capital costs for electricity-generating technologies that produce zero emissions, which include renewables, nuclear (a zero-carbon technology included in these cases for the first time in this AEO), and diurnal storage technologies. We assume capital costs decline over time from learning by doing as commercialization expands and construction and manufacturing experience accelerates. The High Zero-Carbon Technology Cost case assumes no cost reductions from learning by doing. The Low Zero-Carbon Technology Cost case assumes faster, exogenously determined technology cost declines through 2050, resulting in about a 40% cost reduction by 2050 compared with the Reference case for each zero-carbon technology. In addition, we assume fixed operating and maintenance costs will decline along with the capital cost from technology improvement. These cases replace the Low and High

Renewable Cost cases from prior AEOs and now reflect the zero-carbon technology suite, as represented in our models, which is targeted by incentives in the Inflation Reduction Act.

High and Low Economic Growth cases

The High Economic Growth case and Low Economic Growth case address the effects of economic assumptions on energy consumption modeled in the AEO2023. From 2022 to 2050, the High Economic Growth case assumes the compound annual growth rate for U.S. GDP is 2.3%, and the Low Economic Growth case assumes a 1.4% rate. By contrast, the Reference case assumes the U.S. GDP annual growth rate is 1.9% over the projection period.

Economic Growth and Zero-Carbon Technology Cost Combination cases

In addition to our eight standard core cases, we have added four combination cases for AEO2023. These cases simultaneously vary economic growth and zero-carbon technology cost assumptions. The four combinations are:

- High Economic Growth and High Zero-Carbon Technology Cost
- High Economic Growth and Low Zero-Carbon Technology Cost
- Low Economic Growth and High Zero-Carbon Technology Cost
- Low Economic Growth and Low Zero-Carbon Technology Cost

Inflation Reduction Act assumptions in the Reference case and core side cases

The Inflation Reduction Act (IRA), or Public Law 117-169, that took effect on August 16, 2022, includes energy- and climate-related provisions.[4] We reviewed the law for directives that would influence energy consumption, production, and trade in the U.S. economy as modeled in NEMS. We incorporated provisions of this law into the Reference case and side cases, unless otherwise noted. Case assumptions were frozen in mid-November 2022, and AEO2023 does not include regulatory guidance or provisions issued after that time.

This document summarizes the energy- and climate-related provisions from the IRA as incorporated into the AEO2023 Reference and side cases. This document does not cover details about provisions included in the Low and High Uptake cases, which vary the number of bonus tax credits and incentives applied to eligible technologies. Those case definitions and results are discussed in the *Issues in Focus: Inflation Reduction Act Cases in the AEO2023*. Further details about how we modeled the IRA provisions are also in the NEMS Assumptions documents. The No IRA case assumes the same economic outlook as the Reference case but excludes the IRA provisions.

All cases use the macroeconomic outlook from S&P Global IHS Markit as of September 2022.

Although all provisions of the IRA are current law, some are not explicitly included in the NEMS version used for AEO2023. We did not include these provisions for one of three reasons:

1. Guidance is not yet available on how federal agencies will implement some provisions, and without that guidance, we lack the details to analyze their effect. We will analyze these provisions in the future as we receive more clarity.
2. A number of provisions require significant modifications to NEMS that were not possible in this timeframe, and we will consider ways to include these provisions in a future outlook to the extent possible.
3. Other provisions do not align with our analytic resolution. For instance, NEMS does not model individual electricity transmission lines, and therefore, we do not model the IRA-driven impacts related to the planning or construction of transmission lines through financial appropriations in the form of assistance or loans.

Some provisions are not listed in the following table because they are not relevant to this analysis or had minor impacts to the energy system. In the *Excluded* column of Table 1, the numbers in bold correspond to one or more of the reasons listed above. The use of -- indicates that a certain column is not applicable.

[4] Inflation Reduction Act, Public Law 117-169, (August 16, 2022), https://www.congress.gov/bill/117th-congress/house-bill/5376.

Table 1. Included and excluded Inflation Reduction Act (IRA) provisions in NEMS

Section	Provision	Description	Included	Excluded
Title I Committee on Finance				
13101 and 13102	Extension and Modification of Credits Produced from Certain Renewable Resources Extension and Modification of Energy Tax Credit	These provisions include extensions of the Internal Revenue Service Code Section 45[i] production tax credit (PTC) and Section 48[ii] investment tax credit (ITC) for certain energy properties.	We assume the tax credit extensions and modified tax credit values. We also assume the prevailing wage and apprenticeship requirements are met by the most eligible technologies, except certain combined-heat-and-power systems, and the domestic content requirements are met by certain technologies.	We exclude certain technologies such as small-scale energy storage (called behind-the-meter storage). Further details about the technologies we model are in the NEMS Assumptions documents. We exclude the *energy communities* bonus credit. **(1,2,3)**
13103	Increase in Energy Credit for Solar and Wind Facilities Placed in Service in Connection with Low-Income Communities	This provision allows qualified solar and wind projects located in low-income communities to qualify for *environmental justice solar and wind capacity* credits.	--	**(1,3)**
13104	Extension and Modification of Credit for Carbon Oxide Sequestration	This provision extends the carbon oxide capture credit under IRS section 45Q.[iii]	We assume the tax credit extensions and modified tax credit values. We also assume the prevailing wage and apprenticeship requirements are met.	We exclude the new tax credit for direct air capture (DAC). **(2)**

Section	Provision	Description	Included	Excluded
13105	Zero-Emission Nuclear Power Production Credit	This provision creates a production credit for qualified nuclear power generation.	We assume the prevailing wage requirements are met.	--
13201	Extension of Incentives For Biodiesel, Renewable Diesel and Alternative Fuels	This provision extends the biodiesel and renewable diesel credit and an alternative fuel credit.	We extended the existing biomass-based diesel credit through 2027.	--
13202	Extension of Second Generation Biofuel Incentives	This provision extends a tax credit for second-generation biofuel production.	We extended the credit through 2027.	--
13203	Sustainable Aviation Fuel Credit	This provision creates a sustainable aviation fuel credit equal to $1.25 per gallon.	We implemented a simplified version of this credit that extends the credit through 2027	We did not assume the supplementary amount when the fuel meets certain lifecycle greenhouse gas (GHG) requirements. **(2)**
13204	Clean Hydrogen	This provision creates a new tax credit for the qualified production of clean hydrogen.	--	**(2)**
13301	Extension, Increase, and Modifications of Nonbusiness Energy Property Credit	This provision extends tax credits under IRS Section 25C[iv] for home energy efficiency improvements and modifies the tax credit for qualified energy efficiency improvements.	We assume the tax credit extensions and modified tax credit values through 2032.	We do not explicitly model service panel replacement, wiring upgrades, or home energy audits. **(3)**
13302	Residential Clean Energy Credit	This provision extends the credit under IRS Section 25D[v] for the cost of qualified residential energy efficiency expenditures and projects.	We assume the tax credit extensions and modified tax credit values, including phaseout, through 2034.	We do not explicitly model residential clean energy technologies such as residential battery storage. Further details about the

Section	Provision	Description	Included	Excluded
				technologies we model are in the NEMS Assumptions documents. **(2,3)**
13303	Energy Efficient Commercial Buildings Deduction	This provision amends IRS Section 179D[vi] and allows expenses associated with qualifying commercial building efficiency costs to be deductible expenses if they meet certain requirements.	--	**(1,3)**
13304	Extension, Increase, and Modifications of New Energy Efficient Home Credit	This provision extends Section 45L[vii] credits for new energy-efficient homes through December 31, 2032, and increases the credit if qualified projects meet prevailing wage and apprenticeship requirements.	We assume a $500–$2,500 tax credit for new properties meeting or exceeding ENERGY STAR specifications.	We do not explicitly model zero-energy ready homes ($5,000 credit), and we exclude the *energy communities* bonus credit. **(1,3)**
13401	Clean Vehicle Credit	This provision extends the Section 30D[viii] vehicle tax credit through December 31, 2032, and updates the credit value. This provision also contains vehicle assembly requirements, battery component requirements, vehicle price limits, and income limits for vehicle buyers.	We do not explicitly model this provision, but we assume the total number of vehicles that qualify for the clean vehicle tax credit based on an analysis of official U.S. government IRA expenditure estimates from the Congressional Budget Office.[ix]	--
13402	Credit for Previously-Owned Clean Vehicles	This section creates a new tax credit for used clean vehicles.	--	**(1,3)**

Section	Provision	Description	Included	Excluded
13403	Qualified Commercial Clean Vehicles	This provision provides a clean vehicle credit for vehicles not powered by internal combustion engines.	--	**(1,3)**
13404	Alternative Fuel Refueling Property Credit	This section extends and modifies a tax credit for qualified alternative-fuel refueling properties.	--	**(1,3)**
13501	Extension of the Advanced Energy Project Credit	This provision funds qualifying investments in advanced energy projects, such as facilities that manufacture electric vehicles.	--	**(1,3)**
13502	Advanced Manufacturing Production Credit	This provision provides production credits for domestic manufacturing of key components for clean energy technologies.	--	**(1,2)**
13701	Clean Electricity Production Credit	This provision creates a new production tax credit for qualified domestically produced electricity that does not emit GHG emissions.	We assume the prevailing wage and apprenticeship requirements and the domestic content requirements are met by certain technologies.	We exclude the bonus credits for qualified projects located in an *energy community*. **(1,2)**
13702	Clean Electricity Investment Credit	This provision creates a new investment tax credit for eligible clean energy technologies.	We assume the prevailing wage and apprenticeship requirements and the domestic content requirements are met by certain technologies.	We exclude the bonus credits for qualified projects located in an *energy community*. We do not model certain technologies, such as small-scale energy storage projects (called behind-the-meter storage). Further details

Section	Provision	Description	Included	Excluded
				about the technologies we model are in the NEMS Assumptions documents. **(1,2)**
13703	Cost Recovery for Qualified Facilities, Qualified Property, and Energy Storage Technology	The provision updates the definition of a *five-year property* to include facilities that qualify for the clean electricity production credit, property that qualifies for the clean energy investment tax credit, and any energy storage technology for accelerated cost recovery.	We assume the extension of the modified accelerated cost recovery system, or MACRS, for certain commercial end-use equipment and for applicable technologies in the electric power sector.	We do not explicitly model energy storage in the residential and commercial buildings sectors. Further details about the technologies we model are in the NEMS Assumptions documents. **(2,3)**
13704	Clean Fuel Production Tax Credit	This provision creates a tax credit for domestic clean fuel production, including a credit for sustainable aviation fuel, produced after December 1, 2024, and sold before December 31, 2027.	We implemented a simplified version of this credit for certain qualified fuels.	We did not model the credit values based on the lifecycle carbon emissions or emissions factor associated with qualified fuels. **(2,3)**
Part 8 13801–13802	Credit Monetization and Appropriations	These sections include provisions[x] that allow a taxpayer to transfer eligible credits to another taxpayer.	--	**(3)**
Title II Committee on Agriculture, Nutrition, and Forestry				
20001– 23005	Subtitles A–D	These sections fund the U.S. Department Forestry and U.S. Department of Agriculture for climate mitigation and restoration projects. Section 22003 focuses on	--	**(1,3)**

Section	Provision	Description	Included	Excluded
		biofuel infrastructure and agriculture product market expansion.		
Title III Committee on Banking, Housing, and Urban Affairs				
30001	Enhanced Use of Defense Production Act of 1950	This provision funds the acceleration of domestic production of clean energy technologies.	--	**(1,3)**
30002	Improving Energy Efficiency or Water Efficiency or Climate Resilience of Affordable Housing	This section funds projects that improve energy efficiency, water efficiency, or climate resilience for eligible properties.	--	**(1,3)**
Title IV Committee on Commerce, Science, and Transportation				
40007	Alternative Fuel and Low-Emission Aviation Technology Program	This section funds grants issued by the U.S. Department of Transportation for projects that produce, transport, blend, or store sustainable aviation fuel or that develop, demonstrate, or apply low-emission aviation technologies.	--	**(1)**
Title V Committee on Energy and Natural Resources				
50121	Home Energy Performance-Based, Whole-House Rebates	This section funds DOE's grants to state energy offices for rebates called Home Owner Managing Energy Savings, or HOMES.	--	**(1)**
50122	High-Efficiency Electric Home Rebate Program	This section funds DOE's financial support for state energy offices' and	--	**(1)**

Section	Provision	Description	Included	Excluded
		tribal governments' high-efficiency electric home rebate programs.		
50123	State-Based Home Energy Efficiency Contractor Training Grants	This section funds education and training for energy efficiency contractors.	--	**(3)**
50131	Assistance for Latest and Zero Building Energy Code Adoption	This section pays states and local governments to adopt the latest residential and commercial building energy codes and adopt residential and commercial building energy codes that exceed specific industry standards.	--	**(1)**
50141	Funding for DOE Loan Programs Office	This section raises the loan guarantee commitment authority to $40 billion for the DOE Title XVII Innovative Technology Loan Guarantee Program.	--	**(1)**
50142	Advanced Technology Vehicle Manufacturing	This section funds DOE's direct loans for establishing or expanding domestic manufacturing facilities for low- or no-emitting vehicles.	--	**(1)**
50143	Domestic Manufacturing Conversion Grants	This section provides grants for domestic production of electric vehicles and hydrogen fuel cell vehicles.	--	**(1)**

Section	Provision	Description	Included	Excluded
50144	Energy Infrastructure Reinvestment Financing	This section provides additional loan guarantee authority under the Energy Policy Act of 2005 for energy infrastructure that reduces air pollution.	--	**(1)**
50145	Tribal Energy Loan Guarantee Program	This provision funds the DOE's Tribal Loan Guarantee Program.	--	**(1,3)**
Part 5 50151–50153	Electric Transmission	These provisions fund DOE programs that facilitate certain transmission lines or transmission siting and planning.	--	**(1,3)**
50161	Advanced Industrial Facilities Deployment Program	This section makes about $5.8 billion available to DOE's Office of Clean Energy Demonstrations for advanced industrial technologies.	--	**(1,3)**
Part 7 50171–50173	Other Energy Matters	These sections fund the DOE laboratory infrastructure and the fabrication and enrichment facilities for special nuclear material.	--	**(1)**
50251	Leasing on the Outer Continental Shelf	This provision authorizes the U.S. Department of Interior (DOI) to conduct wind lease sales in the Outer Continental Shelf and in areas within an exclusive economic zone.	--	**(1,3)**
50261	Offshore Oil and Gas Royalty Rate	This provision increases the minimum royalty rate for new offshore fossil fuel leases.	We assume the updates to the minimum royalty rates.	--

Section	Provision	Description	Included	Excluded
50262	Mineral Leasing Act Modernization	This provision updates the onshore oil and natural gas royalty rates.	We assume the updates to the onshore oil and natural gas production royalty rates.	We exclude the adjustments to federal leases. **(3)**
50263	Royalties on All Extracted Methane	This provision modifies the royalties paid for natural gas produced on federal land and on the Outer Continental Shelf, including natural gas lost through upstream equipment.	--	**(3)**
50264	Lease Sales Under the 2017–2022 Outer Continental Shelf Leasing Program	This provision requires the completion of the 2017–2022 Outer Continental Shelf leasing program.	We assume the Outer Continental Shelf Leasing Program is completed.	--
50265	Ensuring Energy Security	This provision requires the DOI to conduct oil and natural gas lease sales annually for 10 years prior to issuing leases or rights-of-way for any new solar or wind energy projects.	--	**(3)**
Title VI Committee on Environment and Public Works				
60101	Clean Heavy-Duty Vehicles	This provision funds communities to help them replace eligible vehicles with zero-emission vehicles.	--	**(1,3)**
60103	Greenhouse Gas Reduction Fund	This section funds deployment of zero-emission technologies in low-	--	**(1,3)**

Section	Provision	Description	Included	Excluded
		income and disadvantaged communities.		
60104	Diesel Emissions Reductions	This section provides funding to identify and reduce diesel emissions from *goods movement facilities*.	--	**(1,3)**
60113	Methane Emissions Reduction Program	This section creates a methane emissions charge for qualified petroleum and natural gas systems.	--	**(1,3)**
60114	Climate Pollution Reduction Grants	This section funds the EPA's GHG air pollution implementation grants and GHG air pollution planning and implementation	--	**(1,3)**
Subtitle E 60501–60506	Transportation and Infrastructure	These sections include assistance for using low-carbon materials for constructing or altering federal buildings; for low-carbon transportation materials grants; and for a neighborhood access and equity grant program.	--	**(3)**
Title VII Committee on Homeland Security and Governmental Affairs				
70006	FEMA Building Materials Program	This section funds the Federal Emergency Management Agency's (FEMA) costs for low-carbon materials and incentives for net-zero energy projects.	--	**(3)**
Title VIII Committee on Indian Affairs				

Section	Provision	Description	Included	Excluded
80001	Tribal Climate Resilience	This section adds funds to the Bureau of Indian Affairs (BIA) for tribal climate resilience and adaptation programs.	--	**(1,3)**

All-time Heat Records Set in June

The tables below contain preliminary results for the all-time warmest maximum temperatures that were broken during the warm-air outbreak in late June across the Northwest U.S. A station's record is compared with its history prior to 2021. For the most current records listings, please visit our U.S Records Summary page.

Highest Maximum Temperatures

STATION	DATE	RECORD	PREV. DATE	PREV. RECORD	NUMBER OF YEARS	DIFF

November U.S. Release: Mon, 8 Dec 2025, 11:00 AM EST

In alignment with evolving priorities, statutory mandates, and staffing changes, NOAA's National Centers for Environmental Information (NCEI) will no longer be updating the Billion Dollar Weather and Climate Disasters product. Additional details and the opportunity to submit comments are available at the NESDIS Notice of Changes website. All past reports, spanning 1980-2024, and their underlying data remain authoritative, archived, and available via the Billion-Dollar Disasters dataset landing page.

Menu

Overview

The U.S. sustained 403 weather and climate disasters from 1980–2024 where overall damages/costs reached or exceeded $1 billion (including CPI adjustment to 2024). **The total cost of these 403 events exceeds $2.915 trillion**.

View summary data in Summary Stats

2024 in Summary...

In 2024, there were 27 confirmed weather/climate disaster events with losses exceeding $1 billion each to affect United States. These events included 1 drought event, 1 flooding event, 17 severe storm events, 5 tropical cyclone events, 1 wildfire event, and 2 winter storm events. The 1980–2024 annual average is 9.0 events (CPI-adjusted); the annual average for the most recent 5 years (2020–2024) is 23.0 events (CPI-adjusted).

US Summary

Methodology and Data Sources

The National Centers for Environmental Information (NCEI) is the Nation's Scorekeeper in terms of addressing severe weather and climate events in their historical perspective. As part of its responsibility of monitoring and assessing the climate, NCEI tracked and evaluated climate events in the U.S. and globally from 1980-2024 that had great economic and societal impacts. NCEI is frequently called upon to provide summaries of global and U.S. temperature and precipitation trends, extremes, and comparisons in their historical perspective. The Billion-dollar disasters product is intended to show the impact of extreme weather and climate events on the economy in inflation adjusted dollars. We cannot control how others use the product, but we consistently note that disaster impacts are a combination of increased risk and the possible impacts of climate variability. For example, the increase in population and material wealth over the last several decades are an important cause for the rising costs. These trends are further complicated by the fact that much of the growth has taken place in vulnerable areas like coasts, the wildland-urban interface, and river floodplains. Vulnerability is especially high where building codes are insufficient for reducing damage from extreme events. This is part of the reason that the 2010s decade is far costlier than the 2000s, 1990s, or 1980s (all inflation adjusted to 2024 dollars). The methodology and data sets are documented in the peer reviewed literature and on the NCEI website. This product has no focus on climate event attribution. The number and cost of weather and climate disasters increased over time in the United States due to a combination of increased exposure (i.e., more assets at risk), vulnerability (i.e., how much damage a hazard of given intensity -wind speed, or flood depth, for example - causes at a location), and the fact that changes in the frequency of some types of extremes that lead to billion-dollar disasters (i.e., National Academies of Sciences, Engineering, and Medicine. Compounding Disasters in Gulf Coast Communities 2020-2021: Impacts, Findings, and Lessons (2024); Multi-Hazard Mitigation Council. Natural Hazard Mitigation Saves (2019)). We also know from research using other kinds of climate and weather data that climate variability can alter the frequency and intensity of certain types of extreme weather that lead to billion-dollar disasters - most notably the rise in vulnerability to drought, lengthening wildfire seasons in the Western states, and the potential for extremely heavy rainfall becoming more common in

the eastern states. Sea level rise can worsen hurricane storm surge flooding (Fifth U.S. National Climate Assessment (2023)).

In 2012, NCEI -- then known as National Climatic Data Center (NCDC) -- reviewed its methodology on how it develops Billion-dollar Disasters. NCEI held a workshop with economic experts (May, 2012) and worked with a consulting partner to examine possible inaccuracy and biases in the data sources and methodology used in developing the loss assessments (mid-2013). This ensured more consistency with the numbers NCEI provided on a yearly basis and gave more confidence in the year-to-year comparison of information. Another outcome of the workshop was a published peer-reviewed article "U.S. Billion-dollar Weather and Climate Disasters: Data Sources, Trends, Accuracy and Biases" (Smith and Katz, 2013). This research found the net effect of all biases appears to be an underestimation of average loss. In particular, it is shown that the factor approach can result in an underestimation of average loss of approximately 10–15%. This bias was corrected during a reanalysis of the loss data to reflect new loss totals.

It is also known that the uncertainty of loss estimates differs by disaster event type reflecting the quality and completeness of the data sources used in our loss estimation. In 2024, seven of the 27 separate billion-dollar events (i.e., five tropical cyclones, Upper Midwest Flooding and the multi-region drought and heatwave) had higher potential uncertainty values around the loss estimates due to less coverage of insured assets and data latency. The remaining 20 events (i.e., the winter storms and severe storm events producing tornado, hail and high wind damage) had lower potential uncertainty surrounding their estimate due to more complete insurance coverage and data availability. One approach to understanding cost uncertainty is discussed in the peer-reviewed article "Quantifying Uncertainty and Variable Sensitivity within the U.S. Billion-dollar Weather and Climate Disaster Cost Estimates" (Smith and Matthews, 2015).

In performing these disaster cost assessments these statistics were developed using the most comprehensive public and private sector sources and represent the estimated total costs of these events -- that is, the costs in terms of dollars that would not have been incurred had the event not taken place. More than one dozen public and private sector data sources help capture the total, direct costs (both insured and uninsured) of the weather and climate events. These costs include: physical damage to residential, commercial, and municipal buildings;

material assets (content) within buildings; time element losses such as business interruption or loss of living quarters; damage to vehicles and boats; public assets including roads, bridges, levees; electrical infrastructure and offshore energy platforms; agricultural assets including crops, livestock, and commercial timber; and wildfire suppression costs, among others. However, these disaster costs do not take into account losses to: natural capital or environmental degradation; mental or physical healthcare related costs, the value of a statistical life (VSL); or supply chain, contingent business interruption costs. Therefore, our estimates should be considered conservative with respect to what is truly lost, but cannot be completely measured due to a lack of consistently available data. Sources include the National Weather Service, the Federal Emergency Management Agency, U.S. Department of Agriculture, National Interagency Fire Center, U.S. Army Corps, individual state emergency management agencies, state and regional climate centers and insurance industry estimates, among others.

Links to key public sector data sources include FEMA Public Assistance, FEMA Individual Assistance, USDA Risk Management Agency Crop Indemnity, the USDA National Agricultural Statistics Service, the National Interagency Fire Center wildfire data, the National Flood Insurance Program claims data and the NOAA Storm Events Database. We also reference state insurance services such as CalFire and FLOIR, the U.S. Department of Defense disaster impact reports, the Federal Highway Administration damage reports and private property insurance data as part of this event analysis. We also examined insurance penetration rates for vehicle insurance, home insurance, flood insurance, crop insurance, and business coverage, to better understand insured and uninsured assets. As a point of comparison for robustness, NCEI assessed 28 separate billion-dollar disaster events in 2023. For 12 of these events, the NCEI damage estimates were smaller than those in other sources, such as Gallagher Re, AON, and Munich Re. For the other 16 events, the NCEI estimates fell within the range of the other reports such as Gallagher Re, Munich Re and AON 2023 disaster cost reports. Below is a breakdown of the public and private data sources referenced for the 2024 BDD events:

- the **17 severe storm events** (i.e., tornado, hail and high wind damage) reference data from:
  - NOAA Storm Events Database
  - National Flood Insurance Program claims data
  - FEMA Public Assistance
  - FEMA Individual Assistance

    - USDA Risk Management Agency Crop Indemnity
    - Property Claim Services
    - NOAA Storm Prediction Center
- the **2 winter storm events** reference data from:
    - NOAA Storm Events Database
    - National Flood Insurance Program claims data
    - FEMA Public Assistance
    - FEMA Individual Assistance
    - USDA Risk Management Agency Crop Indemnity
    - Property Claim Services
    - NOAA Storm Prediction Center
- the **five landfalling tropical cyclones** (Beryl, Debby, Francine, Helene and Milton) reference data from:
    - National Flood Insurance Program claims data
    - FEMA Public Assistance
    - FEMA Individual Assistance
    - NOAA Storm Events Database
    - Property Claim Services
    - Florida- Hurricane Milton Report on Agriculture Losses and Damages
    - Georgia Hurricane Helene Report on Economic losses to agriculture and forestry
    - North Carolina Helene Damage and Needs Assessment
- the **one New Mexico wildfire event** references data from:
    - FEMA Public Assistance
    - FEMA Individual Assistance
    - NOAA Storm Events Database
    - Property Claim Services
    - National Interagency Fire Center wildfire data
- the **one multi-regional drought and heat wave event** references data from:
    - USDA Risk Management Agency Crop Indemnity
    - USDA National Agricultural Statistics Service
    - National Integrated Drought Information System
    - USDA Secretarial Drought Designations
    - NOAA Storm Events Database
- the **one Upper Midwest flooding event** references data from:
    - National Flood Insurance Program claims data
    - FEMA Public Assistance
    - FEMA Individual Assistance
    - USDA Risk Management Agency Crop Indemnity
    - Property Claim Services
    - NOAA Storm Events Database

In the (Risk Mapping) section of our site, we also incorporate socioeconomic risk information from the Census American Community Surveys, the CDC Social Vulnerability Index, among

others that provide additional spatial context of hazard risk. For more information on risk, here is a presentation: Smith, A., 2022: 2021 U.S. Billion-dollar weather and climate disasters in historical context and new hazard and socioeconomic risk mapping. *April 2022, AMS Washington Forum*, Washington, DC.

For a more recent analysis, the following report offers a summary on the 2024 - An active year of U.S. billion-dollar weather and climate disasters.

Sixth Oregon Climate Assessment • January 2023
Executive Summary

Established and emerging understanding of observed and projected climate change in Oregon, and knowledge of the opportunities and risks that climate change poses to natural and human systems, may serve as a resource for actions such as equitable planning for mitigation of climate-related natural hazards and implementation of Oregon's 2021 Climate Change Adaptation Framework.

State of Climate Science

Temperature and precipitation. Oregon's annual average temperature increased by about 2.2°F per century since 1895. If greenhouse gas emissions continue at current levels, annual temperature in Oregon is projected to increase by 5°F by the 2050s and 8.2°F by the 2080s, with the greatest seasonal increases in summer. Precipitation is projected to increase during winter and decrease during summer, and the number and intensity of heavy winter precipitation events is projected to increase. Furthermore, the proportion of precipitation falling as rain rather than snow is expected to increase.

Arctic amplification. The contribution to severe weather in Oregon from disproportionately rapid warming in the Arctic (Arctic amplification) is uncertain, but is likely to be small. Some evidence suggests that midlatitude westerly winds are becoming wavier, allowing Arctic air to move south, and that loss of sea ice contributes to extreme winter precipitation. There is greater certainty that Arctic amplification is contributing to summer heat waves and hot, dry autumn weather.

Wind speeds. Wind patterns affect provision of electricity, transportation safety, and the spread of wildfires and pollutants. Mean wind speeds in Oregon are projected to decrease slightly, but extreme winter wind speeds may increase, especially in western Oregon. The frequency of strong easterly winds during summer and autumn, however, is projected to decrease slightly.

Current climate models. Most projections and analysis of future climate impacts still are based on the suite of global climate models from the fifth phase of the Coupled Model Intercomparison Project (CMIP5), and inferences based on these models remain valid and useful. Projections from models in the sixth phase (CMIP6), which reflect slightly different assumptions about emissions and improved understanding of the Earth system, are being evaluated and are becoming more accessible. As the CMIP6 models are refined, it may become worthwhile to update climate impacts assessments.

Climate-Related Natural Hazards

Extreme temperatures. The number of days that are warmer than 90°F and nights that are warmer than 65°F is increasing across Oregon, although extreme cold will still be possible in the coming decades. The Oregon Occupational Safety and Health Administration's new regulations on workplace heat exposure are based on thresholds of the heat index, which accounts for both air temperature and relative humidity. Warming over extensive areas, rather than increases in relative humidity, is the main driver of projected future increases in extreme heat index values in Oregon.

Drought. Over the past 20 years, the incidence, extent, and severity of drought in the Northwest increased. Low precipitation contributed to each drought, but temperature and snowpack also affected drought severity and impacts on agriculture, fisheries, and other sectors. As summers in Oregon continue to become warmer and drier and mountain snowpack decreases, the frequency of droughts, particularly snow droughts, is likely to increase.

Changes in the water cycle. Since the mid-late 1900s, 20 of Oregon's glaciers disappeared; none remain in the Wallowa Mountains. Glacier retreat accelerated during the past 30 years, in part due to human-caused climate change. Public participation in science, or community science, is a powerful means of filling data gaps and improving models of precipitation and water availability. The Community Collaborative Rain, Hail and Snow network (CoCoRaHS), Community Snow Observations (CSO), and Mountain Rain or Snow are compelling illustrations of public contributions to advancing climate science and its applications.

Wildfire. Total annual area burned in Oregon has increased during the last 35 years. As aridity increases,

the likelihood of extreme fire weather is increasing, and the area burned by lightning-caused fires in central Oregon is projected to increase. Following extensive wildfires in 2020, Oregonians took personal action and also assisted their communities in becoming more resilient. Survey results suggest relative high levels of support for climate mitigation and adaptation policies. Survey results also indicate widespread concerns about the impacts of smoke on personal health and highlight potential benefits of providing public smoke-related information and distributing protective equipment.

Coastal hazards. Relative sea-level rise rates are slower in Oregon than in many other coastal regions of the United States. Nevertheless, sea-level rise threatens buildings and offshore and coastal transportation networks. Additionally, local erosion and flooding along the Oregon coast tends to be high during major winter storm seasons. Adaptation measures being implemented or considered in coastal Oregon include hard structures, natural structures, and nonstructural policies and regulations, such as zoning restrictions and relocation of communities.

Adaptation Sectors

Economics. Understanding the magnitude of the economic effects of climate change is critical for evaluating trade-offs of mitigation and adaptation policies. Climate change may significantly affect the availability and use of water and irrigation in Oregon's agricultural sector and change the composition of Oregon's timberlands. Financial incentives could encourage forest landowners to sequester carbon in a cost-effective manner. Oregon's oceans and coasts can harness wave and offshore wind energy while generating sustained economic profit and job opportunities.

Natural systems. Responses of species and ecosystems to climate change and its interactions with other environmental changes are highly variable. Extreme heat can reduce tree growth and increase tree mortality, but trees' susceptibility is affected by topography, acclimation, water availability, and other factors. The near-term and long-term causes and consequences of foliage scorch and heat stress remain uncertain. Conservation priorities for cold-water fishes, such as salmon and native trout, have tended to discount low elevation, seasonally warm waters. However, water bodies that are too warm for salmonids during summer may be ideal during other seasons. Use of both seasonally cold and warm waters may support growth and persistence of Oregon's native fishes.

Built environment. Because land-use laws control development, they affect mitigation of and resilience to climate change. Recent reforms of Oregon's land-use and housing laws, and related regulations and policy, support reduction of greenhouse gas emissions, carbon sequestration, increasing community resilience, and more equitably distributing environmental benefits and burdens. Full integration of climate science and equity considerations into land-use plans and actions could enable Oregon to respond to climate change even more effectively.

Public health. The composition of wildfire smoke, and therefore its effects on public health, is highly variable. Exposure to wildfire smoke can lead to mortality and adverse respiratory and cardiovascular outcomes, and may affect pregnancy and birth outcomes. Increasing co-occurrence of wildfire smoke and surface ozone during summer can exacerbate negative health outcomes. Such exposures and associated hospital admissions also stress the capacity of the health care system.

Tribal resilience. Climate change places disproportionately high stresses on tribal communities, yet tribal adaptation to environmental and social change over millennia can enable unusually high resilience. Early career tribal citizens and their communities are responding to climate change via ceremony, political action, workforce development, environmental stewardship, and youth education and fellowship, thereby exercising self-determination and reclaiming sovereignty despite inequities.

Social systems. Visual artists are informing viewers about climate change, engaging audiences in conversation and information sharing, and catalyzing cultural evolution and transformation. In Oregon's agricultural sector, efforts to restore and sustainably manage degraded soils (practices often referenced as regenerative agriculture) are expanding. Under some circumstances, these practices also can increase short-term or long-term carbon sequestration.

The full Sixth Oregon Climate Assessment is available at blogs.oregonstate.edu/occri/oregon-climate-assessments.

Introduction

Consistent with its charge under Oregon House Bill 3543, the Oregon Climate Change Research Institute (OCCRI) conducts a biennial assessment of the state of climate change science, including biological, physical, and social science, as it relates to Oregon and the likely effects of climate change on Oregon. This sixth Oregon Climate Assessment builds on the previous assessments by continuing to evaluate past and projected future changes in Oregon's climate and water supply. Like the fifth assessment, it is structured with the goal of supporting the state's mitigation planning for natural hazards and implementation of the 2021 Oregon Climate Change Adaptation Framework.

The first section of this assessment, *State of Climate Science*, reflects OCCRI's sustained appraisal of observed trends and future projections of temperature, precipitation, and other major climate variables. Previous key messages about projected changes in Oregon's climate, such as warmer temperatures, drier summers, and an increase in the frequency, duration, and severity of drought, remain consistent. *State of Climate Science* summarizes emerging evidence related to potential effects of Arctic warming on the state's climate and explores the likelihood of changes in annual and seasonal wind speeds. The section also compares the latest two generations of global climate models, including their assumptions about emissions of greenhouse gases and their accessibility.

The second section of this Oregon Climate Assessment delves into the expected effects of climate change on natural hazards, including extreme temperatures, drought, changes in the water cycle, wildfire, and coastal flooding and erosion. Glaciers and perennial snowfields in Oregon retreated rapidly during the past 30 years, reducing storage of water that otherwise would be released during late summer. The section details the contributions of tens of thousands of weather stations to PRISM, the most widely used source of mapped climate data in the United States, and explains how public participation in science is becoming a powerful means of filling data gaps and improving models of precipitation and water availability. The increasing incidence and size of wildfires, whether ignited by human activity or lightning, are strongly linked to episodic drought and long-term increases in aridity. Two surveys conducted after extensive wildfires in 2020 suggest relatively high support among Oregonians for climate mitigation and adaptation policies. Survey results also indicate widespread concerns about the impacts of smoke on personal health and desires for greater access to smoke-related information and protective equipment.

The third section of this assessment addresses six sectors within which Oregon's 2021 Climate Change Adaptation Framework aggregates vulnerabilities and strategic responses: economy, natural world, built environment and infrastructure, public health, cultural heritage, and social systems. The section begins with a robust discussion of economic concepts and tools relevant to understanding climate challenges and opportunities, and highlights recent insights on the effects of climate change on economic activity in Oregon. Contributions related to natural systems underscore that observations of short-term ecological stress from climate extremes, such as foliage scorch, may or may not indicate long-term effects on mortality and nutrient and water cycles. Furthermore, new research questions whether salmonids in the Pacific Northwest may be more tolerant of high water temperatures than previously assumed. Next, the section investigates how reforms of Oregon's land-use and housing laws are supporting reduction of greenhouse gas emissions, increases in community resilience, and more-equitable distribution of environmental benefits and burdens.

Contributions related to public health in this assessment concentrate on the effects of wildfire smoke on human health and the health care system, and the fact that wildfire smoke and high

surface ozone levels increasingly tend to occur on the same days during summer. The health risks of exposure to fine particulate matter ($PM_{2.5}$) are fairly well understood, but many other uncertainties remain, such as the health effects of repeated smoke exposure and relations between health responses and the composition of smoke. Early career tribal citizens share the ways in which their communities are responding to climate change, exercising self-determination and reclaiming sovereignty despite historic and contemporary inequities. The section also explores how visual artists are communicating with the public about climate change, engaging audiences in conversation and encouraging creative problem-solving. Furthermore, the section examines regenerative agriculture, an increasingly popular set of practices that aims to restore and sustainably manage degraded soils.

Both the Climate Change Adaptation Framework and this assessment recognize that the myriad interactions and feedbacks among natural and human systems are complex and can be difficult to differentiate. An iterative assessment process can indicate the extent to which natural hazards may affect adaptation sectors, and inform selection of actions to maximize livelihoods and well-being.

Observed and Projected Trends in Climate

Oregon is becoming warmer and, despite relatively stable long-term precipitation totals, drier. Most projections and analysis of future climate still are based on the suite of global climate models from the fifth phase of the Coupled Model Intercomparison Project (CMIP5; Taylor et al. 2012), an initiative of the World Climate Research Programme that aims to increase understanding of past, present, and future natural and human-caused changes in climate. Later in this section, we describe major differences between models included in the fifth and sixth phases of CMIP. These differences notwithstanding, fundamental projections of future climate have not changed appreciably in the two years since publication of the fifth Oregon Climate Assessment (Dalton and Fleishman 2021).

	2050s		2080s	
	RCP 4.5	RCP 8.5	RCP 4.5	RCP 8.5
Annual	3.6 (1.8, 5.4)	5.0 (2.9, 6.9)	4.6 (2.1, 6.7)	8.2 (4.8, 10.7)
Winter	3.3 (1.6, 5.1)	4.5 (2.4, 6.5)	4.2 (1.8, 6.5)	7.4 (4.2, 9.8)
Spring	3.1 (1.4, 5.0)	4.1 (2.0, 5.9)	3.8 (1.7, 6.0)	6.7 (3.8, 9.2)
Summer	4.5 (2.2, 6.8)	6.3 (3.6, 8.9)	5.5 (2.7, 8.3)	10.2 (6.5, 13.9)
Autumn	3.7 (1.5, 5.4)	5.2 (2.6, 7.0)	4.7 (2.0, 6.9)	8.6 (4.6, 11.4)

Table 1. Projected future changes in mean annual and seasonal temperature (°F) in Oregon from the historical baseline (1970–1999) for the 2050s (2040–2069) and 2080s (2070–2099) under RCP 4.5 and RCP 8.5. Values are the average changes from 35 global climate models and the 5th to 95th percentile range across those models. Table reproduced from Dalton et al. 2017, with data for Oregon from Rupp et al. 2017. Winter includes December, January, and February; spring includes March, April, and May; summer includes June, July, and August; autumn includes September, October, and November.

Oregon's average annual temperature increased at a rate of 2.2°F (1.2°C) per century from 1895–2021 (NCEI 2022). Oregon's temperatures are projected to increase in all seasons, particularly summer. If current levels of emissions of greenhouse gases continue throughout the twenty-first century—a scenario referenced by CMIP5 as representative concentration pathway (RCP) 8.5—Oregon's annual average temperature is projected to increase by 5°F (2.8°C) by the 2050s and 8.2°F (4.6°C) by the 2080s (Table 1, Figure 1a). Summer temperatures are projected to increase by 6.3°F (3.7°C) by the 2050s and 10.2°F (5.7°C) by the 2080s under RCP 8.5 (Table 1). A second emissions scenario reflected in these projections, RCP 4.5, represents moderate reductions in global greenhouse gas emissions, with a peak near mid-century.

Oregon's annual precipitation varies considerably among years, and has not changed significantly over the observational record (increase of 0.30 in [0.76 cm] per century from 1895–2021) (NCEI 2022). Some statistically significant increases in heavy precipitation have been documented

	2050s		2080s

Annual	1.9 (-4.9, 9.0)	2.7 (-6.0, 11.4)	3.4 (-5.6, 15.3)	6.3 (-5.2, 19.9)
Winter	4.9 (-6.4, 16.5)	7.9 (-4.7, 24.3)	7.3 (-6.3, 19.9)	14.5 (-2.8, 37.1)
Spring	1.9 (-8.9,12.1)	2.7 (-7.2, 17.4)	3.4 (-7.7, 14.9)	3.6 (-9.4, 15.6)
Summer	-6.3 (-28.5, 16.1)	-8.7 (-33.1, 22.5)	-4.6 (-24.2, 22.3)	-7.7 (-38.7, 33.5)
Autumn	0.5 (-17.0, 14.4)	-0.8 (-17.1, 14.9)	1.5 (-15.0, 18.1)	1.9 (-17.2, 24.2)

Table 2. Projected future relative changes in total annual and seasonal precipitation (%) in Oregon from the historical baseline (1970–1999) for the 2050s (2040–2069) and 2080s (2070–2099) under RCP 4.5 and RCP 8.5. Values are the average changes from 35 global climate models and the 5th to 95th percentile range across those models. Table reproduced from Dalton et al. 2017, with data for Oregon from Rupp et al. 2017. Winter includes December, January, and February; spring includes March, April, and May; summer includes June, July, and August; autumn includes September, October, and November.

in Oregon (Dalton et al. 2017). However, the relatively small sample sizes and substantial variability in intense precipitation makes it difficult to detect long-term observed trends, and results often depend on location, time frame, and definition of heavy precipitation (Mote et al. 2013). Annual variability is expected to continue to dominate annual precipitation, with a slight increasing trend (Table 2, Figure 1b). Precipitation is expected to increase during the wet season and decrease during summer in the Columbia River basin (Rupp et al. 2017) and, on average, across Oregon as a whole (Table 2). In general, the intensity of heavy precipitation events during the twenty-first century in Oregon is projected to increase, although not uniformly across the state (Dalton et al. 2017, Cooley and Chang 2021).

Recent Advances in Climate Science

Whether disproportionate warming of the Arctic contributes to severe weather at lower latitudes has become a subject of considerable interest and inquiry in recent years. Accordingly, in the next contribution in this section, Rupp and Schmittner examine whether Arctic amplification may affect Oregon's climate.

This section then addresses potential future changes in local wind speeds across Oregon, a topic highly relevant to the risks of wildfires and wildfire smoke. Mean near-surface wind speeds are expected to decrease slightly, but the mean is not necessarily indicative of the maximum speed. Therefore, Rupp investigates drivers, projections, and uncertainties related to wind patterns across the state. Dalton and Bachelet conclude the section by discussing the newest generation of climate models and projections.

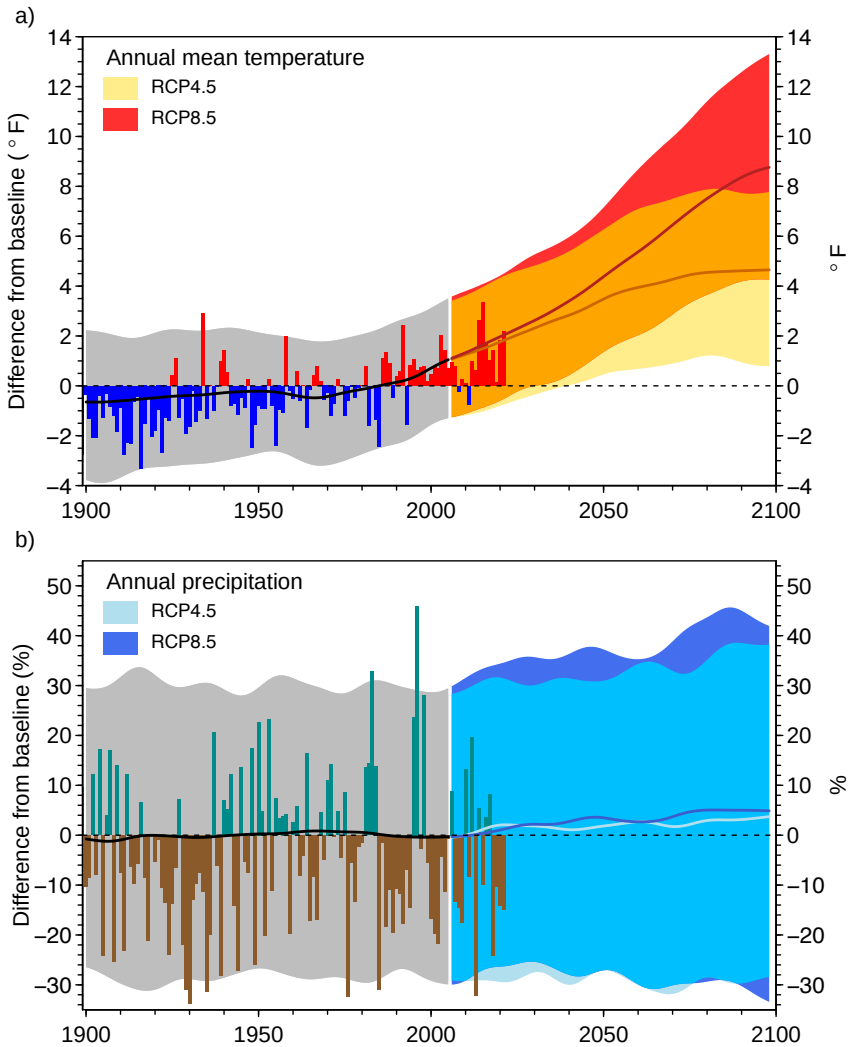

Figure 1. Observed, simulated, and projected changes in Oregon's mean annual (a) temperature and (b) precipitation relative to 1970–1999 (baseline) under RCP 4.5 and RCP 8.5. Colored bars are observed values from the National Centers for Environmental Information. The solid lines are the mean values of simulations from 35 climate models for the years 1900–2005, which were based on observed climate forcings (black line), and 2006–2099. Shading indicates the range in values from all models. The mean and range were smoothed to emphasize long-term variability.

Arctic Amplification

David E. Rupp and Andreas Schmittner

The Arctic is warming faster than other latitudes. This phenomenon, Arctic amplification, is largely a consequence, and a cause, of disappearing sea ice (Figure 1). As atmospheric concentrations of anthropogenic greenhouse gases and air temperatures increase, existing sea ice melts and formation of new sea ice is inhibited. This process leads to yet more warming because the exposed ocean reflects much less solar energy back to space than sea ice (e.g., Cohen et al. 2020). Another cause of Arctic amplification is the increase in equator-to-pole transport of water vapor that occurs as global temperatures increase. This additional water vapor brings more latent heat northward, and the heat is released when the water vapor condenses in the colder polar air (e.g., Schmittner and Stocker 1999, Siler et al. 2018).

Figure 1. Sea ice off Alaska. Source: U.S. Bureau of Ocean Energy Management.

There is no doubt that Arctic amplification is occurring. But whether it contributes to severe weather at latitudes below the Arctic (below about 66.5°N), particularly in the midlatitudes (roughly 30–60°N), is uncertain. Such a contribution first was hypothesized about a decade ago. Because Arctic amplification decreases the difference in temperature between the equator and pole, a difference that drives the midlatitude westerly winds, it was hypothesized that the intensity of the westerlies will weaken, leading circulation of the air around the planet at the midlatitudes to become slower and wavier or more sinuous. Such planetary waves in the flow of air around the Northern Hemisphere would allow warm air from the south to move northward and cold air from the north to move southward. Therefore, it was hypothesized that the incidence of more-extreme weather, including heat waves and cold snaps, will increase, especially when a large wave persists in place for a long period of time (Francis and Vavrus 2012). However, the decrease in the equator-to-pole temperature gradient may be limited to the lower troposphere, the lowest part of the atmospheric layer that is closest to Earth's surface. In contrast, a robust modeled response to increasing greenhouse gas concentrations is an equator-to-pole temperature gradient that increases in the upper troposphere because the upper troposphere over the tropics warms more quickly than the upper troposphere over the Arctic. Because any effect on planetary waves of the decrease in the temperature gradient in the lower troposphere may be negated by the increase in the temperature gradient in the upper troposphere, the intensity and waviness of the westerlies may not change much (Lee et al. 2021).

A second, more complex hypothesis about the effect of Arctic amplification involves the stratospheric polar vortex, a band of strong westerly winds circling the North Pole in winter at an altitude of 16–48 km (10–30 mi). These strong winds help to retain cold stratospheric air (air in the layer above the troposphere) within the vortex. If changes in sea ice and regional snow weaken or disrupt the stratospheric polar vortex, it is hypothesized that cold, high-altitude polar air then may move southward and downward (Cohen et al. 2020).

These hypotheses, particular the waviness hypothesis, have been mentioned frequently in media reports on the role of climate change in extreme weather events (Blackport and Screen 2020). However, there is disagreement in the scientific community over the effect of Arctic amplification on midlatitude extreme weather (Cohen et al. 2020). Much of the recent contention centers on claims that Arctic amplification has caused extreme cold snaps. For example, a study attributing the cold snap that affected Texas in February 2021 to Arctic amplification (Cohen et al. 2021) was quickly challenged because it inferred a connection that was not supported by the authors' own analysis and because the claim that Arctic amplification will increase frequency of extreme cold events is inconsistent with past studies (Blackport et al. 2022). Moreover, the occurrence of extreme cold events has decreased over most midlatitude terrestrial areas (van Oldenbourgh et al. 2019).

An observed correlation between the downward trend in sea ice cover and an increasingly wavy circulation prompted the waviness hypothesis (Francis and Vavrus 2012). Since the hypothesis was proposed, the large majority of observation-based studies have yielded evidence consistent with a connection between Arctic amplification and extreme winter weather (Cohen et al. 2020). Nevertheless, inferences of studies based on climate modeling have not converged, with slightly fewer indicating that Arctic amplification has a strong influence on extreme winter weather than that it does not (Cohen et al. 2020). Here, we review studies published since 2020, concluding with possible implications for climate and extreme weather in Oregon.

Several recent climate modeling studies reexamined the connection between Arctic amplification and atmospheric circulation during winter in the Northern Hemisphere. For example, Arctic sea-ice loss weakened westerlies from 50–65°N but strengthened those around 30–45°N, although the overall response of atmospheric circulation to Arctic amplification was weak (Smith et al. 2022). Another two studies suggested that in the North Pacific, Arctic amplification leads to strengthening and eastward extension of the North Pacific jet (30–50°N) during winter (Ronalds et al. 2020, Rodriquez Solis et al. 2022). A stronger and more eastward jet is associated with fewer anomalously cold temperatures over the United States and Canada and an increase in the frequency of the North America dipole pattern: relatively warm temperatures in the west and northwest and relatively cool temperatures in the east and southeast (Ronalds et al. 2020).

The results of the above studies were consistent with the hypothesized link between Arctic amplification and a weakening of the westerlies, at least north of ~45°N. However, Blackport and Screen (2020) did not find that reducing the difference between equatorial and polar temperature in a climate model induced more waviness, although mid- to high-latitude westerlies weakened. Furthermore, Blackport and Screen (2020) reported that the observed apparent trend toward wavier circulation has reversed in recent years even as Arctic amplification has continued. Dai and Deng (2021) found that although modeled Arctic amplification decreased the equator-to-pole temperature gradient, it also decreased the variability of the gradient, which in turn decreased the variability in the flow of heat energy. Consequently, variability in winter temperature decreased, with fewer events that were extremely cold or hot relative to the mean temperature. Similarly, Blackport et al. (2021)

discovered that winter temperature variability in the mid to high latitudes has already decreased and that the decrease is attributable to human activity.

Additionally, Arctic amplification may affect midlatitude winter precipitation extremes. Climate models indicated that the effect of sea ice loss on the North Pacific jet brings atmospheric rivers closer to the west coast of North America, although the storm track shifts northeast, increasing precipitation in Canada and the northwestern corner of the United States and decreasing precipitation in the southwestern United States (Ma et al. 2021). On the basis of observations, Liu et al. (2021) concluded that Arctic amplification has increased the amplitude of planetary waves and that Arctic amplification will lead to future increases in extreme precipitation over the Northern Hemisphere, although they did not find a significant effect on precipitation over the northwestern United States.

Although much of the focus has been on winter, climate modeling indicates that Arctic amplification contributed to an increase in the frequency of summer heat waves over North American midlatitudes (Song et al. 2021, Wu and Li 2022). Wang et al. (2022) even attributed the persistent high-pressure ridge that led to the heat wave over British Columbia and the northwestern United States in summer 2021 to ice loss in the Chukchi Sea. The processes that link Arctic amplification to development of a high-pressure ridge over the western United States may also drive the increasing frequency of fire weather during autumn in the lower to midlatitudes of northern Mexico, the United States, and Canada (Zou et al. 2021).

On the whole, the likely effect of Arctic amplification on Oregon's future climate and weather appears to be small. South of ~60°N, the effect of Arctic amplification on the climate is minor. The observed correlation between Arctic amplification and midlatitude extreme weather may not be causal, but reflect that both are affected by greenhouse gas-induced warming and short-term climate variability (Dai and Song 2020). Nevertheless, Arctic amplification, in isolation from other factors driving regional climate change, may decrease the number of winter cold snaps (Dai and Deng 2021, Song et al. 2021) and increase the number of summer heat waves in Oregon (Song et al. 2021, Wang et al. 2022, Wu and Li 2022). Arctic amplification will also promote hot and dry autumn weather that is conducive to wildfires, maybe more so in eastern than in western Oregon (Zou et al. 2021). Arctic amplification's impact on extreme precipitation may be negligible given that Oregon is near the transition zone between increasing atmospheric river frequency to the north and decreasing frequency to south (Ma et al. 2021).

Projected Changes in Wind Speeds

David E. Rupp

Wind patterns in the northwestern United States affect natural disturbances, public health, and multiple sectors. For example, variability in winds affects generation of wind power and, via downed power lines, the reliability of electricity transmission. Changes in winds affect the safety of transportation by air, land, and sea and the spread of wildfires and pollutants, including wildfire smoke and allergens (Figure 1). In Oregon, mean near-surface wind speeds are expected to decrease slightly in the future in response to global climate change (Pryor et al. 2012, Jeong and Sushama 2019, Chen 2020, Mass et al. 2022). However, this decrease in the mean wind speed may not translate to a decrease in strong and extreme winds. Although projections are highly uncertain, climate models tend to agree that the magnitude of extreme wind speed will increase in western Oregon (Pryor et al. 2012, Jeong and Sushama 2019). An extreme wind refers to an annual maximum wind speed with a given probability of being exceeded, such as 5 percent probability of exceedance (a 20-year mean return period) or 2 percent probability of exceedance (a 50-year mean return period). Such increases are not projected in eastern Oregon.

Figure 1. Wind-driven wildfires in Oregon during September 2020 as captured by the Aqua satellite. Source: NASA Worldview.

Oregon's location accounts for some of the uncertainty in the response of strong winds to human-caused emissions of greenhouse gases. In Oregon, the most severe windstorms occur from October through April and are associated with extratropical cyclones (cyclones that occur from 30–60° latitude) (Read 2003, 2007; Mass and Dotson 2010). Although future changes in wind speeds in extratropical cyclones are expected to be small, the projected poleward shift in the storm tracks of these cyclones could lead to substantial changes in extreme wind speeds in some regions (Seneviratne et al. 2021). Whether the speed of strong winds in Oregon changes depends

on the current and future mean and variability of the storm tracks' locations. One study indicated that by 2081–2099 relative to 1981–1999, assuming a high emissions scenario (RCP 8.5), explosive extratropical cyclones—those that generate severe winds—will shift northward by an average of 2.2° over the North Pacific (Seiler and Zwiers 2016). Therefore, explosive extratropical cyclones will become more frequent north of 45°N and less frequent and weaker south of 45°N. Oregon lies between about 42°N and 46°N. Accordingly, although Seiler and Zwiers (2016) did not examine the landfall location of these severe cyclones, the value of 45°N implies high uncertainty in whether the frequency of severe landfalling extratropical cyclones in Oregon will change.

The intensity of strong offshore (easterly) winds typically is less than that of winter wind storms. Nevertheless, offshore winds play a major role in summer heat waves in Oregon, including the record-breaking June 2021 heat wave (Chang et al. 2022), because they displace cooler marine air west of the Cascade Range (Brewer and Mass 2016). Projections from global climate models, assuming RCP 8.5, suggest a decrease in the frequency of strong offshore winds over western Oregon and Washington in July and August, with a ~50 percent reduction from 1970–1999 to 2071–2100 in the number of days with an easterly 850-hPa wind above 5 m sec^{-1} (Brewer and Mass 2016).

In late summer and autumn and prior to the onset of the autumn rains, particularly strong and dry easterly winds, known colloquially as east winds, promote the rapid spread of wildfire. East winds were key drivers of the largest wildfires on record in western Oregon, including the 2020 Labor Days fires (Abatzoglou et al. 2021, Mass et al. 2021, Reilly et al. 2022). Recent research incorporating regional climate models that accounted for the effects of the Cascade Range shed light on the potential human influence on east winds. Model results indicated that from the preindustrial to the current era, the frequency of autumn (September through November) east winds along the Cascade Range in Oregon decreased by ~2 percent (Hawkins et al. 2022). The latter research defined east winds as those with a 700-hPa horizontal speed $u \geq 13$ m sec^{-1}, a 700-hPa vertical speed greater than $\omega \geq 0.6$ Pa sec^{-1} (positive ω in pressure per time coordinates is downward), and near-surface relative humidity ≤ 30%. By the year 2099 relative to 1970, assuming RCP 8.5, the frequency of 10-m easterly winds with a daily maximum exceeding 3.4 m sec^{-1}, which is one standard deviation above the mean, decreased modestly west of the Cascade Range (Mass et al. 2022). For example, in Alpine, Washington, the annual number of days with such winds decreased from 15 to 11 (Mass et al. 2022).

Despite recent advances, understanding of how anthropogenic emissions may affect local winds in Oregon remains limited. Due to their coarse spatial resolution, global climate models and all but the highest-resolution regional climate models cannot adequately simulate mountain slope and valley winds, coastal winds, sea breezes, and winds associated with mesoscale convective systems (Doblas-Reyes et al. 2021). Large numbers of simulations from multiple high-resolution (1 to 10 km [0.6 to 6 mi]) regional climate models ultimately will be required to estimate, with high confidence, changes in these types of winds across Oregon.

Understanding the Most Current Climate Projections

Meghan Dalton and Dominique Bachelet

Introduction

The Coupled Model Intercomparison Project (CMIP), an initiative of the World Climate Research Programme that aims to increase understanding of past, present, and future natural and human-caused changes in climate, is in its sixth phase (CMIP6). CMIP6 is the climate modeling foundation for the sixth assessment report of the Intergovernmental Panel on Climate Change (IPCC; 2021). The fifth phase of CMIP (CMIP5) was the climate modeling foundation for the IPCC's fifth assessment report (2013). Climate modeling institutions worldwide build different global climate models to simulate the future climate given a common set of scenarios of concentrations of greenhouse gases, aerosols, and other external influences on the global climate (climate forcings). Evaluation of climate projections from multiple models in that coordinated set of simulations or experiments improves understanding of the likelihood of various aspects of climate change.

Participating in CMIP6 are 132 models from 49 modeling institutions (pcmdi.llnl.gov/CMIP6/ArchiveStatistics/esgf_data_holdings). By comparison, CMIP5 included 61 models from 28 modeling institutions (pcmdi.llnl.gov/mips/cmip5/availability.html). The global climate science community strives to maintain continuity across phases of CMIP. All global climate models included in CMIP5 and CMIP6 ran historical simulations and standardized DECK (Diagnostic, Evaluation and Characterization of Klima—climate in Ancient Greek) experiments, which evaluated the models' variability, climate sensitivity, and performance (Taylor et al. 2012, Eyring et al. 2016). The institutions participating in CMIP adopted common standards for data, documentation, and software (Eyring et al. 2016).

Here, we describe key differences between CMIP6 and CMIP5 in terms of experimental design, greenhouse gas scenarios, climate models, projections of future climate, and climate sensitivity (the extent to which global temperature is affected by a given change in concentrations of greenhouse gases). We also offer guidance on use of CMIP6 climate projections in climate impacts assessments and describe downscaled CMIP6 data that currently are available.

Experimental Design

CMIP6 has three foci: how the Earth system responds to forcings; systematic model biases; and future climate change considering internal variability, predictability, and uncertainty in scenarios. CMIP6 concentrates on clouds, circulation, and climate sensitivity; melting ice; climate extremes; changes in water availability; regional sea level change; biogeochemistry; and near-term prediction. These science priorities are addressed through 21 model intercomparison projects (MIPs) that isolate a particular facet of the Earth system (for example, aerosol chemistry, cloud feedbacks, or ice sheets) to better understand and quantify its uncertainty and contribution to climate change. Many of the MIPs were continued from CMIP5 (Eyring et al. 2016).

Of the 21 MIPs, ScenarioMIP is the primary MIP that will be used in climate impacts assessments. ScenarioMIP is dedicated to multi-model projections of future climate that are based on alternative scenarios of future emissions and land-use changes. This coordinated project selected a set of scenarios to be used by all participating modeling institutions to produce climate projections that are the foundation for investigation of climate impacts, vulnerability, adaptation, and mitigation by the

research community (O'Neill et al. 2016). Twenty-eight modeling institutions contributed results to ScenarioMIP as part of CMIP6, whereas 19 modeling institutions participated in CMIP5's analogous experiments (Chen et al. 2021). Differences in climate projections between CMIP6 and CMIP5 are due to differences in model structure and type, such as general circulation models or Earth system models (see below), emissions scenarios, and initial conditions and years of the future scenarios (2015 for CMIP6, 2006 for CMIP5) (O'Neill et al. 2016).

Greenhouse Gas Scenarios

The scenarios used in ScenarioMIP are related to those that drove the CMIP5 models, which were based on four representative concentration pathways (RCPs). RCPs are concentrations of greenhouse gases, aerosols, and other factors that determine radiative forcings by 2100. Radiative forcing is the total amount of energy retained in the atmosphere after absorption of incoming solar radiation, which is affected by the reflectivity of Earth's surface, and emission of outgoing long-wave radiation, which is affected by the concentrations of heat-trapping or greenhouse gases. The four RCPs, 2.6, 4.5, 6.0, and 8.5, represent radiative forcings of 2.6, 4.5, 6.0, and 8.5 watts per square meter (W m^{-2}) by 2100, respectively. The most commonly used RCPs, 4.5 and 8.5, are often described as representing moderate reductions and business-as-usual increases in greenhouse gas emissions, respectively. The RCPs do not specify a particular set of social and economic assumptions that would result in the radiative forcing by 2100. Multiple sets of social and economic assumptions could result in the same radiative forcing.

In CMIP6, each of the four radiative forcing levels of the RCPs, plus four additional radiative forcing levels (1.9, 3.4, 3.4 overshoot [OS], and 7.0), was paired with one of five sets of assumptions about future population, technological, and economic growth (Table 1). These assumptions are referenced as Shared Socioeconomic Pathways (SSPs) (O'Neill et al. 2016). SSP1 assumes few challenges to mitigation and adaptation. SSP2 assumes continuation of historical social and economic trends, with moderate challenges to mitigation and adaptation, whereas SSP3 assumes conflicts among regions and substantial challenges to mitigation and adaptation. SSP4 assumes inequality within and among countries and minor challenges to mitigation, but substantial challenges to adaptation, and SSP5 assumes dependence on fossil fuels with substantial challenges to mitigation, but minor challenges to adaptation (O'Neill et al. 2016). Each SSP results in a trajectory of greenhouse gas emissions independent of climate policy. The radiative forcing levels represent climate policy outcomes. Some forcing levels are not feasible for a given SSP. For example, only SSP5 can achieve 8.5 W m^{-2} radiative forcing by 2100, and only SSP1 and SSP2 can limit radiative forcing to 1.9 W m^{-2} by 2100.

2100 forcing level (W m^{-2})	SSP1	SSP2	SSP3	SSP4	SSP5
8.5	n/a	n/a	n/a	n/a	SSP5-8.5
7.0	n/a		SSP3-7.0	n/a	
6.0				SSP4-6.0	
4.5		SSP2-4.5			
3.4				SSP4-3.4	SSP5-3.4-OS
2.6	SSP1-2.6		n/a		
1.9	SSP1-1.9		n/a	n/a	n/a

Table 1. The combinations of shared socioeconomic pathways (SSPs) and radiative forcing levels by the year 2100 chosen for CMIP6 projections of future climate. n/a, combination of SSP and radiative forcing level is not feasible. Forcing levels 8.5, 6.0, 4.5, and 2.6 correspond to the four RCPs. Adapted from Chen et al. 2021.

Eight SSP-forcing level combinations were selected for CMIP6 projections of future climate (Table 1). Four scenarios (SSP1-2.6, 2-4.5, 3-7.0, and 5-8.5; the number after the dash corresponds to the forcing level) were the basis for projections of future climate in ScenarioMIP. These four scenarios span a wide range of uncertainty in future forcings and are similar to the RCPs that drove CMIP5. Four additional scenarios (SSP1-1.9, 4-3.4, 5-3.4-OS, and 4-6.0) were considered lower priorities (O'Neill et al. 2016) and will be simulated by institutions contributing to ScenarioMIP only after they complete simulations of the higher-priority scenarios. Of the 56 models participating in ScenarioMIP, 39 have contributed data for the four high-priority scenarios. The four scenarios similar to the RCPs from CMIP5, plus SSP1-1.9, are the core set of scenarios in the IPCC's sixth assessment report (Chen et al. 2021).

The SSPs paired with radiative forcing levels produce trajectories of greenhouse gas emissions that result in different degrees of warming by 2100 (Figure 1). SSP1-1.9 assumes that the Paris Agreement goal of limiting warming to 1.5°C (2.7°F) by 2100 relative to the 1850–1900 mean global temperature is met, with net-zero carbon dioxide emissions by the middle of the twenty-first century. SSP1-2.6 limits warming to 2.0°C (3.6°F) by 2100, with net-zero carbon dioxide emissions by the second half of the century. It is slightly warmer than RCP 2.6. In SSP2-4.5, as in RCP 4.5, carbon dioxide emissions plateau and then gradually decline by mid-century. SSP3-7.0 assumes that carbon dioxide emissions double by 2100, and SSP5-8.5 that carbon dioxide emissions double by 2050. SSP5-8.5 has higher carbon dioxide emissions but lower emissions of other greenhouse gases than RCP 8.5, and is marginally warmer (O'Neill et al. 2016, Chen et al. 2021) (Figure 1).

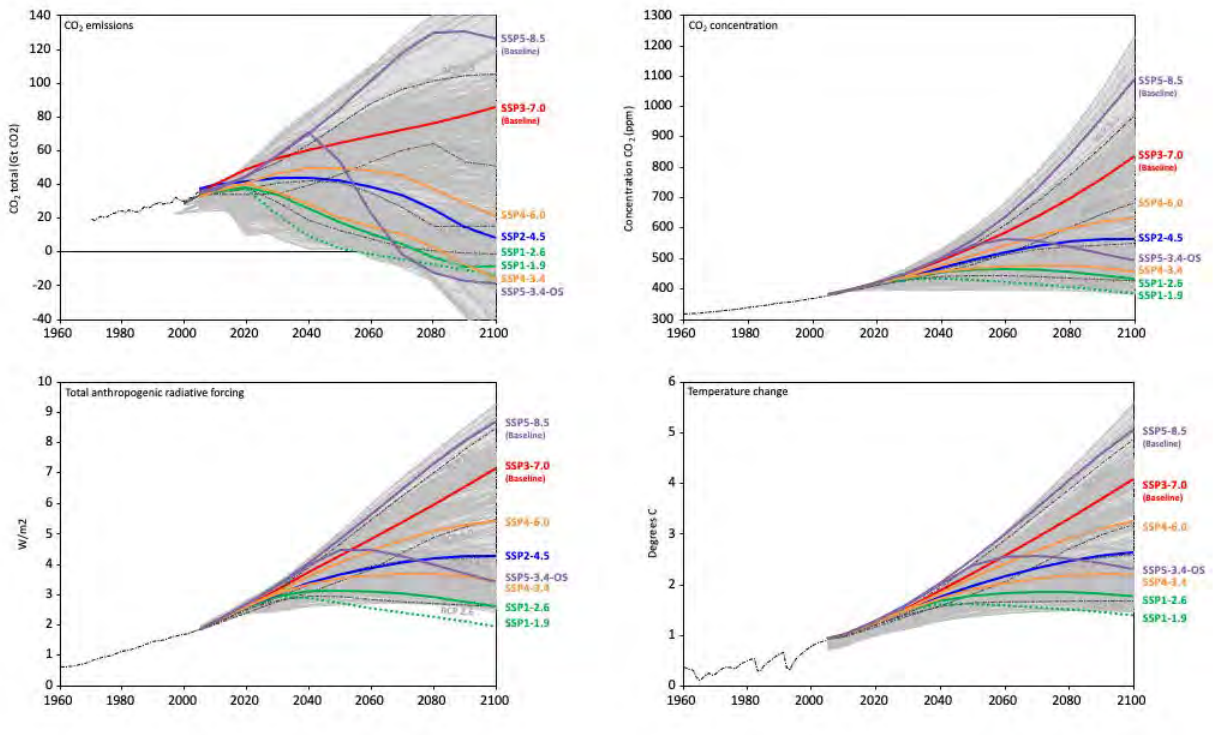

Figure 1. Carbon dioxide emissions (top left) and concentrations (top right), human-caused radiative forcing (bottom left), and global mean temperature (bottom right) for the twenty-first century scenarios in ScenarioMIP (Riahi et al. 2017). Gray areas represent the range of scenarios included in the IPCC's fifth assessment report (Clarke et al. 2014). Source: O'Neill et al. 2016.

Climate Model Advances in CMIP6

Relative to the CMIP5 models, the CMIP6 climate models include many improvements to atmospheric and oceanic circulation and to stratospheric processes (Chen et al. 2021). For example, most CMIP6 models have higher horizontal resolution in the atmosphere, ranging from 50 to 260 km (31–162 mi). Among the exceptions is CanESM5, which maintained the same relatively coarse horizontal resolution as its predecessor (approximately 250 km [155 mi]) to facilitate the production of large ensembles (Swart et al. 2019). CMIP6 models also have a greater number of vertical levels in the atmosphere (14–102), with the top of the atmosphere at 29–88 km (18–55 mi) above Earth's surface (Gutiérrez and Tréguier 2021).

Climate models generally refer to both general circulation models (GCMs) and Earth system models (ESMs). GCMs simulate the dynamics of interactions between the atmosphere and the land and ocean, whereas ESMs also simulate more-detailed chemical and biological processes that interact with the physical climate (Heavens et al. 2013). CMIP6 climate models include improved representation of cloud and aerosol microphysics, ocean eddies, sea ice, and ice sheets (Chen et al. 2021). Not only are there more ESMs in CMIP6 than in CMIP5, but CMIP6 models better represent atmospheric chemistry, carbon and nitrogen cycles, dynamic vegetation and wildfires, and ocean biogeochemistry (Chen et al. 2021, Gutiérrez and Tréguier 2021). Several of the ESMs included in CMIP5 were capable of representing temporal variation in vegetation and simulating vegetation responses to novel climate conditions. However, because the teams that developed these models did not have sufficient time to test the models, vegetation was treated as static rather than dynamic. Similarly, most of the ESMs included in CMIP5 did not include a wildfire submodel. The majority of those included in CMIP6, by contrast, simulated wildfires, allowing land cover to change abruptly and affect land surface reflectivity, point-source emissions, and, in turn, atmospheric chemistry. It is ideal to represent the nitrogen cycle in ESMs to account for the response of vegetation to increasing levels of atmospheric carbon dioxide, which reduces the extent to which nutrient limitation constrains plant growth. Most of the ESMs in CMIP6, in contrast with those in CMIP5, include the nitrogen cycle. However, the level of sophistication in their treatment of the cycle varies greatly, and agreement between models needs to be improved (Davies-Barnardet al. 2022).

Simulation of observed mean temperature trends and variability in global climate models has become more accurate (IPCC 2021). CMIP6 models also simulate past temperature and precipitation extremes more accurately than CMIP5 models (Chen et al. 2020, Fan et al. 2020). The area of the Northern Hemisphere covered by snow generally was simulated fairly well in CMIP5, but CMIP6 models performed better (Mudryk et al. 2020, Zhu et al. 2021). Simulation of Northern Hemisphere storm tracks improved in CMIP6, although the spatial patterns of future storms are similar to those in CMIP5 (Harvey et al. 2020). Moreover, CMIP6 models can reasonably simulate a range of observed atmospheric circulation patterns over the Pacific Northwest, and the temperature and precipitation anomalies associated with those circulation patterns (Taylor et al. 2022).

Climate Sensitivity

One measure of climate sensitivity, the equilibrium climate sensitivity (ECS), is an estimate of the temperature response to carbon dioxide concentrations that have doubled, and remained so, after stabilization of temperature over hundreds or thousands of years. On the basis of observations, paleoclimate data, and other evidence, the ECS of Earth was assessed to be within 2.5–4.0°C (4.5–7.2°F) (66 percent likelihood) or 2.0–5.0°C (3.6–9.0°F) (90 percent likelihood) (Forster et al. 2021).

The scientific community typically evaluates climate model outputs on the basis of how close they are to this assessed range of ECS. Some climate models are more sensitive than others: they produce greater warming given the same concentration of greenhouse gases.

The range of ECS is 1.8–5.6°C (3.2–10.0°F) among CMIP6 models and 2.1–4.7°C (3.8–8.5°F) among CMIP5 models (Meehl et al. 2020, Zelinka et al. 2020). The average ECS value of the CMIP6 model ensemble is higher than both the assessed average value and the CMIP5 model results (Forster et al. 2021). ECS values in all CMIP5 models were less than 5°C (9°F), whereas about one-fifth of the CMIP6 models had an ECS above 5°C (9°F) (Hausfather et al. 2022). Cloud feedbacks and cloud-aerosol interactions most likely are the primary contributors to the higher sensitivities (Meehl et al. 2020, Zelinka et al. 2020). Although there is a 5 percent likelihood that Earth's ECS could be above 5°C, the CMIP6 climate models with ECS >5°C overestimate the observed warming and are considered less valid and reliable than those with ECS ≤5°C. Consequently, use of the average and range of the CMIP6 model ensemble would not be appropriate for analyzing projections of future climate (Hausfather et al. 2022). Before averaging temperature projections from the CMIP6 models, the IPCC weighted the projections on the basis of how well each model simulated historical observations. This approach prevented CMIP6 models with ECS >5°C from skewing the ensemble average (Hausfather et al. 2022). When using ouputs of individual CMIP6 climate models or interpreting published results that were based on CMIP6 climate models, the models' climate sensitivity and their skill in simulating past climate is central to evaluation of reliability (Tokarska et al. 2020, Hausfather et al. 2022).

Projections of Future Climate and Effects of Climate Change

Comparisons of future climate as projected by CMIP6 and CMIP5 are facilitated by ScenarioMIP's inclusion of three scenarios designed to provide continuity between the CMIPs: SSP1-2.6, SSP2-4.5, and SSP5-8.5. These comparisons are useful despite different initial years and assumptions about the composition of greenhouse gas emissions (Tebaldi et al. 2021).

The ensemble of CMIP6 models projects greater and somewhat faster warming than CMIP5 models (Forster et al. 2021). For example, in the CMIP6 ensemble, average global surface air temperature is projected to increase by 4.4°C (7.9°F) by 2081–2100 relative to 1986–2005 under SSP5-8.5, compared to the CMIP5 ensemble average increase of 3.7°C (6.7°F) under RCP 8.5 (Tebaldi et al. 2021). In addition, CMIP6 models project that certain global warming levels (e.g., 1.5°C [2.7°F], 2°C [3.6°F]) will be reached three to nine years earlier than projected by CMIP5 models (Tebaldi et al. 2021). To illustrate, 2°C of warming above the 1850–1900 average temperature is projected to occur in 2038 under SSP5-8.5 and 2041 under RCP 8.5 (Tebaldi et al. 2021). The greater warming of CMIP6 models has been attributed to the inclusion of some models with unrealistically high ECSs that overestimated observed warming (Forster et al. 2021, Tebaldi et al. 2021). Constraining future warming projections by the observed warming trend effectively eliminates many of the unreliable models (Tokarska et al. 2020) and brings CMIP6 temperature projections closer to those of CMIP5 (Tebaldi et al. 2021). For example, when the observed warming trend is used to constrain future warming projections for both CMIP5 and CMIP6 models, the ensemble average increase in temperature by 2081–2100 is 3.5°C (6.2°F) and 3.6°C (6.5°F), respectively (Tebaldi et al. 2021).

In both CMIP6 and CMIP5 models, high latitudes warm more than low latitudes, particularly in the Northern Hemisphere, and continents warm more than oceans (Tebaldi et al. 2021). Projected changes in global precipitation, including spatial patterns, are also similar in CMIP6 and CMIP5 (Lee

et al. 2021, Tebaldi et al. 2021). In both sets of results, the largest increases in precipitation occur in the equatorial Pacific and at the poles, and drying trends are most pronounced in the Mediterranean, Central America, Amazonia, southern Africa, and western Australia (Tebaldi et al. 2021).

In the western United States, the spatial pattern of changes in temperature and precipitation projected by CMIP5 and CMIP6 models is similar (Almarzroui et al. 2021). Although CMIP6 projects higher average temperatures than CMIP5, the range of temperature and precipitation projections over the United States and Canada is smaller in CMIP6 (Martel et al. 2022). Of the 21 CMIP6 models used, seven had ECS >4°C (one with ECS >5°C) and two had ECS <2°C (Zelinka et al. 2020, Martel et al. 2022). However, CMIP6 projects greater increases in temperature and precipitation extremes than CMIP5 (Chen et al. 2020). Of the 11 CMIP6 models used, three had ECS >4°C (one with ECS >5°C) and one had ECS <2°C (Chen et al. 2020, Zelinka et al. 2020). CMIP6 models also project declines in wind power density (a measure of the wind energy available in a given location) in much of the United States and Canada, whereas CMIP5 models project little to no change (Martinez and Iglesias 2022). Of the 18 CMIP6 models used, six had ECS >4°C (one with ECS >5°C) and two had ECS <2°C (Zelinka et al. 2020, Martinez and Iglesias 2022).

In CMIP6 models, the area covered by snow during spring (April–June) is projected to decline throughout the twenty-first century under SSP1-2.6, 2-4.5, 4-6.0, and 5-8.5, as it was under all RCPs in CMIP5 models. Declines in snow cover stabilized by the end of the century only under SSP1-2.6 (Mudryk et al. 2020, Zhu et al. 2021). Under SSP5-8.5, spring snow cover in the Northern Hemisphere from 2081–2100 is projected to be 40 percent lower than from 1995–2014 (Zhu et al. 2021). However, given that seven of the 20 CMIP6 models that resulted in the latter projection had ECS >4°C, and three of those had ECS >5°C (Zelinka et al. 2020, Zhu et al. 2021), projected declines in snow cover may be exaggerated. By contrast, CMIP5 projections under RCP 8.5 projected spring snow cover from 2080–2099 that was 25 percent lower than that from 1986–2005 (Brutel-Vuilmet et al. 2013). Projected annual mean streamflow over the Northwest is marginally greater in CMIP6 models than CMIP5 models (Martel et al. 2022).

A suite of nine crop models projected a larger decrease in median global crop yields by the end of the twenty-first century when using CMIP6 model outputs than CMIP5 model outputs (-19 to 1 percent in CMIP6 versus -13 to 5 percent in CMIP5) (Muller et al. 2021). This may result from a warmer growing season in the CMIP6 model ensemble, which in turn reflects the inclusion of several CMIP6 models with ECS >5°C (Zelinka et al. 2020, Muller et al. 2021). In general, projected global crop yield increased until mid-century and then declined. Muller et al. (2021) did not account for temperature-driven changes in growing season length.

CMIP6 models overestimate global mean leaf area index to a greater extent than CMIP5 models (Song et al. 2021). The leaf area index, the ratio of the one-sided leaf area per unit ground area, is associated with primary productivity, carbon balance, and water and nutrient budgets. Overestimation of the index leads to overestimating primary production, transpiration, and evaporation from the canopy (Song et al. 2021). Furthermore, in temperate regions, CMIP6 models overestimate tree height, which may lead to overestimating aboveground carbon storage and underestimating wind speed (Song et al. 2021). However, in both CMIP5 and CMIP6 models, leaf area index is projected to increase in virtually all biomes worldwide under scenarios of 1.5°C and 2°C warming above pre-industrial levels (Peng et al. 2022).

Use of CMIP6 Projections in Climate Impacts Assessments

Best practices for analyzing and reporting projections of future climate from CMIP5 and earlier generations of climate models were to calculate the average and range across at least ten climate models (Mote et al. 2011). This approach assumed that each model was an independent and equally valid representation of the Earth system. Neither of these assumptions are met within the CMIP6 ensemble. The climate models within the CMIP5 ensemble are not independent, either, often because a given team produced more than one model, such as an early GCM and a subsequent ESM (Knutti et al. 2013, Eyring et al. 2019). Consequently, different models may share code or even submodels that represent major processes (Table 2), violating the assumption of independence (Knutti et al. 2013). Model independence can be evaluated by testing whether model errors are correlated. The effective number of independent models is much less than the total number of models in the ensemble (Eyring et al. 2019). Because several fundamental biogeochemical processes are represented by the same algorithm in most models, selecting climate models from different institutions is a useful but imperfect surrogate for selecting independent models.

The ensemble of climate models from CMIP5 appear to be equally valid representations of Earth's system given their good agreement with observations (Knutti et al. 2013) and range of ECSs (Hausfather et al. 2022). Selecting a subset of models that best simulate past climate of a particular region (e.g., Rupp et al. 2013) also can increase the probability that those models are equally valid for a given application. As explained above, in contrast to the CMIP5 models, not all CMIP6 models can be considered equally valid (Eyring et al. 2019, Torkarska et al. 2020, Hausfather et al. 2022).

The IPCC's correction method of weighting modeled temperature increases is useful in some contexts, but may be impractical when evaluating climate projections at a regional or local level (Eyring et al. 2019). Instead, two alternative approaches have been recommended. First, projections can be presented in terms of temperature increase instead of time. For example, one can consider how other aspects of Oregon's climate are projected to respond to 2°C of global warming regardless of the year in which 2°C warming is reached. This approach is consistent with the Paris Agreement's target levels of global warming. However, time-based estimates are often necessary for impacts assessments (Hausfather et al. 2022). Second, one can select a subset of CMIP6 models with ECSs within the IPCC's likely assessed range (Hausfather et al. 2022). It remains best practice to analyze and present an average and range of projections from at least ten global climate models with realistic ECSs that simulate the historical climate well (Mote et al. 2011, Hausfather et al. 2022).

Availability of CMIP6 Downscaled Projections and Applications to Impact Assessments

Local and regional climate impacts assessments often rely on downscaled climate projections. There are two types of downscaling, statistical and dynamical. Statistical downscaling uses statistical relations between historical, fine-resolution observations of weather (e.g., daily) or climate (e.g., monthly) and coarse-resolution global climate model outputs to increase the spatial resolution of climate projections. Statistical methods attempt to correct global climate model biases under the assumption that historical biases also will be applicable in the future (the stationarity assumption). Dynamical downscaling increases the resolution of climate projections by applying numerical, three-dimensional representations of atmospheric hydrodynamics and thermodynamics. These representations are similar to those used in global climate models, but have finer resolution and are not run over the entire globe. The regional climate models used in dynamical downscaling, however, use global climate model results at their geographic boundaries, and therefore include all of the

Table 2. Coupled general circulation models (GCMs) and Earth system models (ESMs) that participated in ScenarioMIP, adapted from Table AII.5 in Gutiérrez and Tréguier 2021. Models are grouped by the land surface model and processes they included. Aerosols are prescribed or emissions-driven. Land carbon, active land carbon cycle; N cycle, active nitrogen cycle; prog veg, prognostic biogeography of vegetation; permafrost, carbon included in a permafrost pool; fires, dynamic fires. Equilibrium climate sensitivity (ECS) values in Celsius (°C) from Zelinka et al. 2020, updated at github.com/mzelinka/cmip56_forcing_feedback_ecs/blob/master/CMIP6_ECS_ERF_fbks.txt.

global models' biases. The projections derived from dynamical downscaling may be more accurate than those from statistically downscaling because they directly incorporate fine-resolution data rather than statistically approximating fine-resolution data from coarse-resolution data. However, such improvement in accuracy depends on the availability of fine-resolution data within the full extent of the model, which is rare.

Dynamically downscaled data still may have substantial biases. Several sets of statistically or dynamically downscaled CMIP6 projections are available or in preparation (Table 3). Many of these products were generated with methods that were applied to CMIP5 models, and still are widely used in assessments of the impacts of climate change (Kim et al. 2022). Each product was created with a different method, spatial and temporal resolution, and observational data. The reference data used to correct the future projections were a main cause of differences among downscaled climate projections for the northwestern United States (Jiang et al. 2018). However, the bias correction method and the downscaling algorithm used in each method are the most obvious causes of divergence among downscaled projections. The choice of GCM realization (a model run with a given set of initial conditions or parameters) strongly affects divergence among projections, with or without downscaling, at the extent of the conterminous United States (Kim et al. 2022).

The scientific community is evaluating CMIP6 projections of a range of climate variables, and the resulting effects on biogeochemical and hydrological cycles, at global to local extents. The realism of emissions pathways and their radiative forcing remains uncertain because these depend on social and economic decisions. Simulated responses of planetary processes to forcing is driven in part by the coarse-resolution concentrations of anthropogenic aerosols that are fed into ESMs (Persad et al. 2022). Uncertainty in values of these concentrations to 2050 and beyond, which may exceed the increases in values since 1850 (Wilcox et al. in review), causes differences in radiative forcings, from -0.3 to -1.5 W m^{-2}, among models results. Consequently, most of the literature on climate impacts relevant to Oregon and the Northwest is still based on CMIP5 (e.g., Dalton and Fleishman 2021); little is based on CMIP6 or has compared outcomes that were based on the two sets of models. This will change in the coming years as CMIP6 projections become better understood and more accessible, and as their biases are corrected. Some downscaled CMIP6 projections are already available, and additional downscaled projections are in production. Climate impacts assessments that incorporated projections of future climate from CMIP5 are still valid and useful. It may be worth considering whether to update the assessments, or compare inferences based on CMIP5 and CMIP6, in a few years as new climate data emerge and model weaknesses are addressed.
